bulwarks, ample quarters for crew forward, and aft there will be a main saloon 14x33ft., two state-rooms and captain's room; bath-room, etc., on each side of the companion. There will be 28 lights a side. Length, 120ft.; beam, 15ft.; hold, 9ft.

CRUISING ABOARD.—It is becoming more and more the fashion. *Clyde* and *Regina* went foreign this spring. Mr. James Stillman leaves in the schooner *Waverler* for the Chesapeake shortly. The schooner *Resolute*, chartered by Mr. Charles G. Franklyn, will cruise in the Gulf of St. Lawrence; the *Casco*, of San Francisco, sails for the South Seas; the *Via* for the North Pacific; and we hear of others on the berth for distant climes. Philadelphia has also ordered a genuine flush deck sailing steam yacht, 135x15x5, to be built at Marcus Hook. This, besides the other big steamers building, will form the nucleus of a seagoing fleet whose ambition lies beyond the muddy waters of the Sound.

THE LATEST ENGLISH CUTTER.—They make them awfully narrow. The rule of the Y. H. A. does it and nothing else. Here are the dimensions of the new 20-ton *Prada*, taken from *Boat's Life*: Length for tonnage, on w. l., 49ft.; beam, 9ft. 9in.; draught of water, 9ft.; weight of lead keel, 37 tons 15 cwt.; tonnage, 20 tons. Spars, mast, deck to heads, 34ft.; topmast, 31ft. to sheave-hole, 30ft.; gaff, extreme length, 29ft.; boom, 43ft.; bowsprit, outboard, 32ft. 6in.; gaff topsail yards, 40ft.; boom, 2ft.; spinnaker boom 49ft. Area of canvas in square feet: Mainsail 1,860ft.; foresail 290ft., first jib 535 ft., second jib 330ft., big topsail 550 ft., second topsail 450ft.

HOW INTREPID SAILS.—From the *World*: "The schooner-yacht *Intrepid*, N. Y. C. M. Lloyd Phoenix, having completed her fitting at the foot of Twenty-sixth street, went down the bay Saturday preparatory to sailing for Europe. All of her racing spars and canvas has been shipped per steamer, her owner's intention being to race her in all the regattas to which she is eligible, and to accept any and all matches which may be offered him. Unless it be the *America*, Ben Butler's yacht, the *Intrepid* is the fastest keel-schooner to windward that has yet been built in this country, and her career on the other side will be watched with interest."

THE FIRST VICTIM.—Light-draft sends hundreds to an untimely grave every year in America. Here is the first deluded subject of the season. By the captain of the "pleasure yacht" at City Island, N. Y., May 7th, Oliver J. Halsey was drowned, and four others narrowly escaped the same fate. Query, how much water did that mantray draw?

NEW YACHT.—The new sloop building for Frank H. Ordner Buffalo Y. C. is now receiving her rig. She is 31ft. 3in. on deck, 12ft. 4in. beam, 4ft. 2in. deep, draws 3ft. aft and 20in. forward. Is to have 25ft. 9in. deadrise to 6ft. foot; mast steps 11ft. from bow. She is to receive a racing rig and will be in all the hunts on Lake Erie.

ANOTHER COMPROMISE CUTTER.—We have seen the sail plan for Mr. Cassat's new yacht, built by Alonzo Smith at Islip, and before noticed. She is to have 31ft. 6in. beam, 30ft. gaff, 15ft. foremast, 10ft. on foot, and jib same; topmast, 24ft., fitted to house.

ENGLISH SAILS.—The *Murid* is to have a genuine Laphorn suit, imported expressly. The foot of her mainsail will not be laced the boom, and the tack can be triced up by a line after the English fashion.

CALIFORNIA, TOO!—The yawl *Sappho* has received a double head rig and a lofty house topmast in San Francisco, and the *Olympian* remarks that more will follow.

BLACK ISLAND CABLE.—Yachtsmen in these waters will be glad to know that the Black Island cable is in working order.

THE MURIEL.—This cutter has had her fore-foot and keel rounded up more, an 8in. mast substituted for the heavier one and stepped further aft. Some small portion of the lead on the keel has been shifted to the inside, and new inferior work inside. Her owner, in order to give his cutter a fair trial this year, has engaged an English skipper and crew of two. The captain, Harlow, was at one time timoneer of the famous British schooner *Egeria*, and was sent over by Mr. Harvey at the request of Mr. Stillman to put the *Murid* through in English fashion. She now has a race on with Mr. Hitchcock's *Volante*—a match which will be watched with keen interest.

THE FROLIC.—Alonzo Smith has been overhauling this schooner for some time past at Philadelphia. She has received "all lead" ballast and a larger rig. Foremast, 46ft.; mainmast, 45ft.; main boom, 38ft.; gaff, 23ft.; fore boom, 15ft. and gaff, 14ft.; bowsprit outboard, 15ft.; flying jibboom, 12ft.; main topmast, 24ft.; foot of mast, 29ft. This is a new 60 large for her, and *Frolic* will sail more speedily. The trouble with her at that score is that she is too big a boat for her length.

THE WAVE.—This smart sloop (Dr. Barron) is coming out with a stylish rig, in which there are several commendable features. A very tall topmast of about 24ft. above the cap, fitted to house, of course. This is a big stick for a sloop 40ft. w. l., and the crew ought to be drilled into sending it up and down as easily as the burgee at the masthead. Hoist of mainsail, only 30ft.; boom, 11ft., and a long gaff, 27ft. This is a much better cut than the narrow-headed, lofty abracorns copied from the courtiered rig of the smacks built up mud creeks. The jib is 30ft. on foot.

THE ROSALIE.—Albertson Brothers, of Kensington, Philadelphia, well known as having built *White Cap*, *Vizen*, *Midcap* and the steamer *Edna*, have recently launched a sloop 53ft. long, 11ft. beam, 6ft. hold, similar in model to Bob Fish's famous *Vizen*, for Messrs. George and Henry Corson, of Philadelphia. She will receive eight hundred yards of canvas.

GWENDOLEN-HECTOR.—Commodore Stone, East Boston Yacht Club, is very anxious to try on the *Gwendolen* with his smart sloop. As the latter has hardly bent sails, and is not in mofog trim, the match is not likely to come to anything unless Mr. Loveloy proposes taking a liberal risk.

THE IDA.—This little iron cutter, only 18ft. w. l., belonging to Mr. C. J. Faxon, has received a new cabin and outfit at Roberts' shop, in Harlem. Her rig is to be full cutter, 11ft. hoist to main-sail, 15ft. boom, 14ft. head, fore staysail and jib, 8ft. on foot each.

THE MYSTIC.—Vice-Com. Norton, Atlantic Y. C., has bought the schooner *Mythic* from Mr. Hall. She will receive an overhaul at Piegar's yard, Greenpoint, and possibly a larger rig. Capt. Baker, last year in the *Acetic*, will look the skippering.

THE LILLIE.—This well-known sloop, lately of Lynn, Mass., has lost the fashion. She comes out with a keel, Hutchins & Pryor did the work. She is to have five tons of ballast and a snug rig for cruising.

THE INTREPID.—This schooner (Mr. Lloyd Phoenix) will shortly leave for foreign parts, and while in English waters may take on a match or two with some of our cousin's big ones.

Hotels and Resorts for Sportsmen.

OCEAN HOUSE, Spoonk, L. I.—First-class board; near bay and ocean, forest and lakes; gunning, fishing, riding, sailing, bathing and rowing. Parties will be met at L. I. R. R. depot by appointment.
J. W. TUTHILL, Proprietor.

HO! for TROUT FISHING.

THE FAR-FAMED waters of the Magalloway are now within easy access of Toronto and the outside world. We are still teeming with speckled trout. We have erected a large and comfortable hotel in Magalloway Village, and are prepared to offer every facility to our sporting friends by way of canoes and guides to the trout lakes and streams tributary to the Magalloway, and can offer the best of trout fishing within a mile of our hotel; will have ice and facilities for packing fish, so that they can be taken fresh to any part of the Northern States. The road from Rousseau (the head of steam travel) has been Macadamized and the journey shortened by half a day, so that parties leaving Toronto can get here in one and a half days. Come up and see us.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line
FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
FAMOUS SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.
BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in those waters.
The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Aug. 1.
BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and creeks of this territory.
The sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at many points.
TAKE YOUR FAMILY WITH YOU! The scenery of the North Woods and Lakes is very beautiful, the air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with
Hay Fever and Asthma Affections.
The hotel accommodations are of the most surpassing the average in countries now enough to afford the finest of fishing.
During the season Round Trip Excursion Tickets will be sold at low rates, and attractive train facilities offered to Tourists and Sportsmen.
Dodge, Guns and Fishing Tackle Carried Free of owner's risk.
It is our aim to make sportsmen feel "at home" in this route. For Tourists send for the attractive illustrated book (of 80 pages), containing full information and accurate maps of the Fishing Grounds and Game Canes and Lakes.

Medical.

MISTAKES AND PREJUDICES OF RELIGIOUS AND TEMPERANCE JOURNALS.

Some good Religious and Temperance Journals are making the mistake of declining to advertise a most valuable and anti-intoxicating medicine, simply because it is called "Hitters," while the same journals are making a greater mistake by advertising some drunken whisky stuff, or nostrum, because it has some nice fancy descriptive name, ending with "cure," "tine," printed on its label, when the bottle is filled with destruction, drunkenness, death, and the good journals would take the trouble to ascertain how many overworked clergymen have had their lost nerve-force, brains and flagging energies restored by the use of Hop Bitters, enabling them to perform their arduous pastoral duties and preach the good message that they should have been totally unable to do but for this valuable medicine, and did these journals but know of the host of good Christian Temperance women who rely on them for their family medicine, and how many invalid homes they could make happy and healthy, and which they would send to every neighborhood by publishing the merits of Hop Bitters, they would advertise them with a happy and wider effect. And did these journals but know how many have been and may be saved from forming intemperate habits by doctors prescribing Hop Bitters, instead of beer, where the use of hops is needed (there being more actual hop strength in one bottle of Hop Bitters than in any quantity of beer), they would lay aside their fear and prejudice against the word "Hitters."

A few of the many witnesses from religious and temperance sources are given below, who use, recommend and advertise Hop Bitters. The President and Manager of Hop Bitters Mfg. Co. is a veteran Temperance advocate and worker of forty-eight years' service; every man in the Company is an actual teetotaler, and the Company spends thousands of dollars annually in Temperance and Christian work.

What the Religious Press Says.

Chicago, Nov. 18th, 1878.
Hop Bitters Mfg. Co., Rochester, N. Y.

Gentlemen—We do not allow anything in the line of Bitters to enter our paper that contains alcohol, but we are satisfied that Hop Bitters are free from that ingredient. We feel responsible for the good or bad that may be done to the families of our subscribers who are affected by our advertisements. Therefore our discrimination in your favor, and we trust that our very low rates will meet your approval, and that we may hear from you.

"THE LIVING CHURCH."

Temperance clergymen, lawyers, ladies and doctors use Hop Bitters, as they do not intoxicate, but restore the system, and are waste.—*Temperance Times, Brooklyn, N. Y.*

Not a Beverage.

"They are not a beverage, but a medicine, with a most pure and pleasant taste, and containing no poisonous drugs. They do not tear down an already debilitated system, but build it up. They give more hope, than is more real hop strength, than a barrel of ordinary beer. Every druggist in Rochester sells them, and restores many more lives than any other medicine."—*Rochester Evening Express, on Hop Bitters.*

We are not in the habit of making editorial mention of patent medicines, but in case of Hop Bitters, feel free to do so, because their merits deserve to be known.—*New York Independent.*

Northwestern Christian Advocate, N. Y. Examiner and Chronicle, N. Y. Evangelical Messenger, Cleveland, Ohio.

National Baptist, Philadelphia, Pa. Pilot, Boston, Mass. Christian Standard, Cincinnati, Ohio.

Home Journal, Detroit, Mich. Methodist, Baltimore, Md. Southwestern Christian Advocate, New Orleans, La.

Christian Mirror, Portland, Me. And over a hundred more Religious and Temperance papers.

Pittsford, Mass., Sept. 28th, 1878.
Sir—I have taken Hop Bitters and recommend them to others, as they are very beneficial.

Mrs. J. W. TUTTLE,
See'y Women's Christian Temperance Union.

A MEDICINE, NOT A DRINK

High Authority.
Hop Bitters is not, in any sense, an alcoholic beverage or liquor, and could not be sold, for use, except to persons desirous of obtaining medicinal bitters.

U. S. Com'r Internal Rev.

Washington, D. C., Sept. 4th, 1879.
Dear Sir—Why don't you get a certificate from Col. W. H. W., of Baltimore, showing how he cured himself of drunkenness by the help of Hop Bitters. He is a wonderful cure. He is well known in Rochester, N. Y., by all the drinking people there. He is known in this city, Cincinnati, New Orleans, New York, and in fact, all over the country, as he has spent thousands of dollars for rum. I honestly believe his cure would be worth thousands of dollars to you in this city and Baltimore alone, and make thousands of sober men by inducing the use of your Bitters.

J. A. W.

Prejudice Kills.

"Eleven years our daughter suffered on a bed of misery under the care of some of the best physicians in the city, who gave her various names, but no relief, and now she is restored to her good health by the use of Hop Bitters. We are in good health by the use of Hop Bitters. We earnestly hope and pray that no one else will let their sick suffer as we have suffered, but that they will get a good medicine as Hop Bitters."

"The Parents—Good Templars."

Atlanta, Del., Feb. 10th, 1880.
Having used Hop Bitters, the total remedy for debility, nervousness, indigestion, etc., I have no hesitancy in saying that it is one of the best and most valuable medicines I have used, and I would recommend it to any one as a truly tonic medicine.

Rev. J. H. ELLGOOD.

I decided to insert your advertisement of Hop Bitters last year, because I then thought they might not be promotive of the cause of Temperance, but that they are, and a

happily myself and my wife have been greatly benefited by them, and I take great pleasure in making them known.

Rev. JOHN SEAMAN,
Editor *Home Sentinel*, Atton, N. Y.

Cricket Goods.

Alfred Shaw & Arthur Shrewsbury

(Members of the Anglo-American Team and All-England Eleven).

HAVE pleasure in informing their American friends that they have opened the Midland Cricket, Lawn Tennis, Football and General Athletic Sports Warehouse.

CARRINGTON STREET BRIDGE, NOTTINGHAM, ENGLAND.

The most unique and comprehensive establishment of its kind in England. Their stock comprises well-seasoned Cricket Bats, Balls, Shoes, Leg Guards, Stumps, Bags, Lawn Tennis Sets, Rackets, Footballs, Jerseys, Shirts, silk or woolen (as worn by the team in America), and every article in great variety suitable to athletes. S. & S. being members of the late American Team, know the requirements of their trans-Atlantic friends, and if favored with an order may be relied upon to send goods of first-class quality only. Clubs, colleges and schools provided with professional bowlers. First class men, personally known to S. & S., well bred and of high character, only sent out. HAMMERLESS GUN.

PRICES:

\$80; \$100; \$125 and \$150.

Guns, Ammunition, Etc.

The "STANDARD TARGET"—For Rifle Practice. Size 6 inches. Bulls-eye 1 1/2 inches. Range, 100 feet, off-hand. The zones rise by area instead of by height.

Marksmen will appreciate the new departure which this target has inaugurated. The accurate rifleman now gets the true value of his shots, while on old-style targets the record was so tainted by the element of chance as to give but a vague idea of the shooter's skill. For instance, on a 200 yard Creedmoor a "center," scoring 4 has ten times the area of a "bull," scoring 1. Every rifleman who would scatter his shots all over the board center, blunder one shot into the edge of the bull, and win! Now in deer stalking, and shooting at 80 yards, the winner would have wounded and lost one deer, while the loser would have struck down eight, all shot through the heart. Of course the loser of the deer would contend that under the old method "all had an equal chance," which is very true. But it is also true that their equality of chance would have been in no wise impaired if they should have sat down and thrown dice to determine who was the better shot. In contests of skill every element of chance should be eliminated.

Arrangements have been made for supplying these targets at a nominal price, and it is now an easy matter to gauge relative skill by uniform practice, and to communicate definite results without obscuring them by explanatory details. The targets are mailed, post-paid to any address in the United States at fifty cents per hundred, and quite a liberal discount is made to galleries and dealers. Send orders to **W. C. USMAN, MAY & SHEPARD, Glen Allen, Virginia.**

Eaton's Rust Preventer.

FOR GUNS, CUTLERY, AND SURGICAL INSTRUMENTS. Safe to handle, WILL NOT RUST, and will keep in any climate. Sportsmen everywhere in the United States pronounce it the best gun oil in the market. Judge Holmes, of Bay City, Mich., writes: "It is the best preparation I have found in thirty-four years of active and frequent use of guns."

The trade supplied by sole manufacturer, **GEO. B. EATON**, 509 Fayette Avenue, Jersey City Heights, N. J. Sold by principal New York dealers, and by Wm. Read & Sons, Boston, Mass.; B. Kirtland & Co., Cincinnati, O.; E. B. Eaton, Chicago, Ill.; Brown & Hilder, St. Louis, Mo.; The W. W. Fair, Cincinnati, O.; Trimble & Knecht, Baltimore, Md.; Cropley & Sons, Georgetown, D. C.; Jos. C. Grubb & Co., Philadelphia.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING AND BLAST-
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1825, have maintained their reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.

No. 1 (coarse) to 4 (fine), unequaled in strength, cleanliness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING.

No. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S RIFLE RIFLE.

A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING."

FG and FFG. The FG for long range rifle shooting, the FFG and FFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and ELASTIC POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.
N. E.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
No. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square casks of one pound only.

Hazard's "American Sporting."

No. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland game shooting. Well adapted to shot gun.

Hazard's "Duck Shooting."

No. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting. It ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting and the "Sea Shooting" FG is the standard FG Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

Shot Gun and Rifle Powders Revolutionized.

DITTMAR POWDER.

Champion Shot Gun and Rifle

POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

My Fishing on the Nepigon.

CHICAGO LAWYERS IN THE BRITISH WILDERNESS.

NO. II.

WE are becoming sated with trout fishing. When we can capture a three or four-pound trout as surely as a boy can take a six-ounce perch from the Government Breakwater, and quietly drop back into the water fish which would constitute the *piece de resistance* on the choicest table in Chicago, we plan greater variety for our sport. Bonfield and myself did not give up the sport until Tuesday afternoon, fishing from a point of rocks just below the camp, in the edge of the whirl of water from the rapids opposite. Standing on the farthest rock, we could easily see the trout in six or eight feet of water in front of us, and after the first few had been caught, we established the rule that the one who stood on the point should, as soon as he struck a fish, tow it up into the stiller water, and give the place on the point to the other, who, in turn, stepped back when he had hooked his fish. Each used the landing net for the other's fish, and thus the fun proceeded in regular rotation. Occasionally both would have a fish at the same time, which made some confusion. They ordinarily weighed from two to three pounds, a few overrunning the latter figure, and some falling below the former. As we already had in camp all the fish we could eat, we handled each new captive gently, carefully weighed him, and dropped him quietly into the water again, watching him strike out for the lowest rocks. But these trout did not seem to understand their favored position; that they were not to be thrown in a heap on the shore, nor handed over to the ravenous Indian, but were being caught strictly in the interest of science, that we might obtain the fair average weight of the fish in this stream. Several times I attempted to explain to some poor, deluded trout, who was struggling manfully with adversity at the end of a line, that we meant him no harm, and if he would come up quietly and like a gentleman, and be weighed, he would be allowed forthwith to depart in peace. But these explanations never seemed to give satisfaction, and the game creatures fought for liberty as determinedly as though fearing their destination was the frying-pan. Like the victims in De Quincey's "Murder Considered as One of the Fine Arts," they really had the temerity to object to their proposed fate.

TROUT CORRALS.

We have things better arranged now. We have established three corrals; one at the camp, and one on each of the fishing points below. By moving a few rocks at the edge of the water, and building a semi-circular breakwater outside, we have a pond several feet in diameter, and twelve or fifteen inches deep, through which the cold river water runs as fresh and pure as in the main current; and there our happy family lie as quietly and peacefully as their ardent natures will permit. We have about thirty dammed no; and unless some party should come by who are short of trout and will promise to use and not waste them, we shall, on breaking camp, open the rocky barriers, and enjoy the sight of the vanishing tails taking an unceremonious departure. The Indians take turns with us in going down to the camp corral to watch and play with these temporary captives. Some of these are already quite tame, and make no objection to being quietly stroked and petted, though at any sudden motion the whole party unite in making the water boil with their frantic struggles, while the surface is cut with their high dorsal fins. We are all becoming adepts in the science of

FISH PATHOLOGY.

for when one of them is so unfortunate as to be caught at a considerable distance from the corral, he does not seem to relish the necessary aerial transportation, and on his arrival does not immediately display his customary high spirits. The science of pathology requires that he should then be gently held by the hand in his natural position, or with his mouth toward the entering stream of water. If he does not then appear to revive rapidly enough, a few mild shakes in the water will assist him, and, unless he is like Cassio, "past all surgery," he will begin to show his appreciation of your efforts by the movements of his mouth and fins. Last evening High and Pratt brought in five handsome fish in a comatose condition, all of which lay on their sides without making any more of an effort than could have been expected of the late respected Mrs. Donbey. The proper manipulation, however, began to have its effect at once; as soon as they were turned upright, they began to move, and in a few moments all but one were swimming about handsomely. That one, a four-pounder, seemed almost human in his desire for life. After having been once placed with his back up, he used every endeavor to remain so, and, whenever he fell over on to his side, he would look up and turn his head toward me in a sort of mute appeal to be righted; and when assisted, he held his own as long as possible; and on feeling himself sinking again on to his side, he would make a desperate effort to regain his true fishy position. And so all the evening he hovered between life and death. But his wound proved like Mercutio's, and in the morning we found him lying like a dead fish. I set only jump clean him bare, and also to individualize the trout, and so recognize them accordingly. They are as different as the sheep in a flock, every one of whom the shepherd can distinguish. One has a long, slender head; another, a peculiar coloring to the fins; a third has his dorsal fin tipped with white; a fourth, a peculiarly brilliant red belly; a fifth, the markings on his back so clear and fine that they seem almost continuous; and one of our Indians, though small, has zigzag stripes broader than others of three times his weight.

LANDING TROUT.

If I were to say that these trout were game I would be saying simply what every one knows to be true of all trout. The correct statement is that these show more vigor and determination after a few moments than when first hooked. The acquaintance with an eight-ounce rod seems to develop a wonderful amount of latent energy, and I have had a three-pounder make a run of over fifty feet after playing him for half an hour, and then repeat the same process a few moments later. The smaller trout on the Brule and many other streams do not only jump clean out of water in striking the hook, but afterwards do the same and shake themselves in the air after the manner of black bass, in hope to get the hook out of their mouths. These larger fish, however, seldom rise clear of the water in striking, and the heavier ones frequently do not show a single fin; and as they choose the rougher water the first evidence of his size is the rapid running of the line from the reel, and the quick proof of his persistence in striking, and the bottom and refuses to display his proportions. In the pool at the foot of the Falls yesterday one good fish threw himself clean out of water six times, each time shaking himself in mid-air vigorously, but in vain; but as a rule not one fish in ten will come near the surface for a light rod until really tired. For an Indian's rod, however, the case is different. As we were having some fine sport a few miles below one of our Indians seemed anxious to participate, and fastening about ten feet of stout line to the end of a setting pole he baited with a piece of bacon, and at the first bite a three-pound trout went sailing through the air in a manner as laughable to us as it must have been surprising to the trout.

Let some doubting Thomas, accustomed to the little hooks and diminutive trout of the Alleghenies, may sus-

pect that these three, four and five pounders belong to some different species and are not the genuine brook trout, I will add that it is a well-established and undoubted fact among all experienced men familiar with these Nepigon fish, that they are precisely the same as the trout of New England and the Adirondacks—the genuine *Salvelinus fontinalis* of the naturalist.

LAKE NEPIGON.

Yesterday we organized an expedition to Lake Nepigon, which lies beyond the domain of whoever does not chance to have the eye of the tourist or the artist. The fisherman's paradise ends at these Victoria Falls. A fairer paradise lies beyond, and a touch of its beauty seemed even to fall upon the unromantic Indian. Bonfield, King and myself, in our character of excursionists, bid farewell to High and Pratt, who had assumed the literary character—so far at least as one of Trollope's novels and a magazine would admit—and started northward. If these Falls are to be considered as the gateways of the paradise on either side, they are deserving of mention as such, and also for their intrinsic beauty. The broad expanse of Lake Nepigon is suddenly contracted through a wedge of islands and shot over a ledge of rocks between two points not two hundred feet apart. The dark purple cast, which I do not remember to have seen in other waters, forms a striking contrast with the dazzling silver whiteness of the spray into which all seems to be converted, and one ever-opening, ever-closing gulf of foam seems yawning for more water to grind upon its lowest rocks and throw up in silver drops for the rainbow, which spans the horizon above the seething torrent. Below all is turmoil; above all is peace.

Below the fierce current boils and rages through the narrow channel and around the wide rock-bound pool, from which it escapes only to form two lesser rapids just below. Above are islands, widening shores, the unruined surface of the lake and perfect solitude. For two miles our canoe glided between islands, gradually opening wider views and revealing more distant capes and peaks, until on rounding a little point the fair lake opened before us—not one vast unbroken expanse like Michigan, but showing at one point only her waters meeting the sky, leaving a hundred islands equal honor in the beauty of the scene. Right in the center of our line of furthest view rose an island ship. Her solitary pine tree stood as the towering mainmast, with sails spread to the breeze. Two smaller birches furnished other masts, yards and sails, while the bare body of the rock rose just high enough to complete a well-proportioned vessel. Nature could furnish no better one, and man has not yet built upon these waters any other to dispute her supremacy.

After the first burst of enthusiasm we lay enchanted with the scene. Before us the open lake; to our right the main land, gradually receding and rising to the height of several hundred feet; to our left a forest of tall, thin trees small, as natural in this high latitude. But upon one range of hills, at least five miles away, one great tree rose majestic against the sky, as though to re-assert the dignity of richer soil and more southern climes. At our left island succeeded island, until in the distance they seemed a mainland, though our guides told us that the furthest land we could see was island and island.

Slowly we paddled out toward the island ship. It was a rock-anchored and rock-encircled, as though to laugh to scorn a thousand Atlantic storms; and three massive stones showed that her prow was pointed toward the north to meet and brave the roughest winds sweeping from the Pole. The rock ship was all massive trap, and the treasure which she seemed to bear was one great granite boulder, worn round and smelt in ages ago in its perilsous journey with the icebergs, perhaps down from the Arctic zone, and now rejoicing in its haven of refuge on the safest spot in this rock-ribbed island.

Our Indians at once turned their attention to a pair of loons swimming opposite another island half a mile to our right, and borrowing Bonfield's gun one of them hid behind the rocks at the point, and the other commenced calling them up by imitating their well-known cry. The loons answered and commenced swimming toward us, and in ten minutes were within a hundred yards of the gunner; but they wisely declined to come nearer and soon sailed away, still uttering their plaintive canonic cry.

VIEW OF THE LAKE.

To the right of the entrance to the lake rose a sugar-loaf hill, evidently commanding a good view of the surrounding country. From a series of observations we convinced ourselves that it was less than a mile from the water, while on the lake side it displayed a rocky bluff, which told us that in ascending it we should not be treated as other ambitious tourists have been who have climbed high hills only to find them so thickly wooded on summit as well as side, as to furnish no point for a view. Drawing up the canoe on a gravelly beach—a rare thing here—we started inward and upward sometimes through rough woods and tangled underbrush, sometimes sinking ankle deep in the yielding moss.

The first view over the lake was exquisite; the second was rapturous admiration. Our party gathered

on the topmost cliff and gazed in unbounded wonder and delight. We stood probably six hundred feet above the water and in the clear atmosphere overlooked the whole lower end of the lake; the islands which had been united to our eyes before, now stood each in its separate setting of water, blue and beautiful as the ocean itself. The seventeen which lay at our feet were grouped in perfect harmony, and though many new ones had arisen in the west, beyond which there seemed to be a ridge of hills making the shores, our guide William, brought up on the lake, still told us that these were other islands and that the lake extended far beyond. In some places the water, sheltered from the lightest breeze, reflected the island shores as from a mirror of burnished steel, and carried the clouds suspended in its liquid depths, and slowly moving in glorious procession. In some places clear as crystal, in others with a waving rippling appearance as though the ice-king had surprised a summer breeze upon its surface; and again there were those broken lines and narrow angular crevices peculiar to a sheet of ice newly broken in the upheaving spring, and shining lines of water at the cracks. To the north the noble lake still refused to disclose to our searching gaze any boundary save the sky to her horizon. To the south stretched the unbroken wilderness, except at a single point where the river stole out from behind a range of hills, soon losing herself again in the forest. The sky was worthy of Italy, with the add d inspiration of its northern character. To add to the impressiveness of the scene, we knew that every shore washed by these waters was still as designed by nature; that no woodman's axe had ever resounded in these forests; that no electric whistle had ever broken their solitude; that no path leads through them, except the trail of the Hudson Bay Company and the Indian; that no keel has ever plowed through these waters; and no sail held by a white man has ever been unfurled upon their waves. Finding on our standing place no evidence of previous visitations, King suggested that it should be named; and as the event, which to us had been a pleasant and boundless enthusiasm entitled him to the honor. So "King's Peak" it was named, and one of Bonfield's empty cartridges in the center of a mound of stones contains the record of its christening. Each of the party standing with a boulder at his feet, at the edge of the rock, rolled it over the cliff, at the signal given, after the manner of the Titans of old on Mount Olympus, and all gave three cheers for the place. The commander of ceremonies then commanded that silence should be observed until the last echoes had died away, and fired a salvo of Bonfield's artillery toward the north. Each island took up the sound, and every shore repeated the reverberation, until rolling along the shore of the Nepigon it died away in the distance.

Since sighting Thunder Cape, towering majestically nearly 1,400 feet of solid rock above Lake Superior we have been constantly reminded of the rough volcanic origin which geology ascribes to these regions, and so long as we remained on the lake, the islands, however wooded, showed along every shore a narrow strip of trap, the armament of the forest against the waves when lashed by the storm. But gazing from this peak the fringe of rocks had apparently withdrawn into the forest or sunk beneath the quiet water, and all was harmony, confidence and peace. The grandeur of our vision was not a broken outline or a rough shore, save at one island headland, far in the distance, which rose boldly from the water, and showed a part of its side rough and bare as though unwilling that the rigors of this latitude should be wholly forgotten even under the bewitching influences of a perfect summer's day.

One essential part of the ceremony was lacking still. Blue fannel having usurped so large a place in our apparel we could not produce the white flag which it should be planted, as a memorial, on the spot, and it would be presumption in foreigners to plant a colored flag within Her Majesty's Dominions; so we were preparing sadly to return, when a movement of one of our guides attracted our attention, and William having, in this moment of inspiration, torn out part of the lining of his coat, and Baptiste producing a pole, we planted the appropriate flag at its best. Beyond doubt, Frederick I. should travel as widely over other continents as over our own. I never expect to gaze upon another scene which will more ardently call upon the sentiment of love for the beautiful, than this day vision of looking northward over the pure waters of the Nepigon, untouched by commerce and undisturbed by man.

JOSIAH H. BISSELL.

Victoria Falls, Head of Nepigon River, Aug. 28th, 1879.
[To be concluded.]

THE ROUTE TO GRAND FALLS.

HALIFAX, Nova Scotia, May 13th.
WITH all deference to "Salmo Fontinalis" and his very excellent letter in *Forest and Stream* for May 6th, which I eagerly read, I beg to offer a few supplementary remarks about what he has probably inadvertently omitted. I went over the route planned by him in the autumn of '77, and would suggest to those who intend taking his good advice to leave their visit until late in September or early in October, when the scenery on St. John River is at its best. Beyond doubt, Frederick I. should travel as widely over other continents as over our own. I never expect to gaze upon another scene which will more ardently call upon the sentiment of love for the beautiful, than this day vision of looking northward over the pure waters of the Nepigon, untouched by commerce and undisturbed by man.

The beautiful little settlements are the gems of the scenery as the steamer shortens the eighty-four miles to Fredericton. No time is lost in exfoliating freight cars, the smaller stations; a skillfully managed boat comes alongside, while the steamer keeps on her course; a small ladder is let down on either side by which passengers, etc., are transferred and they part. I wondered how those poor little villages struggled under the unpronounceable Indian names that I saw printed on the mail-

bags; but the syllables harmonize so nicely that after having heard them called out I thought pronunciation the easiest part of them.

If the traveler is not a very enthusiastic sportsman he can enjoy some 'good grouse shooting in the immediate vicinity of Fredericton. To be sure "Salmo Fontinalis" must have noticed the quaint old ferry boats between Fredericton and the Nashwan. I imagine they are after the style of the very ancient New Yorkers; they run well ashore at one end and have a pole stuck in the mud to oppose the current at the other. From this up your correspondent's description is better than anything I could attempt. My visit was slightly varied by driving about fifteen miles in consequence of the railway being unfinished; otherwise I enjoyed all the pleasures which he has experienced.

SPRING NOTES FROM MINNEAPOLIS, MINN.

April, 1890.

April 1st.—32°, 48°, 41°. Melted but little during the day. New arrivals noted were killdeer plovers, loggerhead shrike, herring gull, golden-winged woodpeckers and a Wilson snipe. Found first the shore lark's (*Eremophila alpestris*) nest to-day. It was on a sandy ridge in the prairie, and contained four eggs, which were fresh. It must have been built about March 20th or 27th, immediately upon the disappearance of the snow of the 23th. Many ducks flying.

April 2d.—33°, 48°, 37°. Saw a sharp-shinned hawk and striped sparrowhawk (*Spermophilus tridecemlineatus*). The "gopher" had just opened his hole, and was airing himself at the entrance after his long winter sleep. Song sparrows have become numerous. Some poplar and willow catkins are bursting their covering.

April 3d.—30°, 51°, 40°. Rusty blackbirds. Gadwall ducks. A small flock of Northern waxwings (*A. garrulus*) has been about the yard all day, the attraction being a quantity of rotten apples that I placed as a bait for them. They are very fond of this kind of food, and will regularly frequent a place where it is to be obtained. The flock would alight on the ground, and feed eagerly and rapidly, until each bird was full, fairly to the mouth, when they would ascend by easy stages to the top of an oak tree standing close by. Here a brief period was spent in cleaning and arranging their plumage, and in quiet repose, while the food they had eaten digested with astonishing rapidity. Soon they would begin to bestir themselves again, and drop one by one onto the ground to again gorge themselves, and then re-ascend to the tree-top as before. This was continued all day with but little interruption. A shot or any sudden noise would scare them off only for a short time, when they would return apparently as hungry as ever. The soft, unsubstantial character of the food, and consequent rapid digestion, is probably the explanation of the gluttony displayed, though the waxwings are in general very hearty eaters, let the food be what it may. An attempt at feeding them on orange failed; they would not touch it.

April 4th.—34°, 45°, 34°. A cold, windy day. A second shore lark's nest, containing three eggs slightly incubated. Contrary to the usual custom, the female in this instance showed much anxiety for the safety of her nest, keeping close at hand and going into the nest whenever opportunity offered. The coldness of the day may have had some influence. The waxwings remained about until they had eaten all the apples.

April 5th.—31°, 40°. A cold day, with light flurries of snow. Visited a small lake near the city in which the fish have died from some cause unknown. Hundreds upon hundreds of dead fish of eight species, together with many frogs, lay all around the shore or floated in the water. Some of them were of large size; pickered three feet long, black bass eighteen inches in length, and suckers two feet or more. They had been dead some time, as was evident from their appearance; but as they were in various stages of decomposition it was evident they did not all die at the same time. The lake is of small dimensions, lies in a meadow, and is rather shallow around the edges, but deepens abruptly and is said to be forty feet deep in the middle. It is fed by springs, and has a small outlet, which, however, is often dry of late years. The water is always clear as crystal, and stagnation can hardly be advanced as an explanation. Whatever the cause, it must have been something very vital to kill not only all the fish indiscriminately, but even frogs and turtles. The dead fish consisted of the following species, named about in the order of their abundance: Sunfish (*Eupomotis aureus*), common sucker (*Catostomus commersoni*), yellow perch, golden shiner (*Notemisthus chrysops*), black bass (*M. pallidus*), catfish (*Ameiurus vulgaris*), pickered (*E. lucius*), and dogfish (*A. calva*). If anyone who may read this can, from such brief data, offer any explanation of such wholesale destruction of the inhabitants of a lake, it will be received with interest by many persons here.

April 6th.—31°, 28°, 37°.

April 7th.—24°, 40°, 27°. Saw a flock of fifteen or

eighteen evening grosbeaks on Nicolet Island, a locality near the heart of the city where these birds are accustomed to appear. These are the first that I have seen this winter, though several were reported at different times during March.

April 8th.—38°, 51°, 43°. A winter wren, a bittern and two loons. Heard the frogs croaking for the first time. Fox-colored sparrows have become numerous.

April 9th.—48°, 74, 55°. Alder (*Alnus incana*) in bloom and pollen ripe. Some slight signs of starting vegetation in the woods, but the ground, in most places, still frozen hard.

April 10th.—32°, 42°, 31°. A purple martin. Ice about all out of the larger lakes.

April 11th.—32°, 45°, 33°. Soft maples in bloom. Spent some time watching evening grosbeaks on Nicolet Island. Their principal food at present is the last year's seed of the sugar maple. The island is timbered in part with maple trees, and on the ground are quantities of the keys, which are now swelling and beginning to sprout. These the grosbeaks seek for, and, taking out the kernel, remove the dry, brown covering, and have a fresh green morsel, which they seem greatly to relish. They are also very fond of the keys of the box-elder, and during winter, when the snow is on the ground, make this a regular article of diet, for as the seeds remain hanging on the trees in bunches, they are easily obtained. With the sharp, overlapping edges of their powerful beak they clip the dry keys in two as neatly as it could be done with a pair of scissors, and then with the same instrument, clumsy looking as it is, manipulate the parts and remove the small, slender kernel.

April 12th.—40°, 70°, 51°.—The first yellow-rump warbler and a grass finch. Saw the Bohemian waxwings. A trumpeter swan was shot to-day on the Minnesota River, about ten miles from Minneapolis, by Mr. G. Van Ess.

The first pasque flowers (*Anemone patens*, var. *Nuttalliana*) in blossom.

April 13th.—53°, 74°, 43°. Several martins.

April 14th.—51°, 64°, 31°. Wind blew very heavy all day, hot and exhausting in the morning, the thermometer reaching 77°; then turned cooler, and by evening was freezing. Red-headed duck shot. Saw many yellow-rumps, ruby-crowned wrens, white-bellied swallows and the evening grosbeaks and Bohemian waxwings on Nicolet Island. (The waxwings left us about this date, as this was the last time they were seen.)

April 15th.—28°, 50°, 38°.

April 16th.—38°, 60°, 45°.

April 17th.—48°, 68°, 52°.

April 18th.—46°, 72°, 64°.

April 19th.—33°, 38°, 37°. Snow.

April 20th.—40°, 60°, 48°. Ground white with snow that fell last night. Two unfinished loggerhead shrikes' nests. Meadow larks paired. Early crowfoot (*Ranunculus rhomboides*) in bloom.

April 21st.—54°, 78°, 45°. White-throated sparrows. A phoebe bird's nest containing one egg. Bank swallows in great numbers excavating their holes. A small flock of Lapland longspurs. Liver-leaf (*Hepatica acutiloba*), bloodroot (*Sanguinaria canadensis*) and *Isopogon bifloratus* in bloom. Ground plum (*Astragalus glycyphyllos*) in bud.

April 22d.—43°, 60°, 48°.

April 23d.—44°, 52°, 47°.

April 24th.—30°, 45°, 43°. Large number of Wilson's snipe.

April 25th.—43°, 50°, 39°. Bonaparte's gulls. A crow blackbird building its nest behind a water pipe under the eaves of a house located in the central part of the city. Two bluejays' nests, one with one egg. English sparrow nesting about City Hall. These sparrows are increasing quite rapidly here, and will without doubt become a great nuisance before many years.

April 26th.—39°, 45°, 42°. *Geums triflorum* and *Antennaria plantaginifolia* in bloom.

April 27th.—41°, 64°, 50°. Brown thrushes.

April 28th.—50°, 64°, 44°. A chipping sparrow. A golden-winged woodpecker nesting. A bluejay's nest containing three eggs.

Dutchman's breeches (*Dicentra Cucullaria*) and small-flowered crowfoot (*Ranunculus abortivus*) in bloom. Dog's-tooth violet (*Erythronium albidum*) in a very favorable spot nearly in bloom.

April 29th.—39°, 51°, 41°. A few flakes of snow in the afternoon. Box elders and cotton-woods in full bloom.

April 30th.—40°, 60°, 52°. Ice nearly a fourth of an inch thick formed last night. Black-throated green warbler, yellow red-poll warblers and yellow-headed blackbirds noted.

THOS. S. ROBERTS.

BATS AND BEDBUGS.—Conway Farm, Spotsylvania County, Virginia, May 12th.—"W. P. M." of Boston, Mass., in your issue of 6th instant, supposes that the swallows repair to basswood forests and become infested with bedbugs, etc. Then he goes on to say that the basswood trees in Iowa were often infested by them. An Indian cured a cancer by tying his patient and burning out the fungi—declaring after the operation that anyone can cure a burn. I propose to shift the clinch from the swallow to the common leather-wing bat. "W. P. M." may kill one of these animals when he chooses, and he will be very apt to find it covered with these vermin.

When I was a lad in Virginia thousands of bats used to make the roof and upper room, or "debtor's prison," their roosting places, and the prisoners were fairly covered with chinchies. I have observed in Texas that the leather-wing bat frequently hung in shady forests upon trees in long festoons, and also upon fences which were sequestered. When this is the case the bedding will ever be found under the bark, and in the interstices of both trees and rails. In 1867 the writer built him a residence, and the leather-wings took possession before he did. Bats roosted in one or two of the rooms, and when the house was occupied by the writer and his family, there was unceasing warfare upon the rest-breakers for nearly two years before we were the victors. "W. P. M." may rest assured that the "barn," "hasswood forests," "a house," etc., of which he writes, were first infested by being the resort of the leather-wing bats. I reason this way. It is well known that bats are never covered with these pests, and, so far as I know, swallows are not; therefore, it is reasonable to infer, the places where the swallows build their home had been the dwelling place of the bat. It seems to me just possible that the bats got the chinchies from dwellings, to which they are at once attracted by lights, and then they breed upon them, and feed to their heart's content, so far as I know, unmolested upon the countless numbers which flock together.

R. M. CONWAY.

WHEN BEARS BRING FORTH.—Nashville, May 12th.—For some time passed I have noticed a number of articles in the FOREST AND STREAM upon the subject as to what season of the year bears give birth to their young. Perhaps one or two facts on the subject may throw the desired light. Five or six years ago Viscount Parker returned to New York from Florida during the month of May; he brought with him a cub which could not have been more than two months old. This would fix March as the month he was born in, but in Mississippi the fall of the year is when cubs are commonly offered for sale; and the first bear I ever killed was one I should judge was about six months old, that had been captured by my father's huntsman, but was found too old to tame. He broke the chain by which he had been attached, and finding it impossible to induce him to descend from a high tree in our yard, which he had climbed, it was decided that I should have the honor of shooting him. My impression is that there is no regular month for their bringing forth in our Southern country. It was in November when the above occurred. J. D. H.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FOR THE WEEK ENDING MAY 26th.—1 chain snake (*Ophiobolus ophioides*), 2 king snakes (*Ophiobolus ophioides*), 1 brown thrush (*Turdus migratorius*), 2 horned larks (*P. montana*), 1 alligator (*Alligator mississippiensis*), 1 snapper terrapin (*Chelydra serpentina*). All presented. 2 Gillespie's hair seals (*Zalophus elatipes*), 1 Rocky Mountain sheep (*Ovis montana*), 4 howling monkeys (*Myiodes palmarum*), 1 black-headed spider-monkey (*Ateles melanochir*). All purchased. 1 Virginia deer (*Cervus virginianus*) and 1 llama (*Lama peruviana*). Born in the garden.

Fish Culture.

Address all communications to "Forest and Stream Publishing Company, New York."

(From a Staff Correspondent.)

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

NO. III.—FISHING TACKLE.

THE show of fish tackle used in angling is confined entirely to three countries—Germany, England and the United States—the others neither making nor using it to any great extent. In the collection of German rods, the angler can detect many of English and American make, usually of the lower priced kinds, cheap rods, machine made, and well adapted to the wants of the juvenile angler, or of those of more mature years, who would like to own a jointed rod which is not too expensive, and are not at all critical as to taper, weight, direction of grain, distribution of strain, and the other qualities which the finished angler requires to be contained in a fly-rod. Within the past ten years angling, as an art, has been most assiduously cultivated by a few enthusiasts in Germany, until upon the dark ground of a map of the Empire a few white spots could be made, each showing a center from which the light of angling science is diffused for a short distance, and then is absorbed in the darkness of that piscatory night which envelopes many rural districts in America where the popular idea of angling is to obtain the greatest number of fish in the least possible time. The German has never, until within the time named, looked at angling save as a means of getting fish; but, thanks to the enthusiastic fishers which have sprung up within a few years, there are quite a number of good anglers now in the country, and their numbers must increase. From this it will be seen that the best tackle is not in general use here, the demand for it being so limited that it is entirely supplied from foreign sources. Some light rods of native manufacture are shown which have an spike in the butt, which can be inserted in a bank or log, so that the flies may fish away while the angler seeks other recreation, and a novelty is a bell attached to a light bait-rod, which strikes an alarm when the bait was disturbed, and so arouses the attention, should it chance to be fixed upon some other object—a capital thing for boys who fish off New York wharves and sleep in the sun between bites.

THE AMERICAN EXHIBIT.

The American Exhibit is the most complete in all articles pertaining to fishing with a hook and line, the fine

collection of the National Museum serving to illustrate the gradual development of this mode of fishing, and contains a series of articles ranging from the wooden hooks of the savage to the bent and glued bamboo rod of the dainty angler of to-day. In the room devoted to the display of these articles, it is interesting to observe how the implements of the savage man have, by contact with his civilized brother, gradually approached the form approved by the latter as far as the materials of which they are made will allow. Thus, from the northeast coast of America there are hooks of wood, of bone, and of both materials combined in one; but the wooden ones are of necessity the largest and most clumsy, although when bent from one piece they are lighter than seems consistent with the strength required to capture the large fishes which the Esquimaux usually seeks, and the same may be said of the implements from Alaska and the northwest coast down to California. Often the wooden hooks are of two pieces, joined at the bottom in a V-shaped arrangement, bound with some vegetable fiber, but the combination of bone and wood affords the best chance for the addition of a barb or beard, which is utilized in a manner which is quite effective; but wherever the iron or steel of the white man has been obtainable, its value over all other material has been quickly appreciated, and the most primitive use of iron for fish hooks is shown in those obtained from the Wallapai Indians, which is a pipe-shaped wooden hook with a nail for a barb, while other tribes have drilled a hole in a flat bone, and inserted a nail or a bit of steel in a sort of barbless hook. Combinations of bone and steel also enter into the heads of harpoons and harpoon-arrows, while some of the Indians of the northwest coast were fortunate enough to own iron enough to make the entire hook, which closely followed the patterns in use by the white fishermen. Even an eel spear is shown made entirely of iron by the natives. The lines which accompany these hooks are of grass, seaweed or kelp, whalebone, and skin of seal or walrus, the latter for the heavy lines used in the capture of large fish and for harpoon lines. A very interesting trawl line of sea-weed and whalebone is shown, and also a serviceable looking grass rope, which is attached to a sealskin buoy, and is evidently a harpoon line.

Not only the angler and the fisherman are interested in comparing the rude machinery of the savage with those of civilized man which are close beside them, and which give a complete history of the improvements in the mode of catching fish by man in his natural state to supply his daily food—man as a trading animal who catches to exchange for money or produce, and man, who having no pressing needs to fill, fishes for his amusement—but it also furnishes a field of study for the ethnologist as well. Following the line of development here shadowed, the next case contains hooks of various sizes and patterns, made by the "American Hook and Needle Company," from that used for fly-tying and minnow catching up to those required for the great halibut, and an enormous hook, with a chain attachment, which might serve as a killock for a light yacht, intended for the largest shark, together with steel wire, illustrating the ten processes through which the material goes before being turned out a perfect fish-hook; bluefish squids of bone and metal, others covered with eel skin or cloth; bluefish drails; pearl minnows for angling, etc., in great variety. Next come the spoons and other spinning baits of Buel, Chapman, James, Mann, and Trowbridge, as well as those abominable inventions known as spring hooks or "scoodolagers," which, like fish poisons, it should be made a felony to use or have in possession.

Among the fishing lines can be seen heavy quarter-inch tarred cotton shroud-laid lines for fishing in twenty-five or more fathoms of water, as well as raw cotton lines, both shroud and hawser-laid; trawl lines; lines of linen for angling; horse-hair lines; braided silk, both raw and waterproof; silk lines with a horse-hair worked in to prevent kinking. In fact, everything adapted to the taking of a fish, from a shark to a trout of four ounces, or even a minnow; "pickler traps" for showing when a bait is struck while fishing through the fog, and silk worm gut of all sizes. In the collection of the National Museum may be found many artificial flies from the stores of Abbey & Imbrie, Conroy, Bisset & Malleson, Bradford & Anthony, as well as a case of those made by the skillful Miss McBride, while the patterns of reels seem to puzzle the uninitiated as to their object and mode of use. The light rubber reel, the perforated nickel reel of Orvis; and celluloid, brass and wooden reels.

DISEASED FISH IN KENTUCKY.—Versailles, Ky., May 10th, 1890.—Professor Spencer P. Baird, U. S. Commissioner Fish and Fisheries.—Dear sir:—Because of the very great interest you have shown in the propagation of fish, I take the liberty to ask of you information that is earnestly desired by this community.

Two years ago a company of gentlemen built a lake one mile from town, which covers thirteen acres of ground; it was well stocked with bass and new light. They increased rapidly, and last season we had splendid sport. For two weeks they have been dying, and as yet we are unable to find the cause of the fatality. I have examined a large number of them, and will tell you as briefly and plainly as I can how they die, and what I have found upon examination. They will swim around with their heads to the surface of the water, then after

jumping up once or twice, they die very quickly. I have found the whole lining membrane of the stomach inflamed, but that of the intestine only in patches similar to inflammation of the intestinal glands of man in typhoid fever. From time to time we have caught bream from the lake, but as none were intentionally put there, we have supposed that there were fifty newlights to one bream. Yet out of about two thousand dead fish, all are bream except about one hundred newlights and twenty bass. This inclines us to believe that the bream are peculiarly susceptible to the disease. The post mortem condition differs so in the two varieties (the newlight and bream) that I will give them separately. In the bream the inflammation is more destructive—in some instances there were perforations of the bowel—the stomach and bowels were always empty. In the newlight the inflammation was not so extensive—the stomach nearly always contained food, and some fecal matter in the bowel. The lake is fed by a large, never-failing spring of pure water.

Any information will place an entire community under obligations to you; therefore I hope to hear from you soon.

J. WARREN STITT, M. D.

P. S.—I failed to state that some suspected poisoning from the fish-berry, but I could find no evidence of this; not even with the microscope.

Professor Baird sends us the above, that its publication in our columns may elicit suggestions as to the cause and remedy of the disease.

OREGON.—The Astorian, of Astoria, Oregon, gives the following interesting account of the work of the United States Fish Commissioners in that State:—

Messrs. Jordan and Gilbert, of the United States Fish Commission, left Astoria Monday morning, by way of Kelama for the Sound. Their movements in Astoria were so quiet that many people were not aware of their presence here. Their business here was to collect statistics and information in regard to fisheries, for use of the census bureau; to collect specimens of every species of fish inhabiting or entering Columbia River, especially of the salmonidae; to ascertain the number of species, and the habits and ranges of each. Of course a work of this magnitude cannot be completed in a few days, or even months, and it is thought that we may see them here occasionally for several years. Their next visit will be sometime in July. They have prepared and sent away several specimens of spring salmon, *Oncorhynchus tshawytscha*, of blue-back *O. hypsigran*; of steel-head *Salmo tshawytscha*; and three species of sturgeon. In regard to the *Salmo tshawytscha* a very curious question is raised. It was first described as a trout by Sir John Richardson, in 1836; and from that time until a few years ago, no specimen had ever been sent to Washington, though hundreds of every other trout had been received, and but for the reputation of the eminent naturalist who described it, its existence would have been doubted. In 1878 Mr. Livingston sent a fine specimen, a foot long, from the Clackamas Stone. Now that Prof. Jordan has examined the steel-head he thinks it probable that it is the *Salmo tshawytscha* of Richardson; and the question is whether it is a sea-going fish, or only an immense river trout. From the class of fishes to which by its structure it belongs, the latter should be the case. The fish known as pike, chub, sucker, etc., is a true chub; allied to the European fish of that name. The commissioners have not succeeded in getting many trout from our streams, as yet; only five from Jim Crow creek were shown them. One was the *Salmo trutta*, or Pacific brook trout; the other four were *Salmo clarki* or Clark's trout, named in honor of the explorer. An idea was left at the Kinney cannery and arrangements made to have several hundred trout preserved for inspection on their return. Readers of the Astorian may remember the description of a particular spotted trout, caught at Oak Point last fall by Mr. Fred Kendall. This was preserved, and proves to be the Pacific red-spotted trout, common on the headwaters of the Columbia, but never seen so low down as Oak Point before. The fish found upon the sand on the beach are new to science, and specimens are very much wanted. Prof. Baird was mistaken in calling it *Heterostichus rostratus*, which is an altogether different fish. The fish reported as shad a year ago, proves to be shad without a doubt.

Sea and River Fishing.

FISH IN SEASON IN MAY.

Trout, <i>Salvelinus fontinalis</i> .	Salmon Trout, <i>Salmo confinis</i> .
Salmon, <i>Salmo salar</i> .	Shad, <i>Alosa</i> .
	Land-locked Salmon, <i>Salmo gairdneri</i> .

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; Means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

Address all communications to "Forest and Stream Publishing Company, New York."

BISBY CLUB.—Mr. H. H. Thompson, of this city, Vice President of the Bisby Club, left this city last week for the club's headquarters, Bisby Park, Moose River Tract, Herkimer County. He was to have been joined at Utica by Messrs. F. W. Snow, of Ramapo, Robert B. and Frank Cable, of Elmira; A. Rockwell, artist, of Buffalo, and Chas. A. Walbradt, of Theresa. We need not wish the party "good luck," for they know how to catch their own fish and how to enjoy their days in the woods.

TROTTERING IN THE CATSKILLS.—New York, May 20th.—We have just returned from a two weeks' trip among the Catskills. Mr. A. Whitney and wife, of Brooklyn, and myself and wife, left Grand Central Depot morning of

May 5th for Shandaken, on the Ulster and Delaware R. R.; fare \$2.90. We stopped at La Men's Hotel; fished the Notch, Pine Hollow, Broad Street Hollow, Fox Hollow, Big Indian, and other streams in that locality; found fish plenty, but very small, and certainly a disgrace for any sportsman to take home. Tired of this location, we took the train and got off at Arkville; hired a team—price \$4—and drove to farm house of Mr. De Silvie, Grant's Mills, Delaware County, fifteen miles from railroad; fished Millbrook in Ulster County, and met with good success. Mr. Whitney and myself are sportsmen to the backbone, and will walk with any one thirty miles if necessary to catch two good sized trout, but when you come to small ones we will always put them back, and if every sportsman and one lover of trout would do the same we would have better fishing in a short time. We fished Millbrook four days, catching only enough to supply our table. The last day Mr. Whitney and myself caught one hundred and sixty and brought most of them home, and they were beauties, all good size. Boy-like, coming down on the railroad we had to open our basket to look at them, and they were admired by more than one passenger. We were very pleased with our trip, and I can say to our friends that there are good sized trout left yet, if you go in the right direction. Law is not up in Delaware County until June 1st or 10th. H. C. W.

VIRGINIA.—Mt. Airy, N. C., May 15th.—Our "little" party, tired of the "Sunny South," went to the mountains of Patrick County, Va., a few days ago on a trouting, for a little recreation. The waters of the Dan are good right now. We hooked upward of three hundred in two days; also, with our guns bagged three large wild turkeys, two gophers and one hen, besides pheasants, squirrels, rabbits, partridges, robins, doves, snakes, etc. The snakes were shot on our hunt in the mountains, rattlesnakes, adders, and black snakes. We seldom kill a black snake, unless he gets saucy. In our party was a deaf mute, one of the Siamese Twins' sons, Bunker. He enjoyed the trip hugely—full of life and fun. T. M. B.

BASS IN TEXAS.—Waxahachie, Texas, May 17th.—I have before me your issue of May 6th, in which appears a communication from Willis, Texas, over the signature "C. L. J.," in which the writer describes his preparations for a campaign against the black bass. I am afraid, however, that if the gentleman confines his piscatorial pursuits to the killing of black bass in Texas, he will, in the language of the poet, "get left." I have fished all the principal rivers and best fishing grounds in the State, and killed every variety of fish known to exist in Texas fresh waters, but have never yet met with the black bass. What is known as the black bass here is rock bass proper, called in the northern States variously rock bass, striped bass, river bass, etc., according to the locality, and universally known as trout among natives of the Southern States. If "C. L. J." will carefully examine the basses of "Cin and Kan," he will find there such a variety of fish in regard to black bass and rock bass as will forever settle in his own mind which of the two varieties abound in Texas waters; and he will never again be guilty of mistaking our gamy and toothsome favorite for the unwieldy but voracious black bass. Perhaps "C. L. J." will kindly furnish the readers of FOREST AND STREAM with an account of the first or opening battle of his campaign. I, for one, shall look with great interest for a record of his success with flies in capturing "Texas trout." C. S. W.

THE RICHARDSON-RANGELEY LAKES.—The travel to this celebrated lake region has already commenced, and quite a large number of people are scattered about between Errol Dam, Umbagog Lake, and the Upper Dam, on the Richardson Lakes. At present writing the fishing on the Magalloway and Diamond rivers is first rate, and large strings are also being taken at Middle Dam, Upper Dam, head of the Upper Pond, Lake, Beaver Ponds, Richardson Ponds, and Mill Brook.

The two most direct routes, by Bryant's Pond and Andover, and by Bethel and Upton, seem to be the favorites at present, and most of the people who are visiting the lakes this spring go by one or the other. Later in the season, however, the "Dixville Notch Route" must become the favorite on account of the wonderful scenery along its way.

An unusually large number of round trip excursion tickets have been issued by the different railroads this spring, and tourists and sportsmen cannot complain for lack of diversity in routes. Some go in by Bryant's Pond and Andover, and back the same way, and others back by way of Upton and Bethel. The Dixville Notch tickets read various ways; some to North Stratford and Colebrook, by way of the Grand Trunk Railway, others by way of the Boston, Concord and Montreal Railroad. From Colebrook you go down through Dixville Notch to Errol Dam, where connection is made with the elegant little steamer *Parnachenee*, a new boat, built this spring, expressly for this route. She runs daily to all points on Umbagog Lake, and up the Magalloway every Tuesday, Thursday and Saturday. She connects at the Berlin Mills House (Brown's) with the Grand Trunk Railway, and at Angles Falls at Sunday Cove, with trains for the Middle Dam (Angler's Retreat); and at Upton with daily stages for Bethel, running through Grafton Notch, a romantic pass in the mountains.

Through the kindness of Chas. A. J. Farrar, Esq., author of "Richardson and Rangeley Lakes Illustrated," I am able to give from advance proof sheets of his book the following list of excursions to Dixville Notch and the Rangeley Lakes, and I have no doubt but many of your readers will be glad to learn at this early day the expense of tickets to the lakes, and the different routes:—

Boston to South Arm Richardson-Rangeley Lakes and return, via Bryant's Pond and Andover, \$12.00.
Boston to Middle Dam and return, via Bryant's Pond and Andover, \$13.00.
Boston to Middle Dam and return, via Bethel and Upton, \$14.50.
Boston to Upper Dam and return, via Bryant's Pond and Andover, \$14.00.
Boston to Upper Dam and return, via Bethel and Upton, \$16.00.
Boston to Upper Dam via Bryant's Pond and Andover, return via Bethel and Upton, \$15.00.

Boston to Upper Dam, via Bryant's Pond and Andover, return via Dixville Notch and Colebrook, \$17.75.

Boston to Upper Dam, via Bryant's Pond and Andover, return via Dixville Notch, Colebrook and the White Mountains, \$20.00.

Boston to Indian Rock, via Bryant's Pond and Andover, return via Phillips and Farmington, \$15.25.

Boston to Berlin Mills House, Magalloway River and return, via Bethel and Upton, \$14.50.
Boston to Berlin Mills House, Magalloway River and return, via Bryant's Pond and Andover, \$16.50.

Boston to Dixville Notch and return, via Bethel and Upton, \$15.00.
Boston to Dixville Notch, via Bethel and Upton, return via Colebrook and North Stratford, \$15.25.

Boston to Lake Umbagog and return, via Bethel, \$11.00.
Boston to Errol Dam and return, via Boston, Concord and Montreal R. R., \$19.00.

These tickets may be procured in Boston, New York, Philadelphia, Baltimore, and Washington, and other large places, at all the general ticket offices. A new steamer has also been built for the Richardson Lakes, and will ply this summer between South Arm, Middle Dam, Upper Dam and all points on the lake.

The roads from Andover to the South Arm of the lower Richardson Lake, and from the Middle Dam to Lake Umbagog, have both been laid out as county roads, and will be in first-rate condition this summer. RAMBLER.

THE OLD SCOUT GOES FISHING.

A FRIEND of mine was out a fishin', together with me, a few days ago after trout in the Adirondacks, your paper of Thursday, March 18th. In that you has a article tellin' how as to ketch trouts on April fish. Now you must have been a April foolin', and didn't think as how we would recollect 'twas the 1st of April, seeing as how you says grizzlys kings and perfessers and spiders coopers and sich. Now I don't know much of them flys, but I'll tell you—as you asks it that folks send you accounts of the flys, and trout, and such, and such, and such, just what kind of luck them perfessers had up here in Montanny last week. Well, we went a fishin'—two officers and a citizen, a New Yorker, and me; and them officers and that citizen they was just fixed up with rods as looked like a long whip, and wasn't to my eye half as strong, but they said them rods would yank out any trout as I showed 'em. Well, when we got inter the mountains, and went a fishin' they puts on rooster hackles and pintail grouse feathers, as they called gray perfessers. I told 'em it weren't no use, but they laffed and said all right, you just watch. Well, I couldn't beleeve as sensible fellows would calkater in ketchin' trouts with them feathers, and laffed to myself; but at it they went, sneekin up through the briars and brush, and showin' heaps of spunk, for they didn't mind the cold water as much as I did, and just tried like any durned fool to ketch them tats. But it weren't no use, and they just cum up and took a look around and went off, and never no more thought of bein' fooled by fethers than I would of bein' by a Crow squaw for a Sioux buck. Then they tried black parmers and brown ibises and red parmers, and a hull better book full; but it weren't no more use than the perfessers. I told 'em them trouts hadn't ever been slook in the collected water, and they didn't know the perfessers. That kinder riled 'em, but they laffed and began tryin grasshoppers made of gum, and black tumble bugs and tater bugs, and the Lord only knows that they had more of them bugs than ever growed in Montanny; and I kep' on a laffin. Well, now, don't you know, all the time as them three fellers was a playin' at fishin' with them things, I was a fishin'. I was a ketchin' fish. Now you write a fishin' paper, and you know when a man goes aited of you fishin', a foolin' about and wadin' threw the water, 'taint much of a chance of a man what comes behind a ketchin' much fish; but them trouts weren't fooled by no sich fether things. Them trouts was just hungry for something to eat, and fethers is mighty poor eatin'; so I come along behind 'em, and throwed my line. Now I had a hook—a real old Limerick hook with a twine on it—and I had a chunk of deer meat, and the way them trouts cum up and took that meat were a caution. They was just as hungry as they could be, and sometimes a big fellow would git the meat and not git caught on the hook; and when I put on another piece of meat he just had had taste enuff of that meat to go for the next piece with a jump and get kitched, you bet. Well, I had heaps of fun. I kitched fish and laffed at them fellows till I cried, and they was just tired, and swearin' they didn't beleeve as them fish was trouts. Well, now, that was sort of mren, I thought, and told 'em so; and I said 'taint no use, gentlemen, these trouts ain't been to college, and you better take some of my deer meat. Well, they didn't kind of like to do it, and said that weren't no kind of fishin'; but as they was there, and couldn't ketch 'em any other way, they'd try it just to settle the time. So they put deer meat on top of their fethers, and tried again. Well, don't you know they just missed more nor half their fish; then they was sort of mad, cause I didn't miss mine. Well, after awhile I looked at their hooks, and blamed if they didn't have hooks as didn't have any twist on 'em. Well, I told 'em them hooks were no count, and they said they was the very best of hooks—that they was Sprote's. Well, now, I don't know. Sprote may make good hooks, but he better make 'em with a twist. Well, don't you know if they ain't got a twist. Well, I got a whole big string—more than all three of them—and then we went to camp and cooked sum and dried the rest of 'em to take home. Now, I have seen city fellows ketch lots of 'em out here in the summer with fethers, but 'taint no use when they is reel hungry; in the spring they want meat. Now I say they is educated, for they take their desert after they gets a good dinner, and they eat desert on a empty stomach. THE OLD SCOUT.

CONNECTICUT.—Norwich, May 10th.—A number of gentlemen interested in glass ball shooting met on Friday evening and organized a shooting club. A constitution and by-laws were adopted, and the following officers elected: President, A. S. Childs; Secretary, C. W. Scott; Treasurer, E. A. Tracy. The club meets twice weekly for practice. C. W. S.

The Kennel.

Address all communications to "Forest and Stream Publishing Company, New York."

—Mr. Charles Lincoln, the superintendent of the late show, has returned home; his address, in the future, will be care of Gillman Brothers, Detroit, Mich. It would be a great oversight on our part if we failed to compliment Mr. Lincoln on his supervision during his stay in New York. On the days of the show he exhibited more than ever that wonderful executive ability to conduct everything to everyone's satisfaction. We did not hear one murmur.

DEPARTURE OF THE ENGLISH JUDGES.—The steamer *City of Richmond*, which sailed from this port on Saturday last, had on board both of the English judges, Mr. Dalziel and Dr. Stables. Their stay here had been unavoidably protracted to a much longer period than anticipated when they left Liverpool, on April 13th, and neither were sorry that the time had come for their return home. Since their arrival on the 24th ult. their spare moments were employed in visiting the places of interest in the metropolis and in trips to the neighboring cities. Dr. Stables having made two visits to Philadelphia and also going on to Baltimore and Washington; while Mr. Dalziel had been to Boston and made Niagara Falls a flying visit. As the doggy views of these gentlemen may be interesting to our readers, we are pleased to be able to give in a brief way the impressions gained from several conversations held since the exhibition. Mr. Dalziel, in speaking of the show, said: "Regarding the sporting classes, especially the setters, they were remarkably good; but the natives, in such a large class as shown, exhibited too much variety, which careful selection in breeding will only reduce. The pointers, although excellent, generally speaking, were not as good as the setters. For practical use there seemed to me to be a disposition to breed the dogs too fine and small. From conversation, with shooting men as to the lay of the country inhabited by game, I would judge the old Spanish breed of pointers would prove the most useful. I was greatly surprised to see such a strong interest taken in shooting natters, and I trust to be able to come back again some time in the autumn and take a trip to the Western prairies."

Compared with like exhibitions in England, I deemed the building very well adapted to the show—in fact, could not be excelled; it was far better than that in which the show is held in Birmingham, and equal in attractions to the Alexandra Palace and more spacious. Doubtless from inexperience, resulting from shows of the kind being young in America, many exhibitors did not take beating with that silence that they do in England, and would not have expressed themselves as they did had they remembered the terms on which they made their voluntary entries. The general class of exhibitors as a whole was very nice to do with, and the above remarks apply only to a few. I was pleased to see two American gentlemen have such large and excellent kennels as those of Mr. Moore and Mr. Godeffroy, and I trust to hear of more of the same kind before many years have passed away. In England large kennels are continually cropping up and dying out, and it is not always in the most extensive that the finest specimens are to be found. There are many small breeders with only three or four dogs who turn out the finest kind of animals. The general condition in which the dogs were shown was excellent, although there were many cases which required the attention of a veterinary surgeon, and a large number still whose general appearance would have been greatly improved by judicious grooming. Exhibitors of non-sporting dogs especially were lacking in the art of showing their dogs in the blooming condition that they are at home. The non-sporting classes were very variable in character, and I was surprised to hear that many of the dogs shown before me had been imported from England at the extravagant prices told me. In the toy-classes there were a number of very good specimens, but there were the exception; and I am astonished that there were no Blenheim or King Charles spaniels shown, which are beyond doubt the most beautiful and pleasing of all drawing-room pets. The benching and comfort of the dogs were admirably seen to by the Superintendent, Mr. Lincoln, and there was little delay in presenting them for the judging. I was agreeably pleased to see that the dogs were fed on Spratt's patent fibine biscuits. These are ubiquitous, as I see them used at German and French as well as at all our best English shows."

Dr. Stables said: "I heartily indorse these comments of Mr. Dalziel, and I too was very much disappointed with the non-sporting classes, with the exception of the skye and toy dogs. The fox-terriers were wretchedly bad, but I was very much delighted with the setters, the Irish in particular, which we cannot beat in England. The show arrangements were very good, but the pens compared with English benches were too heavy, and would recommend the sides to be of all-work or wire netting, either of which affords more ventilation, and besides, less expensive. I trust to return at some future

will show. The bowling of the victors was completely collared, and 23 was the result in the Young America's innings. In the Wakefield's second Jarvis was making a good stand when rain prevented the continuance of the game at 5.40 P.M.; the home team winning by 233 runs on first innings scores—

CHESTNUT HILL vs. GERMANTOWN.—Played at Nicetown, May 23d, and won by former in one innings' game by 14 runs. This match was witnessed by a large number of Philadelphia cricketers, as it was the first appearance of the two new English professionals, Bromhead and Tyers. The former is a medium-paced, round-arm bowler, with good break and work. Tyers is much faster, and a remarkably strong bat. Bromhead fell to a beauty from Patterson, his second ball. The following is the full score—

CHESTNUT HILL.		Second Innings.

Mr. W. G. GRACE'S CRICKET CAREER.—The presentation to Mr. W. G. Grace, in July last, at Lord's, of a costly testimonial in recognition of his marvelous work as an all round cricketer, was a worthy tribute of admiration of his play, subscribed for, as it had been, by all classes of players. It is now generally understood that we shall see but little of him in the future, except, perhaps, in County and Gentlemen vs. Players matches, and the following statistics of the career of the most famous cricketer that ever lived will be perused with interest.

The appended table show at a glance Mr. Grace's performances as summarized at the close of each season since his debut—

Year.	Inning.	Runs.	Wickets.	Runs per Inning.	Runs. Average.
1864.....	7	402	57	37.4	2,139
1865.....	13	319	21	15.2	1,653
1866.....	15	410	42	19.3	3,221
1867.....	5	154	30	14.3	62.18
1868.....	9	538	65	37.1	59.31
1869.....	27	1,187	87	14.7	29.14
1870.....	31	1,308	54	16.7	35.5
1871.....	32	2,429	78	9.9	59.92
1872.....	29	1,485	57	14.5	30.42
Total.....	425	18,818	1,319	13.128	3.74

This in fifteen successive seasons Mr. W. G. Grace has bowled in 425 innings in first-class matches, and obtained 1,319 wickets at an average cost of 13 runs per wicket, and on an average three wickets have fallen to him in each inning in which he has bowled. In all Mr. W. G. Grace has played 51 completed innings of three figures in first-class matches, giving an aggregate of 9,411 runs, and an average per inning of 184.27—*Lillywhite's Companion*.

Answers to Correspondents.

NO notice taken of Anonymous Communications.

W. H. T.—For shell write to Desmond, 37 Peck slip, New York.

JONAS—Your dog has the mange. Try Glover's imperial cure, advertised in another column.

W. W. Philadelphia.—You will find papers on boat building scattered through vols. 8, 9 and 10.

L. W. S.—Your dog has internal cancer of the ear; treat in same manner as is recommended J. W. B. in issue of May 6th.

TAXIDERMIST—Manton's "Taxidermy Without a Teacher," noticed in our issue of May 6th, is for sale at this office. Sent postpaid for fifty cents.

O. D. H. Chatham, N. J.—Your dog is evidently out of condition. Worms do not cause rumbling in bowels. Give several purges of castor oil—one every other day for a week.

FOR SALE—Write to Mr. E. B. Goldsmith, whose advertisement you will find in another column, and he will give you all the information you require regarding the importation of dogs.

C. C. M. Oskosh.—See advertisement of Mr. E. B. Goldsmith, Custom House and Forwarding Agent, in another column. He will give you all information regarding the importation of dogs.

E. A. S. Westfield, Mass.—Your dog is afflicted with worms. Administer two doses of santonicin, five grains to a dose, one at night and one next morning, followed by castor oil. The dog should be kept at least twenty hours previous to giving medicine.

J. J. K.—The owner of the bull-terrier Tarquin is Sir William Vermer, Bart., 53 Eaton square, London, England. Champion Tarquin and his son Superbus have gone home, and are now in London. Read FOREST AND STREAM of May 20th; it tells about them.

H. H. Hollidaysburg.—You say that your dog's eyes are inflamed, and have been so for six months, waiting during that time. If such had been the case, they would have discharged a mucous-purulent matter. You had better cleanse them with warm water, and twice a day use the following wash: Two grains of alum, dissolved in an ounce of water.

H. N. Brunswick, N. J.—The constant losing of coat by your setter can probably be prevented by giving her a teaspoonful of sulphur once a day for four or five days, and occasionally after, small doses from time. It would also be well to give her a dose of sulphate of magnesia twice a week, which treatment at this season of the year is beneficial to most dogs.

J. L. A. Jit, Boston, Mass.—Your friend's puppy is out of condition; probably distemper may follow. We would advise you to give her at once small doses of sulphur, say once a day for four days, and twice during the week a teaspoonful of sulphate of magnesia. Should the little bitch continue in poor spirit, then give two grains of quinine three times a day for two or three weeks. Keep her warm and dry.

O. J. T.—Depth of 18ft. boat about 2ft., though much depends upon the model. If flat on the floor, less will do, but if round or with much dead rise, a little more. Mast, 19ft. above rail, stepped 3ft. 6in. from bow; use spritsail 9ft. on luff, 11ft. foot, 7ft. 6in. head. About 40 deg. rise to the head and 18 deg. rise to foot. The sprit ships into a grummet on the mast 2ft. 9in. above foot of sail, and the other end into rope or cord eye at the peak.

INQUIRER, Fairport.—For waterproofing tent, take half pound sugar of lead and half pound powdered alum, dissolve them in a bucket of pure water; pour off into another vessel, and steep the tent in it; soak thoroughly; hang up to dry, but do not rinse. Ketchikan, "Yacht and Boat Sailing," price \$2 for new edition; Neilson's "Boat Building," \$1.25; can obtain either. For rigging model yachts see "Model Yacht Building," by Biddle, \$1, or Walton's "Model Yachts," \$1.50.

Mrs. S. A. B. North Woburn, Mass.—You are correct in your idea that this puppy is afflicted with St. Vitus' dance, or chorea, as this purely nervous affection is more often called. The probabilities are that the dog has had the distemper, possibly in a mild form. You must be sure to feed it on strong meat broths, Give doses of quinine two grains, nux vomica one-eighth grain, three times a day, and continue for three weeks. Moderate exercise when possible and fresh air will aid toward effecting cure.

W. J. Percival, Palo, Mich.—I send you with this the head, wing and leg of a bird killed on a small marshy lake here. These give name of it. I think from what I have read and the picture in Webster's Dictionary, that it is probably a gallinule. Does Hallock's "Sportsman's Gazetteer" treat of the different kinds of birds? Ans. Your bird is not a gallinule, but a different common sort (*Porzana carolina*). The "Sportsman's Gazetteer" treats of the different kinds of game birds—this among the number.

G. E. J.—The Creedmoor rules do not in general provide for the settlement of a tie where a badge is given to be taken by the winner on the greatest number of matches, and generally a special provision is made in the conditions of the match. The most common way, as in the case of the Champions-Lackmen's match at Creedmoor, is: "In case of a tie to the highest aggregate score of all the competitors participated in up to that time to decide." Or it may be better to shoot off the tie on some particular day.

St. L. R. C.—The cup can only be won according to the conditions attached. No one has a right to claim it after winning it three times, unless such condition was distinctly expressed in the deed or resolution offering the cup. If, as you say, "it was to be rowed for annually," it remains an annual challenge cup and cannot become the possession of club any longer; it is idle to hold it from year to year. If a club refuses to row it is idle to have three times the cup reverts, of course, to the Mississippi Valley Rowing Association. Offering challenge cups which can never become property is, however, to be deprecated.

CANVAS CANOE—Give the canoe plenty of floor for sailing, and 10ft. deep amidsides will be enough, although you can go up to 12in. Neilson's "Boat Building" is about the best published. You had better await the new edition, revised by Dixon Kemp. Prices about \$1.50 at Manning's Yacht Agency, 53 Beaver street, New York. "The grooves into which the canvas is laid" has reference to the rabbet in stem and stern post. The canvas is fast across the keelson, must be cut in the center at each end, so as to bring it up on each side of the stem and post, where it is tacked down into the grooves mentioned. Experiment is the best teacher.

J. L. H. Milwaukee.—My puppy's right fore shoulder, leg and foot seem partially paralyzed, with constant twitching of the muscles of the shoulder and leg. In running or jumping he cannot control his actions, causing him to frequently fall over, but he does not suffer pain. Is there any remedy? Ans. Time and a tonic combined with good food and moderate exercise, may bring him all right. When the fore-quarters are affected in this way, there is more chance of a speedy cure than if the trouble was located in the hinder parts. Give doses of quinine, two grains, three times a day, and continue for three weeks. Write result of treatment.

J. G. Toronto.—Your center-board is much too small to be effective. As you say the boat is now well balanced, increase the length of the board at each end, making it five to six feet long. Straddle the mainmast over the trunk. If objectionable, increase the board two feet at forward end, and give it the full depth of the boat on the after end. A keel would, however, be the simplest remedy, as you can add to it or cut away until effective and well balanced. About eight to ten inches deep amidships and cut up forward, with the heel taken off aft. Most suitable "drop" of the board is obtained from observation, and will vary with wind, weather and course.

CANONIER, Boston, Mass.—Please describe to me the difference between the eggs of the bank swallow and those of the white breasted swallow, and also give proper names of latter. Ans. Size and color of the pewee's eggs. Is "pewee" the proper name of the above bird? Ans. No. The pewee's eggs run. Ans. The eggs of the bank swallow (*Ochtho riparia*) and the white-bellied swallow (*Archipetia leucorhoa*) are pure white, unmarked by spots. Those of the former species measure .50in. by .50in.; those of the latter .50in. by .50in. The eggs of the pewee (*Sayornis fuscus*) measure about .75in. by .62in. They are white, with sometimes a few dots of light reddish brown at the larger end. They are very common.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND RETRY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

NO. 39 AND 40 PARK ROW (TIMES BUILDING), NEW YORK

[Post Office Box 232.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the *FOREST AND STREAM* for one year.

NEW YORK, THURSDAY, MAY 27, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

*We cannot be responsible for deletion of material, or if money remitted to us is lost.

Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

THE INTERNATIONAL EXCHANGE AND READING ROOM.—We announce with pleasure that there will shortly be opened in Madison Square, in this city, an institution destined to occupy a field of great and permanent usefulness. We refer to the International Exchange and Reading Room, projected by Mr. C. A. O'Rourke, proprietor of the New York City Press Association. The new enterprise is broad and varied in its scope, but its objects are defined with unmistakable clearness, and the executive ability and thorough experience of its projector give assurances that every feature of the new institution will be put in perfect working order. In the Exchange, which will be open from 8 A.M. till midnight, will be found all the leading journals of the principal cities of the globe. This feature will probably be more complete than in any reading room in the world, for the latest issues receivable by mail will always be at hand. Not only newspapers, but the leading reviews and magazines and the latest publications dealing with business interests of all kinds will be found at the Exchange. Current general news of the day, stock, mining and produce quotations will be received there by telegraph, and promptly bulletined. Parties desiring to speculate, and at the same time avoid the turmoil of Wall street, can do so by special wires through responsible brokers. The arrival of Sandy Hook of all incoming steamers will be announced at the Exchange. Railroad, ocean steamer and steamboat directions for travelers will be furnished, and tickets sold at regular rates. Not only subscribers resident in this country, but travelers from all parts of the globe will find in the new institution facilities hitherto unattainable in New York. An agent of the Exchange will go on board all incoming steamers. Guides and interpreters will be furnished to travelers. In brief, the Exchange and Reading Room will be an important and valuable feature among the institutions of New York. The business men of the metropolis have been quick to show their appreciation of this fact, for the success of the new enterprise has been assured even on a Metropolitan clientele.

—The twenty-third annual shooting festival of the New York Schuetzen Corps, Capt. George Aery, will be held at Union Hill, June 7th, 8th, and 9th. The society always offers its guests a superior entertainment. The annual shooting tournament is one of the most important events in the metropolis.

THE TEAM SELECTION.

THE Board of Directors are making a pretty kettle of fish out of the selection of the team to go to Ireland, and a great deal of dissatisfaction has grown up in consequence. Never was a simpler problem presented to the Board; but the same blundering policy which has made Creedmoor a continuous and expensive subsistence on State pap, and left it to-day more helpless and with less prospect of being self-supporting than it was five years ago, cropped out in the choice of the team; and as a result there goes—if it goes—a team to Ireland composed of men whom accident has given an elevation which a sober second thought does not approve.

The circular issued with such great do to on the 20th ult. has proven to be but a snare and a delusion, and has not been lived up to except in the most airy fashion. The result is that a gentleman representing one of the most influential clubs of the rifle shooting world, and who in his private capacity gave the first medal ever offered in a match at Creedmoor, receives a rebuff, which he very properly resents by declaring himself free from the entire crew of gun agents who go to represent America in Europe, and of the blunderers who manage them. A bit of brief history will explain. The circular, as published in *FOREST AND STREAM* April 22d last—and which issue, by the way, represented the circular as it was passed by the Board, before the fingers of the meddlers were seen in amendments for their own purposes—provided that any club could send such representatives as were proper to go on the team and were acceptable to the committee. Dr. Clark was so selected by the Empire Rifle Club without competition. Dr. S. I. Scott, of Washington, went through a brilliant series of contests, and won the honor of representing the Columbia Rifle Association. Capt. L. C. Bruce was selected as the representative of the Amateur Rifle Club, of New York, in a competition of two days' duration, where he defeated such marksmen as Jackson, Farrow and Fisher. The Amateur Club were prepared to furnish the financial backing to Capt. Bruce, and he himself had contributed handsomely. These three gentlemen—Clark, Scott and Bruce—were the only representatives of clubs selected for the team.

The Massachusetts Rifle Association made a great pother at first; but, with a ready excuse to cover up their retreat, saw with Yankee shrewdness a readier way of getting on to the team. Then came the selection of three men at large from the National Rifle Association. The best three in four scores were to count; but only two scores were made by Messrs. Farrow, Fisher and Rathbone, and by some hocus pocus they reported as the choice of the N. R. A., on Tuesday, the 18th, when club men were expected to be present. Then, having been defeated in the Amateur Club, and again in the open contest of the N. R. A., Capt. Jackson appears as a free lance. He, with associate marksmen from the Hub, were not the representatives of the Massachusetts Rifle Association, for that fact they were very positive in asserting. They surely had not won any right to recognition according to the circular, and with only three rightful claimants to places on the team, or six, if the quasi rights of the N. R. A. representatives were to be regarded, it was the duty of the Board of Directors to fill the place vacant. In place of this, there was a three days' noisy shoot at Creedmoor. Capt. Bruce, with important business interests in town, and with a positive assurance that his rights were to be protected, did not appear to shoot beside men whom he had already defeated. Some brilliant shooting was done, with some fortunate days to do it on, and then, with the friskiness of a young colt, Capt. Bodine seemed to go back on his title of "Old Reliable," and in a sort of star chamber proceeding at Creedmoor a team was made up; a scurry was made by its members to get their names attached to a paper in which they promised to go to Ireland—they thinking, perhaps, that the paper would carry some weight in case of trouble. The rights of Capt. Bruce were quietly overlooked in the grab game of that Friday evening at Creedmoor, and the next morning's papers made public the insult which had been flung at Capt. Bruce, and through him at the club which in 1878 accepted the challenge of the Irish riflemen, and brought about pretty much all there is of long-range shooting in America.

Then came the confession of the blunder in the clumsy attempts to patch up the trouble, and in a meeting called on Tuesday afternoon last, after hatching in star chamber confab for some hours the following:—

Whereas, In accordance with the condition of the circular of April 20th, issued by this Association "to the riflemen of America," asking their cooperation in getting up a team to shoot a return match in Ireland next month, Col. John Bodine has been appointed captain, and Messrs. Brown, Scott, Clark, Farrow, Rathbone, Fisher and Jackson have justly earned their several positions as members of the team and one reserve; and

Whereas, Unforeseen circumstances have prevented several of the best marksmen from complying with the requirements for positions upon the team; and

Whereas, By the conditions of said circular more than one reserve can be appointed to accompany said team; therefore

Resolved, That Messrs. Bruce and Rockwell be added to the number to compose said team and reserve.

This issue of prevarication did not help the broil, into

which the selection had drifted, in the least. Capt. Bruce, when the sop was presented to him, promptly and properly rejected it. He had won a place on the team, and did not need any apologetic resolutions to give him his own. Mr. Rockwell had distinctly said that he could not go over, and therefore seemed a fit blank to keep Capt. Bruce company on the flag end of the resolution. The representatives of the Amateur Club had acted from the start in a manner entirely in accordance with the spirit which should govern the selection of a body of experts to represent American riflemen. His absence is a real loss to the team, for while it is pretty certain to win in any case, it is difficult to get up enthusiasm over a group of marksmen where at any moment the drummer instinct may break out, and a price list switched from the pocket be thrust in the face of our host on the other side.

It was a stinging commentary on this chapter of team selection when the chairman of the Finance Committee rose in the Board, and speaking of the financial accounts of the Board, said: "I defy any man to make head or tail out of them, and any firm working with such a system of keeping its accounts would go to the wall very soon."

PROFESSIONAL RIFLEMEN.—The question of a plan for barring out professional riflemen is a growing one in rifle circles, and Col. Sanford, in the last session of the Board of Directors, proposed the following sapient rule, which of course means nothing, as the gate money is in all cases taken possession of by the Association controlling the range. There is not money enough offered as prizes in the whole country to tempt the best marksman to its capture as a means of livelihood, and no rifle-making firm will bar off its agents from the ranges by confessing them as paid to shoot the arm. The resolutions read:—

All matches of this Association hereafter shall be open only to amateur riflemen, unless otherwise specified; and amateurs only shall be allowed to compete for places on the American International or Inter-State teams and be organized by this Association. An amateur in rifle shooting is one who has never entered into a competition for gate money, or who has never pursued match shooting with the rifle as a means of livelihood, or who has never been paid by any rifle manufacturing firm or dealers in rifles to use said rifles in matches for the purpose of advertising or selling them.

We invite discussion of this question.

NTYPES OF ANGLERS.—Many people are just beginning to find out that angling is one of the most artistic sports in the world. Its own inherent gentleness makes it the most refined, and although gentlemen add by their presence to its charms, yet it does not require, as do most sports, their restraining and refining influence. "Its innocence is a feature that has commended it in all ages."

The angler has most of the cardinal virtues. He possesses the rare quality of taking the luck as it comes, good naturedly. Difficulties and disappointments stimulate instead of depressing him, for like virtue patience is its own reward. It was an angling enthusiast who said: "I did not have a positive bite but I had a glorious nibble."

The fisherman's life is made up of one grand series of disappointments. He has more of them to the season than any other person. Most of them, however, are happy ones; only enough of the miserable ones happen along to season the rest. Every sign which the angler studies, the seething clouds, the ripple on the water, the direction of the wind, may all indicate good sport, and yet as he starts out, buoyant with hope, building high his castles in the air, he is conscious of a delightful uncertainty, which is the condiment of his recreation and increasing its attractions.

There is an element of chance about it more fascinating than the absolute certainty, but whatever comes he is never discontented with the actual. No evidence of disappointment ever lurks in his face. He has a well regulated tongue, and is never guilty of committing an assault on the English language, no matter how great the provocation or how much of a thinking he may keep up. Still, in spite of this undercurrent of uncertainty, he is a man of sublime faith. He never steps into a stream without trying to make himself believe that it is one of his lucky days! And well he needs more than a grain of faith, for oftentimes the result of his day's wading will not turn the scale at a grain or less, but he is, under every condition, a philosopher. If he cannot always command success he will at least deserve it.

We mean the fly fisherman, one who uses the lightest rod and fittest line. There are anglers who employ hooks and lines coarse enough to draw out leviathans, but they are mere fishing machines, whose legitimate business should be hauling a seine, and who have little of the spirit of the fair play that betokens the gentleman, who scorns to take any unfair advantage, but is willing to give the fish some chance for his lives.

Anglers are very much like their tackle, coarse and fine. It is the latter who has some object in going to the trout stream besides filling his creel. He likes the vigorous rise and strike, but that is not all in all. There are surrounding associations from which he derives pleasure. He is an observer, and is continually making mental note of the beauties and deformities of the ever changing

pictures before him. He is a student who studies not alone to catch the fish, but also to learn their habits and characteristics. He loves to hear the merry ripple of the stream bubbling along in playful melody. He hears the choicest arias and solos and choruses from a thousand tiny throats pulsating the air. He hears the mountains echoing back the weird cry of the loon; he hears the cheerful chirp of the crickets beating time against their horny sides; the whirr of the ruffed grouse; the sleepy whispering of the leaves, and this is harmony. He sees the earth gay with the spring flowers; the blue-eyed violet in its simple beauty and coquettish grace budding and blossoming at his feet, and peeping upward through the grasses at the golden buttercups, the purple pansies, the trumpet of the wild honey-suckles, the ferns growing on the silver-gray rocks, the May apple laughing in its rosy beauty, and all these are to him perfect types of loveliness.

In looking up through nature he recognizes the wonderful and beautiful creations with which the world is adorned, and basking under their influence is quickened into a devout reverence to the "Giver of every good and perfect gift." To all these the mere fishing machine gives no heed. The boulders, cushioned with moss, the rugged cliffs, seamed and serrated, grim old monarchs of the forest, cloud capped mountains, ferns nor flowers, all tokens of divine goodness, are for him neither ennobling nor harmonizing.

MILLARD.

BEAVER RIVER CLUB.—The field day of the Beaver River Club, at Pittsfield, Mass., May 21st, was a very enjoyable affair. Some twenty members were present, and the afternoon was pleasantly passed in rifle practice and glass ball shooting at the range of the Riverside Club, at Pittsburg, who kindly gave the visitors permission to occupy the range, which is beautifully situated on the shore of Silver Lake, a short distance from the center.

In the evening a trout supper at the Burbank House ended the day's sport, which was much enjoyed by all present. The club voted to repeat the field day, Oct. 13th. Pittsfield is one of the most beautiful of Massachusetts towns, surrounded by mountains interspersed with beautiful lakes and an air invigorating and health-giving. The sportsmen of Pittsburg and the surrounding towns of Adams and North Adams are gentlemen in every sense of the word, and any sportsman who goes there will be sure of a hearty welcome. The President of the club, Mr. A. L. Phillips, was unfortunately detained by sickness in his family, much to the regret of the other members. Eleven new members were admitted, making now thirty-five in all.

[From a Special Correspondent.]

OUR WESTERN LETTER.

DENVER, COL., May 11th.

PLEASANT as the interior of the traveling coaches are which bring one out to these regions, the outside furnishes its due share of pleasure. As the minor in his digging sinks down through successive strata of rocks, so the journey overland from New York presents in turn its different phases of land, life and character. Each phase is a surprise and a matter of interest, especially if the traveler has never been before far west from the Atlantic coast. One's sensations, indeed, are very peculiar in this respect. The Eastern man has heard and read a great deal about the "Far West" and the "Great West," and has gained an idea that there is a great deal to the country beyond what can be seen east of the Alleghany range, and he understands very well that the overland route to the Rocky Mountains is not far short of the distance to Liverpool, and so he may think that he has an idea of the West. But he will find, when he tries the journey, that his ideas have been very small compared with the reality. It is difficult enough to get a notion of the vastness of the ocean, without actually crossing it. It is still harder to realize what a vastness you are going into when you start out overland across the plains. After one has been aboard the train for forty-eight hours, in constant motion, the feeling is that it is about time to come to salt water again; yet the traveler will then have got merely to Iowa. It is a strange feeling, which one can not shake off, that the country is large beyond all proportion, and that the United States still has a future before it.

But if the mere distance produces this effect, the varied richness of the country through which one passes impresses one still more strongly. Across New Jersey, rich in her market-gardening, her mines and her large manufactories, and dotted with the mixed tints of suburban villages—an extension at arm's length, as it were, of the wealth of the metropolis—until it reaches these finger-ends of suburban towns, and drops off and enriches the spots where it falls. Across New Jersey, with these sources of wealth and these adornments, one strikes a new money center, the point of entrance to fresh wealth of nature and new fields of industry. Pennsylvania is certainly a State by herself. You can't help knowing when you enter Pennsylvania, and when you leave it. Rugged and burrowed with mines—that is the impression one gets of Pennsylvania. "Nothing can be

more interesting than the railroad ride which takes the traveler over the mountains. Around the famous Horseshoe Bend is a view both of nature and of engineering, which rivals the Semmering. Down the grade on the other side we fly with a speed that nothing but the best of tracks and road-beds could stand. Down into valleys, dashing around curves, leaving brown clayey banks on one hand and sloping hillsides on the other, rattling over switches, swimming past mining stations with their jeering boys, one gets down at last upon the entrance to the famous city of smoke, almost before one is aware that the mountains have been left behind. It must be admitted that Pittsburg is unrivalled for smoke; "but there is money in it," and that is enough for the American; and it is the province of the tourist and the sightseer; indeed, if he will get a just and true idea of the places he visits, to look through this veil, whether it be of smoke, as at Pittsburg, or of barrenness, desolate surroundings, dust, unhandsome buildings, or what not, a veil that surrounds many a place where the happiness and well-being of mankind is being contributed to by mining, milling, agriculture, and by keeping in supplies the tough men who have moved West and gradually added States to the Union. It is well if the tourist's eye can pierce to the substance of these places; and if it does, he will see a beautiful face behind the disguising veil, and he will come to rank places with forbidding aspects among the fair and good things of the earth, because they are doing good. A good deal of the beauty of Western places is of this sort. The station may look lonely, and perhaps you would not like to be dropped there to get your living. But all about, and between such stations, there is plenty of evidence that there is a productive earth, and here the energy man has bent over the earth and made it yield and add to the riches of the States. These uninviting, sparsely settled places, have brought comfort and plenty to many a home where there has been pinching and want before. So the West has its beauty, even where it is rough.

But I would be far from holding out that the West is without beauty that cannot be seen readily by the eye, and has to be studied out and reflected upon before it becomes apparent to the mind. The beauty of the West is, if I may say so, in general wider than the beauty which belongs to the landscapes of the East. Through Ohio one passes over long, rolling reaches of mellow-looking fields—fields which afford a long, even horizon for the sun to set behind. There is nothing to narrow the scene; there are no sides to the stage at which you are looking. So in Illinois, only more level. Vast rich flats make the view. As one draws into Iowa the soil gets to looking blacker, the ground rolls more, and rather startling round hills of loam, with no sign of rock, rise up, stay a few minutes, and fall away, as we go speeding on. Wet places appear and disappear; the soil is black; wild birds are seen in large numbers; ducks go scurrying away across the patches of water from an advancing train, and geese keep up a steady flight somewhat whither off in the sky. The quantity of game is something of a sight to the Eastern sportsman.

But the most startling revelation is reserved for him who goes West beyond Omaha. Once across the Missouri, the great plains are struck. Everybody in the East has heard of "crossing the plains," but I doubt if anyone without seeing them can form an idea of the plains, or what it is (or rather was) to cross them. The want of fences is one of the first things that the Eastern man feels. Where are they gone to? Are we never coming to one? Surely there must be a limit to this field. Yes, there is—two or three days' travel beyond this—a month's travel in the old days, before steam went over the plains. Where is the owner? Oh, he may be fifty miles away from here, on no man's land, rounding up his cattle for the spring branding! Perhaps, though, that is he! Where? Why, coming horseback down the hill over yonder. But I see no man nor horse. Right here! Oh, that black speck, you mean? I didn't know that was a man on horseback. Why, I didn't think that hill was so far away, but I see now it is a good deal further than it looks; and now I can see the black speck moving, and see it go up and down, on the canter! So the "Tenderfoot" thinks (but, if he is wise, does not utter), and watches and watches the undulating black speck cantering nearer and nearer, but never near enough to distinguish man from horse, until the train has finally left behind, out of view, the solitary horseman, with his hopes and purposes and wishes—much as one sees at sea a sail rise over the horizon, hang there awhile, and disappear—half awe-inspiring in its unknown mission.

LEX.

PENNSYLVANIA FIELD TRIALS.—At the meeting of the Pennsylvania State Association at New Brighton, Pa., next Tuesday, it is proposed to discuss the plan of holding a State field trial of dogs. It is to be hoped that this project will meet the favor it certainly deserves. Local trials bring out into the field a great many dogs which do not and cannot appear at the large, distant trials of the same character. They are influential in developing and directing the taste for field sports, and in demonstrating a right understanding of the good points in a dog.

Game Bag and Gun.

MAY IS A CLOSE MONTH FOR GAME.

GAME AND FISH DIRECTORY.

In sending reports for the FOREST AND STREAM Directory to Game and Fish Resorts, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

—Address all communications to "Forest and Stream Publishing Company, New York."

THE STATE CONVENTION.

SENECA FALLS, N. Y., May 26th.

THE twenty-second annual convention of the New York State Association for the Protection of Fish and Game was held last evening at Daniel's Hall, Horace Silsby, President, in the chair. The delegates were welcomed by Mr. J. D. Pollard, of the Seneca Gun Club, whose speech was received with great applause. The following clubs were represented: Adirondack Club, of Adams; Audubon Club, of Rochester; Central City, of Syracuse; Corning Club, of Corning; Dansville Club, of Dansville; East Buffalo Shooting Club, of Forrester Club, of Buffalo; Farmers' Village Club, of Genesee Club, of Irondequoit; Jordan Club, of Jordan; Jefferson Sportsman's Club, of Watertown; Leatherstocking Club, of Oswego; Lewis County Club, of Lowville; Leroy Club, of Leroy; Monroe Club, of Rochester; Cazenovia Club, of Niagara Falls Club; Ontario County Club, of Clifton Springs; Onondaga County Club, of Syracuse; Phoenix Club, of Seneca Falls; Skaneateles Club, of Seneca Gun Club, of Seneca Falls; Steuben Club, of Wayland; Wayne County Club, of Clyde; Waterloo Club, of Waterloo; Onondaga County Fishing Club, of Syracuse; Rome Club, of Rome; Spencer Club, of Lyons; Forrester Club, of Penn Yan; Forest and Stream, of Akron; Dean Richmond Club, of Batavia; Queen City, of Buffalo; Fountain Gun Club, of Brooklyn; Brooklyn Gun Club; Long Island Club, of Brooklyn.

Applications were received from the following clubs for admission to the convention: Garden City Club, of Hempstead; Forest City Shooting Club, of Ithaca; Fulton Gun Club, of New York; Washington Gun Club, of Brooklyn; Phoenix Gun Club, of Brooklyn; Nonpareil Sporting Club, of Brooklyn; Nassau Gun Club, of Jamaica, Long Island; Forrester Club, of Brooklyn; Long Island Sportsmen's Association; Rochester Gun Club, of Rochester. All the clubs nominated were elected members of the Association.

It was decided to hold the convention of 1881 at Brooklyn, under the auspices of the Long Island Sportsmen's Association. The following officers were elected:—

President, Abel Crook, of Brooklyn; First Vice-President, Charles W. Havemeyer, of Hempstead; Second Vice-President, G. T. Case, of Seneca Falls (Phoenix Club); Recording Secretary, John B. Sage, of Buffalo; Corresponding Secretary, Nathaniel B. Cook, of Brooklyn; Treasurer, W. J. Babcock, of Rochester.

The programme of the shooting to-day was as follows:—Contest No. 1. At 8 o'clock A.M. sharp, each shoot 10 single birds; entrance fee \$5. Contest No. 2, at 2 o'clock sharp P.M., each shoot 10 single birds. In the first contest Peter Tompkins, of the Dean Richmond Club, won the first prize by killing 15 birds straight. The second prize was won by Edward Hudson of the Onondaga Club of Syracuse, by killing 19 out of 20. R. J. Richardson, of the Jefferson County Club, of Watertown, took the third with a score of 18 out of 20. Peter Hines, of the Audubon Club, of Buffalo, took the fourth, the score being 18 out of 20. The general score includes the ties, and 110 men stepped to the front in this contest. The birds were all wild, and good flyers. The second contest commenced at 3.30 o'clock this afternoon. The main score was completed and the first tie shot off before dark, Hiram Twist, of the Seneca Gun Club, winning the first prize. The balance of the ties will be shot off in the morning.

MASSACHUSETTS—Chelsea, May 15th.—The Suffolk Sportsman Club has been formed with the following officers: President, John K. Hodgdon; Vice-Presidents, Charles E. Barse and Wilbur L. Slade; Secretary, William R. Swan; Treasurer, Noah Blanchard. Executive Committee—Joseph B. Fenwick, Joseph S. Hatch, Wesley Abbott and Frank A. Magee. The club proposes to have a building and shooting grounds at the rear of Powderhorn Hill.

PENNSYLVANIA ASSOCIATION.—Wilkesbarre, Pa., May 15th.—I desire to call the attention of the sportsmen of Pennsylvania to the fact that on June 1st, 1880, "The Pennsylvania State Association for the Protection of Game and Fish," will hold its next annual meeting at New Brighton, Pa. At this meeting the matter of holding a State field trial will be taken under consideration. Clubs are invited to send delegates, and it is hoped they will do so. There will, on the following day, be a shoot for a club medal, also one individual prize for best score. Open only to teams from clubs belonging to the State Association.

B. F. DORRANCE, President.

ALABAMA STATE ASSOCIATION.—At a meeting held at the rooms of the Gulf City Gun Club, May 14th, a State Sportsmen's Association was organized, having, for its

THE NEW HARBOR.—The Atlantic Y.C. is displaying something like the enterprise we like to see. It is alive and kicking. Not a mere outline organization, like many another large club, sufficient to themselves in their sleepy seclusion. The fleet lying in the white and red diagonal is growing. The members are the smartest of their tongue, and nearly all of a size out of which sport of the real sort can be had. The new club house, with surrounding grounds and the breakwater, are now in the hands of contractors, and the work will be pushed. The property is located at the foot of Fifty-sixth street, South Brooklyn, and has a water front of 375 feet, extending back to First avenue, about the same distance and 1,500 feet wide. The water is deep, the anchorage good, and the pier will be built 600 feet from shore, affording a fine sheltered harbor for smaller craft, with excellent holding ground. The Bay Ridge ferry and the cars from the Brooklyn side afford communication. There is little doubt but what the neighborhood of Bay Ridge Pier will be chosen for the moorings of the greater yacht fleets of the future, as New York Bay is very poorly fitted for either harbor or anchorage. The contractors are now at work, and the pier is as thick as they are off. The crows, and the sun cannot be seen for their number, and the skippers have to hunt for their craft in the crowd, then will the Atlantics reap their reward, and gather under their colors what may become the finest and largest fleet of yachts that ever owed allegiance to one set of flag officers. They have the chance, let us see if they know how to take it. The wisdom of resolving themselves into a jolly good spree, and another has been making rather faint-hearted efforts at securing a club house or beach quarters, and

third has almost ceased to exist, members of the A. Y. C. clapped a stopper on talk, and lent a hand and a dollar to win the lead they have taken, and they richly deserve the success that for years lay at the feet of others too fair-named to bend their backs to the seas to beance around to the fall wind which has blown so often in their favor.

FOURTEEN COMMODORES.—There are plenty of them around, because they don't know their business; but the San Francisco Y. C. has not got one of that sort. During the April cruise sundry members disregarded the Commodore's instructions and signals, whereupon the latter promptly tendered his resignation. Good flag officers being extremely rare, the club requested Commodore Harrison to reconsider his intentions. Should he order his swallow tail lowered, it would be a serious loss to the club.

THE ISABEL.—This little "cat-yawl," belonging to Mr. J. Buchanan Henry, Stonington, Conn., has been found to work exceedingly well under all three sails, as a cat under mainsail only, under jib and mizzen, and with the mainsail stowed. She is a modification of the San Francisco yawl.

LANCASHIRE WITCH.—The steam yacht, *Lancashire Witch*, on which Sir Thomas Heskell is making an extended cruise around the world, has left San Francisco and gone to Puget Sound, thence to Victoria, British Columbia. After a cruise on those waters, the yacht will take the inside passage to the north, and cruise along the Alaskan coast for a time. Sir Thomas will return to San Francisco by the end of July, so as to join the San Francisco Yacht Club fleet, on its southern coast cruise in August. They are going to Santa Cruz, Monterey, etc., in squadron for a week or so, and the *Lancashire Witch* will join company. With their steam power, she will be handy to have along in case of calms.

KRIS NO ROGER WATER.—The schooner yacht *Pearl*, of the San Francisco Yacht Club, has had her centerboard removed, and a keel substituted. She has been overhauled and coppered, preparatory to a voyage to Nicaragua, Central America, with her new owner and family on board. She came off the ways on the 1st of May, and as soon as her supplies are on board will be ready for sea. So even San Francisco bows to the keel.

YACHTING ON THE PACIFIC.—Our correspondent sends us the following: The schooner yacht *Ariel*, formerly of New York, and brought to the Pacific for Capt. Wilcox, was sold last summer to Edgar Mills, Esq., of the San Francisco Yacht Club. Mr. Mills being about to leave California for a time, has sold the *Ariel* to W. S. Floyd, Esq., who is a member of the E. Y. C. The yacht has been thoroughly overhauled and refitted during the winter, and is one of the handsomest in San Francisco Bay. A new schooner yacht, *Kitt*, long, called the *Daphne*, has been lately launched for Mr. W. H. Martonstein, a member of the S. F. Y. C. George Farmer, a boat builder on Oakland Creek, has turned over to Mr. Billings, of San Francisco, a 35ft. cabin sloop called the *Gaviola* (sea-rig). She is a dandy little yacht, and will be the smallest of the S. F. Y. C. fleet when her owner joins the club, as he proposes to do. The *Gaviola* has proved very fast. The 35ft. cabin sloop *Myrtle*, built by William Stone last fall, has been purchased by two young gentlemen, who will soon fly the S. F. Y. C. burgee at the masthead. She is a good deep boat, with head room in cabin, plenty of freeboard, and is altogether a fine, weathery little craft. The little Bermuda sloop *Lively*, the champion of the smaller yachts of the S. F. Y. C., has changed hands. She now belongs to Mr. Penne, a member of the club, her former owner, Mr. Williams, having taken so kindly to salt water as to have gone cruising to the Sandwich Islands on a deep-water vessel.

LAUNCHED.—From the yard of Piegras, Greenpoint, May 18th, the steam yacht *Jule*, for Edward Balbach, of Newark. The model was furnished by the builder. Her midship section is of the "peg-top" variety, clean run, but rather full forward. She is fitted with the usual cabin and pilot houses on deck, has a raking stem, stump bowsprit and a cutter stern, and is rigged as a schooner. Length 27ft., beam 3ft., depth 4ft. She has been engineered by Clute Bros. & Co., Schenectady, N. Y., and they have guaranteed 14 knots. Compound engines 18 and 14 in., cylinders 10 in. stroke, boilers 16 in. diam., and 4 ft. 6 in. long, of the local massive type, 150 lbs. working pressure. Propeller 4ft. 6 in. diam., and 8ft. pitch, from which it is evident that the engineers have departed from ordinary practice, as the pitch is excessive compared to the diameter. In England experiment has shown that small pitch and high velocity of engine is best adapted for great speed. It remains to be seen whether the new experiment will be successful. We trust that faith in this yacht's speed will not be lost should she fall with her present wheel, but that other wheels be tried in succession. That there is some particular wheel best adapted to every form of hull is now universally accepted among engineers, and as much as 25 per cent. may be lost or gained on this score.

SIDE-WHEEL STEAM YACHT.—What we believe to be the first bona fide side-wheel steam yacht in America was launched last week from Piegras' yard, Greenpoint. She has been built for special service in the shoal waters of Great South Bay for Mr. Wm. K. Vanderbilt, and for a shoal boat is quite slightly. Length 64ft. on deck, beam 12ft., depth 4ft., draft 2ft. The engines are of the inclined direct acting type, cylinder 16 in. diam., 20 in. long, vertical boiler. Wholes 8 ft. diam. We hear that other similar vessels will soon be put in hand, as there is quite a demand for light draft steam yachts on many of the shoal bays which afford good fishing and shooting in this latitude, as well as in some of the inland reaches of the Southern coast and Florida.

THE COMFORT.—Mr. Lord's new compromise cutter is rapidly approaching completion at Gorman's shop, foot of Court street, South Brooklyn. The natives don't like her; she is not enough of a clam shell to suit their mud-sailing propensities, but the *Comfort* will be an excellent craft for all that, and a safe one into the bargain. She was designed by Com. Hyslop, owner of the smart little *Rever*, and like the latter, is a perfect specimen of wire-line design, both in areas and water-lines. She is 35ft. long, 12ft. beam, 5ft. 1 1/2 in. deep. Ballast, one ton iron on keel and four inside.

CRUISING SOUTH.—The *Magie*, Francis M. Weld, has been on an extended cruise in Chesapeake Bay and adjacent waters. She was in Washington during the Courtney-Hanlan race.

COMING WEST.—We hope the report that the New Bedford Y. C. proposes sailing in squadron to New York will prove true. They will meet with a hearty reception from the N. Y. Y. C., Atlantic Y. C., and Seawandaway Y. C. Mr. Thomas Lord has presented the N. B. Y. C. with a cup to be sailed for at their annual regatta some time in July.

FOR CUNA.—Smedley is building a 25ft. racing boat for parties in Cuba. It will be the twenty-fifth boat he has sent to those parts.

THE INTERVUE.—This schooner, Mr. Lloyd Phoenix, N. Y. Y. C., sailed May 20th for Cowes, Isle of Wight, by the Sound.

NEW YORK YACHT CLUB.—At the meeting of the club, May 20th, the following fixtures were decided upon: Brenton's fleet

Challenge Cup, June 29; Cape May Race, Sept. 9; Bennett Schooner and Sloop Cups, June 10th, during the regular annual regatta, and the annual cruise will commence Aug. 11th from Glen Cove, the Eastern Y. C. being invited to join.

THE NEW STEAM YACHTS.—Great secrecy has been maintained about the two big steam yachts building at Cramp's yard, Kensington, Philadelphia, and nothing has been published about them beyond what has appeared in these columns. Recently, however, a *World* man was equal to the occasion, and climbed over the fence after the following: The yachts are named *Corsair* and *Stranger*, both alike in model, the former belonging to Mr. Charles J. Osborn, lately owner of the *Dreadnaught*, and the latter belonging to Mr. George A. Osagood, formerly of the *Fleetwing*. They are said to have full midship bodies (probably judged from the warped standard of our shallow river steam yachts) and fine ends. Length over all, 185ft.; on deck, 170ft. 6 in.; on keel, 160ft.; beam, 23ft.; hold, 12ft.; draft forward, 7ft., and aft, 10ft. Finish decks, mahogany clombings, etc.; schooner rig, with lug sails to brail up and down the masts. The latter are 60ft. deck to hounds, with 20ft. topmasts holed to truck; gaffs, 23ft. Engine and boiler space inclosed in iron bulkheads. Saloon, 18x50ft. 6 in., a long passageway from aft leading into it. On one side of this passage is the owner's suite of rooms, 22ft. long, 11ft. 6 in. wide, divided into sleeping cabin and sitting-room, with bath and toilet rooms attached. On the port side of the passage are staterooms for guests, all of course fitted up in the most luxurious and tasty manner with electric bells and other conveniences, mirrors, sideboards, etc., of a costly kind. Forward of the engines is the officers' mess-room, galley, pantry, etc., and a roomy veranda for the crew, besides four staterooms for the officers. On deck is a pilot-house, chart-room, and smoking-room forward of the smokestack. These yachts will measure 450 tons, C. H. Engines compound, direct acting, surface condensing; cylinders, 42 and 24 in. diam., with 24 in. stroke, to turn up to 150; shaft, 10 in. diam.; propeller, 9ft. diam.; 13ft. pitch; expected speed, 10 knots; two tubular boilers, 10ft. 6 in. long, 11ft. diam.; each boiler has 148 sq. tubes 7ft. long, and two furnaces aft, 9 in. diam., 10 ft. 6 in. heating surface; the shells are 12 of an inch thick, 90 lbs. working pressure; smoke-stack, 24ft. high, 4ft. diam.; bunkers carry 40 tons, enough for only four days when steaming full power. The *Stranger* has a stump bowsprit, with an eagle for figure-head, and the *Corsair* has her rail and stem carried out into a "built-up" bowsprit after the usual pattern. Each yacht is said to cost about \$100,000. There is also some probability of a third vessel of the kind being laid down soon for Mr. E. S. Jeffery of this city.

QUAKER CITY YACHT CLUB.—The spring regatta of this live club will be called May 31st. We acknowledge receipt of tickets and sailing rules. Commodore Bancroft's General orders No. 1 might be studied to advantage by New York clubs. The Q. C. Y. C. has no less than a dozen fixtures for the season. It is a club in fact as well as in name.

SEAWANAWAY YACHT CLUB.—Fleet Captain W. Howard Mitchell has issued his orders for the opening cruise May 31st. Yachts will meet off Tompkinsville, S. I., and at 10.30 A.M. will get underway on signal from the Commodore, passing next in line under his lee. The fleet will round the Southwest Spit, and returning drop anchor off Pavilion Hotel, New Brighton, S. I., where dinner will be served. If this proves poor harbor for the weather, yachts will be signalled to anchor off Tompkinsville, where conveyance to the Pavilion Hotel can be procured. Yacht owners should send notice to the Chairman of the Committee, Mr. F. O. de Lutz, 18 South William street, of the number of guests expected. The sailing rules for the Corinthian matches can be obtained from the Secretary, O. M. Cromwell, 31 Liberty street.

THE LAKE FLEET.—A correspondent writes from Toronto: We had a launch in this neighborhood on the 8th inst. of a 17-ton cutter, built for Mr. James, of this city. She is built for cruising, and draws over six feet. Two years ago we had only one cutter here, the imported iron *River*, 17 tons, and this summer there will be four. Evidently people are coming to their senses again, though slowly.

NONPAREIL YACHTS.—Mr. Clapham, of Roslyn, L. I., has just finished a 22ft. cat boat, "nonpareil" model, drawing only 12 in., and rig for parties on the "Grand Old" Water. He will use the keels of several more of the same kind shortly. These light draft boats seem to supply a demand felt in shallow waters better than the ordinary jib and mainsails, and they are said to be fast and serviceable, as well as low in price. Mr. Clapham has also introduced several novel features in the rig of these boats, the reef points being attached to a light battin running across the sail.

BOOKS RECEIVED.—We are in receipt of "Lloyd's Yacht Register," "Kemp's Yacht and Boat Sailing," "U. S. Report on the Herreshoff Yacht," "Walton's Model Yachts," "Mines of Malaga," "Steamship of the English Channel and Coast," "Mines of Malaga," by Capt. L. A. Beardslee; "Nautical Magazine," "Van Nostrand's Engineering Magazine," "S. W. Silver's 'South Africa,' S. W. Silver's 'Australian Grazier's Guide,'" and others, which will be reviewed at earliest opportunity.

PORTLAND YACHT CLUB.—Our annual regatta was sailed May 20th in a variable wind and fog, which somewhat affected the number of entries, but for all that, there was a fair proportion of the fleet at the line. Fifteen minutes were allowed for crossing the line. No starters in the first class, the cup for which is now in possession of the club, the *Vixen*, which held it last, having been absent. In the second class schooner *Nellie* held the cup, the second class sloop cup had been twice won by *Twilight*, the cup for the third class being offered for the first time this year, the course for second class, 8 miles; third class, 13 miles. Time of sailing, for second class, 8 hours; for third class, 6 hours. Cups to be won three times to become property. Entries, second class schooners: *Nellie*, John E. Bradford, 2nd. w. l. and *Uladine*, E. H. Chase, 24ft. 4 in. w. l. Won by the latter in 4th. 3m. 18 s. Entries, second class schooners: *Tampus*, W. W. Wren, 2nd. 3rd. w. l.; *Marie*, T. L. Clark, 1st. 1st. w. l.; *Twilight*, W. A. Charlton, 2nd. 2nd. w. l.; *W. Bailey*, 2nd. 3rd. w. l.; *Idler*, George C. Ames, 2nd. 2nd. w. l.; *Clarence*, B. W. Jones, —, 1st. w. l. Won by Mary C. Entries, third class schooners: *Allie*, A. L. Johnson, and *Caro*. Won by the former, with 8m. 24 s. to spare. Regatta Committee, T. K. Jones, G. W. Rich, J. T. Wyer, F. L. Mosely.

LAUNCHED.—From the yard of D. O. Richmond, Mystic, Conn., a fine schooner for Mr. Chas. H. Mallory, of New York. Length 90 ft., beam 22ft., hold 7ft. She has been built in accord with Mr. Mallory's own ideas, and is cut away very sharp. Nearly thirty years ago Mr. Mallory owned the *Richmond*, a sloop 45ft. long, well remembered by older members of the N. Y. Y. C. Subsequently he became a member of the N. Y. Y. C., now belonging to Mr. Mallory, of Putnam, R. I., next the *Ketchikan*, and *Quare*, all of which were considered very successful craft in their class. The new schooner is expected to show speed, although comfort

and safety as a cruiser have been overlooked. Also, last Monday, a new schooner, the *Southern Cross*, from the yard of Mr. Decker, foot of Twenty-first street, South Brooklyn, built for ex-Com. John A. Monnell, Atlantic Y. C. As she went off the ways, Miss Annie M. Monnell, the owner's daughter, successfully christened the new vessel. She is 33ft. over all, 65ft. w. l., 18 ft. 6 in. beam, 7ft. 6 in. depth, 11 ft. 6 in. draft, a most commendable quality, being more than customary. Spars; mainmast, dock to hounds, 24ft.; forecast 22ft., topmast, heel to truck 38 and 33ft., a good deal loftier than usual, and another good point for the new yacht, as they are rigged to house. Main boom 43ft., gaff 20ft., fore boom 21ft., gaff same. Bowsprit 43ft., of which 33ft. is outboard, the head booms being all in one. The *Cross* being still in form will take only six tons of iron inside. The forward end of the boat will be a paddling deck, with mast and cherry. At the foot of the companion aft is a stateroom on each side of the main saloon. Forward of the main saloon on the starboard side is the owner's room, on the port side two other staterooms and the usual pantry, ice-box, galley, etc. A tank of 100 gals. has been built over the forward half of the center-board trunk to supply water to the lavatories, etc., and a second tank, of 80 gals., beneath the floor.

CANOE CONGRESS REGATTA.—The canoe offered by Rushton as a prize is now on exhibition at H. C. Squires' store, No. 1 Cortlandt street. Conditions are:—

- First—It is to be a paddling race.
- Second—Open to all canoes and canoeists.
- Third—Single or double paddle.
- Fourth—Must be twenty starters. She is a beauty, and worth paddling for.

PROVINCETOWN YACHT CLUB.—The following officers were elected for the year 1890: Commodore, George H. Holmes; Vice-Commodore, A. P. Hannum; Secretary and Treasurer, H. H. Sylvestre; Trustees, N. D. Freeman, Joshua Snow, J. H. Dyer; Regatta Committee, E. N. Young, Alexander McKenzie, Thomas Lowe, Joseph A. West, James A. Small; Measurer, Joseph S. Atwood. The Union regatta, open to all yacht clubs, will take place about Aug. 1. Many new members have joined the club, and the season of 1890 will be a lively one.

NEW YORK BAY REGATTA.

An annual match in New York bay open to all comers, at least the first year, seems now to be an assured fact, as the management of affairs has been placed in efficient hands. New York seems finally to be waking up in this matter, and a public race for the Eastern style will henceforth be among our fixtures. The date of the race has been set down for Monday, Aug. 9th. Open to all; entrance money \$100, and \$200, \$5; for yachts under 30ft., \$3. Course in the lower bay, not yet settled upon. The committee are desirous of receiving entries at an early date, so that a definite list of prizes can be announced beforehand. They will all be in cash. Entries, until further notice, should be made at the committee rooms, Monday evenings, in the bank building, corner Eighth avenue and Thirty-fourth street, where further information is to be had, or they may be addressed to Post-Office Box 4970, or to Mr. V. Freeman, H. R. Y. C.; Treasurer, H. R. Rogers, N. Y. Y. C.; Secretary, Henry Woods, J. H. Kreymer, P. Y. C.; Andrew Brush, E. Y. C.; J. A. Weaver, C. Y. C.; A. J. Prime, Y. Y. C.

THE CANOE REGATTAS.

Editor Forest and Stream:—

I notice in your paper of May 6th a letter from a Canadian canoeist commenting on the definition of a canoe, and urging that it not only shall not be a clinker built, but shall conform as closely as possible to the "birch-bark" model. It seems to me that this would really be "Hamlet" with the Prince's part left out, as it would exclude exactly the boats which have made canoeing popular in England and America, viz., a decked boat with keel and some sheer, and usually clinker built.

The writer is evidently unaware that modern canoeing, as understood in the United States and England, is carried on almost entirely in such craft, the open canoe being almost unknown in England and but little used in the United States, except for sporting purposes. As to the birch-bark model, it is entirely unsuited to our requirements of a fast-sailing canoe for rough or smooth water, and should the writer visit Lake George next summer he will see the models we prefer.

As to clinker-built, nearly all the wooden canoes in the United States are lapstrake, over three-fourths of the boats of the New York Canoe Club being of that build; and while there may be a mode of construction, there undoubtedly are many who are able to sit well to windward to the lapstrake, until it is positively decided which if any of the other modes is better.

Respectfully,
Rohrney, N. J., May 20th.

W. P. STREPHENS, N. Y. C. C.

SAN FRANCISCO YACHT CLUB'S OPENING CRUISE.

THE opening of the season "at San Francisco was celebrated by the San Francisco Yacht Club on April 24th, in a very satisfactory manner. The guests assembled at the club house, New Sausalito, at 2 P.M., the fleet being anchored in front, all decked out with their new sets of signals. There were some 400 guests present, who amused themselves during the afternoon in dancing, visiting the yachts, etc. After a late lunch had been served, signal was made for the yachts to "prepare to get under way." Flags were hauled down and mainsails set. The guests, who returned to the city by the ferry, all assembled to see the start for Mare Island, some thirty miles up the bay. The fleet looked very pretty as they got under way and stood off for Bay. The steamer went out of her course through Raccoon Straits, behind Angel Island, and passed among the yachts.

Owing to "calm streaks" on the way up, the yachts arrived all hours at Mare Island, some getting up at 11 P.M., and others not till 3 in the morning. The *Annie* arrived up first.

At 1 P.M., on the following day, preparations were made for the 120 start for a boat race to Mare Island, this being the interesting part of the cruise. The New York sloop, *Annie*, was expected to beat the California yachts, and she and the new sloop *Nellie* had never been with the fleet before.

The fleet was composed of the following yachts: *Frolic* (flagship), *Consuelo*, *Chippa*, *Annie*, *Clara*, *Nellie*, *Starling*, *Fawn*, *Lolita*, *Virgin*, *Lively*, *Gaviola*, *Magie*, *Mollie*, *Edna*, *Flapier*, *De Luz*, *Myrtle*, and *Laura*. Several of the yachts of the club had not been seen since the opening of the season, and the weather of the previous few weeks, keeping back painting, etc., had been

At 1 P.M. the signal gun was fired, and the yachts went off in a bunch. For about a mile, on Mare Island Straits, the wind is

them, with the usual trades, but on rounding the lighthouse the yachts have a dead-on-beat through San Pablo Bay for fifteen miles, till the Sisters' light is reached, and from there one tack will bring them to San Francisco, some twelve miles further. It is in the beat down Pablo that the best racing is done, for the bay is large and wind-swept, and is seldom smooth. Tubber coats and oil-skins are usually in order. A good fresh breeze was met on Pablo, bringing all the yachts full-to, and the race down was very exciting. The *Chiepa*, built by Capt. Turner, the measurer of the San Francisco Yacht Club, arrived home first, followed closely by the *Consuelo*, another one of Turner's models. The *Annie* came next, having cracked on very hard, and still lost her to the *Chiepa*. After her came the *Nellie*, and then the *Clara*, followed by those of the fleet which did not turn off through Raccoon Straits for the club house.

An interesting incident of the race down, was a little stop to botom the *Consuelo* and *Con*. It will be recollected that these two yachts made a match last summer for \$1,000, as when the *O'Connor* was the winner. The owners of *Consuelo* had judiciously taken out several tons of ballast previous to the race, counting on light weather, but it blew very hard, and she couldn't be "kept on her feet." She had been champion on the bay for some time, till that race. The *O'Connor* does not belong to the club, but came up and joined the fleet at Mare Island, after an expressed intention by her owner to lead the whole fleet down, and the *Consuelo* in particular. The latter, however, was in her usual trim, and the *O'Connor* caught a Tartar. She singled out the *Consuelo*, and they went it tack and tack, the *O'Connor* setting her stayail in the fresh breeze in the endeavor to lead. The *Consuelo* beat her handsomely and fairly, much to the delight of the members of the club. The *Chiepa* beat her also. There is now a prospect of a match between these three yachts, which are all of equal size—60 feet.

The fleet used their new Signal Code for the first time on the opening cruise, the *Consuelo* giving his orders with flags. The code is a very extended one, carefully prepared, and has already been found very useful.

SAUCLETO.

THE SCHOONER CAROLINE.

AS THIS schooner represents a type of craft now quite popular in Boston, the following details we have obtained concerning her construction will prove interesting: She was built for Boston owners by Wm. L. Dolbear, Fort Hill Wharf, Boston, from model and specifications furnished by Dr. J. Lawlor, the well-known naval architect of Chelsea. Length over all, 56 ft.; w. l., 45 ft.; beam, 15 ft.; draft, 11 ft.; draft, 6 ft. 9 in.; least freeboard, 8 ft. to top of rail. Straight stem, elliptic counter, rocker keel, with fore-foot completely cut away; bold run side, slight hollow to garboards; 11 timbers all the way forward, plumb stern post with clean entrance and run. Frames of hackmatack and oak, double, each 5 in. sided and 7 in. moulded; strongly bolted together; spaced 12 in. between centers amidships and gradually spread to 16 in. at the ends. Keel of oak, 9 in. sided amidships, 5 in. at the ends, tapering down to 6 in. at the bottom, where the iron casting or shoe underneath meets it. This shoe weighs 4,620 lbs., and is 1 in. casting, 38 ft. long, 6 in. thick at top and 2 in. at bottom; about 15 in. deep in its center. It is secured by 1 in. galvanized screw bolts, with 7 heads, spaced about 16 in. apart. Besides this *Caroline* takes 43 tons lead inside, cast to fit. We would have liked her better if she had been given more displacement, and believed her designer thinks favorably of the suggestion.

The frames are "plumb and Y fastened" to the keel, three bolts in each floor. Stem and stern post sided 6 in. of oak with oak deadwood and knees, securely and closely fastened with 1 in. iron bolts. Floorboard strakes, one each side, 9 x 12 in., riveted to floors. Bilge strakes double, each 9 x 12 in., likewise through riveted.

Miscellaneous.

KEEP'S Shirts, the Best.

KEEP'S SHIRTS, the cheapest.
KEEP'S PAT. FARTLY-MADE SHIRTS, easily finished.
KEEP'S KID GLOVES, none better.
KEEP'S UNDERWEAR, the best.

Horsman's Archery

Is Indorsed and Highly Recommended by

Dr. M. H. Thompson, Father of Archery in this country
W. H. C. Thompson, Esq., Champion Archer of the United States
J. C. Curry, Esq., President of the National Archery Association
A. B. Brown, Esq., President of the Eastern Archery Association
Special attention is called to Horsman's STRAIN WAX-BACON
Balls and foot pads, which are the only ones of the kind in the
world and for which Horsman's Archery & Lawn Tennis
is the sole agent.

E. I. HORMAN,

30 & 82 William Street, New York.

Sole Agent for Brownell's Archery Score Book and Score Cards

Clamps 18x2 in. double, riveted in every frame, and a shelf worked on top 9x2 in., bolted down into the clamps and through each frame with tin galvanized bolts; heads clinched on washers. Beams 6 to 8 in. x 4 in.; the trunk beams of oak 3 in. sided, secured to shelf by two 5/16 in. bolts and to frame by one 1 in. bolt. Plank, hard pine 1 1/2 in. thick, wales 1x4 in., water ways 3 in. thick, let in over all stanchions and fastened with 4 in. spikes. Deck of selected white pine 2x12 in., worked in a single length fore and aft, fastened with 2 1/2 in. nails. Rails of white oak 4x12 in., worked also in single length and secured to stanchions with tin galvanized iron.

The bulwarks are 9 in. high amidships; the cabin trunk is 15 in. high and 8 ft. wide, with oak sides bent down forward in a solid piece; the beams dovetailing into it. Skylights 5x12 in., over cabin, the other over staterooms; the forecastle hatch leads down the forward end of the house. The cockpit is finished in oak. There is not a brush of paint about the deck; everything is kept "bright," and very stylish and orthodox it looks, a great improvement over the yellow and blue hues so liberally daubed over our craft to their damage in appearance. The *Caroline* has an Edison windlass and an Edison steering gear. The latter we certainly do not admire. It is lopsided and more than is required for the tonnage. The deadlights, or ports in the side of the cabin house are of circular ground glass in brass setting, and are far handsomer than the barn windows disfiguring most yachts. They are made by T. D. Vanuxem & Co., and ought to come into favor for their ship-shape appearance, if nothing else. There is aft spread to the shrouds, the chain plates being 1x2 in. galvanized iron and reaching well down the side.

Below, this craft shows up a big lot of room. A spacious main saloon aft, 13 ft. long, with 7 ft. door and no center-board to split it up into narrow gangways either. Four berths out in the wings, ample locker room and transoms 20 in. wide. Amidships is a large stateroom on the starboard side, with a berth 3 ft. wide and a 3 ft. floor, wash basin, lockers, etc., all tastily and practically arranged. On the port side is the pantry, w. c., ice-box, linen and wine lockers; and in a roomy forecabin an Atlantic range No. 0., two berths, pump, sink and lockers. As the bulkhead is abut the forward end of the house, standing height is afforded, and the crew get a chance at some of the air ports. In this respect the *Caroline* is second to none, and certainly superior to New York yachts of her size. The water-tank is underneath the floor aft and holds eighty gallons. The cabin is finished in oak and pine paneling, with chairs and oak table and settee on deck, there is not a brush of paint below, forward or aft.

Spars: Mainmast, 42 ft. deck to cap; 9 in. diam. at partners. Foremast, 41 ft. deck to cap; 9 in. diam. at partners. Mastheads, 4 ft. Topmasts, housing, 18 ft. long. Bovepost outboard, 15 ft., 3 in. diam. at stem. Flying jibboom, 6 ft. beyond, with a 1 ft. pole. Foremast, 9 ft. 6 in. from forward end of l. w. l. and 16 ft. 6 in. drift between it and the mainmast. Mainboom 40 ft., gaff 18 ft. 6 in., foreboom 15 ft. 8 in., and gaff same. Masts of masts, 1 in. to the foot.

Sails: Mainmast 34 ft. luff, 17 ft. head, 37 ft. foot, 43 leech. Foremast 30 ft. luff, 14 ft. foot and head. Fly 38 ft. luff, 31 leech, 25 foot. Flying jib 44 ft. luff, 24 leech, 19 foot. Working jib topsail 52 ft. luff, 23 leech, 30 ft. foot. Storm staysail set up on its own luff 3 ft. outboard, 13 foot and 21 leech. Main gaff topsail 24 ft. luff, with a 19 ft. club and 19 ft. yard. For racing a lug foresail will be used 23 ft. on the foot. Also main mast staysail 17 head, 14 luff, 23 foot and 30 leech; balloon jib topsail 52 ft. luff, 64 leech and 43 foot.

The *Caroline* will carry two waist boats 12 and 14 ft. long, and need an outfit made up through their company and their agents as for racing. In many respects she is a decided advance upon the "common run." She will have runners to her lower masts, whips in the standing part of all her gear, and topmasts are fitted to house.

FLEAS!

USE DR. AL. WATTS' FLEA SOAP,
a safe and efficacious remedy and preventive
for fleas and all eruptions of the skin pro-
duced by them. It cleanses the hair of all im-
purities, purges it of all disagreeable odors, and
possesses the most perfect disinfecting prop-
erties. It is impossible for fleas to live where it
is used. Price, 25 cents per cake. For sale by all
druggists. Wholesale depot, 161 Lincoln street,
Boston. Dr. Watts offers for sale the largest
assortment in America of dogs of all breeds. All
diseases of dogs safely treated. Medicines with
full instruction, sent to any address upon
receipt of one dollar. The fact that Dr. Watts
has for four consecutive years been appointed
the post of Special Officer of the City of
Boston to have charge of unlicensed dogs in-
sufficiently guarantees of reliability. All com-
munications and orders will receive prompt at-
tention. Address—DR. AL. WATTS,
New York, 161 Lincoln street, Boston, Mass.

bitch, and one Cocker spaniel dog, eight
months old; very handsome; Rector's stock; price
of bitch, \$25; dog, \$30; full pedigree given.
Also one black setter dog (Gordon red Irish),
twenty months old, imported stock, well broken
on woodcock, and has been hunted a little on
fox and partridge. Also one black and white
Irish pointer, imported stock, well broken on
woodcock; splendid retriever, and is very
strong and good, and will make a splendid dog
when through the discipline; price, \$100. Ad-
dress G. E. OSBORN, Box 673, New Haven, Conn.
May20th

RORY O'MORE KENNEL.—Champion
Rory O'More in the stud. The handsomest
as well as one of the best and best bred
Irish setter dogs in the United States. Winner
of the first prize at New York, 1877; also at same
show in special prize for \$250 cup, competing
against the crack dogs, male and female, English,
Irish and Gordon setters and pointers, imported
and native. The judges tied on Rory O'More
and Paris. Also winner of the champion prize
at Hudson, 1879. Also winner of champion
prize at New York, 1879, also winner of the
gold necklace (competing against setters and
pointers, male and female) at New York, 1880.
Thoroughbred pure for several years. Also
of Queen Bess, Lottio and Magenta. For ped-
igree and particulars, address W. N. CAL-
ENDER, Albany, N. Y. May20th

Neversink Lodge Kennels.

The following celebrated Dogs are in
the stud.

DOGS:

St. Bernard dog "Marco," rough coated, two
years old; a magnificent animal—Rev. J. Cun-
ningham Macdonald's stock—prizes Hanover
Show and Rochester.
Newfoundland dog "Keeper," four years old;
first prize Westminster Kennel Show, 1879.
Pointer dog, "Croxeth," liver and white; one
and a half years old; out of Lord Seton's re-
tained stock—one of the handsomest pointers
in the United States. Second prize in the Han-
over International Show.
Blue belton setter, "Deimal Dash," eighteen
months old; sired by Llewellyn's celebrated
"Dash"—a magnificent stud dog—never exhib-
ited.
Irish setter, "Hozer II," pure red; one of Mac-
donald's champion "Hozer," never exhibited,
English setter, "Hanger II," pure red; one of
Macdonald's champion "Hozer," never exhib-
ited. His get won first at Grand Paris show, and
second at Puppy Stakes in Eastern Field Trials
1879.
Stud fee, \$25.00.

For Sale.

The get of the following thoroughbred
Bitches.
St. Bernard "Braunfels," rough coated, out of
Prince Selva's celebrated stock; a magnificent
bitch, in whelp to "Marco." As prizes in Han-
over and Rochester show.
Pointer "Queen," liver and white, 1st Westmin-
ster Kennel show 1879, whelp to "Croxeth."
Gordon setter "Beauty," 1st Boston Show 1879,
and New York show 1879.
Pointer "Dora," liver and white, out of
"Queen" and "Sancho."
Blue belton setter, "Deimal Dash," 18 months
old, sired by Llewellyn's celebrated "Dash."
Irish setter "Moza," out of Col. Hilliard's
"Palmerston," in whelp to "Hozer II."
English setter, "Hanger II," pure red and lemon.
Pups can be secured by mail and application.
Besides I offer for sale pointers and setters of
superior quality, but of good, thoroughbred stock;
full pedigree. Also, several puppies of cham-
pion "Queen," by champion "Sensation."

HO! for TROUT FISHING.

THE FAR-FAMED waters of the Mag-
nettewan are now within easy access of
Toronto and the outside world, and are still re-
markable for the abundance of trout. We have erected a large
and comfortable hotel in Magnetewan Village,
and are prepared to offer every facility to our
sporting friends by way of canoes and guides to
the trout lakes and streams tributary to the Mag-
nettewan, and can offer the best of trout fishing
within a mile of our hotel; they have local and
facilities for packing fish, so that they can be taken
fresh to any part of the Northern Shore of Lake
Macdonald and the journey shortened by
half a day, so that parties leaving Toronto can
get here in one and half days. Come up and
see us. IRWIN & CLARK, Proprietors.
Magnetewan Post-Office, Ontario, Canada.

"THE FISHING LINE."

TAKE THE
Grand Rapids & Indiana R.R.
Mackinaw, Grand Rapids and Cincinnati Short Line

FOR THE
Trout, Grayling, and Black Bass Fisheries,
AND THE
RAMOUM SUMMER RESORTS AND LAKES
OF
NORTHERN MICHIGAN.

The waters of the
Grand Traverse Region
and the Michigan North Woods are unsurpassed,
if equaled, in the abundance and great variety of
brook trout, grayling and black bass, and the
famous AMERICAN GRAYLING is found
in these waters.
The TROUT season begins May 1st and ends Sept. 1st.
The GRAYLING season begins June 1st and ends
Nov. 1st.

BLACK BASS, PICKEREL, MUSKELLUNG and
MUSKIE are abundant in large numbers in the
many lakes and bays of this territory.
The sportsman can readily send trophies of his
skill to his friends or home, as ice for
packing can be had at practically no cost.

TAKE YOUR FAMILY WITH YOU. The scene
of the North and Lakes is very beau-
tiful; the air is pure, dry and bracing. The at-
titude is peculiarly beneficial to those suffering
with

Hay Fever and Asthma Affections.
The hotel accommodations are good, far sur-
passing the average in countries now enough to
attract the tourist and sportsman.

During the season Round Trip Excursion Tick-
ets will be sold at low rates, and attractive tur-
n facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at
owner's risk.

It is a treat to realize sportsmen feel "at home"
in this route. For Tourist's Guide (an attractive
illustrated book of 80 pages, containing full in-
formation as to routes, maps, and sportsman's re-
serves) and also a full description of the Fishing
Grounds and Time Cards, address A. B. LEET,
Gen'l Pass. Agent, Grand Rapids, Mich.

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 8 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE, A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FFG and FFGG. The FG for long range rifle shooting, the FFG and FFGG for general use, burning strong and moist.

SPORTING MINING, SHOOTING, and BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

P. L. KNEELAND, 70 Wall Street, N. Y.
N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder," Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting," Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting," Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle," FFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FG are the favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

Fly Fishing on the Nepigon.

CHICAGO LAWYERS IN THE BRITISH WILDERNESS.

(Concluded.)

THE chief product of this region is rock—not soft sandstone or thin layers of limestone, but original primeval trap. It is trap dykes which form the bold headlands overlooking the north shore of Lake Superior; trap which forms the bed of the Nepigon from its head to its mouth; trap which constitutes the high cliffs and palisades extending half its length; trap which towers so abruptly over its bed that not even the pine can find a foothold in its crevices; huge trap boulders, hard and smooth, which show their sides along our course; trap columns which stand erect like pillars in the Giant's Causeway; trap battlements which frown upon us from gigantic trap castles; and trap bulwarks which, like the high poop of a seventy-four gun ship, overhang the river, and then, doubly impressive, are repeated from the deep, clear water beneath.

Granite and sienite we find occasionally as stray boulders, and quartz and sandstone pebbles on the beach on Lake Nepigon. But granite and quartz are never common near red rock.

The forests are not the magnificent growth of Michigan and Wisconsin, but stunted, like the soil on which they grow. Of the valuable hard woods, such as oak, beech, maple, hickory and ash, I have not seen a single tree. The pine, though plenty, is of a size and quality which a lumberman would scorn to touch. Cedar, hemlock, spruce, tamarack and poplar are abundant, and in the foliage the mountain ash shows its brilliant berries, to relieve the continuity of green. And as though the land were destined forever for the Indian, from every hillside is displayed the bright silver bark of the birch, ever ready to build the frail canoe, the same in shape, size and construction to-day as when Columbus or Vesputius first turned their vessels toward the West.

Game is more plenty and varied than we had been led to expect. Black bear are by no means scarce, and caribou are often found, though great perseverance and skill are required to hunt them successfully. At Red Rock we saw the head and antlers of one recently killed, the antlers being two feet three inches across, and from their tip to the point of the nose measuring four feet eight inches. No deer are found along this shore, there being no opportunity for southern migration at the approach of winter. Pigeons and partridges can be found almost

every day. Mink, beaver, lynx, martin, otter, fox and fisher are trapped by the Indians in winter, and their furs sold to the agents of the Hudson Bay Company, the controlling spirit of this region. Last evening one of our Indians shot a couple of muskrats, and though their skins are worthless at this season, their bodies were

speciously consigned to the same kettle which a few hours before had sung the requiem of six rabbits, which furnished a famous stew. It was a notable procession, these six Indians, two carrying a pole on which was strung the cauldron of mysterious contents, the others following in solemn file from the fire to a convenient nook behind the birches. We could just make out through the bushes six heads brought into a contracted circle. The kettle returned empty, the Indians happy.

The snare set for these rabbits is a very ingenious contrivance. Over a run-way the Indian places a twig in a semi-circle, and then bends down a small sapling, fastening the end by a cord with a half hitch to the middle of the semi-circle, just within which he extends the noose, which drops from the end of the sapling. The noose is held in its place by bits of twigs, with which all passage outside the run-way is closed. Then a slight barrier is formed in the run-way on each side of the snare, so that the rabbit will land in the noose with a spring, and the snare is complete. The rabbit is peacefully and quietly visiting his accustomed haunts, when he finds himself carried into mid-air, and there suspended, until in the morning his captor makes the tour of his snares, finding probably two or three rabbits for every ten snares which he has set. The fur of these rabbits is now gray, but in the winter they are snow-white.

We have not seen many birds, except an occasional crow, hawk, snipe, loon or osprey, and two eagles—one perched on a high tree, the other soaring in true republican style. There is an eagle's nest on the palisades below Split Rock, and our Indians endeavored to get an answer from the young eagle in it, but without success. Ducks and geese are said to be plenty in season, but we have seen scarcely a dozen. Of songsters I have heard none, save a fine chick-a-dee, which sang as merrily as though there were upon him the responsibility of filling this solitude with melody.

In fish Bonfield is the variety man of the party, having captured a whitefish, a perch and a sucker. Pratt secured a fair sized lake trout, which, contrary to the accepted notion as to its habits, jumped clean out of the water for his fly.

The woods furnish a great variety and abundance of berries: whortleberries—here called blue-berries—red raspberries, currants, both red and black, gooseberries, cherries, small red, and, consisting almost exclusively of pit and skin, black haws, and what the Indians call elderberries, which are in reality a small species of cranberry. I have seen some elegant mushrooms, but as the Indians do not use them, we did not care to eat them upon our own judgment. There are a few strawberry plants, apparently producing in season berries about the size of a small currant.

Of nuts I have seen no indications, except some hazel-bushes at one of the portages, and two little squirrels looked as if uncertain of proper support.

The rose bushes on some of the hillsides show that at another season some of their present barrenness must have been concealed.

We met a detachment from a surveying party, prospecting for the Canadian Pacific Railway, by the aid of which the Canadians hope to free their territory from paying tribute to "The States"; but, if the other sections are given up as exclusively as this to the production of rock for the quarry, and timber, little of which is fit even for firewood, whence will their resources be derived?

So thin and gravelly is the soil that although we have not yet had a frost, the woods along the side hills are already clothed in their fall colors of yellow and red, ready to shed their exhausted leaves.

We have found no gnats or black flies, and a judicious selection of camping grounds has removed us from the few lingering mosquitoes, and placed us each night within hearing of the music of a rapid or waterfall. Previous experience has rendered us forgetful of the inconveniences of camp life and thoughtful of its amenities. No drawing-room ever saw an act of more graceful and considerate politeness than when, in making a long portage, Pierre, one of our guides, leading the way, carried a stick in his hand which he invariably had far better the grass on both sides of the trail.

Though the fishing has been good at each of the well-known pools, we have always found better wherever the low stage of water had exposed a riffle where ordinarily the water would be smooth. In the swift water above a rapid or fall, we have usually done better than in the more regularly fished pool below; and, whenever following our own judgment, and casting according to the indications of the water, we have invariably had far better success than in fishing the places pointed out by the guides. The trout here are not as some have argued, a salmon trout, or anything different from the regular speckled brook trout, growing, under favorable circumstances, to a large size.

One circumstance seems strange, that at each point where one day we find especially choice fishing, we can hardly get a bite the next. High and Pratt, standing on a single log, caught ten elegant trout in water so shallow that they could see every movement of every fish, which did not seem to be in the least disturbed by the gyrations of their companions, as one after another was drawn out; but each fish seemed to be waiting his turn, and rose to the fly accordingly. Naturally they tried that log again, but not a trout would respond to their most skillful casts.

Generally, when we can see the most trout, the fewest will rise to the fly. Often, when one is hooked, several others will follow it about, even to within a few feet of the boat, and if the captive is a small one, the attentions of the larks ones assume a character by no means encouraging. When a half pound trout, expecting to regale himself upon a dainty fly, suddenly finds himself dragged one way by a remorseless line, and attacked from behind by an equally remorseless monster, who is no respecter of his own species, it is a busy day for the little fellow. One of these pursuers was nearly captured in the landing net.

The water of the lake and river, though naturally not so cold as some of the streams which flow into them, is beautifully clear, and one can easily see the trout swimming about among the rocks, eight, ten, or even twelve feet below the surface, and on taking a sounding in the lake, I found that I could see a white pebble, one inch in diameter, on the bottom at a depth of 234 feet.

HOMEWARD BOUND.

Friday morning we turned our faces homeward. Our enthusiasm had never forsaken us, nor our spirits flagged, but the feeling seemed to pervade the party that our descent of the river should be as easy as that of Avernus. The point seemed to have been reached at which we could return with dignity and satisfaction.

The water was struck, and as the supplies were placed in the canoes, no one could fail to notice how rapidly they had diminished under our sharpened appetites. The last ceremony was to free the trout in the camp corral, where they seemed to have become quite happy and contented. Of course every one gathered at the edge of the water, and as a few stones were removed on the outer side, the trout clustered nearer the land. They seemed to move toward us, rather than toward the freedom now offered them. So far, the scene was a failure. Then we tore out a dozen more stones, but the prisoners of our watery Chillon were still unwilling to depart. So Pratt commenced driving them forward with a landing net; it was some time before he succeeded in getting a single one into the open river. Several times he got one of them half way through the now broken barrier, when it crashed and forced its way back. And each one, when finally driven out into the river, only moved a few feet; and there we left them close together in the river, not ten feet from their three days' prison, accepting liberty as reluctantly as did Kinglake's gazelle in its native Arabian desert.

What animal it was that prowled around our camp that night, is purely a matter of conjecture. It would sound well to set it down as a bear, but that would not be the truth. But as the cook was getting supper, he saw a bear swim the river from the point below.

In the morning Michel brought in three partridges, which he had stowed on the hill back of the camp. Bonfield had cached his ammunition train with Pratt's keg of pickles, and the reserve of pork, flour and bacon, at a portage half way down the river, so he confessed no jealousy of the Indians' prowess.

At Flat Portage we met an Indian family on their travels. The man wore two feathers in his hat; in which respect only was his dress suggestive of the Indian. The squaw had a large, flat face, and what the Scotch would call an "open countenance." The papoose sat quietly by the rough contrivance which serves as a cradle at night, and on a journey is strapped to the mother's back, papoose and all. A wooden bow, fastened at right angles to the board, makes the whole resemble a miniature Russian winter traveling sled. The maiden, Minnehaha, lacked somewhat of the beauty and grace attributed to her in poetry and legend. Her traveling outfit was emphatically light, and we have seen handsomer blankets. There were only live dogs visible at any one time. How many more belonged in the family is uncertain. Those five cottony little monster, one complete tail; a porcupine which seems to be about the average along the north shore. Through the interpretation of our guides, we learnt that since our departure two steamers had been in at Red Rock, though what were the present prospects of the presidential candidates, and what progress Sir Garnet Wolsey was making with the Zulus, and what base-ball club is now ahead for the championship, we failed to learn; and as we offered us no late papers, we could not pursue the investigation on our own account. On the whole, we are quite as well satisfied, for there is a delightful sensation in being lost to the world for two or three weeks, and knowing nothing, absolutely nothing, of what has taken place beyond the Nepigon River. If a canoe had been upset anywhere in the river we should

have known all about it; but if Chicago and New York had both been burned, we should be still in blissful ignorance of the fact.

Bonfield has introduced a new method of catching trout—with an axe. The process is simple. He wanders along the river bank, casting for another five-pounder, and on the back cast lands his fly in the top of a good sized birch, and there fastens it securely. With a downcast air he slips back to camp, and has one of the guides come down with an axe and cut him out.

Sunday was a very quiet day. We moved three or four miles down the river, and then all the circulating library of the party, which had hitherto lain in the most neglected recesses of the carpet-camp, was brought out, toilets were made, partly in camp, partly before the mirror which proved so unfortunate for Narcissus, and the only episode was a little excursion to a point which commanded a fine view of the falls below the camp. We commenced congratulating Pratt on the approach of the storm which he has been constantly predicting, but unfortunately a fine, double rainbow appeared on the hill opposite, and that was all there was of the storm.

We are waiting for some one to fall out of a canoe, or slide off from some slippery stone. Thus far, not enough of an accident has befallen any one to furnish chaffing stock for the others, though we had a reasonable supply in the performances of that architectural curiosity sold as a trout rod to the overconfident King.

Thus far the discipline of the party, as to using the fly of the artist and abjuring the bait of the pot-fisher, has been well maintained; but King, advancing the theory that on the home trail some allowance should be made, threatens to drop a frog into a deep hole which he has discovered, and extract a six-pound trout. His fear is less of the wandering king or pickered will take hold—he now despises all less aristocratic fish than trout—or less high, as a true representative of fly-fishing, shall furnish his disappointment on any method less artistic.

It is equally extraordinary in repose and in action. It gives way at every conceivable point, and of course at the most critical, and finally it became a serious question whenever he attempted to make a cast how many sections would follow the fly into the water. His muffled good nature, through so many trials, so worked upon the admiration of his comrades that he was soon equipped with a good rod, and now is happy.

INDIAN LIFE.

Bonfield having declined to repeat his last Sunday evening's lecture on "The Hen," the conversation around the camp-fire gravitated toward the Indians, and our guide William was addressed, a very intelligent half-breed, whose Scotch father, an officer for forty-five years in the Hudson Bay Company's service, and now retired on a pension, still lives near Red Rock. He explained the absence of old Indians by saying that most of the men, as soon as they passed middle life, became consumptive and died, and that the women, having nearly as much exposure, lived little longer.

"Do you know, William," asked one of the party, "what that family of Indians we met at the portage are going to do at Lake Nepigon?"

"They are going to the Hudson Bay Company's port there, and as soon as cold weather comes are going trapping, and will sell the furs to the company in the spring."

"But how will they live in the meantime?"

"The man is an old hunter, and probably the company will let him get in debt for a little flour, and he can generally catch some fish."

"But won't he have pork, or bacon, or salt?"

"Oh, no. Except salt; but he will set three or four stands of snares, and his wife will tend them, and if they have good luck they will catch rabbits enough to live on, and when they begin to get scarce at one place they will move to another."

"But if they don't happen to catch any rabbits what will they live on then?"

"Then they will have to go hungry, unless the man catches some fish in the net, which he probably has with him to set near the ice. Sometimes in a storm these people can't get anything for three or four days, and I tell you these trapping Indians have a pretty hard time of it. In summer they can always get along, but the hard time is in winter."

"What do the women do?"

"They do as much as the men, and some of them are just as good hunters and fishers. They make the clothes and moccasins, and a chance one is just as strong as her husband."

"Were those traps you saw all that that family have?"

"The blankets I could easily have carried on one arm and all the rest of the household articles on the other."

"To be sure. That is as much as most Indians have. Of course he has a skin of twine to make rabbit snares with."

"Do all the Indians about here trap for the Hudson Bay Company?"

"That's the only way they have of making anything, except when they go out with anglers in the summer. The best fixed and the healthiest Indians are the Esquimaux, who come down here sometimes to trade. You could not get one of them to go into a house to stay if you were to give him gold. He would rather go down into the river and make a snow hut, and make his clothes dressed all in furs, warm and fine, and make his boots out of seal skin, with the fur inside. They are short, stout and fat, and don't make their canoes as we do; but make them longer and narrower, and then cover them all up except a hole in the middle large enough to sit in. Then his family crawls into the boat and lies down underneath. When he draws a cloth around his body and ties it tight so that not a drop of water can get into his canoe, and goes out into any sea, and the waves wash over it but can't get in and can't hurt him. He has a long paddle, broad at both ends, so that he can use it either way, and is not afraid of anything."

"But suppose he gets capsized or runs against the ice?" suggests Pratt.

"No danger of that," answered William. "He is very expert with his paddle."

"But suppose the waves swamp him, or anything happens to his boat, then the whole family would be drowned?" insists Pratt, who has read about these aborigines, and saw one of their canoes at the Centennial, and is bound to drown off at least one family.

"No danger at all!" still insists William, in his confi-

dence in the skill of his more Northern brother. "The Esquimaux is very expert with his paddle."

We have three or four methods of communicating with our Indians. English will do very well with William, and will answer with one or two others to the limited extent necessary for camp life. French does rather better, as this country was originally settled by that nation, whose language is still quite generally spoken. The Indian dialect none of us are very proficient in, and the only new phrase thus far mastered is rendered phonetically, "Ow-Wow, Way-Wahy," or, freely translated, "Go-ahead, hurry up." When everything else fails we fall back on pantomime, perhaps the most successful of all methods, as it certainly is the most vivid and entertaining.

Although our guides knew every foot of the river, and had traveled it all their lives, we could not get any two of them to agree as to the names of any of the well-known rapids except Hamilton's, or, freely translated, of them called Cameron's Pool at first. Which was Cameron's Pool none of them seemed to know positively, though we finally satisfied ourselves in other ways; nor have they any idea of distance as measured by miles. Their only standard seems to be for short distances, at what time they must start to get there by dinner-time, or before night; and for long distances, how many days it takes to make the trip. Hamilton's Pool is a series of rapids, five miles of bad river and two or three portages standing as the equivalent of twenty or thirty miles of good river, as the case may be. Whenever pressed to give distances in miles, their answers were always evidently, and sometimes absurdly, inaccurate. Their ideas of time are also extremely vague and uncertain.

Along the north shore of Lake Superior there remain now probably less than 2,000 Indians, mostly Chippewas, and many of these travel 150 or 200 miles every year to draw the \$4 a year which the Government pays them on account of the cession of their lands. This money is, of course, mostly captured at once by the traders who follow the Government agent, but who are not allowed to supply them with liquor.

Some of the Indian legends are very amusing and interesting, as their account of the creation of the world, the deluge, of the formation of Isle Royal by their god, Nana-Bijoo, out of a pebble which he threw behind him when the Chippewas were fleeing across Lake Superior in their canoes before the warlike Mohawks, though their belief in them seems now to have been much shaken.

Monday morning we made the long Pine Tree Portage, and it was astonishing to see how heavy a weight each Indian would carry on his back and shoulders, the pack being so arranged that the greatest strain would fall upon the forehead, which is covered by the broad part of the canvas strap. Louis once complained that this made his head hurt him, so he kicked up his heels and stood on his head for awhile, and then went on apparently satisfied and relieved.

PORCUPINE STEW.

While making a short portage, the guides treed a porcupine. Down went canoes and packs in an instant, and there was shouting and whooping, and a loud cry peculiar to the Indians, while the river bank furnished stores for a regular bombardment of the poor rodent. After carrying on their sport until all were satisfied, they cut down the tree, and quickly dispatched poor porcupine with a club. Then John the Baptist, who, being unable to speak a word of English, had been expressing his desires, his hopes and his feelings, in the most excited manner and the most vigorous pantomime, was commissioned to prepare the stew. First he scorched it over the camp-fire, then took it to the river and cleaned it, then cut it, head, skin and all, into small pieces, which without delay were consigned to the kettle, for which the supply of rabbits happened to be short that day. We watched the proceedings with great interest, but did not manifest a strong desire to partake of "pot-luck."

Toward evening the trout rose steadily to the fly and encouraged us to delay putting up the rods, with using which our hands and wrists were tired and sore.

VALE BENEDICTE.

Tuesday evening our last camp was made, and the guides entertained us for a long time around the fire with accounts of their life in the trapping life, of their work with various wild animals, and of their labors and duties when in the employ of the Hudson Bay Company. The black bear and the lynx, here called king, naturally played a prominent part in these recitals. Directly they resumed their Indian dialect, and Michel, their leader, gave a vivid description, accompanied by most expressive gestures and action, of what High rightly divined to be the running of a dangerous rapids. Wednesday morning King, who had delayed the execution of his threat of drawing out Leviathan with a hook, secured the desired rod, and launched him into the foaming waters at Camp Alexander. He will never cease to regret that it was a pike which he secured, and not the handsome trout which first rose to the imported battrachian. Bonfield and myself, fishing along the bank with hard work and corresponding success, put up our rods without a regret, and at the last waterfall on the river joined the others, to find that High and Pratt had encased the rods which had served them so well.

The wind, which heretofore with its well-known perversity had blown down stream when we were going up, and up stream as we came down, now changed to the west, and our Indians, rigging their blankets on their poles, spread them to the now favoring breeze, and home onward by wind and current along the winding river, through Lake Helen, and down the last rapids, they steered our frail flotilla to its journey's end. The Nell was waiting to receive us, and no steamer ever carried from that port a party more happy and contented.

JOSIAH H. BISSELL.

A BONE OF CONTENTION.—A somewhat amusing incident took place at one of our clubs in the city a short time ago, which illustrates the fact that even a "bone sharp," or to speak more by the card, an osteologist, may be of some practical use in the affairs of every day life.

A group of gentlemen were gathered in a club, which is situated something less than ten miles from the corner Fifth avenue and Twenty-third street, and had been discussing the affairs of the world in general and of this Republic in particular. These trifles having been exhausted, and a pause ensuing, one of the party drew from his pocket a somewhat cylindrical bone about two and a half inches long and placed it on the table, remarking, as he did so, that it had passed through his mouth in eating, and that he believed that no one present could tell what it was. A careful examination of the specimen (which had been somewhat obscured by having one end sawed off) ensued, and many conjectures as to its nature were hazarded by those present. Several guessed duck, one rabbit, two or three pigeon, others curlew and partridge. At last, emboldened by the many failures, the owner of the bone offered to wager a dinner for those present that no one could tell what it was, and for a while it seemed that no one would accept his offer. At last, however, a well known banker bethought him of a friend of his whose knowledge of bones is not small, and accepted the wager, stipulating, however, that he should have three days' time for consideration. This having been agreed to, he at once wrote to his osteological friend, inclosing the specimen, relating the circumstances and begging his assistance in the matter.

The letter was mailed in the evening, and the next morning the banker was made happy by the receipt of the following dispatch:—

"Letter received. Your specimen is right shin bone of big bullfrog. BONESHARK."

So he won his dinner.

A KIND FOSTER MOTHER.—Littleton, N. H., May 15th. Mr. H. D. Bishop felled a tree about the 1st of May that had four young red squirrels in it, two of which he took to his house and put them into a half-barrel with three kittens that were ten days old. Old puss soon came in, and Mr. Bishop expected to see his pets devoured instantly, but to his surprise, the old cat kindly acted as foster-mother, and has up to this day. I have just been to see them; they were taking their nourishment and seemed to be experts, for when removed would again take their position at once. They are nearly half grown, and are as frolicsome as the kittens, often seizing them by the paw, and holding it as they would a rat.

JOSEPH IDE.

We once tried an experiment somewhat similar to this, which was successful up to a certain point. We caught two young levers (young of the common brown rabbit) and put them in a box with a cat that had been deprived of all her kittens except one. The old cat nursed them kindly, but the kitten was too old when they were added to the family. For a week all went well, but at the end of that time one of the rabbits disappeared, and the next day we caught the kitten in the very act of running off with his remaining foster-brother in his mouth.

HABITS OF QUAIL.—In Maryland in dry fall weather these birds, during the day, generally remain in the woods or underbrush instead of being found, as might be expected, on the stubble fields and along the hedgerows. An inquiry into the cause of this by our correspondent, Mr. Joseph K. Bramble, leads him to believe that the birds resort to the woods for shelter from the hot sun, and as evidence of this, he cites the fact that, as soon as the weather becomes clear and cold, the birds are found, some distance from the brush, in the open fields.

NESTING OF ICTERUS SPURIUS IN A SPRUCE TREE.—A few days ago my attention was called to a nest which was situated in a spruce tree, and upon ascending the tree I found it to be the nest of the orchard oriole. The nest was built about ten or fifteen feet up from the ground, and was composed chiefly of grass, and was just finished. Do these birds often build in a spruce tree?

SEYM. R. INGERSOLL.

We have never met with a similar case, and should be glad to learn if any of our readers have done so.

SPRING NOTES FOR APRIL.—Cleveland, Ohio, May 17th. —April 1st.—Noticed a wood pewee.
—April 2d.—Saw first cliff swallows to-day. Robins beginning to build.
—April 4th.—First chipping sparrows around.
—April 10th.—Saw barn swallows, grasshopper and brown creepers to-day, for the first time this spring.
—April 14th.—Wood thrush and house wrens have arrived.
—April 22d.—Noticed chimney swifts to-day; snowbirds still around.
—April 28th.—Saw the following birds for the first time this spring: Baltimore Orioles, cardinals, yellow warblers, brown thrushes, Maryland yellow-throats and kingbirds.
—April 27th.—Saw a scarlet tanager to-day.
—April 30th.—Saw first purple martin.

SEYM. R. INGERSOLL.

from a mixture of the juices of several plants belonging to different genera, and it differs much in color, hardness and its solubility.

At the bottom of this sea, mixed with clay, ooze, sand and sea-weeds, are now heaps of amber formed from generations of trees which once flourished where the waters now roll, the stems of which have rotted while the imperishable resin lives to tell that it was once part of the life blood of the vanished vegetation which perished by the sinking of the ground and the influx of the water, and the old manner of gathering the amber was to pick up what was washed ashore by the storms, but the material so obtained was never equal to the demand and the harvest was uncertain and not remunerative. Now they wait until the wind is in the right direction and of sufficient strength to wash the amber which may be among the submerged sea-weed or other floating matter which is not far from shore, and men are stationed to watch its approach and signal to the town below the appearance of the harvest, upon which they hasten with rakes and nets and rush into the sea to bring the tangled mass on shore while the women search it for prizes. Beside this there is also a system of clear water fishing, in which the bottom sea and masses of sea-weed are dredged up with rakes into nets and so taken on shore. These systems were the only ones known until about the middle of the sixteenth century, when the physician of the Markgraf Albrecht made an attempt to dig amber from the bottom, he rightly concluding that there must be much of this valuable substance hidden in the sand and clay, and in the year 1555, during the reign of George Frederic, there was much taken on the shore of the estate of Lochstein, yet the work seemed of no great value and shortly after stopped and was never resumed until 1781, when it received a new impetus, and by the approval of Staats Minister of Ileinitz permission was granted to open a "mine" of amber which was carried on for twenty-four years with great success. All these undertakings, however, faded away before the development of the amber beds which were found in great bunches without any mixture of blue earth, and in 1811 private persons were allowed to establish diggings on their own coasts, and this has in these later days developed into the great establishment of Messrs. Stantien & Becker at Koenigsberg, who have a fleet of fifteen steam dredging machines and carry on the business on a large scale.

The exhibition of Messrs. Stantien & Becker in the International Fishery Exhibition, is a splendid one, exhibiting one sea cases full of small pieces of amber in the rough, from the size of a pea to that of a walnut, suited for the lacquer trade, and then larger pieces, with here and there a bit which has one face polished to show its grain and coloration. Green, violet and red are the rare colors, and are therefore highly prized, the former being exceedingly rare, although very fine specimens are here exhibited among the cabinet specimens as well as curious forms and patterns, and a great number of specimens containing leaves, bark and insects, the latter of which are very interesting, the animal life being represented by the families and genera, Blattina, Hyppocline, Ptenolepis, Lasius, Termites, Hymenoptera, Coleoptera, Diptera, Lepidoptera, Arachnoidea, Polycentropus, Orthoptera, Neuroptera, Rhynchota and others, with their larval forms making the most interesting study.

The model of the amber fishes belonging to the firm named shows the steam dredging machines in position with an endless belt of buckets which drag the bottom and bring up the mud, which is then washed for the gems; as well as the boats, nets, houses of the fishers, etc., together with glass cases showing how the amber lies in the sand, the blue sand and the sea-weed.

As the fisher in the inland fishes for pearls in the sea, and the miner seeks for precious ore in the mine, so is amber, the beautiful child of the sun, sought and fished for along the coasts of East Prussia, and it is impossible to quarrel with the learned Professor Hasse, who, in his enthusiastic account of the amber fisheries at the close of the past century, declared that the finding of amber was

"the discovered Eridanus, the fruit of the tree which the earth produces in the highest age, nor with its associating the amber with the apples of Hesperides, with the tree in Paradise, nor with his following this train of thought until it led him to the belief that his beloved gem was not only the fruit of which he spoke, but that its presence in such quantities plainly showed that East Prussia was in fact the exact location of Paradise."

These thoughts are indeed poetry, and if the apples of the Hesperides in passing through those mills whose slowness is only equalled by the exceeding fineness of the pulp, as we proverbially learn, were made into cider of such purity that it solidified into the subject of our story, then we know that horticulture has retrograded, and that it cannot be done with the Newton pippins and greenings of to-day, plant we never so wisely.

BLACK BASS FOR INLAND WATERS.

THE black bass is peculiarly adapted in every respect for stocking inland waters, and there is no fish that will give more abundant and satisfactory returns for the slight labor and expense attending its introduction.

As a food fish, there are very few more palatable fresh water fishes, its flesh being firm, white and flaky, and when cooked, nutty, tender and juicy; it has few bones, little oil, and as a pan-fish is unexcelled. Its game qualities are of the highest order, and it will thrive in waters where the *Salmoides* cannot exist.

There are few fish more prolific than the black bass, while there are none more hardy, healthy and better able to take care of itself, and none that protects or cares more tenderly for its young; consequently, there is no limit to its production and increase in suitable waters, save a lack of natural food.

In view, then, of the good qualities, there is no fish more worthy of cultivation, none that can be so easily transplanted, and none that is so well adapted to the various waters of our country—for there is none that has such an extensive original habitat. Every attempt that has been made to stock suitable waters with the black bass has been crowned with signal success.

Both species of the black bass, *Micropterus salmoides* (Lacépède) Gill and the small-mouthed bass, and *Micropterus pallidus* (Rafinesque) Gill and Jordan, the large-mouthed black bass (Osage bass), are remarkably active, muscular and voracious, with large, hard and tough mouths,

are very bold in biting, and when hooked exhibit gameness and endurance second to no other fish. In the opinion of the writer, both species are equally "game," and equally good for the table; they generally inhabit the same waters, and there is a slight diversity of habits where they co-exist together.

Naturally, the small-mouthed bass prefers rocky streams, or the gravelly shoals and bottom spruces of lakes and ponds, while the large-mouthed bass lurks about submerged roots of trees or sunken logs in rivers, and delights in the beds of rushes and other aquatic plants of lacustrine waters; but both species readily adapt themselves to waters of various conditions, when transplanted, easily accommodating themselves to their surroundings, and have a happy faculty of making themselves at home wherever placed, so that in some localities their habits are as anomalous as their colors, which may be of any shade of black, green, or yellow.

As before stated, black bass are very prolific, the females yielding fully one-fourth of their weight in spawn. The period of spawning extends from early spring until midsummer, according to the section of country or temperature of water; in the South, occurring as early as March, and in the North and West, from the middle of May until the middle of July, always earlier in shallow waters, and somewhat later in those of great depth.

The bass leave their winter quarters, in deep water, about a month or six weeks previous to the spawning season, at which times they can be seen running up streams and in the shallow portions of lakes in great numbers. Soon afterward the males and females pair off, and prepare for breeding. They select suitable spots for their nest, usually upon a gravelly or sandy bottom, or on rocky ledges, in water from eighteen inches to three feet deep in rivers, and from three to six feet deep in lakes and ponds; and, if possible, adjacent to deep water or patches of aquatic plants, to which the parent fish retire if disturbed.

The nests are circular, saucer-like depressions, varying from one to three feet (usually about twice the length of the fish) in diameter, which are formed by the constant turning and scouring from the pebbles all the sand, silt and vegetable debris by means of their tails and fins, and by removing large obstacles with their mouths; this gives the beds a bright, clean and white appearance, which, in clear water, can be seen for a hundred yards or more. Sometimes the nests are formed upon a muddy bottom, with a pavement or foundation of small sticks and leaves, from which they always have been found to be constructed; and as this often seems to be a matter of choice—there being beds upon gravelly situations in the same waters—the writer has sometimes thought that this discrimination in the location of the nest might be owing to some difference of habits in this respect in the two species of bass, but of this he is by no means sure.

The females deposit their eggs upon the bottom of the nests, usually in rows, and are attended by the males, and become glued to the pebbles and sticks contained therein. The eggs are hatched in from one to two weeks, depending on the temperature of the water, but usually in from eight to twelve days. When hatched, the young bass are almost perfectly formed, from one-fourth to one-half of an inch in length, and cover the entire bed, where they can be easily detected by their constant motion. After hatching, the young fry remain over the beds from two to seven days, usually three or four, when they scatter into the deep water, or take refuge in the weeds, under stones, logs, or other hiding places.

During the period of incubation the nests are carefully guarded by the parent fish, who remains over them fanning the eggs with her fins, creating a current which washes away all sediment. But after the eggs are hatched, and while the young remain on the nests, her vigilance becomes increased and increasing, and all suspicious and predating intruders are driven away.

After the young bass leave the spawning beds their food at first consists of animalcules, larva, insects and the ova of other fish; as they grow older and larger they devour worms, tadpoles, small fish, etc., and in later life they vary their diet, taking frogs, muskies and water snakes. Where food is plentiful the young bass, reaching a length of two inches in a few months after hatching, and at a year old will measure at least four inches. At two years of age they will be found from eight to twelve inches in length, weighing about a pound, and will grow nearly or quite a pound a year thereafter until they reach their maximum weight. They arrive at maturity in from two to seven years, according as the conditions for their growth are favorable or otherwise.

Black bass grow with wonderful rapidity where an equable temperature of water and an abundance of food obtain, and will increase in weight, as before stated, about a pound a year; but under adverse circumstances or unfavorable conditions their growth is much slower, therefore no rule of general application can be established from any single instance, or the result of any exclusively local test or experience. Their growth is affected not only by the supply of food and temperature of water, but also by the extent of range. Bass in small ponds do not thrive so well nor grow so fast; the smaller the extent of their range the slower will be their growth; and, indeed, this is true of any other fish, for it is a well-known fact that fish confined in aquaria, in springs or wells, grow so very slowly that their increase in size is hardly appreciable from year to year, even though the supply of food be abundant. An equally well-attested fact, that the largest bass are found in the largest bodies of water, or where the range is extensive; extreme depth of water seeming to be more favorable to their growth than mere extent of surface.

From the foregoing account of the breeding and growth of the black bass it will readily be seen that there are no reasons for restricting its introduction in the manner practiced with the salmon, trout, or shad; nor would the method be successful, for reasons well known to fish culturists. The black bass, being hatched with but a small or rudimentary umbilical vesicle or yolk-sac, needs the fostering care and attention of the parent fish, who teaches it how and where to find its food, and protects it from its enemies, in the same way that a hen cares for her brood.

All that is required to stock a stream or pond with black bass is to procure a small number of fish, at least a year old, and place them in the waters. If the water is

of a suitable character, and possesses a sufficient supply of food, the bass will propagate naturally, and rapidly increase in number. The Potomac River and its tributaries, which now swarm with this desirable game fish, were originally stocked with less than thirty young bass from Wheeling Creek, West Virginia.

The only considerations to be looked after are the character and condition of the waters to be stocked, and the supply of food contained in them. It is useless to attempt to stock very small and confined ponds of less than three acres in extent, for in such ponds, without communication with running water, the bass will not increase beyond a certain limited number, which will usually be the number of fish originally planted; for the supply of natural food will soon become exhausted, and the old fish will prey upon the young ones, should any be hatched, until a certain average, proportionate to the supply of food, is established and maintained. In the case of newly formed ponds, they should be well stocked with minnows, crustacea, frogs, etc., at least a year before the bass are introduced. It is also necessary that there should be deep holes in all ponds of not less than twelve feet in depth, to which the bass can retire in very hot weather, and where they can also hibernate.

In some waters one species of black bass may prosper better than the other; for instance, in large ponds or shallow lakes, with a sluggish current, muddy bottom, and abounding in fresh water algae, the large-mouthed bass will thrive better perhaps than the small-mouthed species; but in streams and ponds with a good supply of running water, either or both species may be introduced. Both species of black bass are natural to the waters of Ohio, and originally existed in all the streams, those emptying into the Ohio River as well as those flowing into Lake Erie.—DR. J. A. HENSALL, in Ohio Report.

In sending reports for the FOREST AND STREAM Directory of Game and Fish Reports, our correspondents are requested to give the following particulars, with such other information as they may deem of value: State, Town, County; Means of access; Hotel and other accommodations; Game and its Season; Fish and its Season; Boats, Guides, etc.; Name of person to address.

—Address all communications to "Forest and Stream Publishing Company, New York."

FLY-FISHING FOR BLACK BASS.

SECOND PAPER.

CLICK REELS.

THE black bass angler who has confined himself entirely to bait fishing and a multiplying reel, and has had no opportunities for knowing anything of fly-fishing and its implements, must understand that a click reel is indispensable in fly-fishing. As the two methods of angling differ so essentially, they require reels of widely different functions.

The multiplying reel must be very rapid in its action so as to deliver the bait as far as possible at a single cast, the thumb, meanwhile, controlling the rapid reeling of the line so as to prevent back lashing of the spool; but in fly-fishing the line is lengthened gradually, a few feet being taken from the reel by the hand before each subsequent cast, while the click offers the necessary resistance to the reeling of the line to permit this to be done without the casting arm coming over the head.

As the multiplying reel is made wide so as to allow for the thumbing of the spool, and as this necessity is not required in the click reel, the latter is made quite narrow, thus permitting the line to be reeled without bunching and at the same time allow of its being reeled rapidly enough for all practical purposes without a multiplying action; for the main object of a multiplying reel is for rapidity of action in casting and not in retrieving the line, as is often erroneously supposed.

After a fish is hooked a click reel answers the purpose of playing and landing it as well as the best triple or quadruple multiplier made—if not better; for after a fish is reeled in by main strength with a rapid multiplier and an attempt made to land it before it has been killed in the rod, thus curtailing the real sport of angling and at a great risk to the angler's tackle. I speak of this now, for I have heard anglers praising a rapid working quadruple multiplying reel because they could reel in a fish "so fast," basing all of its merits upon this one quality; the desire to get possession of the fish seeming to be paramount to the real sport of hooking and playing it.

Click reels are all constructed upon the same general principle, but are of various patterns and composed of various materials, being made of hard rubber, celluloid, brass, bronze and German silver; their weight depends on the material used, and the angler has a large assortment of styles and prices to select from. Any good trout click reel is suitable for black bass fly-fishing, and can be furnished by any of the first-class dealers who advertise in FOREST AND STREAM.

The "click" reel answers as well as any; it is simple, durable and inexpensive; is extremely narrow and takes up line rapidly, while the perforations render it light and assist in drying the line and in freeing it from sand and grit.

Abbey & Imbrie make a superb reel, the "Abbey," composed of hard rubber, with German silver spool, rim and fittings; it is extremely light and has a protected handle to prevent fouling of the line in casting, and is first class

in every respect. Nos. 3 and 4, the latter being the smaller, are the proper sizes. The "Imbria" reel, also made by this firm, although a multiplier—and a most excellent one, by the way—does not have the adjustable click which allows of its being used also for fly-fishing. And the angler who is the fortunate possessor of one of these reels can use it in black bass fishing for either his minnow rod or fly-rod.

Wm. Mills & Son's reels are unexcelled, either brass, German silver or rubber; they are fitted with protecting bands to prevent the line from catching on the handle. The 100 and forty yards reels are the correct sizes for black bass fly-fishing.

The "Leonard reel" is probably the lightest metal click reel manufactured, and holds a great deal of line for its size, being of good width. It also has a flush handle to prevent fouling of the line; and two and a half inch diameter is the preferred size for black bass angling.

Conroy, Bissett & Malleson, of New York, A. B. Shipley & Son, of Philadelphia, and Bradford & Anthony, of Boston, also furnish the reel. As the click regulates the rendering of the line, and as the narrowness of the reel obviates the necessity for guiding the line in reeling, it is placed out of the way, at the extreme butt, and "where it will do the most good." A reel should always be placed underneath the rod, and not on top, as is often done.

FLY-LINES.

The reel line for fly-fishing must necessarily be heavier than the line for spinning, the greater weight of the former being required to cast objects so light and delicate as artificial flies, while in the case of the small and light bait-line, the minnow, swivel and sinker give the required weight for casting. Increased weight is obtained by increase of the caliber of the line; so a fly-line is consequently of a larger size than a bait-line.

Formerly, the twisted or plaited hair, and hair and silk lines, were employed together by the best anglers (or fly-fishers), but they have been uniformly superseded by the really elegant tapered and enameled waterproof braided silk line. The latter is the line *par excellence* for all kinds of fly-fishing, being smooth, round, polished and perfectly waterproof, and is just stiff and heavy enough to favor a perfectly straight cast, without looping or kinking, qualities that are peculiarly essential to this kind of angling. Those who have used the old-fashioned fly-line, and are prepared to speak feelingly and appreciatively concerning the great superiority and excellence of this line.

They are made in several sizes for salmon, black bass and trout fishing; are very strong and serviceable, and can be purchased in lengths of from twenty-five to one hundred and twenty yards. They are fashioned with a regular and gradual taper from the reel end to the fly-end, the fly-end being only one-half the caliber of the reel-end; salmon lines usually taper but we have found the middle. They are usually stained of a greenish-lime hue, which harmonizes well with the tints of the waters, sky and foliage. From twenty-five to thirty yards is the right length, and the size should be either E or F, which correspond with Nos. 3 and 4, some dealers designating the sizes by letters, others by numerals.

The silk and hair line is still used to some extent, but it is open to many objections. At best it is a weak line, and soon rots and becomes worthless by use, even with good care. The ends of the hairs become frayed and separate after a time, and are a constant source of annoyance by sticking out at various places on the line, preventing it from working smoothly and freely through the rings of the rod. When used for black bass angling, the size of the line for trout fly will answer, and the length should be about thirty yards.

Next best to the tapered enameled silk line, is the oiled braided silk line; though this is not tapered it is a good, strong and useful line, and is used by many anglers in preference to all others. It is tinted of a similar shade to the enameled line, and altogether is a very satisfactory fly-line, being heavy enough, and withal, cheaper than the tapered line. Letters E and F, or Nos. 3 and 4, are suitable sizes.

Next in order is the braided linen line, either waterproof or plain. Where economy in price is a necessary object, this is the best line to select, though the angler should bear in mind that the best is the cheapest, for he knows full well that to no other class of goods does this maxim apply with more force than to fishing tackle. This line is strong, firm and round, and is capable of long and hard service, if proper care is taken to dry it thoroughly always after using. It is well adapted for making a nice, straight cast, and will not curl or kink. It is usually stained a light shade of slate, or a grayish drab. Letter E, or No. 3, is about the right size.

Some fly-fishers use the ordinary braided raw, or boiled silk lines, which, while being the very best lines for bait fishing, are not so well adapted for fly-fishing on account of the light weight; the medium sizes, however, answer tolerably well. Letter E, or No. 3, is the correct size, when used for black bass fly-fishing.

All fishing lines that are not absolutely waterproof should be carefully dried after use; and even waterproof lines would be much benefited by an airing previous to putting away. Even the best lines become weak and brittle through want of proper and judicious treatment. It is impossible to make a line that is indestructible, or waterproof against mildew or rot, though many anglers seem to think to the contrary, judging from the shiftless and reprehensible manner in which they use them; then, when the line fails, they blame the manufacturer.

LEADERS.

Black bass leaders should be six feet long, and composed of the best single Spanish silk-worm gut, heavy and strong, and not so much twisted as the trout leader. It should be perfectly clear and sound, quite smooth, and without irregularities or rough places. The rod-end of the leader should be composed of a large-sized gut, the next length a trifle smaller, and so diminish by a gradual taper to the fly-end. The

several lengths should be neatly and firmly knotted together by what is technically known as the double water-knot. The ends should be cut off closely; or, if the single water-knot is used, the ends should be first wrapped with silk, waxed and varnished, and then cut off neatly and closely.

It should be remembered that it is necessary to soak and soften the ends of the gut-lengths previous to tying. The water-knot, if correctly tied, can be easily slipped apart and the snell of a fly inserted, when it is to be securely drawn together again, the snell having a knot tied on the end to prevent its pulling out; but more of this anon.

Some leaders are now made with loops for attaching the flies, which is a very convenient and expeditious way, but the old method is still much in vogue, and both plans have their advocates.

Too much care cannot be exercised in selecting the leader, for upon its soundness and excellence depend much of the pleasure and success of fly-fishing. It should be carefully examined in every inch of its length, and the knots closely inspected. The leader should always be stained some suitable neutral tint; either a slightly greenish, grayish or smoky hue will answer. Strong green tea, diluted black ink, or a weak solution of indigo, make good stains. The leader should have a loop at each end, for attaching the reel line and stretch-ly.

I will not enter into the details of making leaders, as they can now be purchased so cheaply, and of such superior excellence, that the amateur can hardly hope to equal them, even were it necessary. The leaders known as "mist-colored" are all that can be desired, and the angler can have them sent by mail from any first-class dealer, who will select them "upon honor." I will only add, beware of double or twisted leaders; they are an abomination to the black bass fly-fisher.

J. A. HENSHALL.

Cynthiana, Ky., May 25th.

MAINE—Lincoln, May 26th.—In the town of Topsfield, forty miles east from here, is a small lake nearly two miles long by about fifty rods wide, which is one large boiling spring, having no visible inlet and but one small stream running from it, in which are the gamiest land-locked salmon and salmon trout it has ever been my good fortune to struggle with. Prof. Mills and I made a hurried visit to it the other day, fishing from 5 to 9 o'clock A.M. We caught, after most exciting sport, ten beauties, the smallest of which weighed two and a half pounds.

F. C.

MAINE TROUTING.—Mr. D. J. Flanders, Gen. Pass. Agent of the Boston and Maine Railroad, is a disciple of Izak Walton and an expert fisherman. He captured on the Upper Dam, Rangeley Lakes, last fall a trout weighing 61 lbs. Under Mr. Flanders' supervision the angling tourist is always well treated on the Boston and Maine road, which is the favorite route among those who have once been over it. The rates of excursion tickets from Boston and return, as now issued, are: To Andover, \$9; South Am., \$13; Middle Lake via S.; Upper Dam, \$14; Indian Rock, \$15.25; Upton, \$11; Greenville (Rangeley Lakes), \$12.50; Indian Rock (Rangeley outlet), \$13.75; Indian Rock (in via Phillips, out via Andover, or vice versa), \$15.25; Forks of the Kennebec, \$13; Mt. Kineo House, \$15.

MAINE TROUTING.—Newport, Me., May 24th.—Have just returned from a trout fishing trip to Kingsbury Stream, which empties into the Piscataquis at Abbot Village, on the Moosehead Lake road. The water is a little too high yet for first-class fishing, and is still discolored by surplus water from the swamps. No trout in eddies or deep holes, but all on the ripples, feeding on winged ants, of which I saw their throats were full, and even in corners where we were so long in finding them. A liberal supply of green tar and sweet oil, mixed in proportion of three parts of the latter to one of the former; it is by far the best preparation made to keep off flies, lasting four times as long as oil of pennyroyal or peppermint. It is also excellent for improving the complexions of those whose occupations keep them within doors, as a single day's application will give them a color which would cause a Hute to blush with envy. PENOBSCOT.

BLUE FISHING.—Riverside House, Forked River, N. J., May 29th.—Plenty of bluefish now in the bay near the Riverside House, catches of twenty-five or thirty being the average per boat the past week. They run from two to four pounds and make fine sport. Weather warm, and we look for good fishing of all kinds from this time.

SHAD AND FLY.—Plainfield, N. J., May 25th.—It has long been a question of veracity on the part of the disciples of Izak Walton, especially in this section, as to the possibility of catching shad with hook and line. That question is, however, settled at last in the affirmative. Last Friday, three gentlemen, members of the New Jersey Game and Fish Protective Society, visited the Raritan River, in the vicinity of the dam below Bound Brook, with two purposes in mind. One to see that the law was being obeyed regarding the hauling of nets at that point, and another to whip the stream with flies for dace, perch and sunfish. While enjoying the latter sport, the writer was so fortunate as to land and strike the lead fly, and after a tussle of some fifteen minutes succeeded in securing the fish, which weighed 34 pounds. The rod used was a nine ounce Orvis. Although much heavier black bass have been killed by this rod, in season, we must say that this shad possessed great strength, and gave more sport and excitement in its capture. Keep the nets out of the river and rare sport is in store for the anglers.

PENNSYLVANIA—Greenville, May 25th.—The Shenango River abounds with black bass, and the fishermen are preparing themselves for the 1st of June, for then it is legal to catch.

THE BEAGLE JUDGING.

THAT we have printed the below communications in full, in spite of their very outspoken criticisms of the late bench show judging, is the best evidence we can offer that it is our aim to afford the largest liberty to our correspondents consistent with the limits of our space, when they do not themselves overstep the limits of propriety. In our mind, no healthy subject can be injured by proper ventilation, but at the same time the true object of such airings must not be lost sight of. While it is the universal impression that the animals at the late show were to be judged by Stonehenge's points, we have been told that all the judges did not construe Rule 8 as a direction so to do. The rule in question reads as follows:—

The scales of points given in the third edition of the "Dogs of the British Islands," by J. H. Walsh (Stonehenge), will be used by the judges, when necessary, in judging the dogs.

Therefore, cannot it with justice be claimed that in the majority of cases the judges did not deem it necessary to use said points?

Whatever may be the adjustment of the differences of opinion in the past, it is patent to us that a reform must at once be adopted for governing the proper judging of dogs in the future. We believe the time has come when there can be no difficulty in instituting a proper standard of points, and upon finding plenty of good judges, "those to the manor born," to see that the rule of judging by this standard is carried out. We have always been opposed to three judges, and to English judges; where there is only one, he is very careful, for he cannot lay the blame on anybody but himself. Therefore, in the future let us have American judges—let them be specialists, and let each one be detailed to judge his own individual classes. This will narrow the matter down, and in the future we will have our own countrymen to pick to pieces, and thus save our guests—the foreign judges—from the abuse that is always heaped upon their heads by unthinking people the moment their backs are turned upon our shores.

Turning now to the subject in question, we may say that the standard of perfection of the beagle thirty-five years ago was considered to be from ten to eleven inches, and the latter was the maximum height. Stonehenge advises that they should not be bred under 9 inches, and Mr. Dalziel, in his admirable book, "British Dogs," gives the measurements of two good dogs, one 14½ inches and the other 15 inches. The former authority states that it is said in the time of the Virgin Queen, Bess herself possessed a pack so diminutive that they could be carried in a man's glove. This statement, of course, must be taken *cum grano salis*. Had we been told, however, that a pack of beagles had been wont to repose, in the time of the Roundheads, in the hat of Oliver Cromwell, the one now shown in the armory of Stirling Castle, we would have believed it beyond all question. But it is not in this crude way must we size the merry little bound spoken of by Oppian as one of the kind of dogs peculiar to the ancient Britons?—

There is a kind of dog of mighty name

For hunting, worthy of a fairer fame;

By painted Britons brave in war they're bred,

Are beagles called, and to the chase are led,

Their bodies small, and of so mean a shape,

You'd think them curs that under table gape.

It is a mere question of inches—in our opinion we want a practical dog of about 12 to 15 inches for our rough, stony hill-sides, and when they exceed that measurement exhibitors should furnish the judge with a pair of far-seeing glasses, so as to reduce in size the animals before him and spy out in the future his impending fate.

GRANBY, CONN., May 24th.

Editor Forest and Stream.—

By the request of several prominent breeders of beagles I took notes and measurements of entries in that class—prize winners in particular—and am compelled to say that such unaccountable judging as was shown in the award of prizes in that class it has never been my misfortune to witness before.

An overgrown animal, measuring 16 inches high at shoulder, was given first prize.

The second prize was captured by another oversized specimen, standing 16½ at shoulder, and I should judge would turn the scales at 26 pounds. Head had a snipy, whittled-out look that was anything but hound-like in expression, and ears were short in leather and set high.

The giving of third prize to a dog standing over 19 inches high at shoulder, and that must have weighed 30 pounds, is what I wish to say most about. We have read in the works of Stonehenge, Herbert, and many others, that a beagle is a diminutive hound; in fact, a "pocket edition of the old Southern hound," and should have the long ears "that sweep away the morning dew," and according to that high authority, *The Fowler's Gazette*, should not exceed 15 inches in height; but the honorable judges did not consider size any barrier to success, and gave prizes to oversized animals that would ruin the reputation of any breeder who should send them out as beagles.

Two beagles recently imported by the Essex County

Hunk were not splendid, as they measured 16 inches high, and were very justly considered oversized by the club.

Why the judge should overlook such dogs as Rambler, Lottie (winner of first at New York in 1879) and Charley (second at New York in 1879) is a mystery to us, that we hope the judge will kindly explain, and if dogs 19 inches high and weighing at least thirty pounds are beagles, we hope the judge will tell us what a harrier is.

N. ELMORE.

MONTECLAIR, N. J., May 24th.

Editor Forest and Stream:—

I wish to call the attention of the several breeders of pure beagles to the fact that the standard of excellence is going up a peg in size. According to the awards at the 14th bench show the winners were from 15 inches up. It used to be from 12 to 15, but not one of the prize winners in the above class were less than 15. The third prize was awarded to a dog that I know was 16½ inches high at shoulders. The others I did not measure, but someone else did. The Essex County Hunt Club has imported two splendid hitches. They arrived about three weeks ago, in good condition, so I had a bench show of my own to decide which I should take to the show. The late arrivals, however, lost the chance of seeing Madison Square Garden just because they measured full 15 inches at the shoulders; but they are beauties, for all that.

One of the judges in last year's show censured me for taking a bitch into the ring that measured 15½ inches. I tried to rub the half inch off her feet with sandpaper, but I couldn't fetch it. He (the judge) said she was no "bagle." I thought of selling the dog onto him, but he gave me third prize with another dog, and so I let up on him and promised to be more careful in my selection for future bench shows, and I was, for instead of taking a couple of 15 inch beagles, I took one 12 inch and one 13 inches, and got beaten with two 11 inch ones. I believe, Mr. Editor, that if I had taken a couple of 18 inch hounds I should have got first and second, sure. On meeting the aforesaid judge in the building, I asked him what he called a beagle? He looked at me and said, "What did I tell you last year?" Of course I forgot, but I hadn't, so I took him around to the kennels and asked him to point out the best two. Well, he just sat and showed me my own two. He said the others were "duffers," oversized, and that he never saw a "bagle" over 15 inches; but, alas, I had to stand it when the prizes were given, although I did get honorable mention, and the dogs that took first and second last year did not get a smell. The above gentleman was not a judge this year, so I had the wrong man, that's all. I would like to see him again, and the dogs next year, so that I can be ready for him. I will try and ring in the right ones if I can find out.

II, II.

THE COCKER JUDGING AT THE SHOW.—*Buffalo, N. Y., May 24th.*—*Editor Forest and Stream.*—I had a breeder of cocker spaniels at my house. I have visited several bench shows, but saw few specimens that I fancied better than my own. In securing my original stock I was always very careful to avoid curly coats, or dogs with topknots. At an expense of upward of \$50 I visited the late New York Dog Show, principally to view the prize winners in the cocker classes, and compare my ideas of a standard dog with those of the judges. I saw a fine specimen of a cocker spaniel, which first was awarded a prize in the dog class to the poorest specimen in the show. It could boast of a topknot very similar that of Mr. Holbrook's champion Irish water spaniel dog Barney. When I saw this dog, previous to the judging (I wondered how a person could be foolish enough to enter such a specimen in the cocker class. Now this award looked to me as if the judge knew very little of what constituted a cocker spaniel. I heard it stated that he claimed that there was not a genuine cocker spaniel in the show. For argument's sake we will concede this, or that there is not one in the United States; and I presume he will admit, that such a cocker is a rarity, even in England—the original home of the breed. But that there were several specimens in the dog class which were greatly superior and came much nearer the standard of Stonehenge than the dog he gave first prize will admit who them. Of what use is it to expend money in trying to breed cockers to a standard that bench shows advertise the dogs are to be judged by, when prizes are awarded to such miserable specimens as the one in question. I am not a disappointed exhibitor. The only dog that I owned an interest in at the show was awarded first prize in his class, with, I believe, eight competitors.

COCKER.

THE TILESTON MEMORIAL FUND.

EASTERN FIELD TRIALS CLUB.—*New York, May 28th.*—The undersigned, a committee appointed by the Eastern Field Trials Club, to receive subscriptions to the Memorial Fund, to accompany the resolutions of sympathy to the family of the late Wm. M. Tileston, Esq., of this city, respectfully solicit your cordial and earnest cooperation in this laudable undertaking.

In addition to your own contribution, we would ask you to secure from sportsmen, naturalists, lovers of aquatic and all outdoor sports, and from all who sympathize in the bereavement and sorrow occasioned by the recent calamity at Madison Square Garden, as liberal and prompt subscriptions to this fund as their feelings may prompt them to make, under all the well-known circumstances.

This fund is a positive and greatly needed benefit, and all who join in creating it may feel assured of doing a good deed.

We inclose blanks for subscriptions, which please present to the attention of all likely to be interested, and return with the amounts subscribed, at as early a date as possible, to the Treasurer of this fund, P. H. Morris, 22 Duane street, New York City, or to the Secretary, Fred. N. Hall, P. O. Box 1263, New York. All subscriptions received will be duly acknowledged through the sportsman's newspapers throughout the United States.

P. H. MORRIS, Secretary. FRED. N. HALL, Treasurer.

—*French Show scoring cards, with complete table of points, by Edward J. Forster, Secretary Massachusetts Kennel Club.* By the table, the value of any particular point of any breed, according to Stonehenge, can be seen at a glance. Twenty-five cents per package, or five packages for \$1, postpaid. Send currency or stamps. Address Edward J. Forster, Charlestown, Mass.

June 29—N. Y. Y. C. Breston's Reef Challenge Cup.

YACHTING NEWS.

NOTES FROM SAN FRANCISCO.—The yawl *Emerald*, which was for so many years one of the shells in San Francisco Bay as a Bermudian sloop, has been thoroughly overhauled. She has a new deck and her spars have been reset. Her cabin has been raised to give standing room. She was an old-style yacht, with low freeboard and very low cabin. She has been fitted up handsomely. The *Emerald* can still crowd some of the larger yachts. Mr. J. Clem Usher, for many years a leading member of the San Francisco Yacht Club, and an enthusiastic yachtsman, has gone to New York to live. Mr. Usher was owner of the yawl *Emerald*. His fellow members of the club, and him greatly, as he has taken very great interest in building up the organization, and is a genial, pleasant companion. The sloop *Clara*, which was brought from New York to San Francisco on a vessel's deck two years ago for Jabez Hoves, Esq., is now the property of Jno. Isaac Hamilton, of the San Francisco Yacht Club. Mr. Hamilton has refitted her and put her in first-rate shape. Her cabin has been raised to give head room, and her interior fittings are now very handsome. She has had 1,000 pounds of lead put in her keel, which makes her stand up very much better. Before Mr. Hoves sold her he had her stem remodeled and lengthened, so she is now, with the new improvements, very much better adapted to San Francisco waters than when she arrived. Mr. Hamilton has her jibs arranged so as to set a small one flying, English fashion, in strong breezes. The yawl *Sappho* has been thoroughly overhauled this winter and has just been launched in a greatly improved condition. She has been lengthened eight feet, and is now forty-one feet water line. Her cabin has also been raised and lengthened, the additional length giving two state-rooms. She has now an enormous sliding topmast, the second and third masts in San Francisco Bay, the first one having been put on the little yawl *End* some three years ago. Her topmast has as much hoist within ten feet as the mainmast. Her driver, or "jigger," has been changed from a graft to top of mutton, and she is now fitted with a flying jib. Wm. Stone, the builder, made a very neat job in lengthening the *Sappho*. Her name, by the way, has been changed to the *Lolita*. With the yawl rig and big sliding topmast the *Lolita* can carry a very large and very small amount of sail, the change being made very quickly and readily, and the vessel is very well adapted to San Francisco waters, where the winds are strong in the afternoons and light in the mornings. The sloop yacht *Annie*, formerly of New York, and brought on the ship *Three Brothers* to San Francisco for Jabez Hoves, Esq., last fall, has been very much improved since her arrival at the latter port. She fairly glitters with brass work, etc., now. Her cabin has been thoroughly overhauled, new cushions, new carpets, new paint, etc. Oil paintings have been put on the panels, mirrors added, convenient dress lockers, signal lockers, etc., put in. Her rig is now iron work and rigging have been replaced, and she is now in cock-pit; and in fact she does not look like the same yacht. Although she carries very much less sail than she did in New York on the race down from Mare Island on the first cruise of the San Francisco Yacht Club this season, she came in third, the California boats *Chipsa* and *Consuelo* alone beating her.

A PRETTY MODEL.—Mr. Rushton, of Canton, N. Y., has sent us a beautiful model of his traveling canoe. It is about 4 ft. long, regularly built up, and shows all the rivets and details of a full-sized canoe.

A HANDICAP MATCH.—The Secretary of the New York Y. C., Mr. Chas. A. Minton, has offered a cup, to be sailed for by yachts of the club, upon a handicap measurement, as under:—

The race will be sailed on Friday, June 11th, over the regular club course, for a cup valued at \$250, presented by the Secretary for competition by schooners and sloops of the club. Yachts will not be restricted as to sails, or in the time of making the race. It has been decided to adopt, as the most fair and simple method of handicapping the various classes and rigs, the scale annexed. Time allowances will be made according to the usual rule of the N. Y. Y. C., and the race will be sailed, with the exception noted, according to the sailing regulations.

Entries should be made in writing to the Secretary of this committee, Mr. W. Lindsay Blatch, at the club house, before 8 p.m. on June 9th. To cover the expenses of the committee boat, an entrance fee of \$20 will be required from each yacht entering. Any excess will be returned.

Owners of yachts entering can procure three tickets each from Mr. F. W. S. Hurst, 69 Broadway, for the committee boat, which will leave the Battery at 9:30 A.M. precisely on the morning of the race, and the Ferry Landing at Stapleton at 10 o'clock, stopping at the same points returning.

In the event of the Annual Regatta of the club being postponed until the 11th, this race will be sailed on Monday, the 14th. Committee—F. W. J. Hurst, J. Fred'k Rams, W. Lindsay Blatch.

In calculating time allowances, the following percentage of cubic contents of each yacht will be taken as her measurement: First-class keel schooners, 60 per cent.; first-class center-board schooners, 65 per cent.; second-class keel schooners, 70 per cent.; second-class center-board schooners, 75 per cent.; first-class keel sloops, 50 per cent.; first-class center-board sloops, 55 per cent.; second-class keel sloops, 60 per cent.; second-class center-board sloops, 65 per cent.

Entries to be made to Mr. W. Lindsay Blatch, at the club house, before 8 p.m. June 9th. Sailing rules can be obtained from the

same source. Start, flying, off Stapleton, S. I.; ten minutes allowed to cross the line. Course, to and around buoy No. 10 on S. W. Spit, keeping it on port hand, thence to and around Sandy Hook Light Ship, keeping it on starboard hand, and under the same course, to and around buoy No. 11 and 12 on West Bank, to the southward of 84 on S. W. Spit and outside 54 on the Hook, going and returning. Finish between committee boat and buoy No. 15 on West Bank.

SEAWANAHKA YACHT CLUB.—The following members have been added to the club list: Messrs. James Clinch Smith, Fred. Gebhard, Geo. E. Chiselm, S. Nelson White. The club has been decided to join the N. Y. A. for the present. The annual cruise has been fixed for July 13th, rendezvous at Glen Cove. For the Corinthian matches, June 12th, the following rules will be observed:—

The race will be open to yachts of the New York, Atlantic, Eastern and New Bedford Yacht Clubs, and will be governed by the sailing regulations and time allowances, and under the direction of the regatta committee of the Seawanhaka Yacht Club.

Five prizes are offered; one in each class in which two or more yachts start; and personal prizes to each member of the winning crews.

Classification.—Schooners.—Second class; all whose area is 1,950 square feet or less. Value of prize, \$100. Cabin Sloops.—First class; those whose area is greater than 900 square feet. Value of prize, \$100. Second class; those whose area is 900 square feet or less, and greater than 600 square feet. Value of prize, \$100. Third class; those whose area is 600 square feet or less, and greater than 450 square feet. Value of prize, \$85. Fourth class; those whose area is 450 square feet or less. Value of prize, \$65.

Rules for Measurement.—Add the length over all to the length on the water line, and divide the sum so obtained by two; this will give the "mean length" of the yacht. Multiply the mean length and the extreme beam together, and the result will give the "area" in square feet. Length over all will be measured from the after end of the plankstee at the middle of the stern, to a point perpendicular to the forward end of the load water line at the upper line of the plankstee, or a point corresponding thereto, if the plankstee does not extend so far.

Entries must be made in writing, addressed to the Regatta Committee, and filed with the Secretary of the club, O. E. Cromwell, 34 Liberty street, Room 4, by 3 o'clock, P.M., on June 10th, accompanied by the measurement of the yacht entered, according to Seawanhaka rules, certified to by the measurer of the club from which she enters, or by her owner, together with a list of the proposed crew, their several occupations and addresses.

Every yacht-owner winning a prize shall allow the measurer to take off the lines of his yacht. The fee for this will be \$15, and the lines will be returned to him with full claim to the prize. The measurer cannot deliver a prize until this rule is complied with. No copies of these lines will be allowed without consent of the owner.

CREWS.—One man for every five feet of length on deck, and one for any additional part of five feet, will be allowed, not including the owner.

Yachts in Corinthian races must be manned by amateurs exclusively. The sailing master, cook and steward, if carried, shall remain below, and not appear on deck; and none of them shall in any way direct or assist in the management or working of the yacht. Any infringement of this rule will forfeit all claim to the prize. Every yacht sailing in any match or regatta shall have on board during such race a member of the club. Each yacht shall be sailed and, as far as possible, steered by her owner or by a member of the club to which she belongs. Schooners will be restricted to headsails, mainsail, working-gaff-topmast and spinnaker. No two headsails of the same name shall be carried at the same time. Balleon jibs will not be allowed. A working-gaff-topmast is a jib-headed-topmast that does not extend above the truck nor beyond the gaff end.

Flying start at 11 A.M., at second whistle from club steamer. Ten minutes allowed to cross the line. Course for all but fourth class, from line between steamer and Fort Wadsworth around buoy 10 on Southwest Spit, keeping it on port hand, thence around Sandy Hook Lightship, keeping it on starboard hand, and return over same course. Fourth class will round Cuddeys Channel buoy, keeping it on starboard hand, instead of Lightship. Keep to eastward of buoys 9, 11, 13, and outside 54. Finish at starting line. Regatta Committee, James H. Elliot, G. Wyllis Betts, Louis P. Bayard, Robert Carter, Grand Foster.

LIVIN YACHT CLUB.—The officers for 1880 are: Commodore, E. C. Neal; Vice-Commodore, E. G. Southey; Fleet Captain, H. Dennis; Secretary, C. G. Viall; Treasurer, C. H. Clifford; Measurer, C. H. Taylor.

JEFFRIES YACHT CLUB.—The officers for 1880 are as follows: Commodore, William McCormick; yacht *Gael*; Vice-Commodore, Frank H. Blaney; yacht *Empire*; Fleet Captain, George P. Tenney; Treasurer and Secretary for the summer, the Commodore, George A. Palmer, of yacht *W. B. Ford*. The club has seventy-eight members, and owns a club-house at Jeffries Point, East Boston.

SALEM BAY YACHT CLUB.—The club now numbers among its fleet some of the finest yachts on the coast. There are forty entered in the club, and new ones are constantly being added. Four of the yachts measure over 10 ft. in length, and twenty are 30 ft. and over. The new club-house will be supplied with a slightly tower, with balconies on the first and second floors, affording an ample view of regattas. A library of yachting and nautical literature will be one of its attractions. The landing facilities and the arrangements for the care of yachts will be very complete. Mooring buoys for club and visiting yachts will be conveniently located. Arrangements will also be made for the laying-up of yachts and boats in winter. The club has now about one hundred members. An application for membership for Gen. B. F. Butler's schooner *America* has been received.

MORE LEAD.—The *Vision*, of Boston, has had a heavy lead keel added, and the cat boat *Lolita* has received an iron one.

CRUISE OF THE CARCO.—Dr. Merritt left San Francisco May 8th, in his schooner *Carco*, for a protracted cruise in the South Seas. We have a photograph of her, showing her to be a fine, longhose looking craft. She was built in 1873, at Oakland Creek. Length over all, 81 ft.; w. l., 8 ft.; draft, 11 ft.; beam, 22 ft.; with a lead keel. The party on board consisted of five ladies and three gentlemen in the cabin, and a sailing-master, cook and steward and four hands below the mast.

TO EUROPE IN A KUT-SHELL.—Two young men from New York State, George P. Thomas and Fred Norman, are having a little boat built, long built at Gloucester, in which they intend crossing the Atlantic and visiting many of the leading European ports. They will start about June 1st. It is the smallest boat that has ever made the attempt. The craft will be named *Little Western*.

science has sustained so great a loss.

"Recent Literature and General Notes" occupy twenty-five pages of the *Bulletin*, and are as full as usual of interesting news.

—Under the title "The Modern Archery," Mr. John Wilkinson of Chicago, publishes an attractive circular, which will be found useful to our Western archery readers.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AT-

NO. 39 AND 40 PARK ROW (TIMES BUILDING), NEW YORK

[POST OFFICE BOX 2232.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonparel type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial columns 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements must be sent in by Saturday of each week, if possible. All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 8, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

© We cannot be responsible for dereliction of mail service if money sent to us is lost.

Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

THE NEW YORK STATE CONVENTION.

THE Twenty-second Annual Convention of the New York State Association for the Protection of Fish and Game, which met at Seneca Falls, on Monday, May 24th, was a perfect ovation of success. The Long Island Sportsmen's Association, which was only represented by the Fountain Gun Club, of Brooklyn, last year, this year sent fifty-five delegates from the various clubs, a number which was unparalleled. They were enthusiastic and generous in every respect, and asked the Convention to come East for once and see what the Eastern sportsmen were composed of; also, they thought great benefit could be derived in having a thorough understanding in relation to game laws and fisheries by having their inland friends fully appreciate what was needed on the coast, and seeing for themselves during a brief visit to that section. The Long Island delegation went to Seneca Falls in two Wagner cars, especially chartered for the occasion, which were as well equipped as any hotel in the country, by their everlastingly caterer, Mr. Harry Miller, of Flatbush avenue, Brooklyn. Nothing was wanting in the shape of edibles, even to frogs' legs, well broiled; drinkables, cigars, etc. The party had a splendid run up, and were received at the depot by delegations from the Seneca Gun Club and the Phoenix Club, of Seneca Falls, with a good band of music, and escorted to their hotel, the Hoag House, whose proprietor, Milton Hoag, is one of the best shots in the State, as well as one of the most genial landlords. Upon their arrival, the delegation immediately took possession of the main parlor, and invited all in attendance to join them at their festive board in celebrating the occasion. The music in front of the house of course attracted the crowd, and every one was well provided for. The proprietor remarked that the gentlemen from Long Island were on a par with the rest of the gentlemen represented, and were entitled to every consideration. Every delegation arriving was cordially received in the same manner, and every courtesy extended by both the home clubs. The Seneca and Phoenix both had their club-room doors wide open for their guests, everything was free and equal in all respects, and a finer set of gentlemen could not be selected than the numerous club delegates from all sections of the State.

At the meeting on Monday evening everything was

harmonious, and after routine business had been disposed of and motion made for locating the next meeting, it was unanimously passed by acclamation that the Long Island Association should have it. This was a new feature in the Convention, as it has for the past twenty years been hotly contested for by ballot, and in many instances carried over until the second evening before the question could be settled. Of course our Long Island friends felt good. Why shouldn't they? Such a solid vote was never before heard during the many years of existence of the Association. After the adjournment, an elegant banquet was served, and after that the Long Island clubs did their part in the parlors of their hotel. Of the reception by the clubs neither could claim a superiority. The Seneca Club did well, and the Phoenix Club more than well under the circumstances under which they were situated, and we were pleased to see that no personal rivalry existed in entertaining their guests. No matter which room was entered, the doors were open and a cordial hand ready to greet one.

Of the field we must say a few words. The tents were neatly arranged, and well provided with edibles free to all. The Spencer Club, of Lyons, had quite a large tent, well arranged with camp coats, etc. The Forester Club, of Buffalo, had their handsome striped tent well stocked, as usual. The Adirondack, Jefferson and Lewis County clubs had their usual tent well furnished with every comfort. The Dean Richmond tent was always open and free to all. The Queen City Club, of Buffalo, had a large tent, well equipped, and the old Monroe County Club, of Rochester, had their usual large tent well supplied with everything, and the usual pile of straw on one side, where an overworked or tired man could take a good nap during the day. The Audubon Club, of Buffalo, extended their hospitalities as usual, and all friends were welcome. The tent of the Seneca Gun Club was an open house for all, like the rest. But the largest tent on the ground, with the highest flag-pole and largest flag, was that of the Long Island Association. This, like the rest, was never empty and never dry. Moisture was no name for it, and after they once let down the sides, everybody was welcome. The Onondaga County Club, of Syracuse, had the square, large tent that had become so well known in previous years. Besides these, there were numerous small tents for private purposes on the grounds.

Of the birds we can say, that a finer lot were seldom seen; they were all wild, in good condition, and good flyers. With the management no fault could be found, and everything passed off rapidly and pleasantly. Of the gentlemen present, it would take a whole paper to put in their names. We especially wish to remember our old friends from all sections who have been present for years and know their own names, but among the new comers we should not fail to name Mr. George A. Chapell, of Brooklyn, a veteran sportsman, and deeply identified with the fishing interests of the State; also, Mr. Henry Altenbrand, of Brooklyn, who organized a club especially to be a partner to this occasion, and when once there could not tear himself away. There are many others of the same type, but they have yet to learn what a New York State shoot is. Last, but not least, we cannot forget Mr. Chas. E. Fisk, of Brooklyn, who acted the part of a nobleman, and we were delighted to see that he was made referee in the first important contest.

During the entire week not a bet was made as to results in any contest.

Our Brooklyn friends ought to feel pretty well satisfied, as they have won some of the most valuable prizes. In the first place they won the Convention without a dissenting voice; then Mr. MacMaster's valuable picture, the Pierce Diamond Badge, the Dean Richmond Trophy, the Wadsworth Cup—and the broom.

The Standing Committee for the ensuing year consists of Robert Robinson, Brooklyn; James F. Williams, Dansville; Jacob M. Witmer, Niagara Falls; Henry H. Morse, Rochester.

FIRE ARM FRAUDS.—By reference to our rifle columns it will be seen that the postal authorities have issued an order withholding all money orders addressed to the "Chichester Rifle Company," of Jersey City, N. J., on the ground that the company is a fraud, and the business conducted by it a swindle. We have repeatedly warned our readers against this concern, and are rejoiced to see its operations finally broken up. The "Chichester rifle" was extensively advertised all over the country as a "great bargain, equal to any rifle in the world," etc., and over the advertisement was placed a cut of a sportsman shooting deer and of a settler defending himself against Indians. This was to deceive the reader as to the nature of the arm. The rifles were advertised at the low price of \$4.50, and the advertisement was a magnificent one. The arm in reality, which the purchaser would receive, if he sent his money, was a small caliber (pocket pistol size), cheap made revolver, with a small stock added; in fact, only a toy.

This is but one, however, of many similar articles at present being pushed before the public. Large advertisements, attractively worded, are constantly appearing of some great bargains in fire arms—of revolvers, rifles or

guns being sold at less than cost, or than regular dealers can furnish. The advertisements describe immense productions—of wonderful demands from all parts of the country and inform the reader that for only a short time can they be obtained at the prices named.

It seems strange that an ordinary mortal can swallow so much and not "see through it." There is no reason why new firms, unheard of before, should spring up and be able to sell good articles cheaper than old established houses; and certainly he is a fool who trusts at all to these advertisements, and a still greater fool if he sends his money. We have lately seen a revolver, shown by a friend, who bought one, and we have read the advertisement accompanying it. It was represented to be equal to Smith & Wesson's beautiful high grade revolvers in workmanship and quality, and to be the handsomest revolver ever seen in America! The price was \$2.75. It was said to be worth really \$10, and a story was told of their being made for a Russian order, who failed to take them. The real truth is, they are cheap quality; poorly engraved little revolvers, costing less than \$2 to make, and of course the Russian contract story is too ridiculous. We would not put our head behind one of these dangerous little tools. Life and limb are too precious to be risked by the blowing up of \$2 worth of poor metal. The very best makes of guns do occasionally burst, but such an accident is exceedingly rare. Cheap fire arms often burst; as a rule they are liable to go to pieces.

Whom the gods would destroy they first make mad, and the madness is sometimes exhibited by the use of cheap, poorly made firearms, which prove the agencies of self destruction.

THE TEAM OFF.

TO-DAY an American team sails for the second time to meet an Irish team on Irish soil. They have gathered together in a quiet sort of a way, not altogether in the wisest manner of selection, as the present sharp discussion on that topic indicates; nor is the team, while beyond question a strong one in its individual components, the unit we should like to see, nor such a team as a sober, calm review of the field would have made up. It is too early yet to judge of Col. Bodine's capabilities as a commander, and even should defeat meet the team on the field at Raheny there is something to be said in mitigation of it. In fact, we are not altogether out of the opinion that a mild dose of defeat at this time would do American rifle shooting a vast deal of good, and we know of no team better able to swallow the bitter pill than this one. There is no doubt a spirit of lethargy in rifle shooting here which a rebuff abroad may be instrumental in dispelling. The team have not had a single day's practice as a team under the eye of its captain, and once on the Irish soil and in the hands of a reception committee, virtually as extensive as the Irish census roll, the team will have hard work in getting any practice of great value on the range there.

With a very good motive, but in a rather cumbrous manner withal, the Board of Directors thoroughly dissipated one phantasm which has been floating about for some days past,—that the team is sent out with a general shooting commission to make a descent upon Ireland in the first instance, and then complete the campaign with a sortie into England. The team has been created and is sent abroad with but a very slender backing, it is true; to do one thing and one thing only—to hold a team match with Irish riflemen. The expression of this idea was aimed at when the directors unanimously resolved "that we consider it inexpedient for our representatives to enter into any team match except the one they are sent to Ireland to shoot." The match over, it is the right of the marksmen to do as they please, but not to enter into international matches as representatives of anything except themselves. Any matches of that sort which may be had, however much they may be thought to advertise this, that or another rifle, are merely "scrub matches," and any attempt to galvanize the fortuitous concourse of atoms, as the team will be when the last shot of the Irish match has been fought, into a living organic team, deserves no encouragement from this side of the ocean. It is not at all creditable to American rifle shooting, and is the one thing which will help to swell the already-rising tide of opposition to professionalism in American rifle shooting, that the Board of Directors are forced to the consideration of such a problem at all. There seems to be wanting on the part of the team, or some of them, or those into whose contact and influence they will come on the other side, that nice sense of propriety which would check them from belittling the match which led to their visit, to meet the convenience of those who have obligations on this side the water yet to meet. It should be understood at Wimbledon that until the Palma is wrested from us and added to the trophies of the exhibition tent on Wimbledon Common, no representative American team can visit that shooting ground, however many "advertising" and so-called American teams may turn up with big pretensions.

The team for Ireland may find a difficult task before it. It has a short task to perform if it confines itself to its errand. It may be that defeat has not been without its fruit of victory on the plucky Irish marksmen. The

Rigby breech-loader is an unknown quality yet as to its merits, and we can only echo to our speeding experts a hearty *bon voyage*.

THE TEAM SELECTION.—Col. John Bodine, who was selected as the captain of the American Team to Ireland, yesterday handed in to the office of the FOREST AND STREAM the following note:—

Editor Forest and Stream:—

It gives me pain that just at this important time, when a team is about to sail to compete in a foreign match, you have committed the indiscretion of publishing an editorial reflecting on me and my team. You had published the conditions of the competitions, and consequently knew their purport. I am not about to discuss the wisdom of the method of selection, nor the personnel of my team, except to say that I think it a strong team, and fully equal to any that may be pitted against them on the Irish ranges. And further, I challenge any man to show anything unfair in the selection, or anything like Star Chamber judgment in my action. I was fully sustained by the Committee and by the Board of Directors, and to have done differently, in any particular, would have been a violation of my instructions. If any one was aggrieved, it was from his own delinquency in not complying with the plainest terms of the circular, and no one regretted this more than myself. This is the view taken in the matter by all riflemen who have become familiar with the circumstances.

It is with the greatest reluctance that I refer to this, but I cannot consent that this presentation of our action should go abroad without my earnest protest.

JOHN BODINE.

Col. Bodine is correct in saying that we had published the conditions, and we are correct in saying that they have not been lived up to. The one reserve which was amply sufficient for the purposes of the team was swelled to an indefinite following. Challenges about "star chamber judgment," whatever that may be, do not remove the fact that three secret meetings were deemed necessary before the present state of dissatisfaction was fully reached. Nobody has denied that the Colonel was sustained by the Board of Directors; but that does not remove the fact that Capt. Bruce was promised Saturday as a day on which to make a score by Col. Bodine, and to his surprise and disgust found the team organized, with himself excluded. We deny the Colonel's assertion about his views being taken by all riflemen, because we know otherwise. Our own reluctance in being compelled to speak of the manner in which the team had been made up is fully as great as that of Col. Bodine in writing his note to shield the action of the managers of the affair.

DECORATION DAY SPORTS.—The growth of out-of-doors sport in the United States is never better illustrated than upon the occasion of a national holiday. Decoration Day, coming as it does at a season of the year when the heat of summer has not yet overcome the inspiring influences of spring, has been adopted by the clubs as an anniversary day in their calendar. Yachting, rowing, athletic games, archery, cricket and rifle shooting comprised the programme of the day last Monday, and the Tuesday morning papers devoted as much space to the records of the previous day's sports, as to the distinctive forms of celebration for which this occasion has been set apart. It is fitting that the yearly commemoration of the nation's dead should thus also become a season of recreation. The arena of manly, generous competition in athletic sports has its place in the development of the nation's citizens.

COACHING.—The annual spring parade of the Coaching Club, last Saturday, was witnessed and applauded by thousands of spectators, and the young gentlemen who handled the ribbons received loud commendations for their rare possession of mind in guiding their fiery steeds through the concourse of vehicles. But how a Rocky Mountain jehu would laugh to scorn this play, and rightly so, too. If one wishes an exhibition of coaching he must go farther west than Manhattan Island to find it; and for a genuine sensation we commend a winter mountain ride through the snow.

[From a Special Correspondent.]

OUR WESTERN LETTER.

DENVER, COL., May 20th.

WHILE the vast plains, stretching from the Missouri River to the Rocky Mountains, are not without their sentiment, their monotony, their silence, their solitude and their extent, while the sky and the ground have their grand beauty, and the very sense of the desolation has its charm to the traveler, we must not overlook the useful quality in this wild region. The long, creeping lines of fire, which may please the eye with their weird dancing in the blackness of the night far over the plain, may be doing harm as well as good. There is a hay rick or two which may prove an undesigned prey to their beauty, and a ranch or so whose occupants may have to keep the fire at a safe distance. It is difficult not to have some sort of fellow feeling for these scattered inhabitants of the plains. Here they are, many of them, quite way from friends, incurring solitude and separation to amuse some kind of a fortune. The ranch, indeed, is not wholly unoppressing spot to the eye. Probably no one, who has not seen the thing, could easily imagine just how a ranch looks. The word has a kind of lux-

uriance about it which is not found in the object itself. Perhaps the farthest thing from a ranch, and yet of the same general class with it, is a New England farmhouse, glistening white, with its bright green blinds and red chimneys, surrounded with shade trees, with a green grassy yard, and very likely a little brook trickling along by it. At a ranch there is nothing white, nothing green, nothing red; there is no yard and no rushing brook. The yard, indeed, is the great plain, though I should say, that since the introduction of barbed wire fences, one will occasionally see a fence of that sort even west of the Missouri. The ranch is low and flat, perhaps eight feet high in all, built of dirty logging logs, generally placed upright. The flat eaves project, and all that can be seen of a roof is usually earth and rough sod. Rude enough, in looks, this abode is, but I should say it would be far from uncomfortable, either in summer or winter. Here a bachelor could keep his hall well enough. And two or three bachelors, who had something in common between them besides their herd, might snap their fingers for a few years at the East, especially if the herd was doing well and the dollars were steadily piling up. Here one could enjoy books, a pipe and a horseback ride, and nature perhaps. There will be no tree to sit under, nothing but the burning sun (and it gives a bronze and color which even a Harvard oarsman might envy), or the thick roof of the ranch. Then, in the spring, there comes activity, when the round-up for branding calves begins. This, too, is the season of activity for the Ishmaelite herder—the herder who is too active, and goes about branding calves that are not his. These men are to the herdsmen what a claim-jumper is in a mining camp. He may be successful, and get rich faster than his neighbors; and, on the other hand, he may be found cold on the plains, or be "run off" to some other scene of pleasure. Again, when a shipment of stock takes place, there is more rounding-up. Then a pleasing community of action is seen, as an indiscriminate herd is driven up to the railway station, and the herd-owners in that region stand by, and each checks off in his book each animal that passes into the car bearing his mark. One man may thus ship fifty head to his neighbor's five; but it evens itself off in the course of the season. These are the cattle that make the best New York beef. Along or near the Missouri River they are picked up by Iowa and Illinois farmers, who have come or sent West for the purpose. During the winter they are corn-fed, and fattened on the farms of those States, and then are sold to the stock-yard men of Chicago at a handsome profit. So we get in Washington Market the large, fat quarters of Western corn-fed beef. The future promises even better, at least larger beef than we have had hitherto. Considerable short-horn blood is being put into the herds on the plains, and while it may hardly be expected that such heavy-chested cattle will result from this innovation as are raised by extreme culture in England, yet in general and gradually the size and form of the animal should become better. All through Nebraska there is grazing ground. Of course, it is better in some parts of that region than in others, and one should not settle down at any point for herding, without some previous inquiry. Another caution is, that a man who is not used to cattle or herding, as the business is done on the plains, had better serve an employer for a while to get experience, before embarking in the business on his own account; and even then he will have to be patient for a couple of years, before the profits fairly begin. LEX.

SPRING IN ALASKA.

SITKA, April 9th.

OF a dozen of us, who differ and argue upon most anything that will furnish a possible difference of opinion, no two are agreed as to whether the steamer is due now or will be soon. Her schedule time calls for her to arrive on the 7th of each month, or 8th at farthest, that though she has seldom done so we all avoid championing that date, but four distinct sets of us are equally positive that she is due this time on the 10th, the 12th, the 14th and the 16th, and we all base our positiveness upon the same foundation—namely, the assurance of her Captain upon his last visit. The matter is of little importance, except that it enables me to be consistent, and start this letter, as I find by glancing over my files I have about all my letters, with a few remarks about said steamer, and seeing the letters side by side in a scrap book, I find I have been guilty of tautology, for very nearly the same remark opens several of them; but on my word it was accidental, and having been discovered will be in future eliminated; but the fact is, her arrival is our only event, and we can't avoid thinking and writing of her. I'll try to stop, though! I've broken myself of worse habits; for instance, my earlier letters. I gave them the true Alaska stamp by bringing in more or less "hoo-chee-noo," a word introduced to the Eastern World as a typical Alaskan phrase. I even adopted the missionary paper style of speaking of it, and always preceded it with the adjective "vile." How certain adjectives become parts of the simple nouns they qualify and transform them into compounds! Who, in hearing a snake described, or by a lady a rat, has failed to expect and hear the "big?" And who, throwing a fly for a brook trout and

raising a chub, or fishing for codfish and hooking a pollock or dogfish, has failed to attach a prefix to their ejaculation when they named it? So it is with "vile" hoo-chee-noo.

I think the word must have originated in "Greenland's icy mountains," etc., where, however, "only man" merits the epithet, and as I like to be original occasionally, I've dropped it, and I'll drop the steamer.

March has been with us probably the pleasantest one, so far as weather goes, that we have ever experienced out of the tropics, and April so far is following its example.

Although it is popularly supposed that it rains here about all the time, we have in the last forty days had but four or five rainy ones, and we have absolutely longed for it, to wash off the snow, which an unusually severe winter has piled up in an unprecedented accumulation. The miners who are waiting its departure to develop their last year's finds; the prospectors who are anxious to be off among the mountains, and whose stakes, with which, economically used, they hoped to tide over the winter in Sitka, have become impoverished through the earnest efforts in their behalf, made by the purveyors of amusements in the shape of dance halls, grog shops, etc., grumble at the snow, and the slight impression made upon it by our not over warm sunshine, and we are all tired of it. The robins and sparrows and buntings have returned, expecting, evidently, to, as usual at this season, go at once to housekeeping, but they flit around on the leafless trees disconsolate; and the eagles sit for hours motionless, evidently discouraged.

The herring have come in as usual, and are being caught in great numbers by the Indians, who strike into schools with poles armed with sharp nails.

The ducks have nearly all left us; a few old wives still remain faithful and firm, somewhere—we can't find any. The Indians bring in a few mallard. The venison is uneatable, and the trout have not yet put in an appearance. On the whole, this transitory stage is decidedly uncomfortable.

I hear that down about the mouth of the Columbia River the hair sealing season has begun, rather earlier than usual, and that several hundred seal have been captured.

Right here let me again use your columns to urge people to save their and my postal stamps by not writing to me to get their seal skins. They don't come from this neighborhood. I've been here a year and haven't seen a seal. If I had I would have gone hunting for it daily till I got it, for there's nothing else to go for, except perhaps bears, and I'd rather buy them.

To my regret, and that of the Siwash, many of whom got rich out of it last summer, the salmon cannery will not be operated this year; the reason why I cannot tell, but I presume the company know their own business best. I know, on one side, that the fish can be gotten here at a far less cost than further south, but, on the other hand, the season begins down about the Columbia River six or seven weeks earlier, and the rise in tin from \$5 to \$12 per M. makes an item.

Fred Mather writes to ask me to tell you something about the *Thaleichthys pacificus*, or eulachon, or as we call it in Alaska, the candle fish, or as called by the Siwash, the "oolachan." I can't tell you much now, for they don't come here, but are plentiful in Wrangel, and I'll send down a jar with alcohol for specimens, and get up a lot of data by next steamer. In the meantime, *Adieu*. PISCO.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

—Address all communications to "Forest and Stream Publishing Company, New York."

A STRING OF FIELD SCORES.

MONTGOMERY, ALA., May 25th.

I NOTICED in last week's issue of your paper that some of your subscribers thought the killing of two snipe at one shot a very great feat. In fact, it is, but what do you think of this? Several years ago, when I was quite a boy, I made, I think, the best score on record. At Abercrombie's plantation, five miles below Columbus, Ga., on the Alabama side of the Chattahoochee River, I killed and bagged eighteen snipe in thirteen consecutive shots. I shot three at one shot, and two three times; the remainder were single shots. I did not take them as they came (for they did not come), but I went for them as they went. When I killed the three at one shot they were flying (only three) forty yards high, and apparently at the rate of forty miles an hour or more. Two of them were killed stone dead, the other one was wing broken and battered. The double shots were made as they got up before me in range, irrespective of distance from each other, and I repeat that only once were there as many as three together, and I killed them. I do not think this score has ever been beaten, and should any of your readers think I am simply telling a "snipe" story, I would most respectfully say that I have a credible witness, who saw every shot.

If I may not be unkind to say that I am now shooting a little 12 bore gun, and to tell of some of the shots that I have made with it only for the purpose of showing what a gun can do when properly loaded and handled. The gun is a full choke, 14 at the muzzle. Here is what I have done with it, viz.: In the presence of the New Or-

[illegible]

This left but two—Christopher Warner and R. Seldon—both of the Dean Richmond Club, Batavia. Mr. Seldon withdrew, and the first prize was awarded to Mr. Warner.

Ties of 14, 25 and 25: Trucker missed his first, Tallman his second. Lefevor and Miller their third, Neapars his fifth, and Smith, Hudson and Sheridan tied on five each. At 31 yards: Sheridan killed four, and Smith, of the Onondaga Club, and Hudson, of the Audubon, Buffalo, five each, and divided. Ties of 13: There were twenty contestants. It ended in a contest between Henry Jones, C. D. Rodman and Robert Newell, in which the latter, a member of the Forester Gun Club, Buffalo, won the third prize. The ties on 12 was won by H. B. Hooker, of the Monroe County Sportsmen's Club, of Rochester, who took the fourth prize.

[illegible]

Ties on 17-21 yards.				
H. R. Jones.....	10	10	10	01-4
Ed. Hudson.....	10	10	10	10-4
B. W. West.....	11	11	10	10-

This gave the first prize to B. W. West, of the Long Island Gun Club, of Brooklyn.

Ties on 16-21 yards.				
E. L. Sargent.....	11	19	10	11-6
S. H. Tucker.....	11	11	10	11-7

The second prize to S. H. Tucker, of the Madison County Gun Club, Peterboro. There were four contestants in the ties on fifteen; George Smith, of the Forester Club, Buffalo, winning the third prize. In the ties of thirteen there were eight contestants. H. B. Hooker, of the Monroe County Club, of Rochester, won after a hard fight, the fourth prize.

Fifth Contest—Substituted in place of an amateur shoot: ten single birds, 21 yards:—

Charles Lobb.....	5	O. M. Helmer.....	7
L. Mathewson.....	7	J. A. Dingsen.....	9
G. Archer.....	4	W. J. Allen.....	8

In ties of ten, W. G. Gavitt, of the Spencer Club, Lyons, killing three birds straight, received first money. Second money was finally won by Peter Tompkins, of the Dean Richmond Club, Batavia. In the ties of nine, Geo. W. Smith, of the Queen City Club, Buffalo, received the purse for the best score, killing all of his five rises. The money for the second best score went to Mr. H. B. Hooker, of Rochester.

Best Average.—The FOREST AND STREAM gold prize medal, valued at \$125, for the best average in five contests, was awarded to Edward Hudson, of the Onondaga County Club, of Syracuse, he winning it by four points.

C. W. Wingert.....	17		
M. B. Bayless.....	19		
Total.....	50		

This gave the Dean Richmond trophy to the Fountain Gun Club of Brooklyn. The prize for second best club being between the Seneca Gun Club, of Seneca Falls, and the Dean Richmond Club of Batavia. These two organizations concluded to divide the prize, which consisted of 2,000 shells.

Judges—Wm. Lawrence, of Seneca Falls, and J. A. Hackstra of Buffalo *Herald*. Referee—T. C. Banks, of the FOREST AND STREAM.

Notwithstanding the fact that the sun had nearly gone down, the last contest on the programme, that for the Livingston Sportsmen's Association cup, was commenced. It was finished in almost total darkness, and resulted in a tie between the Onondaga Club, Syracuse, and the Fountain Gun Club, Brooklyn, the shoot-off being won by the latter.

Contest 8—Wadsworth Cup: 15 double rises:—

Fountain Gun Club	23	Onondaga Club, Syracuse	2
G. W. Wingert	23	E. H. Hudson	2

	20	Total	15

The Fly Casting.—The only entries were Chief Engineer Ira Wood, Syracuse, and E. Robbins, all of Syracuse, the latter of the *Standard* staff—and W. C. Jakus, of Buffalo. All of the Syracuse contestants are pupils of the veteran Rubc' Wood, hence he did not bring out his own rod. He did not have the heart to reel out his line over the heads of "my boys," as the champion delights to call his graduates. Mr. Wood, together with H. R. Wood, were chosen judges of the fly casting, and Dr. Fowler of Ithaca, referee. The following was the record of the casting in number of feet of line thrown out:—

Name.	Feet
Ira Wood, of Syracuse	70
C. W. Smith, of Syracuse	70
E. E. Hancock, of Syracuse	70
W. C. Jacus, of Buffalo	66

The judges decided to award Mr. Wood the first prize on account of his superior style and accuracy. The exhibition was, considering the poor weather, very praiseworthy. The other prizes were awarded in the order named.

RIFLE SHOOTING—The distance was 100 yards, off-hand, string measure, the telescope being barred. The judge was Mr. James Rafferty, and the referee, Mr. E. Hill. Mr. Archie Paul, of Cohoes scored 27 7-16, getting first prize; Mr. O. G. Jones, of Syracuse 35 5-16, second prize; Mr. Samuel Jacoby, Seneca Falls, 40 7-16, third prize.

PISTOL PRACTICE.—During the fifth contest the match for pistol shots was called at the rifle range. Ten shots were allowed, string measure, at a distance of fifteen yards. Mr. J. H. Andrews scored 16-26 and took first prize; George J. Marsh, of the Forester Club, Buffalo, 25½ and second prize; O. S. Jones, of Syracuse 25½ and third prize. The other scores were by Mr. G. W. Crouch, of Rochester 20, and Mr. U. B. Hooker also of Rochester 20.

MASSACHUSETTS—Quincy, May 29th.—The Merry Mount Shooting Club glass-ball shoot:—

	Rotary trap.	Double trap.	Total.
George Monk	10	8	18
A. Keating	9	8	17
John Curtis (2d)	9	9	18
T. Curtis	9	9	18
George Beebe	9	9	18
Charles Prescott	9	9	18
W. W. Mitchell	8	6	14
Ed. Hardwick	8	6	14
Henry Studley	7	5	12
Myran Clark	7	5	12
C. C. Badgley	7	5	12
M. J. Hunt	7	3	10
Frank Curtis	3	0	3
Wesley Nightingale	3	0	3

After the above a challenge match took place between Albert Keating and George Monk for the badge held by Monk, with the following result:—

	<i>Rotary.</i>	<i>Double.</i>	<i>Total.</i>
A. Keating.....	9	10	19
G. Monk.....	10	9	19

In shooting off the tie at eleven balls Mr. Keating shot 11 and Mr. Monk 10, making the former winner of the badge.

Natick, May 20th.—Shooting at ten rotary and five double at 18 yards rise. The following shows a gain on their previous shoots:—

NEW HAVEN GUN CLUB—New Haven, May 20th.—The New Haven Gun Club held its regular medal shoot to-day. Owing to

WEST VIRGINIA—*Wheeling, May 26th.*—The second match of the series of contests between the Canton Rod and Gun Club, of Collingville, Conn., and the Wheeling Rifle Club, at 200 yards, off-hand, Massachusetts target, came off to-day. Both clubs improved on their first score, and especially the Wheeling team, who rolled up the magnificent total of 503 points. The scores were as follows:—

WHEELING RIFLE CLUB TEAM.												
C. B. Dwight.....	10	12	9	11	9	11	10	12	12	105		
William Cox.....	8	12	11	10	10	12	8	12	9	102		
Otto Jaeger.....	12	10	9	9	11	10	11	7	10	101		
R. George E. Lewis.....	10	6	8	12	12	11	11	6	10	88		
B. H. Babcock.....	8	11	10	11	7	9	10	11	7	97		
Total.....	503

O. B. Hull.....	10	9	10	12	9	11	10	10	9	102		
H. B. Moore.....	10	11	10	11	9	8	12	12	10	102		
J. H. Bidwell.....	11	10	9	11	10	12	10	9	10	100		
J. Laubenstein.....	10	6	8	12	12	11	11	6	10	88		
J. Laubenstein.....	7	7	30	4	9	9	11	7	9	85		
Total.....	487											

On the 27th inst. the long-range team went to Washington, Pa., to shoot a return match with the club of that place. The first match was shot between teams of three men each, on the 8th inst., by telegraph, and resulted in a victory for the Wheeling club by 22 points. The Washington riflemen not feeling satisfied over the result, the Wheeling club decided to go to their range and have another round. The team was received by Mr. James Woods, and conveyed to the range, and the match commenced about 11 o'clock. A young hurricane came along about an hour later, which made everyone on the range seek the shelter of neighboring covered bridges. After the storm had passed the teams resumed firing at their seventh round, and continued until about 4 o'clock, when on counting totals the Wheeling team was found to be 11 points to the front—not so many as in the first match by another eleven, but considering that a very new man was being substituted for Mr. Stewart, who shot before, it was satisfactory. Mr. Dwight did not make another clean score, but came within two points of it, while Mr. Babcock passed him then by one point. The Wheeling team and those who accompanied them had a pleasant trip, and were "glad they went."

The following are the complete scores:—

WHEELING RIFLE CLUB TEAM.												
Dwight.....	5	5	5	5	5	5	5	5	5	5	5	5
Babcock.....	5	5	5	5	5	5	5	5	5	5	5	5
Jaeger.....	5	5	5	5	5	5	5	5	5	5	5	5
Total.....	570											

WASHINGTON RIFLE CLUB TEAM.												
Rothwell.....	5	5	5	5	5	5	5	5	5	5	5	5
Enoch.....	5	5	5	5	5	5	5	5	5	5	5	5
Hazlett.....	4	5	5	5	5	5	5	5	5	5	5	5
Total.....	368											

The shooting was at 500 yards, under rules of N. R. A. The Washington club use Remington rifles, and the Wheeling team Sharps long range, except Jaeger, who shot a Maynard.

The Wheeling Club had anticipated a pleasant long-range match with our neighbors at Pittsburg, Pa., on the 28th, but because of the timid ones concluded that "they did not wish to be put on record in their present state of ignorance of long-range shooting." Too bad; but we are in hopes they will let us know when the ignorance which they claim has taken its departure, and we will be glad to give them the chance to put us on record, even if our names should not be at the top.

LOUISIANA—*New Orleans, May 24th.*—The twelfth individual contest for the Washington Artillery cup came off to-day, at the New Orleans Rifle Park, in the presence of a large number of lovers of the sport. The weather was fair and the wind light enough to add to good scores. A number of riflemen were present at the range, but only eight contested for the cup. The following is the score:—

	200 Yards.	500 Yards.	Total.
Dodley Selph.....	19	18	37
J. C. Sport.....	21	17	38
G. W. Chilton.....	20	17	37
M. Manlin.....	21	17	38
P. Mitchell.....	15	12	30
V. Villars.....	15	12	30
V. Despaux.....	14	14	28
Gus Leefe.....	12	13	25

Mr. Selph won the contest, and, this being the fifth time he has won it, the cup becomes his property, and will hereafter be added to the many trophies already in his possession.

THE STATUS OF "PROFESSIONALS."—40 Chestnut street, Boston, May 30th.—To the President and Directors of the N. R. A. Gentlemen:—The resolution offered by Col. Sanford, reflecting upon the integrity of gentlemen who shoot the rifle, who may be receiving or have received favors from rifle dealers, or rifle manufacturers, or dealing in or have dealt in rifles, comes at rather an unfortunate time. The last intended for the backs of some of your friends, and I am afraid that I am afraid that not one of the team are to meet. We are invited to meet an Irish team, armed with the new Rigby breech-loader, and Mr. Rigby is one of that team, and probably others interested in the new arm. Do you wish to be impolite to those gentlemen in showing your dislike to members of the American team? Will not so broad a resolution be either inoperative, or prevent so many from participating in rifle matches at Creedmoor that you had better not have the matches? How many of your board can step to the front with no favors received from the Board? I know that not one of the team of 1877 but what received favors. And all of the teams before and since have received the same probably. Exchanging old rifles not worth a cent for a new one worth \$100 is a very great favor. I have not found, in my life's experience, gentlemen above receiving favors, when it does not come in the shape of a bribe.

The whole cry against the professional comes from those who are jealous of the success of our crack shots. No one would care were these-called professionals poor shots, and easily beaten, were they to the Board in a drop of the whole matter; and to those that cry because they cannot win anything, I would say, Do you deserve what you have not earned? Are you willing to stop smoking, drinking and late hours? Do you love rifle shooting enough to make the sacrifice necessary to become a first-class shot? If you are not willing to do so, keep still and do not throw mud at those who are. Respectfully, W. H. JACKSON.

HOW A "RIFLE" COMPANY DID BUSINESS.—The Chichester Rifle Club has its headquarters on the second floor of the Sterling building, No. 31 Montgomery street, Jersey City. The company was organized last December with an alleged capital of \$10,000. Of Ben. F. Fichtel, J. P. Cottle, of Jersey City, and Charles Monrrell, of Brooklyn, comprise the Board of Directors. Fichtel has the stock, and the other half being divided between Cottle and Monrrell. They have been sending out, principally to country districts, tempting circulars having a cut of a beautifully mounted rifle, which was offered for sale at from \$5 to \$15, according to quality. The company did no business in Jersey City or vicinity

devoting their exclusive attention to country trade, and receiving their orders by mail in the shape of registered letters and money orders. Some time ago Postmaster Gossip, of Jersey City, began to receive complaints against "the rifle" company. Correspondents informed him that instead of receiving the handsome rifle described and illustrated in the circular, they received a pistol with a shoulder-stock comparatively valueless, and of no use whatever for the purpose of a rifle. The complaints finally became so numerous that Postmaster Gossip communicated with the authorities at Washington, and an investigation was ordered. It resulted in an order from the Postmaster-General to Postmaster Gossip to withhold all registered letters and money orders addressed to the Chichester Rifle Company. The company's office was closed yesterday.—N. Y. Times, May 23th.

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

DECORATION DAY ARCHERY.—Second annual field day of the Brooklyn Archery Club, on their grounds at Prospect Park, Monday, May 25th:—

York Round.
Brooklyn Club—Nash, 30—118; Hoyt, 23—53; Johnson, 18—69; Constable, 16—64; E. A. Stoutenborough, 13—55; Parker, 16—60; Pearsall, 18—61; Miller, 11—41; Nast, 9—23; X. Stoutenborough, 3—11.
Ascham Archers—Brown, 18—73; Chapman, 17—59; Geyer, 21—59; Gerow, 8—30.
New York Archery Club—Roper, 30—121; Autten, 23—112; Frazer, 25—81; McLean, 23—83; Pond, 16—79; Sutton, 16—73; Hill, 15—47; De Luna, 11—33.
Torpholite Club, Dover, N. J.—Hurd, 32—50.
Pequoset Club, Boston, Mass.—A. S. Brownell, President, Eastern Archery Association, 23—114.
American Round.
Brooklyn Club—Hoyt, 33—230; Nash, 60—238; Johnson, 49—180; Pearsall, 47—169; E. A. Stoutenborough, 39—138; Parker, 35—134; Constable, 31—125; Miller, 22—84; Nast, 15—49.
Ascham Archers—Chapman, 55—285; Geyer, 41—170; Brown, 50—164; Gerow, 23—74.
New York Archery Club—McLean, 68—324; Roper, 70—275; Sutton, 50—234; Frazer, 57—223; Autten, 44—164; De Luna, 37—143; Hill, 19—65.
Torpholite Club, Dover, N. J.—Hurd, 54—212.
Pequoset Club, Boston, Mass.—A. S. Brownell, President Eastern Archery Association, 72—330.

Prizes Won.—Mr. Nash wins the badge, total 100 hits. Mr. Nash wins the first bow, best score York Round. Capt. Hoyt wins second bow, best score American Round. A. S. Brownell wins third bow, best gross score, York Round and American Round. Total 444. First gold, Capt. Hoyt.

"How to Train in Archery."—X. Stoutenborough, 3 hits, score 11. Most golds, American Round, L. Chapman, 10 golds. Best score 50 yards—J. K. Hoyt, 21 hits, 111. Best score at 40 yards—A. S. Brownell, 21 hits, score 146. Most reds—A. S. Brownell, 25 reds. Whites at 40 yards, Mr. Brown. Poorest score at American Round, Mr. Fan.

Ladies—30 arrows at 30 yards, Miss Morton, 23—59; Mrs. Andrews, 21—61; Mrs. Dr. De Luna, 25—53; Mrs. Horsman, 11—47; Mrs. Pearsall, 10—30; Miss Horton, 6—24; Mrs. Hill, 10—22; Miss Brett, 7—21; Miss Woodward, 2—10. 30 arrows at 20 yards—Mrs. Dr. De Luna, 28—112; Mrs. Andrews, 29—153; Miss Morton, 29—147; Mrs. Hill, 22—84; Mrs. Horsman, 20—72; Mrs. Pearsall, 15—57; Mrs. Hill, 16—56; Mrs. Peckett, 14—49; Mrs. Horton, 13—47; Mrs. Sturtevant, 8—38; Mrs. Brett, 8—20; Mrs. Woodward, 5—9.

Prizes Won by Ladies.—Best gross score at 20 and 30 yards, Mrs. Dr. De Luna, score 255. Best score at 30 yards, Miss Morton, score 97. Best score at 20 yards, Mrs. Dr. De Luna, score 172. First gold, Miss Morton. Most golds at 30 yards, Mrs. Morton. Most golds at 20 yards, Mrs. Dr. De Luna. Second best gross score at 20 and 30 yards, Miss Morton. Most reds at 20 yards, Mrs. Andrews. Poorest score, Horsman's "Book of Instruction," won by Miss Woodward, who shot for the first time.

—Owing to the absence of several gentlemen, who were to take part in the match between Boston and New York, and want of support from the majority of the New York archers, the match will have to be postponed for the present. W. HOLBERTON.

ORITANI ARCHERS—Hackensack, N. J., May 27th.—Notwithstanding the intense heat yesterday, quite a number of the members of the Oritani archers took part in the first monthly contest for the two badges. Mr. W. Holberton the gentleman's badge on a score of only 283. American Round, 30 yards, H. Moore would have won it easily had he been able to have drawn his score, as he had 254 at the forty and fifty yards ranges. Mrs. Holberton won the ladies' badge with a score of 151, at the Columbia Round. The frightful heat told on the scores and cut them down; but those who attended deserve great credit.

NEW YORK ARCHERY CLUB.—The Park Commissioners having notified the club that practice would necessarily have to be discontinued upon the archery lawn in the Central Park until after it rained, the club was unable to hold their annual field meeting Decoration Day, as intended. A number of its members took advantage of this notice, and visited the Brooklyn Archery Club Monday, May 31st, and had a very enjoyable visit. At the meeting held Wednesday, May 26th, six new members were received. The club expects to resume practice again this week.

THOSE CHALLENGES ONCE MORE.—New York, May 25th.—Editor Forest and Stream:—Archery being really a royal game, it seems a pity that envy and jealous feeling should in any manner attack those who practice it. It should escape the bickering and controversy that fall to the lot of most other sports, and which do them no good. It is with this spirit I once more take your space in the notice, and again visited the Brooklyn Archery Club Monday, May 31st, and had a very enjoyable visit. At the meeting held Wednesday, May 26th, six new members were received. The club expects to resume practice again this week.

In answer to Mr. Holberton's courteous letter, I am sorry the necessity arose to agitate the question in print, still the fact is uncontested that the New York Archery Club did accept the challenge of the Oritani Archers with the proviso I stated. Regarding the letter from the person who imagines he hides his identity under the name of "Oritani," it could only have been written through envy, ignorance or design, containing, as it does, false statements from beginning to end. The author may yet find that the New York Club, being organized for the pleasure and physical advancement of its members, who are bent in doing everything in their power to make it a success; to advance the interest of archery, and foster the kindest feelings of good fellowship among neighboring clubs, does pride itself upon its "high moral principles," and that such slurs only react upon their author. The New York Club has never presumed nor at-

tempted "to constitute themselves censors over the membership of other clubs," but they do claim the right of regulating their own membership in whichever manner they may deem best for their interest, and shall exercise it every time, whether it pleases outsiders or not. The overwhelming challenge which closes the communication, unfortunately for the writer, cannot be noticed even if he does "regard it as official," for he may yet live long enough to learn that "official" communications are never anonymous.

In conclusion I want to say, once for all, that our organization siding for the object above stated, we do not propose to enter into newspaper controversies, and that hereafter all communications of the tenor of the one now noticed, will remain unanswered, whatever their origin may be. JAS. W. ALLEN, JR., Secretary New York Archery Club.

New York, June 1st.—Editor Forest and Stream:—Whatever attempts are said to have been made by the New York Archery Club to secure the membership of certain Oritani and Manhattan Archers, spoken of by "Oritani" in your last issue, were by individuals, unofficially, and in accordance with the conditions of our constitution, allowing only the admission of archers connected with another club. S. S. ROPEL, N. Y. Archer.

THE FOREST AND STREAM hopes soon to be able to chronicle some of these differences in the shape of a score which shall determine the relative merits of the two clubs as marksmen. Let us have a friendly recourse to arms.

THE BROWNELL METHOD OF SCORING.—The plan devised by Mr. A. S. Brownell for scoring in archery has been accepted by the Boston archers as an improvement over the old styles formerly in vogue. The chief advantage claimed is that the score is complete with each end, and the time and labor devoted to reckoning up are therefore unnecessary. The method is described as follows:—

DATE, _____

NAME,

August 8, 1879.

1ST END.	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1	0	
A. B. G.	30	9	17	30	35	43	43	61	58														
A. B. G.	0	3	1	10	4	5	6	11	10	10	10	10	10	10	10	10	10	10	10	10	10	10	10
A. B. G.	40	4	6	1	25	30	37	47	54														
A. B. G.	50	1	5	19	23	27	32	36	41														

"A space is given for each end, in the upper part of which the value of each hit or miss is recorded. To illustrate: The first end of arrows hit black, white and blue, recorded 3—5, and the total value, 9, is placed in the lower part of the space. The second end of the arrows hit a black, blue and a miss, recorded 3—0. The value of this end, 3, is added to the value of the previous end, 9, and the amount, 12, placed in the lower part of the space for the second end, showing the total value of the two ends. In this way each end is recorded, and its value added to the total of the previous ends, giving the total value of his after each end, and the value of the last end added to the previous total gives the complete score. Columns for colors are given, in which the details of hits and colors can be kept, and by figuring these in the

old way scores may be verified."

of wickets. Blackham was as good as ever behind the sticks, and Jarvis proved himself to be an exceptionally fine cover-point. Altogether, they are said by a correspondent to be a "very likely looking lot," and whatever comparison may hereafter be instituted between Gregory's team of 1878, and the present, Boyle's men will surely render a good account of themselves.—

TRENTON VS. STATEN ISLAND (20).—Played at Trenton, N. J., on May 29th, and won by the former on first innings score by 67 runs. By boat, rail and bus the aspiring cricket eleven of the Island Club, with Sprague, swooped down into the heart of New Jersey on Saturday and assisted the Trenton Club in inaugurating their new ground. The inclosure of six acres, by the way, promises well for the future, and besides a good wicket it contains a new and well-arranged club-house. On arrival the visitors found a jolly lot of old Staffordshire cricketers, including one Mart, who for three years past was engaged as ground man at Tenthum Park, the duke of Sutherland's estate, and it was not long after he commenced operations with the ball that Capt. Inman wished that he had taken his drey to any other place. As a bowler the ex-provoked one of a cross between Hallis and Jack O'Brien, of Boston. The day was cool, but Mart's analysis "against such good bats" was a hot one, ten wickets for 27 runs.

Despite the drubbing the youngsters got, from the fact that they were overweighed in more ways than one before a ball was bowled, the visitors enjoyed themselves hugely—and an excellent old-fashioned cricket dinner at the Trenton House did much toward deadening the sting of defeat. Mountford showed excellent form, but his thirty-six was not without a slice of luck. Filmer long-stopped in fine style, and Satterthwaite bowled eighty-seven balls for 16 runs and seven wickets. Score:—

CHESTNUT HILL vs. ST. GEORGES.—Played at Hoboken, N. J., May 23th. Former won by 12 runs. On Saturday the gentlemen of the Chestnut Hill Club turned up on the St. Georges' grounds with an excellent eleven, including the old stand-by, "Nelly" Pearson, and Tyres, their new professional. The home club had

banded together an eleven composed of members from the Manhattan, Staten Island, Columbia College and itself, which dovetailed together so nicely that it almost escaped defeat. The wicket was a good one, simply because Giles had looked after it, and not because old Sol had not. The play began at 1:30 a.m., and five good bowlers propelled the ball until the Philadelphians had scored 163, Giles taking the best care of the spot. At 3:15 p.m. St. Georges commenced what looked to be a very up-hill game, but thanks to Bance, who secured an excellent 68 without a chance. Moeran 33, who once found the ground too small for him; Moore, 17 in his usual style, and Giles 11, victory did not hover far out of reach. With Cross, Soutter and Conover it would have been of grass. Let sucking youngsters take our tip and note how the game should be played. "It said those of the hill did field their level best, and toward the close of the game the excitement became so intense that a stoutish gentleman who watched the game through one of the cracks in the fence was seen by an outsider to have several terrific fits. The double B's at last, however, brought the game to a speedy close, as they were too big shot for the home club's tail-end, the last wicket falling for the goodly total of 151. Score:—

HO! for TROUT FISHING.

THE FAR-FAMED waters of the Magalloway are now within easy access of Toronto and the outside world, and are still teeming with speckled trout. We have erected a large and comfortable hotel in Magalloway Village, and are prepared to offer every facility to our sporting friends by way of canoes and guides to the trout lakes and streams tributary to the Magalloway, and can offer the best of trout fishing within a mile of our hotel; will have canoes and facilities for packing fish, so that they can be taken fresh to any part of the Northern States. The road from Rousseau (the head of steam travel) has been Macadamized and the journey shortened by half a day, so that parties leaving Toronto can get here in one and a half days. Come up and see us.

KENDALL'S SPAVIN CURE.

The Most Successful Remedy ever discovered, as it is certain in its effects and does not blister. HEAD PROOF

Below.

From Rev. P. N. GRANGER.

Presiding Elder of the St. Albans District.

St. Albans, Vt., Jan. 20th, 1880.

Dr. KENDALL & Co., Gents: In reply to your letter I will say that my experience with Kendall's Spavin Cure has been very satisfactory indeed. Three or four years ago I procured a bottle of your agent, and with it cured a horse of lameness caused by a spavin. Last season my horse became very lame and turned him out for a few weeks when he became better, but when I put him on the road he grew worse. When I discovered that a ring-bone was forming, I procured a bottle of Kendall's Spavin Cure, and with less than a bottle cured him so that he is not lame, neither can the touch be found.

Respectfully yours,

P. N. GRANGER.

Price, \$1 per bottle, or six bottles for \$5. All Druggists have it or can get it for you, or it will be sent to any address on receipt of price by the proprietors.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

"Old Judge" Cigarettes.

MANUFACTURED under Letters Patent granted Charles G. Emery, March 5, 1878, by which the pipe paper used as wrappers is so prepared that the unpleasant odor and injurious effects of the OIL CIGARETTE thrown off when burning is completely neutralized, and the paper made saliva proof to prevent its breaking or melting in the mouth. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "Old Judge" Cigarettes they smoke. Neither will they require a printed certificate from any eminent Professor of Chemistry to convince them they have heretofore, in smoking Cigarettes made of PURE RICE PAPER, been inhaling one of the deadliest poisons known.

FOR SALE BY ALL DEALERS.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING AND BLAST-
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1803, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequaled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE, A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FG and FFG, The FG for long range rifle, shooting the FFG and FFG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, and BLASTING POWDERS of all sizes and descriptions, special grades for export. Cartridge, Musket, Cannon, Mortar, and Minnott Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder," Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Shooting," Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting," Nos. 1 (fine) to 6 (coarse). In 1 and 5 lb. canisters and 5 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loading.

Hazard's "Kentucky Rifle," FFG, FG, and "Sea Shooting" FG in kegs of 25, 50, and 100 lbs. and cans of 5 lbs. FFG is also packed in 1 and 5 lb. canisters. Burns strong and moist. The FFG and FG are favorite brands for ordinary sports shooting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

Shot Gun and Rifle Powders Revolutionized.

DITTMAR POWDER.

Champion Shot Gun and Rifle
POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

Wild Turkey Shooting in the South.

CREEK bottoms, black jack ridges, low swales thick with bamboo briars, old sedge fields, with the broom six or seven feet high, pea fields lying contiguous to these—such are the chosen haunts of the wild turkey.

Much has been written and said in sporting books about this bird, most of which is hearsay, for the writers display a most lamentable ignorance of its history and of its habits.

The hardest of all birds to raise in the poultry yard, they are the hardest in a wild state. The old hen will select the driest spot for miles around with an intuitive perception that the season is going to be a rainy one. She will cover this nest up so skillfully that the most practiced eye will fail to discover it. When found, there is something pathetic about the manner in which she tries to hide her round, bright eye, knowing as well as you do that here is her vulnerable point. At such times you may walk up and study her at your leisure, for she does not intend to leave that nest unless you become too familiar, when with a low "chut!" "chut!" of angry remonstrance she flies away.

When first hatched they do not look like domestic turkeys, but have an indescribable, wide-awake look, as if they had inherited from their paternal ancestor, the old gobbler, some *soupcou* of the gulle that so eminently distinguishes that wise and wary old bird. Indeed, when the young turkeys begin to walk about this mundane sphere the young gobblers, not a month old, will unconsciously put on airs and begin to look wise. So strong are inherited traits in birds, or in men! The young hens, on the contrary, are very meek and mild, with a strong tendency to lurk and cry out peevishly for the old hen if they see their father with his majestic and Turk-like beard too near them. So strong is sex in woman or birds!

About the middle of September in our climate they are about two-thirds grown, and then is the time to kill them. Full feathered and strong on the wing, yet their heavy bodies make them fly very slow, and they fall an easy prey to the sportsman. At this time, too, being entirely uneducated, they will come to the call of the

veriest tyro; and, indeed, will come better to a slight whistle, made by the mouth, in imitation of the cry of the young birds, than to any call. Next to the quail, the most social and gregarious of all birds, they seek each other after being scattered, and the plaintive cry of the ambushed hunter leads many a promising young bird to his ruin.

But ah me! what a difference in the same birds three months later! Then the most practiced eye cannot tell a young gobbler from an old one as they rise on the hill above the swamp and sail majestically across the creek, far out of range of any shot gun. They cannot then be approached at all, under any circumstances. Accidentally, as you walk out of the swamp into a pea field, feeding upon the dearly loved pea. Then if you shoot straight at the heads of the crossing gobblers, you have the satisfaction of seeing two fine, fat fellows fall to your aim. It is with a feeling of personal triumph that one kills two wild turkeys in successive shots, nor is it often done; once in a way, or twice, but not often.

But it is chiefly upon strategic movements that the experienced hunter of turkeys relies. I have often thought, while lying in my blind, that the greatest strategist in the world, Napoleon Bonaparte, would have made an accomplished turkey hunter. Absurd! you say. Well I have my reasons for my belief, and I think that you will agree with me when you come to the end of this article. However that may be, there are old gobblers extant, to capture whom would require an amount of patience, energy, woodcraft, knowledge of the habits of your game, and skill, that if exercised in another direction, education taken for granted, would make a good general, *Me judice*.

Yes, there are gobblers in the South who would put to shame Minerva and all her owls. If Mentor, whom we all remember in the *Telenague* as the utterer of the most delightful platitudes, were to attempt to stalk an old gobbler he would make a most ignominious failure, and would find to his amazement and sorrow that it would be easier to rescue a hundred lady-like *Telenagues* from the wiles of a hundred sea-green Calypsoes than to circumvent one wily, veteran old turkey. "Deep sir, deep and devilish tough" would be the praise bestowed upon that bird by Major Bagstock, to whom, in my wrath and vexation, I have often compared an old bird, who obstinately remained just out of gun shot!

Yes, a very knowing bird, indeed is the graduate, who, after being shot at by all the negroes in the neighborhood, with pot metal, double-barreled guns and old army muskets until he knows their range exactly, will strut by the hour just one hundred and fifty yards from the blind, behind which the sable sportsman lies snugly unconcerned, rolling his eyes in eager anticipation of that sharp old bird's coming nearer; an anticipation, it is needless to say, never to be realized. Sometimes, in utter anguish of heart, the wearied and hopeless darkey will fire at him only to hear the derisive gobble of the veteran re-echo the report of his gun.

Wild legends are in circulation among the negroes, anent some old gobblers. How, once upon a time, when old daddy Nero was "settlin' fur turkey," a huge old bird made his appearance behind old Nero's back and gave him a dig with his long sharp beak. Some times, in him a dig with his long sharp beak. Some times, in him a dig, whereupon old daddy Nero, having fired both barrels at the feathered fiend, fainted. A strict examination revealed the fact that Nero had gone hunting with a pint of "pop skull" whiskey in his pocket, that he had fallen on his back among some canes that had been taken up by the cattle, leaving sharp stubs, and that one of these had entered his head. Sometimes, he saw his satanic majesty for all that, in the shape of a turkey.

It is only in the bright, still mornings of early spring that you can shoot the old gobblers. They lose some of that wariness that so distinguishes them at other times. "Love rules the court, the camp, the grove," and, we might truly add, the wise old gobbler.

But let me not enter this. I think to put the "comother" on one of these old birds. He can tell one of their "yelps" just as well as the old turkey hunter can, and refuseth to come to a call, compounded of a grunt, a squeal and a whistle. He incontinently takes to his heels and goeth the other way, with steps quickened by a knowledge that in that way lies safety. Though, for that matter, he might have come to the call with perfect impunity, for not one man of a hundred can kill a turkey after being called to the blind without he have some previous experience.

Suppose some still morning in March, when all the woods in our climate are gay and fragrant with the yellow jasmine, and the snow-white blossoms of the dog-berry contrast vividly with the scarlet flowers of the mayflower, your feet press violets and lady's slippers and "star eyes," crushing perfume at every step; all around is heard the myriad hum of insects that wake to life in early spring; the woods are vocal with the sweet strains of the mocking bird, the cat bird, the thrush, the blackbird and the "rain crow." On such a morning as this, you take down the trusty old gun, put a shell marked

BB in the right barrel and one marked 8 in the left, and soon you are seated behind an old log, with the firm determination that to-day the old gobbler, your favorite aversion, on foot, or wing, shall die, for is not this the third day? By Mercury, the patron of rascally turkeys, it is the fourth!

A full mile from you, sitting on the fence of an old sedge field, is your old foe, the wisest turkey in South Carolina. He is evidently dreaming of tall and like turkey hens whom he has appointed to meet this very morning. He wonders why he does not hear them, as he knows that turkey hens, unlike human beings, are very punctual to their appointments. Hark! borne on the still morning air, comes a plaintive "cluck, cluck!" to his attentively listening ear. How changed in a moment! Now, full four feet high, with majestic beard nearly a foot long, he struts about waiting a repetition of the call. The seconds grow into minutes, the minutes into hours, and he hears nothing more. Just as he is beginning to think that he may have been mistaken: "Cluck, cluck!" Ah! that is the voice of Mary Jane, that tall and graceful young turkey hen to whom he was introduced last week, and with whom he fell in love at first sight. With wings outstretched and head thrown far forward to catch sight of the charmer, he speeds to the chosen trysting place, on the branch near the old pine log. He has run over half the distance, when a deadly fear stops him short in his mad career. What if that mellifluous sound, instead of coming from the beautiful beak of his own Mary Jane, should have been made by a turkey bone? For a long time he stands, drawn up at his full height, watching on every side for the danger, Hark! no turkey bone over threw that enormous, inviting cry upon the scented air. He is now fully satisfied. He pauses no longer, but on the outstretched wings of eager love he hastens forward to the old pine log. One step more, and there rings out the left barrel loaded with the No. 8's, and with head shattered to pieces, the noble bird falls headlong to the earth. Your sable henchman, whom the loud report, just at his ear, has awakened from a sound nap, immediately springs upon the prostrate bird, fully convinced that to him alone is due all the merit of killing "dat smart old gobbler," and with loud yells of joy he shoulders a bird weighing, when dressed, fully twenty-five pounds. The darkey speculates how much will fall to his share when the turkey shall have been roasted, and makes a solemn vow to eat until he cannot walk, if the mistress will allow any such gluttony. Elated, you vend your way homeward, having killed a turkey that was a regular graduate.

Another method of shooting wild turkeys is to dig a trench some two or three feet wide, and then scatter corn in the bottom of it. After a few days the whole flock will come with great regularity to the food. Of course all their heads are in the trench at one time, feeding, and the shooter fires a gun, heavily loaded, down the trench, at their heads. Many are killed at one discharge, and many more are wounded, and escape to die a lingering death. None but the most incurable pot-hunters practice this mode, which is as reprehensible as it is unsportsmanlike. It is the favorite mode with the negroes, who cannot call turkeys, and are passionately fond of eating them.

The is a peculiarity about the wild turkey, and indeed in all gallinaceous birds, that is very curious. When pens or traps are made for them, they are built of small logs, and a hole is dug under the trap large enough to admit a full grown turkey. Corn is scattered for a long distance in the woods, ending in a bountiful supply in the pen. The top of the pen is left open, so that when the birds have eaten up all the corn, or sufficiently gorged themselves, they fly out at the open top. This is repeated for several days, and then the hole is closed and the pen baited as before. The turkeys, never suspecting anything wrong, go into the pen as usual, and when they try to fly out they find the top closed. With a fainty not to be expected from such sharp birds, they never look down for the hole by which they entered, and are captured to a bird.

Quail will do the same thing, and, I believe, all birds of that kind.

There is still another mode of hunting the wild turkey, and that is to "roost" them, or watch them when they go to roost. On moonlight nights, when they roost in trees that are not too tall, by getting the birds between you and the moon some can be killed in this way, by using buckshot in a close shooting gun. So cautious are they of life, that unless they are shot in the brain they often fly in long distances, and fall dead entirely out of reach of the disappointed hunter. This is only another mode of pot-hunting, and is not much in favor with the skillful sportsman.

No. All the pleasure of true sport is not in killing for the sake of slaughter, but an intelligent knowledge of seeing game difficult to kill, and, when killed, eating it well cooked and with their hearts. Ah, how I wish I could look back over the days when, with elastic step and bounding pulse, I could shoot an old gobbler square through at one hundred yards, and on an emergency could kill him on the wing nearly every time, I am re-

Fish Culture.

—Address all communications to "Forest and Stream Publishing Company, New York."

PLAN OF THE INTERNATIONAL FISHERY EXHIBITION.

WE present to our readers this week a plan of the great "International Fischerei Ausstellung" in Berlin, with the following description:—

- THE GROUND FLOOR OF THE MAIN BUILDING.
1. Fountain of Neptune in the great water basin.
2-5. Collection of water animals, mammals, birds, fishes, amphibians, reptiles, invertebrates, etc., which are beneficial or hurtful to fishes.
6. Italy; South America.
7-9. Japan; China.
10. Annam.
11-13. East India, Farther India, South Sea Islands and Netherlands Colonies.

Norway, Sweden, Denmark, Russia, Holland, England, United States and Switzerland.

- ADDITIONS AND EXTENSIONS.
14. Rotunda for fishery productions, fresh fish, etc.
15-16. Cyclorama, with rocky grotto, disclosing views of the Bay of Naples.
17-19. Artificial fish culture.
18. Restaurant.
20. Pond for boats.
21. Smokehouse for fish in operation.
22. Shrubbery and pond for fish.
23-25. The German Department.

The main building is about 230 feet in length by 180 wide, and is built of stone, while the additions are of wood. It has been lately erected for the National Agricultural Museum, but was only finished in time to be opened as the Fishery Exhibition. It is fitted up in most excellent taste, and the whole exhibition is so arranged as to attract thousands who are not in the least interested in the fisheries. This is well shown by the fact that on Whitsunday it was visited by over 24,000 persons.

[From a Staff Correspondent.]

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

V.—LIVING FISHES.

THE display of live fishes here is small in comparison with the other objects and interests, and necessarily so, being perhaps of less importance than most other departments, and few people are interested in making such a show, Germany being the main exhibitor in this line. America sends a few catfish, *Ameiurus catus*, and a hellbender, *Menopoma*, from Mr. E. G. Blackford, of Fulton Market, New York; and in the central basin in the "grotto of Neptune" can be seen the famous Russian sterlet, *Acipenser ruthenus*, which is an inhabitant of the tributaries of the Black Sea, and is so highly esteemed as food. This fish always commands a high price, and in Germany is valued at about a dollar per pound, the fish culturists of this land being anxious to introduce it into their rivers. Three were recently served at a supper given by Dr. Wittmack, custodian of the Agricultural Museum (the building in which the Fishery Exhibition is held), at which were present Prof. G. Brown Goode, Deputy Commissioner from America; Mr. Fred Mather, the fish culturist, and Mr. J. W. True, the custodian of the American collection, who speak of it as a very fine fish, making due allowance for national tastes, cooking, etc., the Germans having a habit of smothering a fish with some sauce or other, which disguises its natural flavor, while we Americans prefer our fish without sauce, cooked like a beefsteak, in its own juices.

One of the most interesting exhibits is that connected with the display of Mr. Schuster, of Freiburg, who has about a dozen California salmon of twelve to fourteen inches in length, and weighing perhaps a pound or more, swimming in a glass tank, apparently none the worse for having been transported in the egg from California two

years ago. These are from the eggs sent to Germany by Prof. Baird in October, 1877; and Mr. Shuster has some a year older in his ponds, but as there were but few eggs received that year, and his portion is necessarily small, he is too careful of them to risk them in the bad water of Berlin. In the aquaria there are many fine fishes and curious ones; among the latter may be classed the display of Dr. Hermes, of the Berlin Aquarium, who has a tank of eels, which are some six inches in length, labeled "male eels," and accompanied by the following description:—

"In the year 1874 Dr. Syrski, of Trieste, succeeded in discovering the secret of the sexual organization of the eel, which had remained a mystery up to this time, it usually being considered as an hermaphrodite.* Three Italian professors published in this same year an account of an extended examination of eels, in which they proved to their own satisfaction that the eel was an hermaphrodite, and it is only by knowing that one sex is represented only by small fish that we can account for the fact that they escaped observation so long, the males not exceeding forty-four centimetres (about sixteen inches) in length, and in addition to this it appears to be the case that all the eels in the waters of the interior are females,

where the crosses are numerous, and, one might add, worthless. The German fish culturist is fond of hybrids, on the ground that they are of quicker growth, while the American breeder has not gone into this question except as an occasional experiment, and perhaps they may be of the opinion of your representative fish culturist here, who, when a gentleman called his attention to a tank of fish bearing the placard, "Bastard von forelle und saibling," by saying, "There, Mr. Mather, are not those fine fish?" answered, "Yes; if one did not know that they were bastards."

Many other unimportant fishes are shown, and, although not living, one cannot fail to be interested in the model pike (Zoo) in tin, which is some fifteen feet long, and is suspended in the grotto, having a brass ring around its neck with a Greek inscription. This is an exaggerated model of an "historical pike," whose painting adorns the wall opposite, and is about eight feet in length. The painting is an old one, and formerly adorned the old covered bridge over the Neckar at Heilbronn, and after the destruction of the bridge the picture was taken to the town hall, where it has since hung, until the opening of the Fishery Exhibition. The inscription says: "This picture is of the natural size of the fish," and is accompanied by the following verse:—

Schau bey Heilbronn, mich recht versteh',
Im Weyer, genannt Bockinger See,
Der in sich hat ein Wasser zwar
Sechs Morgen, doch ist es g'fahr
Welcher ohn' atzulaßen ist.
Was sich zu traugen hat zur Frist.
Als man Tausend vier hundert Jahr
Und neunzig sieben gezeibet war
Nach Christi unser Heylands geburth
Ein solcher Hecht dancn, geygen wurd
Der gestalt ih abgemahlet stelt
In dieser grösse ein lling umh hatt
Von Mös am Hies gewachsen ein
Starck unter den Floss Federn sein
Mit griechischer Schrift so mann allda
Gegraben ein lauter also: Ich bin der Fisch
Welcher in diesen seel ist gehau worden
Von Frederico dem andern drit Namen
Regenten der Welt im Jahr 1230
Den 5ten Octob.

Of which the following may be offered as a free translation: "Look! by Heilbronn, you will understand, there is a lake called the 'Bockinger See,' which is an expanse of the Weyer, and contains about six acres, which cannot be emptied. In the year 1497 such a pike as is here pictured was caught at this place, and of the self-same size. Around his neck, just behind the gills, there was a metal ring with a Greek inscription, as follows: 'I am the fish which was caught in this lake in the time of Frederico, the other of this name, Regent of the world, in the year 1230, the 5th of October.'"

This, as will be seen, leaves a time of 267 years between the times of capture, but gives us no clue to its age or size when first taken. The truthful chronicle further saith, "On the 5th of October, 1230, under the reign of the Emperor Frederick II., a pike was caught, and a metal ring placed upon its neck with a Greek inscription, stating that it was placed in the water by the Emperor's own hand, and that this pike was taken 267 years later, in the year 1497, weighing 350 pounds, and was four yards long. It was then presented to the Emperor Maximilian I."

There is no reason to doubt but what the ring grew also, as it does not seem to have pinched the neck of the fish, and why should it not, having been placed on its neck by the Emperor's own hand? If fish will grow so under these circumstances, it might be well to import a few emperors into America and station one at each fish breeding establishment.

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	
Trout, <i>Salmo fontinalis</i> .	Muskellunge, <i>Esox nubilus</i> .
Salmon, <i>Salmo salar</i> .	Pike or Pickerel, <i>Esox lucius</i> .
Salmon Trout, <i>Salmo confinis</i> .	Yellow Perch, <i>Perca flavescens</i> .
Land-locked Salmon, <i>Salmo gairdneri</i> .	
SALT WATER.	
Sea Bass, <i>Centropomus undulatus</i> .	Bluefish, <i>Pomatomus saltatrix</i> .
Sheepshead, <i>Achoerodus probatocephalus</i> .	Spanish Mackerel, <i>Scomber maculatus</i> .
Striped Bass, <i>Morone tenebrosa</i> .	Atlantic Salmon, <i>Salmo salar</i> .
White Perch, <i>Morone americana</i> .	Kingfish, <i>Sterna fuscata</i> .
Weakfish, <i>Cynoscion regalis</i> .	Menhaden, <i>Brevoortia tyrannus</i> .

—Address all communications to "Forest and Stream Publishing Company, New York."

—The bass fishing at Greenwood Lake is reported to be good.

MAP OF THE MAGALLOWAY.—We have received from Lee & Shepard, of Boston, a new map of the Magalloway, compiled by Mr. Chas. L. Adams, which includes the country adjacent to that river, with routes from the Rangleley Lakes.

Lake Megantic is now attracting much attention as a hunting and fishing region, and many sportsmen will go from the Rangleley and Magalloway by the woods. It takes about three days from Farmachenee Lake to Megantic with good guides.

A VETERAN SPORTSMAN.—The Syracuse Standard of the 23d inst. has this pleasant personal mention of Mr. L. H. Redfield, of that city, a gentleman who is well known throughout this State for his earnest efforts in behalf of game protection:—

Mr. L. H. Redfield is quite enthusiastic over his late trip into the North Woods with P. H. Agen, Esq. When we recall the fact that Mr. R. is eighty-seven years old, and when we remember this and the fact that he is the oldest editor and publisher in the State, we are induced to extend our warmest congratulations. The veteran, after arriving at Lake No. 4, took his rod and line and went after the speckled beauties, independent and alone like the younger fisherman. He stood the journey well, ate well, fished well and enjoyed the trip most heartily.

*See Report United States Fish Commission, 1873-4. "Lecture on the Organs of Reproduction and the Fecundity of Fishes, and especially of Eels, by Dr. Syrski." Translation from "Degli organi riproduttori e della fecondazione dei pesci ed in ispecie delle anguille." in Bollettino della società Adriatica di Scienze naturali in Trieste, December, 1874.

If it were not for the fact that the date of Mr. Redfield's birth is down in black and white in the family Bible, we should be inclined to think there was a mistake of some fifty years in his age.

FIRST MUSCULONGE OF THE SEASON.—*New York, June 4th.*—Just received a splendid fish (musculonge) from Clayton, N. Y.; the first of the season; weight, twenty pounds. Caught by Mr. G. M. Skinner on one of his own spoon bait. Sorry we can't invite you all to dinner; have distributed it to many friends in small portions.

ABBET & IMBRIE.

WISCONSIN—Oshkosh, May 24th.—Black bass fishing is reported better than for years past, and indications are that some of the finny tribe will be taken into camp.

C. C. M.

A NEW SALMON RIVER PURCHASED.—A club of New York gentlemen, among whom are Messrs. Vanderbilt, Tiffany, of the well-known jewelers' firm; Mr. Winchester, treasurer of the National Express Company; Messrs. Fearing, Cooper, Lawrence and a score or more of metropolitan Waltonians, have just completed the purchase of a large tract of land and fishing privileges at the junction of the Metapedia and Restigouche rivers, near Campbellton, N. B. This tract was the property of Mr. Frazer, whose hotel has been known for years as the "Fishing tourist resort of the Forest and Stream." The price paid was \$33,000. The salmon fishing here has long been famous. Some of the members of the new club are now on the ground, and tokens of their success with the rod and line have already been received in this city.

CANADA SALMON—EIGHT-INCH TROUT.—*New York, May 17th.*—In reply to Mr. Fay's communication in your paper of the 23d ult. I would say that he was very fortunate in hitting the salmon fishing on the Restigouche and Metapedia so exactly as to be there at the arrival of the first run of salmon, and—in a week—do get such good sport. Such good luck would probably seldom occur. Ordinarily people require a month's absence from the States to be sure of a good score of salmon. That fish arrives in the fresh water streams in Canada at very irregular periods, and seldom so early as the 5th of June. I have waited two weeks in some years before salmon commenced to run freely, so that ordinarily salmon trips are, as I said, very expensive, and anglers may either make up their minds to face the open or public fishing, or instead of one week, or else go home without salmon. So that with rod, flies, lines and other expenses, a person had better multiply Mr. Fay's figures by four to get a total cost, for to my notion it don't pay to go so far and return thence with poor or no luck, merely because one cannot stay at stream only a week—as Mr. Fay did.

But the principal reason for writing you is to say that I am informed that the open or public fishing on the Metapedia has been taken up by a club, and so a friend who has been accustomed to going there says he is shut out. It does seem as though none but governor-generals and the nobility of England could longer afford to go s-fishing for salmon.

While passing laws to prohibit the taking of lobsters under a certain size, why not make a vigorous effort to punish the taking of trout less than eight inches long? I have seen such slaughter of troutlings, hangerlings, such infanticide, that I fear nothing but the brand of the law, added to the scorn of true sportsmen, will stop this murderous work and preserve any trout for decent and merciful anglers. Do urge this subject. Can't we get such a law?

MANHATTAN.

A law prohibiting the capture of trout less than eight inches in length might be acceptable to expert anglers, but it would be both undesirable and impracticable.

NEW HAMPSHIRE NOTES.

THE salmon have again made their appearance in the Merrimack River at this place, two having been seen below Amesock Falls on Friday, May 28th, and one of 10½ lbs. weight was taken from the river at the same place on Monday, which had been killed by the logs; the last of the annual "drive" of lumber being on its way over the falls that day.

The river has been unusually low this spring, and the logs have been very much delayed, but the rains of the last day or two have raised it so as to float them out of the way, and give water enough for the salmon to come up, and a number were reported yesterday as being in and about the falls.

Salmon have also been seen, during the last few days, in the Nashua River, in which they were planted by the Massachusetts Commissioners in 1876, and in which we caused two fishways to be built at Nashua in 1878.

Lamprey eels and alewives have also made their appearance in large numbers at Lawrence and Lowell, and their advance guard has been on its way up Nashua and Manchester. This shows that with proper fishways there is no difficulty in restoring these migratory fish to one river.

The writer took a trip to the Upper Coos country last week, with a lot of "Schoodic salmon," otherwise called land-locked, which latter term is such a misnomer that it ought to be abolished, for whatever may have been the original condition of these fish, or the circumstances under which their ancestors were developed, they are in no sense "land-locked" now in Grand Lake stream, and can go to salt water any warm morning they may fancy the excursion.

These salmon are placed in Great Diamond Pond, in Stewartstown, and although the extreme heat of the 25th and 26th ult., when the trip was made, make large numbers now from six to nine inches long. The writer and his son, who assisted him on this trip, had several hours' good fishing on "Great Diamond," and brought back more pounds of fish than they took up, getting

about sixty, ranging from nine to twelve inches in length, averaging over 4 lb. in weight. This is said to be the normal size of the fish in "Great Diamond," while those of "Little Diamond," which is the upper lake, are said to run up to two pounds. The fish in "Little Diamond" had not begun biting yet, so that we did not see any of them; but I am strongly of the impression that the Great Diamond trout are neither more nor less than the "blue-backed trout," or "*Salmo onquassa*," of the Rangeley Lakes, answering perfectly to their description so far as I could see.

They look more like a mackerel than a brook trout, when taken. The flesh is very deep red and very high-flavored, and altogether they are a superb fish. The trout of "Little Diamond" do not bite till two or three weeks later than those of the lower lake.

Should any of your readers feel like a trip to the upper Connecticut, this month, they will find excellent accommodations at the Pansie Hotel, Colebrook, and an obliging landlord in the proprietor, Mr. E. F. Bailey, and good fishing in every direction.

Besides the lakes above spoken of, there are the Mohawk River, rising in Dixville Notch, and flowing west to Colebrook; Clear Stream, also rising in the Notch, and flowing east to Errol Dam; Sim's Stream, three miles below Colebrook, and brooks in every direction.

The Willard Hotel, at North Stratford, kept by Messrs. Gould & Moses, is another good place for headquarters. I must not forget to mention that we met your correspondent, the well-known guide, Mr. Edward Norton, and enjoyed an hour's chat with him over his moose hunting reminiscences of last fall.

For good fishing, good roads, beautiful scenery, abundant springs of natural ice water, and obliging landlords, commend me to the Upper Coos country.

SAMUEL WEBBER.

Manchester, N. H., June 2d.

THE BLACK BASS OF TEXAS.

Editor Forest and Stream:—

Since the perusal of the last few numbers of the FOREST AND STREAM, I have been convinced of the necessity for a better system of nomenclature for our game fishes. If anglers cannot remember the scientific names, which is the only safe plan, they should agree upon distinctive common names for the different species, which should be applied in all of the States indiscriminately.

As a case in point, the black bass has had more than forty scientific specific names applied by different naturalists at various times, and it is known in the several States by nearly as many vernacular names; it is, therefore, not surprising that anglers find it difficult to make themselves understood when alluding to this genus, even by residents of their own State, as the following may witness:—

In your issue of May 6th is a communication from Willis Texas, signed "C. L. J.," in which he asks for information regarding the black bass, and incidentally alludes to this fish in a way that proves that he knows what he is talking about. In the issue of May 27th, however, "C. S. W.," in a communication from Waxahachie, Texas, takes issue with "C. L. J.," and denies that there is such a fish as the black bass in the whole State of Texas, and uses the following language:—

I have fished all the principal rivers and best fishing grounds in the State, and I know of no fish known to exist in Texas fresh waters, but have never yet run with the black bass. What is known as the black bass here is rock bass proper, called in the Northern States variously rock bass, striped bass, river bass, etc., according to the locality, and universally known as trout among natives of the Southern States. If "C. L. J." will carefully peruse Frank Forester's "Fin and Feather" he will find there such information regarding to black bass and rock bass as will forever settle in his own mind which of the two varieties abound in Texas waters.

Now "C. S. W.," is, no doubt, perfectly serious and honest in this declaration and fully believes every word of it, as viewed from his standpoint; and really the only difference between the two gentlemen consists in their applying different names to the same fish. "C. L. J." properly and correctly calls it black bass, while "C. S. W.," like most Southerners, calls it the trout, which, in this case, are both one and the same fish.

But there are two species of black bass—the small-mouthed bass and the large-mouthed bass—and here is probably where "C. S. W.'s" confusion begins. The large-mouthed black bass (there is no evidence that the small-mouthed species exists in Texas) inhabits all of the fresh waters of the State and it is just the same as the large-mouthed black bass of the North and West, except that it grows to a larger size. Indeed, one of the scientific names of this fish is of Texas origin. Girard called this species, which he first found in the Nueces River, *Dioplitus nuceensis*, and even at the present day it is so called in France. Prof. Leon Vallant of Paris distinguishing this variety as *Micropterus nuceensis* in a work now in press, and correctly classifying it as a Mexican.

"C. S. W.," instead of throwing any light upon this subject, makes "confusion worse confounded" by stating that what is known as the black bass in Texas is really the rock bass, and which he says is known in the North by the various names of rock bass, river bass, striped bass, etc. (names that apply to fishes of wholly different genera). Now, if he had read "C. L. J.'s" article more carefully he would have known that "C. L. J." meant black bass (trout) and nothing else, for he speaks of it as weighing from four to six pounds. The largest rock bass I ever saw weighed but two pounds, and it seldom weighs more than a pound.

The rock bass (*Ambloplites rupestris*) is a fish entirely different from the black bass, being very deep for its length and much compressed, so that a specimen as long as the head would be about as wide and no thicker than the hand; it is also known as "red eye" and "coggle eye." The large-mouthed black bass (*Micropterus salmoides*), as is well known, has more proportional length and width, with an enormous mouth, and an adult fish would have no difficulty in swallowing an ordinary rock bass.

The striped bass (*Morone chrysops*) is a salt water fish of the Atlantic coast, growing often to a weight of seventy-five pounds, and is never taken with rod and line, weighing thirty pounds or more.

There is a fresh water species of this genus, however, in the Great Lakes and a portion of the Mississippi Val-

ley, called the striped lake bass, or white bass (*Morone chrysops*), but its weight seldom exceeds two or three pounds. In the Lower Mississippi and some of its tributaries there is a fish belonging to the same family, but of a different genus—the short striped bass, or brassy bass (*Morone interrupta*), and which grows to about the same size as the last-named species.

The only fish known in the North as "river bass" is the small-mouth d black bass, and is so called in Western New York, in contradistinction to the large-mouthed bass, which is there called "lake bass."

"C. S. W." seems to have got these several fish considerably mixed, and I do not wonder at it if he takes "Frank Forester" as his guide, for it is notorious that "Frank Forester" never caught a black bass in his life, and I doubt if he ever saw a live one, if I may judge from his description of the species in his standard work, "Fish and Fishing."

The illustration of the black bass in said work is a miserable burlesque on this fine game fish, though it professes to have been drawn from nature by the author. The illustration of the rock bass in the same work is not a rock bass at all, but is a very poor cut of an entirely different fish—the "crappie," or calico bass (*Pomoxys nigromaculatus*). Aside from the salmon and the speckled brook trout, "Frank Forester's" ichthyological writings are totally unreliable. His descriptions of most of the species were inaccurate from authors who were in many cases misinformed.

"C. S. W." evidently recognizes but one species of black bass, the small-mouthed (which does not exist in Texas), and ignores the fact that the fresh water "trout" of the Southern States is the large-mouthed black bass. But so it is, and the two species co-exist in many Southern streams, where they are sometimes called "white trout" and "black trout," but often are known by other names.

I will merely say to "C. L. J.," who seems to have the right stuff in him for an angler, that he has gone to work in the right way, and that he will have no difficulty in getting the black bass of Texas to rise to his ties (even if they are of his own tying) if he fishes from sundown until dark, when there is a good rippling breeze, in favorable places of the lake stream, and provided he keeps well out of the sight of the fish. This is the great secret in fly-fishing for black bass.

J. A. HENSHELL.

Cynthiana, Ky., June 3d.

WILLIS, TEXAS, June 1st.

Editor Forest and Stream:—

In your issue of May 27th one "C. S. W.," of Waxahachie, Texas, takes me to task for applying the term "black bass" to a certain variety of fish in our waters commonly called "trout," and although he advises me that the term is misapplied, yet he does not tell me what I should call it.

I have fished ever since I was big enough to pull an angle worm in twain, or since I could take a brass pin between my teeth and crook it into a semblance of a hook, and with a "sout'wood" spruce and out the black bass, white bass, and pollywag, and I have ever been a close observer of every variety of fish and game met with, and I would be utterly afraid to place before a criticising world an effusion upon something I know nothing about. "C. S. W." directs my attention to Forester's "Fin and Feather." I have never read the work, although I have many other books by that versatile author, and he is not a sportsman in America; but I have heard a higher regard for Frank Forester than I do; but this is an age of progress, and although Forester is excellent authority on many things, yet I believe we have more modern writers whom I would regard as authority far above him.

I will take the privilege of calling the attention of "C. S. W." to "Hallock's Gazetteer." Read what he says about black bass; get Gill's opinion, also Dr. Estes, D. S. Jordan, Dr. Henshall's and others, who know more about such things than Forester ever thought of, at least so far as Southern fishes are concerned. Frank Forester never was in Texas, nor did he ever see a fish from this State, hence I can not allow him as authority on that which he never saw, and against the direct experience and study of our first-class native-born naturalists.

I still claim that the term "black bass" is proper. In our waters is the large-mouthed black bass proper. I believe there are two varieties of black bass at the North, the large and small mouth, and I regard our fish as the latter, and one cannot make anything else out of him. I can go in one day's fishing in this county into a circle whose radius is not over one mile, and I will guarantee to kill four different specimens of black bass and lay them all side by side on the ground, and you can not find out every hundred words pronounce them each a separate and distinct variety. I will take two out of our lake, one of which will be a beautiful, glassy, pea-green on the back and head, fading into white on the belly, with an almost imperceptible form and at five running along the side from the gill covers to the tail, where the scales of the back and sides divide with those of the rest of the body. The other is precisely the same fish in every respect, except that the color on the back is a dark olive or subdued lead, fading down as in the other. The third I will take from another lake, whose water is dark amber, clear and deep. (The water of the former lake is a light steel colored.) In this latter lake the fish are all very dark, nearly black on the upper parts and very white below. The fourth I take from a clear, bright, greenish yellow. These bass are all nearly the same size, and all very hard, like steel with a sheen of green and eyes as yellow as gold, whereas those in the lakes have a dark brown or hazel eye. Now take those out of the lakes and put them into the creek, and in two weeks all will be the color of the little four ounce fellows found there, and vice versa. Those taken from the small creek are only smaller because of their age; they have not grown any larger lakes and streams as they attain greater size. Now if "C. S. W." were to see these specimens lying together he would call one a "Texas trout," another "rock bass," another "chub," and the little fellow a "brook trout," as I have known others like him to do before, and leave the "black bass" out, like a "poor boy at a country wedding," meriting a good deal, but having no show.

That which is termed rock bass, strawberry bass, crappie, etc., or the "white perch," or "gasper," in Texas, is a sac-a-lac and thincapin perch in Louisiana, and white, or silver perch, in Alabama and Mississippi.

I shall still insist that the fish commonly called trout in the Southern States is one of the two varieties of black

bass; nor will I be convinced otherwise until I have it from the best authority in this country. However, I am willing to leave it to the FOREST AND STREAM to decide, and you and I go together and take our boats, rods, flies, bobs and the like and kill some of them.

I have not had a thorough trial of the fly on bass yet. The water has been too high, the weather wet and raining all through May. I took one trout and one other day with a fly of my own make, made of feathers—white heron, wood duck, game cock hackle (red), and scarlet ribbon in strips as substitute for ibis. When this bass made a rush for my lure he really frightened me. I was playing, or skittering, near the rush grass, when all at once a splash, a rush, a flying of sparkling drops of water over my boat and me, a singing of the reel (I never heard or saw one before), and the bass out of the water in mid air twenty feet from the strike, and pitching like a mustang pony, all in one-fiftieth of a second, was too much for me; but I recovered in time to attend handsomely to his next rush, and laid him in the boat. Ahem! "C. S. W., if you think these are not black bass if you think they won't rush for a fly, or anything else you may afford them—then you come here and go with me, and I think you will return a better satisfied, if not a wiser man.

When the weather gets in such condition that one can fish, I shall try every method of new and old style fishing, and then I can tell you what I know about fly-fishing. I can get all the bass I want with minnows and cut bait, but I would rather take one "big one" with a fly than kill the biggest old buck in Texas.

I think if "C. S. W." will carefully read Dr. Henshall's papers on fly-fishing for black bass—now appearing in the FOREST AND STREAM—he will be convinced that they will take the fly; at least I have that much confidence in what he shall say, and I trust the Doctor will never stop writing until he has told us all he knows about the subject.

C. L. J.

AUSTIN, TEXAS, June 1st.

Editor Forest and Stream:—

I have before you my issue of May 27th in which "C. W. S." asks "C. L. J." to give "an account of the first or opening battle of his campaign" against "Texas trout" with flies.

I, in the past two days, have taken "Texas trout" with flies. On the 30th of May several others and myself fished Barton Creek, near this point, and between six and seven o'clock we took four "Texas trout." On May 31st, in company with Col. A. J. P., I again fished Barton Creek and with flies I captured two more "Texas trout."

DOGS FOR PRAIRIE CHICKEN SHOOTING.

ALGONA, IOWA, May 19th.

Editor Forest and Stream:—

Sometime since I noticed an article in the FOREST AND STREAM from the pen of an Eastern gentleman giving his experience in hunting Eastern dogs on the Western prairie. His experience is but the experience of most sportsmen when they bring their dogs West to hunt prairie chickens. The training of their dogs is not right for that kind of business. When a dog is trained to work well on prairie chickens that dog will almost always work well on woodcock, partridge, snipe and quail. But a dog that is trained on those birds will seldom work well on prairie chickens. The dog that is being trained wants a large field to work in. He must have room to be independent, room to range. Then he will learn to take the scent high in the wind, where he can breathe. A dog cannot work well with his nose down in the prairie grass. His head must be above the grass to do good work.

A well-trained chicken dog will never work down the wind. They will always work from one side to the other if they wish to get down the wind. Four years ago a gentleman came here from Scotland on his way to a large farm about twenty miles west of this place in Adams County. He owns about 40,000 acres there and in Emmet County. He brought with him three splendid pointer dogs, with pedigrees of eighty years. I told him when he came that his dogs would be of but little use here. He laughed at me; told me what great experience his dogs had had in Scotland. "Why," said he, "your American dogs do not know how to hunt. They are neither big nor curs; they are but little dogs. But I thought I had better look out for a good dog if he wished to have good shooting. He took his dogs out and set them at work. The dogs did not understand their business. Their work had been in too small fields, and when they came to have miles of prairie to work over they were lost. They did not know what to do. The gentleman was very much displeased with the work of his dogs. He knew that they were well-trained to work on some kind of game. He went back to his farmhouse and his man told him to take a setter dog that they had there and he would have no trouble. He did so, and was very much surprised to see how well a dog could work that did not have a pedigree. When he went back to Scotland he took with him a setter dog for which he paid \$100.

I have lived in Northwestern Iowa thirteen years, and I do not believe there is a place in the United States where there are more prairie chickens, or where one has a better chance to judge the work of dogs on those birds. We have hundreds of sportsmen here every year from the East and South who bring with them fine dogs, but few of those dogs work well. They do not understand how to hunt; and again that comes here for a few days' shooting does not want to put in all his time training dogs.

It has been my experience that to have a dog work well he must know something about the game that he is expected to find. To be successful with prairie chickens he must be a great ranger, carry his head high above the grass and have a good nose. It is a common thing to see a dog run fifty to one hundred miles a day when hunting prairie chickens, and a dog that is shut up most of the time cannot expect to range with a dog that is out with a team three days in the week.

I have no wish to run down well-bred dogs, and no man admires them more than I do; but a well-bred dog must have a great range and plenty of game to work well. I always work my dogs from the wagon, and I believe it is the true way to do where one has a chance. The dog that has been taught to putter in the brush is too slow for prairie work.

J. G. SMITH.

TRAINING FOXHOUNDS.

ASHBURNHAM, MASS., May 29th.

Editor Forest and Stream:—

I have taken the FOREST AND STREAM for the last six years, and have been waiting and hoping to see something written on foxhounds all that time, and now that it is started I hope to hear more.

All through northern New England, in every town, are one or two old fox hunters. Not after the Southern style, following the hounds on horseback, as in this hilly and ledgy country it would be impossible; but with one or two good dogs starting sly Reynard, while the frost still lies on the meadows where he has been prowling during the day, and, owned as foxes are, keeping the hearing of the dogs, cut him off at some of his crossing places with an ounce and a quarter of double B shot.

The Southern gentlemen that ride to hounds call that a mean way; but it is no fool of a job to get a shot at an old dog fox that has been run a few times and has had a few shot lodged in his jacket all long range.

I know the bird hunters call foxes vermin, but for us who love the sport, there is nothing like it. I have raised and trained a few hounds, and what "Farmer" says in your issue of the 27th is about right; though I should never dare to let a pup make his first acquaintance with a fox by a bite through the nose. He would have to have good grit to face the next one alone, though he might do some good with a dozen or two more. I have known of several good, likely pups, spoiled by tackling a wounded fox alone. I owned as fine a young dog as ever run, and the first fox I ever shot with him I only broke his fore legs, and when the pup came up, I thought I would let him kill him. Well, Reynard got first grip and hung on, and when the pup got away, he was done with putting his nose very near a fox again, and although he would work an old trail and start his fox in good snags, he never would run very close on the fox; and if a fox was shot at and lay down, he would not kill him a rod. I think it is better not to run a puppy till he is a year or more old, as the work is too hard for one younger than that. But if a man lives on a farm and raises his puppies, if the bitch has pups early in the spring, if they are all allowed their liberty, she will have them all running before fall. I think the best way is to run the young dogs on foxes first. Most of the fox hunters know of a litter of pups, and when the pups are small, they get to be about six months old, take them near the burrow and let them get after the young foxes; they will soon run them in, and after they have had a few runs will, if of good stock, never tumble on rabbits. The best time to begin is before the young foxes get used to going far from their burrow, and the evening is the best time to start, as the scent lays heavy, and the young ones are sure to be out.

Farmer says he never saw the fox that could stand his pack three hours. I suppose the following is better there, for among the granite ledges here I have known the same fox to be run forty-eight hours or more at a time. Now about keeping dogs kennelled. I used to keep mine chained from March 1st to Oct. 1st, only letting them loose for exercise, and used to take pains to cook all the meat for them, feeding once a day. Now I let them run loose all the time and never feed them, as they can go to the slaughter house near by and help themselves to the refuse meat. According to the dog books they ought to die, but I have never had a sick or mangy dog since I gave them their liberty. But they are off about every other morning as soon as the barn is opened and worry the poor fox till they get tired, which is seldom till night, and sometimes they are gone two and three days. This rather ruins the fall hunting, as it gets the young ones in the habit of starting for home as soon as a dog gets after them, and it is rather poor sport to have them run in when you are after them in November, as it is ten times more than they are worth to dig them out, and there ain't any fun in it anyhow.

The kind of hound that cut the best is a rather small-sized dog, that gives tongue steadily all the time after the fox is started, as a fox will run closer to a steady barker than one that only barks every rod or two, and if not hurried too fast he will generally play round some hill or in some swamp rather than leave, as they generally do if the hound has a harsh or squealing voice. My reasons for letting my dogs run through the summer are that they are toughened and ready for work in the fall and do not get foot-sore very easily, as they are apt to if kept tied, especially when they run half the time on the ledges. Hoping to hear more from others in regard to this sport, I am

H. C. N.

CHARCOAL AS A CURE FOR WORMS IN PUPPIES.—West

Boylston, Mass., June 8.—Editor Forest and Stream:—Every one who has bred dogs and raised a litter of puppies has more or less trouble with worms, often losing some and occasionally a whole litter. Now these popular remedies for worms in dogs are injurious to the urinary organs, especially puppies, and I have known instances where pups were permanently injured by over-doses of worm medicines. Often the owner is unused to administering medicine to the dog, and also many do not consider the age and give the pup of a few weeks of age the same quantity as an adult dog. Now these popular remedies—area nut, santaline, turpentine, tin filings, etc.—all tend to inflame the urinary organs and often leave the dog or puppy in a bad state, which takes some time to recover from.

Santoline I acknowledge to be first rate; it does its work, but leaves in a high state of inflammation the urinary organs.

The last three litter of puppies which I have raised I have had good healthy ones, not troubled with worms, and all I have used is charcoal, giving when four or five weeks old a teaspoonful of powdered charcoal twice a day for three days. I have also used it with success on old dogs, cleaning the urinary organs. Farmers and stock raisers use it for the same purpose, and it accomplishes the object, effectually destroying them in cattle.

Charcoal is a purifier and absorbent of putrid gases; it absorbs gases very rapidly. One cubic inch of fresh charcoal will absorb nearly one hundred inches of gaseous ammonia.

When given to a dog, it absorbs or destroys the putrescent gases which are generated in the stomach and alimentary canal. These gases help to generate the worms, and without them the worm cannot live. Charcoal also acts on the digestive organs, increasing their power as well as having a healthy condition of the stomach if any unhealthy condition is the cause that charcoal existing there. Not the least is the fact that charcoal would not inflame the mucous membrane throughout the alimentary canal, and the urinary organs would be in as good condition as before.

PAUL.

TRAINING FOXHOUNDS.—Carthage, Mo., May 18th.

Editor Forest and Stream:—I saw in your issue of May 13th a communication from a subscriber who wants to know how to train foxhounds so as to give them staying qualities. Now, my experience is that it depends more upon the breed than on the training. Of course the training helps, but without the right stock all the training you can give them will not make them first-class foxhounds. The way I train them is this:—I take the puppies, when eight or nine months old, when I have them on and not too fat, and start them with two or three old slow and steady fellows. Once started, call in the old dogs and let the puppies run. They will usually make it warm for Reynard for one or two hours. When they do not run so freely, stop them. Never allow them to run themselves out and stop themselves. Now, when they have rested sufficiently, turn your old dogs loose, and when they have started the fox again, which will not be before long, keep the young dogs in sight, and should they begin to play excite them. You can, in this way, generally keep them running until the old hounds catch the fox, which will be done inside of two hours. This method I have found to work the best in this country, and proved to be the most successful one I have ever tried.

S. H.

HOW TO GIVE PILLS TO DOGS.—Dover, Del., May 11th.

Editor Forest and Stream:—Many persons experience great difficulty in administering pills to dogs—especially large pills, and those having a very unpleasant taste. Sugar-coated, two grain pills are nothing, but when it comes to giving the second quinine pill, minus the sugar coat, in the usual manner, one and sometimes two men have their hands full, causing the dog to struggle and become nervous, greedy to his injury if he be in a debilitated state. This morning I wished to give one of the dogs a dose of quinine; my supply of sugar-coated pills was exhausted, but I had some loose sulphate of quinine in the house. I knew that if I encased it in dough or meat he would chew it, and I also knew that to gag him with a solution would be unwise. A happy thought struck me, and I at once put it to use. I made up the quinine pills, rolled them in dry oat dough, and poured a tablespoonful of cod liver oil into a saucer, and proceeded to the residence of my k-9 friend. After dipping my finger into the oil and letting him lick it, I rolled the two pills in the oil and dropped the first one into his mouth, which he opened to receive my finger. He swallowed it (the pill) in the time it would take to wink. The second pill I placed in the palm of my hand, and he took it greedily. I immediately returned to the house, made a bread pill the size of an ordinary marble, rolled it in the oil and sent it the same road. To be farther convinced of its complete success, I made a small pill of powdered ginger (hot) and a large one of dough, and gave them in the same manner to a four months old puppy with equal success. After giving each dose I allowed the dog to take what remained of the cod liver oil. I hope some of your readers, who have occasion to give large doses of disagreeable medicine, will try it and give their experience.

EVERETT VON CULIN.

COCKERS FOR SALE.—We call attention to the advertisement in another column of Mr. Macdougall's fine kennel of Mr. J. in writing as about them, says: "While thanking you for the favorable notice of my dogs at the late show, I think that they can hardly be called Sussex spaniels. The reason Mr. Dalziel gave for passing over Bijou was that he was not like a Sussex, though why that should be anything against a cocker is more than I can say. Cora is more fairly said to resemble that breed, as I understand their color is golden brown. Her coat is a rich color, but only because it is somewhat faded. When in condition Cora is a dark liver. I am sure these remarks necessary because I advertise my dogs as cockers."

KENNEL NOTES.

DEATHS.—Vetres—Miss Julia Wygan's (of Peelskill, N. Y.), cocker Vetres died on May 25th. The cause was presumed to be cholera. Dingo—Dingo, a black and white dog of Mr. J. C. Higgins, died on May 25th. The poison had evidently been intended for cats, as several dogs had fallen victim to same cause.

ORANGE AND WHITE LIVERBAGS.—We learn from Mr. F. A. Merrick of New Brighton, Pa., that Mr. J. C. Higgins' young Lavender, the only orange and white dog in America, as we were informed, as Mr. M. is the owner of Prince Orange and white. He was one of a litter of eight, whelped June 19th, 1879, by Mr. J. J. Snellenburg's Thunder out of Peers.

DIDO.—Mr. J. O. Donner, of this city, is to be congratulated in having succeeded in purchasing Dido from Mr. Wells of Chatham, Ont. This perfect bitch arrived in New York on Sunday last in that condition. She is to be bred to Mr. J. C. Higgins' Pontiac. Their progeny will be hard to beat. As good as Dido looks upon the bench, we know her to be better in the field, and Mr. Donner can now feel that he owns one of the finest animals ever bred in America.

SALES.—Dido—Mr. W. B. Wells, Jr., of Chatham, Ont., has sold his cocker bitch Dido (Dread-Sail) to Mr. J. O. Donner, of this city. Pluto—Mr. E. A. Godfrey has purchased from Mr. C. K. Keller the white and black pointer dog Pluto. Broom—Mr. C. S. Keller, of Washington, D. C., has purchased from Mr. E. A. Godfrey the Irish setter puppy, Broom (Haver, II-Moyn).

WHEELS.—Lilist—Mr. A. J. Ward's (Boston, Mass.) bitch, Lilist (Rock-Strlight), whelped on May 23rd, seven puppies, six dogs and one bitch, by Mr. Avery W. Gore's Fred.

NAMES CLAIMED.—*Boreen*.—Mr. C. S. Keller, of Washington, D. C., claims the name of Boreen for his Irish setter dog puppy by Rover II. out of *Moya*.—*Glenwood*.—Mr. Geo. L. Wilms, of Jersey City, N. J., claims the name of Glenwood for his lemon and white pointer pup by Mr. W. F. Steel's Glenmark (Rush-Romp), out of Mr. R. J. Green's Girl (Tall-Maryland).—*Jockey Club*.—Mr. Geo. L. Wilms claims the name of Jockey Club for his lemon pointer pup, by Mr. E. C. Culver's Duke (Frank-Quail II) out of Mr. P. Lumbrey's Queen (Ben II-Nello).—*Glenade*.—Mr. Geo. Piercey, of Jersey City, claims the name of Glenade for his lemon and white pointer puppy, by Glenmark out of Mr. R. P. Green's Girl (Tall-Maryland).—*Evangeline*.—Mr. B. G. H. Hall, of Portland, Me., claims the name of Evangeline for his red Irish setter bitch puppy by champion Echo out of Meg, Meg by imported Milo out of imported Biddy.

BIRM.—Zest.—*Finnet*.—The St. Louis Kennel Club's Zest to Champion *Paul*.—*Marguerite-Duo*.—The St. Louis Kennel Club's Marguerite, Faust-June, to Champion *Bow*.—*Ouida-Charlie*.—Mr. W. H. Lee's (Boston, Mass.) imported King Charles bitch, Ouida, to Mr. S. C. Hindley's Charlie.—*Gustie-Rory O'More*.—Mr. W. H. Pierce's (Courtland Kennels, Peekskill, N. Y.) red Irish bitch Gustie to champion Rory O'More, on May 8th and 11th. *Jennie-Glen*.—Mr. W. H. Pierce's (Courtland Kennels, Peekskill, N. Y.) Gordon setter bitch Jennie to Dr. Aten's champion Glen, on May 8th and 11th. *Blanche-Glen*.—Mr. W. H. Pierce's (Courtland Kennels, Peekskill, N. Y.) Gordon setter bitch Blanche to Dr. Aten's champion Glen, on May 8th and 11th. *Dr. Aten's champion Glen*, on May 8th and 11th.

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

THE GRAND NATIONAL ARCHERY MEETING.

THE principal event in the archery season of 1880 to American (toxicophiles is only a little more than a month ahead of us, and every enterprising archer should be shaping his affairs so as to be in attendance. The city of Buffalo, where the meeting is to be held, is located so far East that the greater number of contestants should come from Eastern societies, and it is to be hoped that every member of those societies thus favorably situated will strive to be present, and join in friendly contest with their brethren of the West. Much is to be gained by any archer, whether an expert or novice, by attending and taking part in one of these great public meetings. It is too commonly the idea that one should wait until he has become a fairly good shot before attempting to shoot in public. Nothing is further from truth. It is much better to begin by public shooting, accustoming the nerves to the unusual strain, than to acquire a reputation for good scoring first, to be utterly broken and humiliated by the necessary failure upon a first public appearance.

None of our American archers has had time to become experts. None have grown in the reliability of veterans, and the attempt to name the winners of the ten first prizes at the coming tournament would be worse than the solution of the fifteen block puzzle. Not only would this be difficult from the known similarity in the scoring of many of our most successful archers, but from the further fact that no one can estimate the different effects of the surroundings of a great public meeting upon the scoring of different persons.

Every national meeting in Great Britain witnesses the curious fact that several archers who usually get near 100 points at a Single York Round in private practice, fall below that number at the Double Round in the contest for the medal, while others even exceed their practice scores. In 1878, Mr. H. H. Palms averaged 44 points at the Single York (or 84 at the Double York) in private practice, and in the struggle for the championship at the national meeting scored 93 points. In the other great public match at the Crystal Palace he scored again in excess of his private practice, getting 93 points. On the contrary, Mr. Piers Leigh, who, during the same season, in private practice, averaged 83 points at the Double Round, only succeeded in getting 89 points at the national meeting. Mr. B. Walters, who stood lowest, with one exception, in the second class of the English private practice club, last year won the champion medal. Such examples are not exceptional ones. They are almost the rule. Another element, too little taken into consideration, largely affects the prize-winning at public meetings, and that is the fact that no archer can ever become so completely master of his weapons as to score always up to his standard. Upon one day he may excel himself by continuous steady central shooting, making almost phenomenal scores at all ranges, while upon the very next day, perhaps, he cannot coax or force an arrow to touch the target anywhere near the red or gold. While a national meeting may occur upon one of his best days, it is just as likely to be upon one of his "off" days, and though himself almost a veteran, he is forced to succumb to the "luck," as he will term it, of a mere tyro, who is "making his best score of his life."

The first national meeting at Chicago witnessed many instances of the sort; indeed, they were the rule rather than the exception. One instance, more proper for present mention than any other, was the fact that a member of the Wabash Merry Bowmen, Mr. R. C. Smith, was only induced to shoot at the national meeting by the over persuasion of the balance of his society. He had never touched a bow two months before the meeting; could not score 100 points at forty yards, and was a novice in private practice, and had never shot at a target at a longer distance than sixty yards. Yet he won second place on one day at the one hundred yard range, obtaining the cash prize of \$50 over such "old reliables" as John A. Boot, Theodore McMechan, H. C. Carver, Maurice Thompson, L. L. Piddingsham, W. B. D. Gray and all the many good shots there competing. Another instance might be noted where one archer upon one day at sixty yards scored just three times as many points with thirty arrows as he had with the same number two days previous. It is a curious fact that at national meetings in the same season the average would bring the best bows surely to the front, but no one can tell (at least in archery) what a day may bring forth. For these and many other good reasons no one should let the national meeting go by without contesting for the prizes, not so much for their real value as for the pleasure of such a contest and the many pleasant experiences of the occasion. Buffalo is a pleasant place to visit upon any occasion, and the archery tournament will greatly add to its attractions on the 13th, 14th and 15th of July. From assurances received from Western societies the attendance of Western archers will be much greater than at Chicago last year, and the meeting will be the occasion of the formation of many new and valuable acquaintances and true and lasting friendships. One whole-souled toxicophile, whose home is several hundreds of miles west of the

Mississippi River, writes that his business is such that he "cannot possibly leave it," but that he intends for once to achieve an impossibility by "utterly abandoning it and going any way." Who would grudge a prize to such an archer? The cash prizes will this year most probably be graded from first to twelfth, thus giving double the number offered last year, and the special prizes will be so arranged that no archer shall win more than one special prize. This will enable many archers to bear off something as a trophy of the tourney, and will give much more satisfaction than the faulty arrangement of last year, which resulted in giving too many prizes to the best shots. The Double York Round will be shot through by the gentlemen upon the first two days (a Single York upon each day), and upon the third day there will be some handicap shooting. The ladies will shoot the Double Columbia Round through upon the two first days and handicaps upon the third day. The programme for the meeting will be set out within a fortnight, and will be sent by the Corresponding Secretary to all archers who desire a copy. An effort is now made by the writer, together with other members of the Executive Committee, to admit all archers to contest for all the prizes of the association regardless of the question of membership. Of course the Executive Committee have no power to allow the national medals to be contested for by any archer who is not a member, because of the constitutional provision upon that subject; but if the Executive Committee will admit all archers to compete for the cash and special prizes no doubt many would attend and take part in the meeting who would otherwise be deterred. The annual business meeting of the Association will take place on Monday before the tournament begins, and it is to be hoped that at that meeting the competition for the medals will be also opened to all American archers. We are satisfied that much good would result from such a course, and surely no evil can spring from it. The writer has steadily advocated this idea from the inception of the Association, and at the last annual business meeting tried most earnestly to secure such a result, and he feels sure that the friends of this idea are now in the majority. Let us "gather together from every land and name and tribe," and make our national meeting of archers for 1880 one long to be remembered by the votaries of the bow. The writer begs of each archer who reads this and who is not a member of any society belonging to the National Association, but who will attend and take part in the meeting if this restriction is removed, to send him his other name at once.

WILL H. THOMPSON.

A CHALLENGE.—New York, June 1th.—*Editor Forest and Stream:*—We hereby challenge the New York Archery Club to shoot a friendly match with the Oriental Archers—a team of four gentlemen from each club—at either the American or York Round; or, four gentlemen and two ladies, ladies to shoot the Columbia Round—none to take part in the match unless they have been a member of their respective clubs at least thirty days at the date of this challenge. Match to take place any time after July 1st.

W. HOLBROOK, President Oriental Archers.

A MANHATTAN BOWMAN.—New York, June 5th.—*Editor Forest and Stream:*—I notice that a slight error has been made in recording the field meeting of the Brooklyn Archery Club, held on Monday last. I am represented as shooting as a member of the New York Archery Club, while the fact is I am an officer of the Manhattan Bowmen, and represented them on that occasion. By making this correction you will oblige, yours very truly,

MALCOLM MCLEAN, President Manhattan Bowmen.

Cricket.

—Address all communications to "Forest and Stream Publishing Company, New York."

CRICKET AT TORONTO.—The cricket season of 1880 may be fairly said to have been commenced in Toronto on May 15th. At the University grounds sides were chosen by Messrs. Totten and Townsend, and the wickets looked very pretty. There were several carriages with fair occupants on the ground. Totten's side went in first, and scored 98, of which Irving scored 40, made in good style, with only one chance given. Totten, 16; Sprague, 15; and Brown, 12. Ogden was the most dangerous opponent, and he captured the majority of the wickets. Townsend's side collapsed in a remarkable manner, only scoring 15, owing to the good fielding of Totten's team. Dr. Sprague and Irving made some brilliant catches in the long field off Totten's slows, and the fielding all round was good.

—The Campbellford Cricket Club, of Canada, has reorganized, with J. D. Kennedy as Secretary-Treasurer.

—The season has opened at Haliburton, Can., very auspiciously, with Mr. Niven as President.

—The Parkdale, Can., Union Star Cricket Club are in the field for the season; and also the Dominion Club, of Toronto.

—The Newark Cricket Club, of New Jersey, had its opening game on the 21st ult.

—The Frankford Cricket Club, of Philadelphia, has put its grounds in fine order for the season, and the members are getting in trim for a long series of matches. The Pennsylvania Railroad runs close to the grounds.

ONONDAGA CRICKET CLUB.—This club held a meeting at Bright's restaurant May 31st, for the purpose of reorganizing for the season. The attendance was large, among whom were Alfred Moore G. Pyroft, C. Davies, T. Newick, W. Coppins, C. H. Millward, E. J. Bright, D. P. Phelps, Jr., J. Lighthall, A. N. Smart, J. Gill, J. Holt, H. Russell, R. Hess, S. Taylor.

On motion, Alfred Webb was appointed Chairman, and C. H. Millward Secretary, *pro tem*. On motion of Mr. Pyroft the following officers were elected for the ensuing year: President, H. Russell; Vice-President, John Elliott; Treasurer, Luke Collins; Secretary, C. H. Millward; Managers, G. Pyroft, C. Davies, T. Newick, D. P. Phelps, Jr., J. Lighthall, A. N. Smart, E. J. Bright. It was resolved that the club use the grounds at Lakeside Park for matches and practice. The practice days will be Wednesday and Friday of each week, commencing at 4 o'clock sharp. A vote of thanks was extended to Major A. H. Davis and John Elliott for their liberal patronage to the club last season. The managers met Monday, June 7th, to elect new members and arrange a list of games. The Secretary, Mr. Millward, is in correspondence with several clubs in Canada, Oswego Falls, Utica and Albany, and some lively games are expected.

DEFEAT OF TOM DALE, alias JORDAN.—The misfortunes which have befallen to allow the Canadian cricketers from the start must have almost appeared to be infinite when Prosper Dale, the captain of the team, was apprehended when Prosper Dale, England, on Wednesday, for having deserted eight years ago from the Royal Horse Guards. Dale was playing under an

assumed name against the Leicestershire team, but was early in the day recognized by a brother trooper. He was allowed to finish his innings, when the doors of the Leicester "jug" are said to have closed "on the other side of Jordan." If we are not very much mistaken, 365 days at hard labor will be his portion. Oh, where, oh, where is the Reverend T. D.?

BELLEVIEW (ONL) CRICKET CLUB.—This established club is now in possession of one of the finest grounds in Canada. At a recent meeting the following officers were elected for the season: Patron, Alex. Robertson, M. P. P.; President, C. J. Staudler; First Vice-President, N. B. Falkner; Second Vice-President, S. G. Beatty; Third Vice-President, L. P. Reeves; Secretary, W. H. Hagar; Treasurer, R. F. Benjamin; Captain, E. Corby. Committee of Management—Chairman, James Jenkins; W. M. Thomas, Hugh McKinnon, Geo. Maybee, E. W. Davy, A. M. Kemp. Honorary Members—E. R. Benjamin, Jas. Corby, Wm. Pedin, Jas. D. Clarke, A. Bruce.

CANADIANS VS. WEST OF SCOTLAND.—The first match of the Northwestern Team after their arrival was played on May 21st and 22nd at Hamilton Crescent, Glasgow, the visitors winning by 5 wickets. According to the report of the match sent us by our friend, Alexander Jordan (Dale) was accorded the best bowler by the Scotch critics, and Hardman the safest bat. Jordan's 41 and 19 were contributed by hard "lamming," and Pinkney is said to have played well. The fielding of the Canadians is described as being "something too awfully bad." Kearney had the misfortune to break his little finger in fielding in the second innings, and had to retire. Unfortunately the crowded state of our columns will not permit of a lengthy or detailed account of the game. The score:—

CHESISTON HILL vs. STATEN ISLAND.—Played at Tompkinsville S. I., on May 29th, resulting in victory for the visitors by two wickets, in beautiful cricketing weather, and on a very inferior wicket, which had evidently not been gone over with the roller to any great extent, this match was contested on Decoration Day. The Hill team was a very good one, including Pearson, the old professional of the Philadelphia Cricket Club, well known as a very excellent and stubborn bat, and Tyres, the new professional of the club. Little can be said in favor of the selection of the home eleven or its banding in the field, we seldom having seen a team played in a more "as you please" manner. The hour for drawing the stumps had been agreed upon by both captains to be 5:30 P.M.; but later on, when the Islanders had overtopped their adversary's score, the visiting captain requested that an hour later might be named for the closing of the game, which was consented to by the representative of the home club, and his vacillation cost his side the game. Concessions, therefore, having been established, it did not surprise us to see Mr. Inman, who was not on the team, take Mr. Bance's place with the gloves when that gentleman was unfortunately injured during the second innings. Of course, this is not the way to play cricket, and the match lost all interest to those who knew anything of the game.

Play began at 11:30 A.M., with the Staten Island at the bat, and in despite that all the athletic associations were having their games, and the boating fraternity were at the Passaic River witnessing the regatta, yet the attendance was a very good one. Tyres and Biddle huddled the ball for Chestnut Hill, and Outerbridge, the latter being the batsman, succeeded in getting it away for double figures, the innings closing for 56 runs. Small as this total was, the visitors did not do so well, both Lane and Sprague being well on the spot. Certainly the former is one of the best bowlers in America, and if anything, in better trim than last season. Forty-one was all the tins could show when the last wicket fell. To inspire the eleven to greater deeds the luncheon bell was rung, and some fifty to sixty players, members and guests, were invited to take a birds-eye view of a round of roast beef and the salted horse, a ten of fish and a ten of chicken, larger than a ball. But there was loaf bread and cheese, when one could find a knife, and as no one turned up to ask for fifty

cents a head, the cricketers took in a reef in their belts, and the "patrons of the game" a double hitch of their back-straps, and the game went grimly on. Propped up with a bat, Mr. Simms, the Philadelphia umpire, feebly gasped "Play," and from that time until 94 had been told, the wickets of the Islanders were rattled down by the Philadelphia bowlers. It may here be remarked that those of the home team that did not go out on the first ball, waited for a second, and some few had strength enough to cope with two covers. With half a century to make and win, the Chestnut Hill boys went in smiling; but Lane was deadly, and eight wickets fell before the necessary score was recorded. Further remarks being unnecessary, we present the full score:—

Answers to Correspondents.

No notice taken of Anonymous Communications.

GUNS, New York.—Please call, or send your address to this office.

R. E. H.—The firm you mention is reliable. They have probably not got out their new circular yet.

G. C. H.—Canvas boats will not molder if the canvas has been properly prepared and they receive ordinary care.

AMATEUR.—You will find dimensions of Penita and Roter in our recent files. Both are reported as sailing very well and fast.

P. L.—The schooner Maple has never crossed the Atlantic. She won the America cup against the Cambria, and about eighteen other schooners over the New York Y. C. course.

YORKSHIRE.—Your terrier has the mange. Do not feed any meat for some time and rub the parts affected with Glover's imperial mange cure, advertised in another column.

B. F.—Cadet engineers rank with cadet midshipmen at the Naval Academy. They belong to the staff, but have the assimilated rank of the midshipmen and receive the same pay. Wyoming Territory offers more large game than Maine.

R. F.—We take exception to much that is in the government report on the Herreshoff coil. For want of experience the board was compelled to reason by inference, and practice has not borne out all their conclusions. Will review soon.

C. H. S.—Brooks Bros. still furnish yacht crews with their duds; also good party in New Bedford, Mass. He fits out the revenue marine schoobship, and supplies rigs at \$9 to measure. Club caps at McCue Bros., Broadway, above Maiden lane.

A. W. A., Long Prairie, Minn.—Clean ears out thoroughly with Castile soap and water. Do not overfeed; give no meat; tablespoonful of sulphate of magnesia once a week in food. Pour in ear twice a day following: Three grains sulphate of zinc, ounce water, drachm diluted lead water.

Z., Washington, Pa.—Undue exercise and overheating are the principal causes of your dog's having fits. Sudden changes of temperature, such as taking your dog from a cool and dark room into the sun will also bring them on. Would advise treatment of sulphur combined with cooling medicine.

D. S., Fulton, N. Y.—My year old setter has just pulled through the distemper, but his eyes have continued to run, one of them having a bluish whiteness over it. Kindly prescribe? Ans. Build the puppy's strength up with quinine, two grains three times a day for several weeks, and dust into the eye twice a day the following very fine powder: Calomel, one drachm; sugar, one and a half drachms.

W. R. R.—For practical work, we recommend "Shipbuilding in Iron and Steel" by E. J. Reed, \$10, and "Murray's Shipbuilding

In Iron and Wood," \$7. Scott Russell's work (\$50) contains valuable plates, plans, etc., and is also good on practical building in both iron and wood. For theory of modern naval science, see "White's Manual" (\$10) and "Kemp's Yacht Designing," \$25. No American works that we can recommend.

P. P. AND S. C., Philadelphia.—My setter pup, nine weeks old, has his navel swollen to a lump about the size of a thumb. When pressed the lump recedes and the stomach is natural, but the moment the pressure is removed, the lump returns. What shall I do? Ans. Your puppy has umbilical hernia, and unless a surgical operation is undertaken by a skilled surgeon, we would recommend you to apply simply a compress (a cone-shaped cork is as good as anything) and bandage around the puppy.

S. B., Cleveland.—I want to buy a spaniel, say one in the street like one I want; was of about twenty to twenty-five pounds weight; liver and white, curly coat and long ears. 2. What kind of dog is a Japanese spaniel? 3. What is the cheapest book I can buy with illustrations of all the breeds of spaniels? Ans. 1. Cocker spaniels, see advertisements in another column. 2. Somewhat similar to the King Charles breed. 3. No cheap book can give correct and life-like illustrations of dogs. Stenhouse's "Dog of the British Islands," and Vero Shaw's "Book of the Dog," contain what you want.

GEORGIA.—My Gordon setter has a dry cough, now and then he makes an effort to clear his throat, and I have noticed once that he coughed up some phlegm. I find some running at the nose. What shall I do for him? Ans. It is impossible from the outline of your description to know whether your dog is suffering from cold or is in the first stages of distemper. You neglect to state age, a very important point. Should the dog have cold, keep him warm and dry and administer several small doses of castor oil, one day interceding. Should you judge that it is distemper, doses of quinine, say two grains three times a day will probably be the best treatment for you to adopt when this issue reaches you.

G. E. J., New York City.—1. What are best kind of rabbit dogs, and where can I get two? 2. My beagle has something the matter with his ear; he scratches it, after he has been running. 3. My red Irish setter bitch, one year old, has had a swollen throat ever since she was two months old. What shall I do for her? Ans. 1. Beagles are the best to our liking. See advertisements in another column. 2. You do not state whether there is any discharge from ear or not; should there be any, your dog is affected with earache. See answers on this subject in late issues of this paper. 3. Rub part afflicted with mild iodine ointment.

E. V., N. Y.—Is the name of woodchuck, or groundhog, a synonym to the badger? In company of a friend I dug out a happy family, consisting of the mother and three hopeful young ones, last week on my farm in Pennsylvania, but find that the animal called badger in Europe is larger and somewhat different in color to these ground-hogs as they are called in Pennsylvania. Ans. The badger and woodchuck are two entirely different animals having nothing in common except their habit of living in holes which they excavate in the ground. The former (Arctomexicanus) and the latter (Arctomexicanus) of the West, are carnivorous, and are allied to the bears, raccoons, etc., while woodchuck (Arctomexicanus) is a rodent, and belongs to the order which includes the squirrels, hares, gophers, beaver, etc.

NEW PUBLICATIONS.

CANOE AND CAMERA: A Two Hundred Miles Tour through the Maine Forests. By Thomas Sedgwick Steele. With illustrations. New York: Orange, Judd Co., 1880.

Under this title Mr. Steele has given us one of the most attractive summer books of the year. It is a sketch of a canoe voyage which the author took through the wilds of Maine in the summer of 1879, providing himself with the usual complete campaign outfit, and in addition with a full set of photographers' instruments and the services of a photographer. In this way the party were enabled to secure views of every point of interest visited by them, and these pictures have been used for the lavish illustration of the volume before us. In addition to giving the reader these faithful reproductions of scenes on the Penobscot, Mr. Steele has enlisted the skill of such well-known artists as True, Williams, Day, Aug. Will and others, whose character sketches add much to the charm of the pages. The mechanical work of the book is of the very highest standard; it is a superb volume.

The country explored and described comprised the territory of the east branch of the Penobscot River—a region rich in beautiful scenery and well supplied with game and fish. It is admirably adapted to canoeing, and at the time of Mr. Steele's trip a fortunate break of water, caused by the heavy rains at the beginning of the journey, with an almost uninterrupted succession of perfect days, conspired to make the trip one of as much comfort as the true follower of field sports could desire. No one wants to float down a river on flowery beds of ease. Mr. Steele is no amateur in the camp and on the hunt. He has explored the wilds of Maine, the forests of Wisconsin, and has camped beside the Rangelys. As an accomplished sportsman, he communicates this spirit to his book, and writes in a vein which leads the reader unconsciously to sympathize with him in his description of a striking landscape, his spirited accounts of a capture of a fish or the running of a rapid, and in his philosophical and outspoken sentiments regarding the ethics of the camp and field. For this reason we commend the style of his book, and we always glad to induce every contributor to the literature of manly, out-door recreation.

PUBLISHERS' DEPARTMENT.

—See advertisement of Riverside House, Forked River, N. J.

The firm of Lincoln & Hillyar is this day dissolved. The business will be continued by Hitchcock & Hillyar, who take the kernel entire.

—Donch Show Scoring cards, with complete table of points, by Edward J. Forster, Secretary Massachusetts Kennel Club. The value of any breeders' point card by letter according to Stonehenge, can be seen at a glance. Twenty-five cents per package, or live package for \$1.00, postpaid. Sent currency or stamps. Address Edward J. Forster, Charlestown, Mass.

NOTE TAKEN.—Is out from the State Journal, Springfield, Ill., the following:—"Among the sick and disabled, a ballot taken in person and by proxy, resulted in favor of a unanimous vote in favor of Warner's Sea Remedies.—L.A.C."

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, THE CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AT-

NOS. 39 AND 40 PARK ROW (TIMES BUILDING), NEW YORK

[POST OFFICE BOX 232.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 10, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith and be addressed to FOREST AND STREAM PUBLISHING COMPANY. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Editors of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

—June is the month selected by the pigeon shooters, and in consequence a large amount of our space is necessarily devoted to that sport.

—The minds of certain citizens of New Jersey, are still befogged by the opinion that the State game laws are inoperative on private lands. We commend the letter of "W.," published in another column, to the New Jersey State Association. There is an opportunity here for that body to show their metal. And that there may be no trouble in discovering the offenders next Fourth of July, we will be happy to give the proper parties such definite information, that there will be no excuse if the woodcock are slaughtered on that day.

LETTERS TO HERBERT.—Letters postmarked Paris, and addressed to William Henry Herbert (Frank Forester), who has been dead over twenty-two years, have recently been received at the Newark post-office. They were addressed "The Cedars," Herbert's old home on the Pas-saic, which was long ago burned down.

AMERICA AT BERLIN.—The American exhibit of fish culture apparatus and methods is deservedly attracting much attention at the Berlin Exhibition. The visitors are not satisfied with the regular hours of the Exhibition, but have so besieged the American representatives at their hotels that it has been found necessary for them to leave their hotels and resort to private lodgings in order to escape. This would seem to show that we have sent something to Berlin which is worth seeing.

THE FRASER RIVER SALMON.—The paper on this subject, of which we print to-day the first installment, will not fail to attract the attention of naturalists and practical fish culturists. Systematists have given no little attention to the *Salmonidae* of our Northwest coast, but of their habits very little has been written, and the little is inaccessible to most of our readers.

It affords us much satisfaction, then, to be able to furnish such an excellent account of the habits of the salmon of Fraser River. Our correspondent, "Mowitch," whose writings have so often interested the readers of FOREST AND STREAM, has, by this contribution, further increased the burden of gratitude which they already owed him.

WANTED—A "NEW YORK STATE ASSOCIATION FOR THE PROTECTION OF FISH AND GAME."

WHEN the "Females' Society for the Protection of the Naked Limbs of the Infants of Dahomey" converts its weekly gatherings into sessions of gossip and slander, the public is not inclined to bother itself much about the matter, for it is by no means certain that the infants of Dahomey need clothing, nor even if they did, is it a matter of particularly vital importance to that public. When, on the contrary, an association of intelligent men repeatedly convene under a title which implies if certain amount of work in a designated and important field, and then deliberately ignore that work and its claims upon them, a certain portion of the public does interest itself in the matter, and it calls for some explanation and remedy of the abuse.

There came together, at Seneca Falls, New York, the other day, as the readers of the FOREST AND STREAM have already been told, an assembly of the delegates of forty-three sportsmen's clubs. The convention met under the title of the "New York State Association for the Protection of Fish and Game." The meeting continued from Monday through the following Saturday. During that period several thousand pigeons were shot in competitive matches at the traps, but not a single iota was accomplished in the way of advancing the interests of game protection in the State. As a pigeon-shooting tournament the convention was a great success; as the session of a game protective body it was an utter failure.

The intelligent, systematic and proper protection of game and fish is a subject of live importance, and the proceedings of the Seneca Falls convention, therefore, is of interest to every sportsman in the State. A society professedly established for the protection of game and fish, and assuming a title setting forth that claim, represents not only sportsmen in general, but particularly the higher class of sportsmen who recognize and practice the higher code of sporting ethics.

The reputation of the individual is here directly concerned, and every man who is thus represented at the annual meetings of the Association may call that body to account for its repeated delinquencies in its neglect of a professed duty. The very grave charge may be preferred and sustained, that, so far as the ostensible object of its annual meeting is concerned, the convention is a wretched farce, and that, instead of exerting any good influence for the cause of the due protection of game, what influence there may be is bad.

This is not a question of pigeon shooting, nor of the expediency of a body of men gathering for a week's tournament at the traps. It is simply the question whether a society may profess one thing and practice another; whether a body of men with such a grand field for earnest work as was presented to the convention at Seneca Falls may bring that work into ridicule by systematically and year after year ignoring it.

The title, "New York State Association for the Protection of Fish and Game," is a misnomer. This organization is one to which all who are interested in the protection of game should look for their greatest encouragement and from whose influence, example and efforts the greatest good should result; yet at the only time when it appears before the public, the only time, in fact, when it appears at all, it entirely loses sight of the objects which it ought to hold in supreme importance; it deliberately throws away its opportunities for creditable effort, and substitutes an amusement which affords temporary pleasure to its members. More than this, it belies the cause it professes to serve. It is a shame that instead of the good work which a true New York State Association for the Protection of Fish and Game, with its wealth and influence, might accomplish to restock and keep stocked the vast territories which offer themselves for easy improvement, the organization which appears before the public for the professed accomplishment of these ends should have degenerated into a congregation of trap shooters.

The interests of game protection in this State imperatively demand of the so-called "New York State Association for the Protection of Fish and Game" one of two things: either to abandon its false title, or to make itself worthy of that title. As the "New York State Association of Pigeon Shooters," or a body with any other name which shall designate the true nature of an annual tournament, no one can find fault. Such an association would be both honest in name and consistent in practice.

We should much prefer, however, that the present body, who are so well known to each other, who are practical and experienced sportsmen, and consequently so well fitted to work understandingly and in harmony, should really assume the character of a game protective society, and substitute for their present negative influence, the positive power they are so preëminently capable of wielding.

The Long Island Sportsmen's Association is with reason jubilant over its exploits at Seneca Falls. The convention of 1881 will offer to it a magnificent opportunity for reform in this matter. The new president of the Association, Abel Crook, Esq., and those who are associated with him as officers and committees, are capable

of shaping the course of the Association next year in a direction which shall make it a credit to the sportsmen of the State and the country.

What will they do?

MIGRATORY QUAIL.

THE migratory quail ordered by gentlemen in this country were shipped from Messina May 5th, ult., per steamer *Gisland*, for New York. She is due in New York in the forepart of this month, and her arrival is daily expected. The birds will be distributed as follows:—

Leviston, Maine.....	400	Danville, Canada.....	100
Other towns in Maine,		Chatham, Ont., Can.....	200
by Mr. Everett		Sherbrooke, P.Q., Can.....	300
Smith, Fish and		Altoona, Pa.....	100
Game Commissioner		Zanesville, Ohio.....	100
of Maine.....	2,200	Wilkesbarre, Pa.....	100
Rooster, N. Y.....	300	Baltimore, Md.....	400
Franklin, N. Y.....	100	Jefferson City, Mo.....	100
Manchester, N. H.....	300	Glencoe, Ill.....	100
Toledo, Ohio.....	200		
Quebec, Canada.....	200	Total.....	5,100

—Caleb Cooke, a widely known naturalist, curator of Essex Institute at Lynn and attaché on the staff of the Peabody Academy of Science, died at 9 o'clock on the night of June 5th, of typhoid pneumonia, after a brief illness. He was about forty years old, and unmarried. He held the United States consularship at Zanzibar at one time, and was a man of wide range of knowledge, genial and warmly endeared to a large circle of friends at home and abroad. Mr. Cooke was an active worker in the Salem fraternity, and was of a modest, unassuming and generous disposition.

HOW IT WORKS.—The subscription price of the FOREST AND STREAM is \$4 per year, but it costs the subscriber more than that. One of our stanch friends, who subscribed for the *American Sportsman* in 1874, then to the *Rod and Gun*, and whose name has been on our books ever since, writes that he was led by reading its pages to buy first a Parker gun and the various knick-knacks which go with a gun, then a Nichols and LeFever, with loading tools, and rods, reels, lines and other fishing traps too numerous to mention.

This is just the work we are doing all the time. If a man is not a sportsman when he begins to read the FOREST AND STREAM, the paper incites him to be one. We can never fully estimate the good effects accruing from a year's subscription to a bright sporting journal.

VALUABLE CONTRIBUTIONS.—We have recently printed, under the title of "Spring Notes from Minneapolis, Minn.," two papers which are of very great value, as well for their matter as their method. Mr. Thos. S. Roberts, from whose pen they come, is well known to our naturalists, not only as a careful and accurate observer, but also as a student of very great originality and acuteness. His "Spring Notes" show in their preparation a careful attention to detail which is most admirable, and which gives to his contributions an importance far above that of most of the notes which come under that heading.

We cannot refrain from recommending these productions to field collectors as models of their kind, and we think that a series of similar notes from different sections of the country would not only be of great interest to most of our readers, but would have a high scientific value as well.

Such field notes should not be interrupted, but continuous, the thermometer should be read at least three times daily, morning, noon and night, and, if convenient, the minimum temperature for each day should be given; the state of the weather should be noted, the different plants in bloom mentioned and matter pertaining to any of the different vertebrates be introduced. Only by following some such method as this can field notes be made as valuable as they ought to be.

ONE OF MANY LETTERS.—It is always encouraging to receive merited commendations and expressions of approval. Our lot in this respect is a most happy one. We are constantly in receipt of letters from old and new friends, which are filled with expressions well fitted to encourage us in our efforts to make the FOREST AND STREAM an acceptable journal. Here is an extract from one of these letters:—

I cannot close this letter without giving expression to my appreciation of your efforts in providing sportsmen with so excellent a journal as FOREST AND STREAM.

No other influence is so widespread and powerful in the up-building and maintenance of a healthy sentiment in favor of those outdoor sports which are so delightful and beneficial to all who indulge them in moderation.

Nowhere can one find a paper so full of all that is of timely interest, and yet bearing the test of age. Its every utterance has the saving quality of purity, and much of the matter published from week to week will endure in the memory of sportsmen so long as the love of nature is strong within us.

Your removal to more commodious quarters, while being an evidence of financial prosperity that must be peculiarly gratifying to those directly interested, is not without promise to your readers, for we all know that pleasant surroundings are conducive to good work, in whatever direction one's efforts may be applied. It must be especially so in your life and work.

GAME PROTECTION.

WORK FOR THE NEW JERSEY ASSOCIATION.

New York, June 5th.

Editor Forest and Stream:—

Now that our friends the Jerseymen have their new woodcock law, would it not be well for the authorities of the State to see to the enforcement of said law. In one of my former letters to you I claimed that the old law had never been enforced—furthermore, that every Jerseyman, or rather a good many, claimed the right to shoot on their own land. One of your correspondents, signing himself "New Jersey," informed me through your paper that the old State law giving each Jerseyman the right to shoot on his land the whole year round had been repealed in 1874. It might have been repealed in Trenton, but this repeal is not in force in the State of New Jersey.

Last Monday (Decoration Day) I happened to be in Passaic County, N. J., and if you had heard the guns in the different swamps, you would have thought so. I had a long talk with a farmer, and he told me that this new law was not only a fraud, but had been gotten through the Legislature through misrepresentation, and for the benefit of a few. He named to me a gentleman, one of the originators of this new September law, who still claims the right to shoot on his own ground. He says that he is going to shoot on his own land next Fourth of July, and in fact he brings about it. The upshot of all this is that twenty more men claim the same right. They say that if Mr. So-and-So can go out shooting, they do not see any reason why they should not go themselves. They will go in a body, and they say that they would like to see anybody arrest them.

As I said in one of my former letters, we have old laws enough; why pass new ones long as the old ones are not enforced, especially when the instigators of those new laws are the first ones to break the old ones? W.

GAME PROTECTION VS. TRAP SHOOTING.

New York, June 4th.

Editor Forest and Stream:—

In my anxiety to hear and learn all about the proceedings of the New York State Sportsman's Convention, I looked eagerly, but in vain, in your edition of yesterday. There must certainly be a mistake somewhere, as your paper, speaking about the convention, gives only the scores of different pigeon matches. Could it be possible that such a body of men, claiming to represent the sportsmen of the State of New York, should have convened without transacting any other business than pigeon shooting? I have asked several of my Brooklyn friends, but all I could get out of them was, "The Brooklyn boys carried everything before them."

In the heat of a battle, amidst the roar of the guns, the cries of agony of the wounded and dying, the curses of the living, the sight of blood and gore will make human fluids out of tender hearted men. Is it possible that such has been the case with our sportsmen at the convention—that the blood of the thirteen thousand innocents slaughtered at Seneca Falls turned their heads, made them forget their duties and lose sight of the objects in view? No, it cannot be. I can hardly believe it. However, should my present belief prove true, let every sportsman in the United States know it. At the same time, let those gentlemen who convened last week at Seneca Falls, and agreed to meet again next year in Brooklyn, change the title of their convention. Let it be called the New York State Pigeon Shooters' Convention, as they have certainly no right to the title they met under last week.

Some years ago pigeon shooting was indulged in for practice; to-day it has grown into an infatuation. It is indulged in for gambling purposes and orgies. In some instances, it has broken up homes and families—has even taken the bread out of children's mouths. It has made gamblers out of steady men. Clubs that have been gotten up for game protection have been turned into gambling associations; charters have been gotten under false pretences, and then broken. And all this under the cloak and color of sportsmanship. Well might Mr. Bergh address to those so-called clubs Cicero's words to Catiline: "*Usqueque tandem Catilina, adulescentia patientia nostram.*"

A TRUE LOVER OF THE SPORT.

IS TRAP SHOOTING CRUEL?

Editor Forest and Stream:—

"En Garde," in FOREST AND STREAM of May 27th, makes rather a decided misnomer of his pseudonym, for he is certainly off his guard, and certainly leaves himself open in places more than one to severe criticism.

He was never more mistaken in his life, than when he laid the inception of my article, in defense of the pigeon, to either no experience, or a luckless one at the trap. I confess to a limited experience, but not a luckless one. I have shot over traps long enough to acquire a decent proficiency, and a strong disgust for what I fearlessly denounce as a foolish, unmanly and cruel practice. I still hold trap shooting is rapidly reducing the pigeon supply, and that its continuance will eventually result in absolute extermination. Yes, I look back with pleasure to the time when the great flocks visited us semi-annually, and, contrary to "En Garde's" suggestion, it was not in the "long ago" when our country was densely wooded, but within the last ten years, for being still in my third decade, that happy epoch, when game of all sorts was plenty, a *teufel* before my eyes, with a smooth-bore musket, with its "half pint of shot, and four fingers of powder," merges into a very serviceable Remington twelve-bore.

"En Garde" thanks "Knowles" for taking up the cudgel in behalf of "the guild" (by "the guild," I presume he means the noble order of trap shooters), and "squeebly" replying to my letter. He also says he "believes him to be one who would never wantonly practice cruelty toward one of God's creatures." This last sounds well; but every time he steps to the score and peppers a pigeon full of shot, he indulges in a most cruel and unworthy practice toward one of the most innocent creatures of a kind Providence.

"That twenty-nine per cent. that gets beyond the eighty yards boundary is sadly reduced before it runs the gauntlet of the outside shooters, and I will venture to say that not two per cent. of the pigeons spring from traps ever get back to their native pastures; and if they do, their lead-loaded bodies, in spite of their marvelous fecundity, will be in no shape for propagation. When the terrible net drops on a pigeon, he is lost. What wing packing, shipping and confinement his spirit is broken; and when for the first time in weeks he stretches his pinions freely, and darts away from the trap happy in his new found liberty, "bang!" goes the unerring gun, and "dead bird" is the only eulogy spoken over his corpse.

Mr. Frank Beebe comes gallantly to the rescue, and in a few short, terse remarks defends the pigeon. I thank him heartily for

his substantial support, and am sure there are many, many more of our way of thinking.

If trap shooting is not abolished voluntarily, it perforce soon will be, for the pigeon will become extinct, and then, and not till then, will "the problem" be solved and the glass ball become the standard. H. W. DE L.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

—Address all communications to "Forest and Stream Publishing Company, New York."

A NEW FIRM.—Messrs. Schuyler & Duane, importers and dealers in guns and sporting goods, military arms and ammunition, opened their new store, 189 Broadway, on the 25th of May, with a stock of goods selected by Mr. Schuyler during his recent trip in Europe. They handle guns of all kinds and have no specialties, but soon expect a fine assortment of Purdy guns, which will probably be the most valuable of any ever seen in this country. The store is quite large enough for a large business, and we hope they may have it. Mr. R. B. Schuyler was formerly of the well-known firm of Schuyler, Hartley & Graham, whose copartnership expired by limitation in January last. He is well posted in the business, and with his experience ought to meet with great success. His copartner, Mr. Duane, is an amateur in that line, but a thorough financial man. Their advertisement will soon appear in our columns.

FOUNTAIN GUN CLUB.—The Fountain Gun Club, of Brooklyn, celebrated its victories at Seneca Falls by a banquet at their club rooms, 451 Flatbush avenue, last Monday evening. The club team who were the winners of the Dean Richmond Cup were the special guests of the evening, and deservedly so, as they had done admirable work at the traps. The dining-room was handsomely decorated with the club colors of the Washington, Long Island, Foresters, Nonpareil and Phoenix gun clubs, and the Dean Richmond, Wadsworth and R. V. Pierce prizes—and the broom—were prominently displayed as evidences of the club's prowess. Immediately back of the President's chair was a crayon allegorical drawing representing Harry Miller bestowing laurel wreaths on the club team.—Messrs. M. G. Bayliss, Charles W. Wingert and E. H. Madison. Surmounting the picture was the legend: "The Fountain Gun Club Welcomes its Sons of Guns—Bayliss, Wingert and Madison." President Abel Crook presided at the dinner. "He was surrounded by the other officers of the club—Vice-President G. A. Chappell, Secretary C. W. Wingert, and Treasurer H. G. Miller. On the right and left of the officers were Judge Calvin E. Pratt, Robert Furey, T. C. Banks, G. E. Gildersleeve, of the Long Island Shooting Club; Henry Altenbrand, President of the Washington Gun Club; Charles E. Fiske, A. Eddy, John Hanley, John T. Saine, W. H. Hunter, Frank Chamberlain, Nathaniel Beggs, E. H. Madison, M. G. Bayliss, William Cleaver, Dominick Tyrne, Robert Sullivan, M. Brady, George Helmsdick, James White, G. B. Hazard, G. H. Badam, J. C. Buckley, Robert Wells, Samuel Norman, and other well-known sportsmen.

The menu was in Harry Miller's best style, and the club members and guests in the best of spirits. Wit and merriment ruled the hour. President Crook recounted the recent successes of the club, and called attention to the remarkable fact that the officers were Judge Calvin E. Pratt, Robert Furey, T. C. Banks, G. E. Gildersleeve, of the Long Island Shooting Club; Henry Altenbrand, President of the Washington Gun Club; Charles E. Fiske, A. Eddy, John Hanley, John T. Saine, W. H. Hunter, Frank Chamberlain, Nathaniel Beggs, E. H. Madison, M. G. Bayliss, William Cleaver, Dominick Tyrne, Robert Sullivan, M. Brady, George Helmsdick, James White, G. B. Hazard, G. H. Badam, J. C. Buckley, Robert Wells, Samuel Norman, and other well-known sportsmen.

—Mr. Henry Altenbrand, President of the Washington Gun Club of Brooklyn, E. D., is a member of the Standing Committee of the New York State Association.

WAKEFIELD, Mass., May 28th.—At a meeting of the Parker Sportsman's Club, held last evening, the following officers were elected: President, S. T. Parker; Vice-President, W. J. Godfrey; Secretary and Treasurer, S. O. Richardson, Jr.; Executive Committee—F. H. Emerson, W. W. Whitten, H. C. Lane; Referee, M. W. Boardman.

TEXAS STATE SPORTSMAN'S ASSOCIATION.—The morning of May 17th found a goodly assembly of sportsmen on the grounds of the Jacksonville Gun Club, of Dallas, awaiting the opening shoot. Representatives from Denton, Denton, Texarkana, Houston, Wills Point, Galveston, Fort Worth, Sherman and other clubs were on the grounds in eager anticipation of the coming contests.

The first day of the tournament opened up with a sweepstakes. Five single birds at twenty-one yards rise. Some very effective work was done, resulting in a tie between Messrs. J. Thompson and Barrold, who finally divided first money.

Contest No. 2; ten birds, twenty-one yards rise. First prize, \$250 cash; second prize, \$150; third prize, \$75; fourth, \$25. Mr. Lister took first money.

The remaining eight contests, comprising sweepstakes and team shoots, passed off very smoothly, the only unpleasant feature being the scarcity of pigeons, compelling them to fall back on balls. Among the many excellent shots present at the tournament may be mentioned Mr. J. H. Mason, of Houston, winner of the Webb Medal; Mr. P. B. Watson, of Houston, winner of the Knappely Championship Medal, and Mr. Sam Finley, of Dallas.

The delegations to the convention met at Lively Hall on the evening of the 19th and elected the following officers to serve during the ensuing year: President, G. A. Foote, McKinney, Tex.; First Vice-President, C. C. Pettit, Galveston; Second Vice-President, A. H. Strickland, Galveston; Corresponding Secretary, H. M. Thompson, Waco; Recording Secretary, M. W. Shaw, Galveston. By vote it was decided that the next convention meet at Galveston. L'ECLAIRE.

A DASTAROUS EXPERIENCE WITH DITTMAR POWDER.

PHILADELPHIA, Miss., May 18th.

Editor Forest and Stream:—

Thinking that it will probably be the cause of some brother sportsman shunning the breakers on which I have been wrecked, I give my experience with Dittmar powder. I am a dentist by profession, and my home is Philadelphia, Miss., although I have an office in Louisville, Miss., where I spend about half of my time. Whether Philadelphia or Louisville my gun has always been an indispensable article in fact, has been an inseparable companion during the whole of my life, and often, when wearied with the confinement of my office, I have found it a source of pleasure and recreation to spend a few hours with my gun in the field, or at the glass ball trap. I have looked forward with pleasure to all the late improvements in guns and ammunition, and the many advertisements and recommendations which I had seen of the Dittmar powder had made me anxious to try it, and if it proved to be what was claimed for it, to introduce it into our club. I ordered several canisters of the Dittmar powder, and they were promptly expressed on the 24th of March; but, owing to some carelessness of the express company, the goods were lost, and did not reach Louisville until the 1st of May.

One of the merchants of Louisville, having heard that I had sent for a new kind of powder, wrote to New York for some of the finest Dittmar powder that could be had, and in a few days received several canisters. He came to me and requested me to give his powder a trial, to see what it would do; but I at first refused to do so, as he had very little instructions for using the powder. I told him that I was afraid that his powder was not suitable for large gauge guns, and that I had ordered powder for shooting glass balls, and I preferred waiting to see if there was a difference in the powder. He told me that a small circular came with the powder, and that the circular stated that the powder could be used in both shot guns and rifles, and the charge was the same amount by measure as that of black powder, and that he ordered the finest powder that could be procured. I went to my sporting goods and hardware stores, and I had often used black FFP rifle powder in shot guns, so I did not see much to fear in this. I consented to try his powder for him, but concluded to shoot one drachm less of the Dittmar than my regular charge of black powder.

My gun was a Parker eleven gauge and weighed eight and a half pounds, and I had been shooting four drachms of black powder of all brands and all sizes of grain with perfect satisfaction, so I concluded that it would be safe to shoot three drachms, by measure, of Dittmar powder, and loaded my shells accordingly.

Mr. John Graham and myself went out to shoot them. We arranged our target, stepped the required forty yards, and I fired one of the loads. When I touched the trigger I felt as if I had been struck by lightning. The report from the gun was deafening, and the jolt I received was terrible. I let the barrel of my gun separate as I was sighting down the rib, and the stock came back over my right shoulder with such force that it seemed as if it would tear my right arm off before I could relinquish my hold on the grip or handle. I felt pain in my left hand, and when I turned my attention to it I saw blood spouting several feet from an artery, and my left thumb was cut down to the first joint. The wound extended from where the forefinger joins the hand over to the wrist, and from the center of the palm of the hand to a point on the back of the hand, a little beyond a line with the bone that connects the forefinger with the wrist, making the wound fully three inches across, measured from any point.

I was carried to town and my wound dressed, and several stitches were sent back to look up the missing thumb and the shattered gun. The wound retained its position, my thumb and accompanying flesh, and reported that it was found just forty yards from where I was standing when I fired the gun. My gun was torn into fifty or more pieces and badly scattered. The barrels were about forty yards apart when found. The left-hand barrel (the barrel that I shot) had a piece torn from the outside of the butt of the barrels as high as the shell was chambered, while the inside of the butt was turned back, but not torn off. The right-hand barrel was bent like a bow and the left-hand lock plate was torn to pieces like so much pasteboard. My gun was a \$65 Parker, with steel barrels.

I have not written this through any prejudice I have against the Dittmar powder, for I am satisfied that, if rightly used, it is a valuable invention, but I do wish to warn others from doing as I did, using FFP rifle powder in large gauge shot guns. Since I have been I have received the Dittmar powder that I ordered from Bogardus & Co., and with it all the necessary instructions for using the powder.

I wish to bring one charge against the Dittmar Powder Company, and that is that they do not give the public a sufficient price to become acquainted with the various grades of powder. They do not give the public the advertisement of the Dittmar Powder Company, but nothing is said about the different grades. On the same page we see the advertisements of Laflin & Rand, Dupont and Hazard Powder Company, all describing the different grades of their powder, and telling the public what they are used for.

I fired this large charge of powder I sought information concerning it, but could get none except the little circular, which stated that the powder could be used in both rifles and shot guns by using the same amount, by measure, as of black powder. I used one drachm less, by measure, than I used of black powder, and what was the result? I have had many weeks of suffering and confinement with a prospect of many more. I have been made a cripple for life. I have been out of my office and practice for at least this year, and perhaps forever, with no chance of making a support. Besides these misfortunes, my gun, the source of many a pleasure, is gone, and in my present condition I cannot get another, at least until I am

Abner Kleinman won the first money and the Gore champion golf badge, valued at \$125. In shooting off ties of 9 each, Hauworth and Canfield tied again on 5 straight, at 36 yards, and divided.

Some day.—Two hundred dollars cash, donated by citizens of Galesburg. A two team shoot of any two members from any organized club in the United States. Team making the best score to win. Ten single rises each, at 21 yards:—

Sleep is Prevented by Heat!!!

USED AS A LOTION OR IN THE BATH
frees the pores of the skin and soothes the nerves
and allays the IRRITABILITY WHICH CAUSES
HEADACHES AND PREVENTS SLEEP.
Its judicious use will produce a healthful glow
in the skin and REMOVE ALL DISAGREEABLE ODOR FROM THE PERSPIRATION.
The acidity of the body, if not removed, PRODUCES RHEUMATISM AND
KIDNEY TROUBLE. In fact, the SKIN BEING THE PURIFIER OF THE BODY, MUST ACT
OR DISEASE RESULTS.
WE MOST EMPHATICALLY CLAIM THAT THIS PREPARATION ENABLES A HEALTH-
FUL ACTIVITY OF THE SKIN.

PREVENTS AND CURES MOSQUITO BITES.

Many of our LEADING PHYSICIANS have given this article their HIGHEST APPROVAL,
but refuse the use of their names, because of the tyranny of ethics, which terrifies them into silence
where even the most beneficial results must follow their recommendation of the secret preparations.

Can be mailed to any Address. Price 25c. for sample.

Depot 331 Sixth Av.,

New York.

The Kennel.

TRAIN YOUR OWN DOGS.—Secrets re-
vealed; send two 2-cent stamps. M. VON
CULIN, Delaware City, Del. June 3-4

HO! for TROUT FISHING.
THE FAR-FAMED waters of the Maganetewan are now within easy access of Toronto and the outside world, and are still teeming with speckled trout. We have created a large and comfortable hotel in Maganetewan Village, and are prepared to offer every facility to our sporting friends by way of canoes and guides to the trout lakes and streams tributary to the Maganetewan, and can offer the best of trout fishing within a mile of our hotel. We have created facilities for packing fish, so that they can be taken fresh to any part of the Northern States. The road from Rousseau (the steam travel) has been Macadamized and the journey shortened by half a day, so that parties leaving Toronto can get here in one and a half days. Come up and see us.

KENDALL'S SPAVIN CURE.

The Most Successful Remedy ever discovered, as it is certain in its effects and does not blister. READ FROM
Rev. P. N. GRANGER,
Presiding Elder of the St. Albans District, St. Albans, Vt., Jan. 20th, 1889.
DR. KENDALL & Co., Gents: In reply to your letter I will say that my experience with Kendall's Spavin Cure has been very satisfactory indeed. Three or four years ago I procured a bottle of your agent, and with it cured a horse of lameness caused by a spavin. Last season my horse became very lame and I turned him out for a few weeks when he became better, but when I put him on the road he grew worse, when I discovered that a ring-bone was forming. I procured a bottle of Kendall's Spavin Cure, and with less than a bottle cured him so that he is not lame, neither can the bunch be found.
Respectfully yours,
P. N. GRANGER.
Price, \$1 per bottle, or six bottles for \$5. All Druggists have it or can get it for you, or it will be sent to any address on receipt of price by the proprietors.

TRADE--"BEATS THE WORLD."--MARK.
Old Judge Smoking Tobacco.
The Only Tobacco Ever Manufactured that does not Bite the Tongue.
Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary poor rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning papers, namely THE OIL OF CRESSON, CHARLES E. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco, invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Cresson are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarettes they smoke. Sold by all leading dealers.
Try them and you will use no others.
Manufactured by GOODWIN & CO., 207 and 209 Water st., NEW YORK.
Pittsfield, Mass., Cuts Free. Full-Length CUT in this case, \$10; LOUNGS, in this case, \$5. Sold Everywhere by the Trade

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING AND BLAST-
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,
A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING,"
FFG and FFGG, The FG for long range rifle shooting, the FFG and FFGG for general use, burning strong and moist.

SPORTING, MINING, SHIPPING, AND ELASTIC POWDERS of all sizes and descriptions. Special grades for export. Cartridges, Muskets, Cannon, Mortar and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.
N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 lb. kegs. Burns slowly and with great clean, shooting remarkably close and with great noise. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFG, FFGG, and "Sea Shooting." FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFGG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFGG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard rifle powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON AND MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

DITTMAR POWDER.

Champion Shot Gun and Rifle

POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

In the Alleghanies.

BY RODINES.

THIS was the way of it; but whether to lament or applaud the undertaking, now that it is accomplished, becomes a matter for serious consideration.

H. and S., our two famous experts with the rod, had been fishing on Slate and Cedar runs, two tributaries of Pine Creek, Lycoming County, Pa. They returned flushed with success, and whispered slyly in my ear that trout—and large ones, too—were abundant there. "O you must go, and lay out some of those old lunkers!" they said. H. was particularly clamorous for going, declaring he would gladly accompany me during the following week.

Well, the "following week" came, when I apprized H. of my readiness to start. To my surprise, and, when all his excuses had been named, my disgust, as well, "the streams were too low;" "the sign wasn't right;" "Brown said it would be just right on June 1st, and this was only May 27th;" and so on *ad infinitum*. I was fagged ready for a start, and it mattered not to me whether the sign was in the navel or gizzard, nor what reason Brown had for saying trout would rise on the 1st of June and not on the 27th of May. I was ready, and go I would.

I looked about for other company, and struck Joe. Now that was a lucky strike, for he proved to be the jolliest sort of a companion. Joe and I therefore took the State Line Railroad, leaving Elmira at 9.30 on Tuesday morning. We reached Lawrenceville two hours afterward, changed cars for Wellsboro, and changed there again for Antrim, at which mining village we arrived at 3 P.M. Now, the stage—a very dignified name for a well-worn "democrat wagon"—leaves Antrim at 1 P.M., going down Babbs' Creek, and then follows Pine Creek to Jersey Shore. This was our route, so we telegraphed the driver to wait for us, which I am happy to chronicle he did with the utmost complacency and good humor.

The driver of this stage was not only an accommodating chap, but very convivial and communicative withal. He had just returned from Brazil, he informed us, where he had been working and starving on the railroad that is being constructed there. Said he found a chance to

"stowaway" in a steamer, by which means he reached home. This stage route offered him employment, so here he was to relate to us his experience.

"Any rattlesnakes on this road?" Joe queried.
"Rattlesnakes! Well, you just bet there is! See them?" said the driver, exhibiting a bunch of rattles, which he declared he had pulled from a snake's tail the day before, just as he was escaping from the road to the bushes. "Bat," he continued, "these snakes are no account alongside of them fellows what grow in Brazil. Gosh! I seen a bow constrictor there that measured clean twenty-two feet long. He belonged to a feller who kept a gin mill. He kept him in a long trough. The fellers used to come there to see him and take a drink at the same time. The blamed critter wouldn't eat but once a year, and then he'd fill himself so cussed full he couldn't do nothin' but sleep for the next six months. One day, when he waked up from one of his long snoozes, he looked around for sumthin' to eat. I was there and saw him. Just then the gin mill feller's boy, eight years old, cum runnin' out the house, got in front of that snake, and cum I he kicked to death with a musketeer if he didn't swaller that boy quicker'n you could shut your off eye; he did, by hokey!"

"What did the proprietor do?" we inquired.
"Do? Why he didn't do a cussed thing! I shouted and hollered to him like a wild Injin that his snake had swallered his boy. I told him to bring a knife and we'd cut the boy out of the durned snake's belly before he was suffocated. But do you know that blasted cuss said he'd rather lose the boy than the snake. Durned if he didn't."

With such stories did our driver entertain us along the beautiful mountain road leading from Antrim to Brown's, sixteen miles away. We reached our destination at 6 P.M., and found Mrs. Brown at home, who soon prepared us supper and assigned us apartments in her comfortable farmhouse. Just opposite her house, across Pine Creek, was seen the mouth of Cedar Run, which came tumbling down from somewhere among the mountains to the westward. The water looked clear, cool and inviting, so that we were impatient to try our flies over its surface. Having partaken of supper, donned our fishing suits and selected our casts for the evening, we waded across the large creek to the mouth of Cedar Run. There we cast our flies, causing them to settle upon the water in the most approved and fascinating manner. Joe was the first to make a capture.

"I've got him!" he cried.
"How large is he, Joe?"

"I hope to scream if it isn't a chub, and a blue-nosed one at that," he replied.
Just then I had a strike. He didn't behave very trout-like, so I brought him to the surface without delay—another chub. Then Joe caught a chub. So did I. So did Joe. I another. Joe ditto. Then we quit, meditated, and went up stream further. Soon Joe caught from a beautiful crystal pool, which was fed by a delightful little cascade that fell over a huge, mossy rock—just the nicest sort of an abode for a lively trout—a large and sprightly chub.

I circumnavigated them (Joe and the chub), and took a very promising pool higher up, where I made quite a satisfactory cast, and landed the very first—horned dace that had yet been captured. It now became a matter of "nip and tuck" between Joe and I as to who should land the most blue-nosed chub and horned dace. We followed that run; the very run that H. and S. had gone into ecstasies over but two weeks before; the run they declared was "alive with trout—big ones, too." We followed it, I say, for more than a mile without even getting the remotest glimpse of a single trout.

We accordingly reeled up our lines and retraced our steps toward Brown's, determining to try Slate Run, six miles below, on the morrow.

Mr. Brown being away with the only conveyance in the neighborhood, we inveigled a small boy, by sundry proffers of nickels, to wade the creek, walk a mile further below to where the stage put up for the night, and ask the driver to be so kind-hearted, and yet more obliging, by returning and conveying us to Slate Run. We were emboldened to this experiment because of the long wait he had made for us in the beginning of our acquaintance with him. Soon the boy returned, and, shaded as he opened the gate—

"All right; he'll be here at six o'clock in the morning."

"Bless me! if that isn't the most obliging stage driver I ever struck," said Joe, as he sat on Brown's cosy veranda smoking a fragrant cigar and quizzing the madam as to how she happened to have located in such a wild country. We soon learned that the cause of our ill success in catching trout was entirely attributable to the fact that he had not gone far enough up the stream. "Go up as far as the dam and you will catch all you want," said Mrs. Brown.

She then related to us how two lawyers from Wellsboro (how I wish I had taken their names) came there a year ago, and brought four painful of dressed trout from the pool under the dam.

"Caught them all on a fly?" queried Joe.

"No, sir; they caught them principally in a net," replied the madam.

Scarcely had we finished the delicious cup of coffee at Mrs. Brown's breakfast table, next morning, ere we heard the shout of the stage driver without—

"All aboard!"

All aboard we quickly climbed, and were soon set down at the mouth of Slate Run. Here Mr. Tombs, a plump, jolly looking native of the Alleghanies, met and transported us and our baggage over the creek to his mansion at the mouth of the run mentioned.

"Any trout on this creek, Mr. Tombs?"

"Lots of 'em, sir; and rousers, too. Some chaps were here last week, and caught some whoopers below my dam. You can have fine sport here in the evening, if you know how to throw a fly."

"Glad to hear it; we will certainly try, Mr. Tombs," we replied.

Slate Run proved to be a charming stream. Numerous smaller runs empty into it here and there, at the mouths of which beautiful cascades are seen playing over the most delightful mossy rocks that I had ever beheld. The ravines through which these little runs flowed their way were exquisitely decorated with mosses, ferns, violets, forget-me-nots and brilliant and fragrant azalias. I wandered in and among them, drinking in their fragrance and beauty, almost forgetting the rod in my hand. At the mouths of these streams, one or two fine trout were invariably taken, and at the "splash dam," four miles up, over forty fine fish rewarded my efforts at fly-casting. Joe, who expected to have joined me here for our nooning, he having taken another run, failed to put in an appearance at the appointed hour; so, according to a mutual understanding in case of tardiness of either party, I prepared my trout dinner. First, I built a fire on the beach, far enough away from grass or leaves to prevent communicating flames to the forest, and while this was burning to coals I dressed a few trout, salted and peppered them well, then rolled each trout in a piece of manilla paper, well smeared with butter. When a dozen had been so enveloped I placed them all in a solid pile and wrapped them snugly in a larger piece of the paper, then rolled the wad in a newspaper, and put the bundle to soak for five minutes in the creek. The woodpile having become a glowing bank of coals, I excavated a hole in the center of them with a long stick, and threw my wet budget of trout therein, hastily covering it with the glowing embers. My tin quart cup was now removed from the creel-strap, filled with water from the brook, and placed on the coals. I selected a shady, grassy spot on the bank, washed two flat stones for plates, placed my chunk of bread and butter on one, while the other served for a platter. The water having boiled, I threw a handful of black tea into it, and stood the pot from the fire, covering it with a flat stone. In twenty minutes the package of trout was removed from the fire, the outside paper only being scorched, while the trout were steaming hot, and as delicious a morsel as ever was placed in a tired fisherman's mouth. There, with the pot of tea at a elbow, and bread, was a meal not to be despised, even when prepared indoors, with more elaborate cooking appliances. Here I lingered, enjoying the delicious meal and the surroundings as well, waiting for the shadows to fall upon the creek and for the trout to commence their feeding on the natural flies that then begin their careless and seemingly aimless flights over the surface of the water.

About 6 o'clock I noticed a break in a pool under an overhanging limb from a great scraggly bench. Immediately I strapped on my creel, took my rod in hand, and started down the stream. A cast under the limb rewarded me with a ten inch trout, sleek and fat, who fought violently to free himself from the deceptive fly. Others were taken on my way down, until I reached Tombs' mansion, at 6 o'clock, with a creel well filled as a reward for the day's exertion.

After tea I succeeded in landing a twelve and thirteen inch trout from under Tombs' dam, and as the two beautiful fish lay upon the porch, where the woodsmen had assembled to admire them, many and varied were the stories that were told of the immense fellows that had been taken from that same pool in days gone by.

"I saw a twenty-two incher taken there last season," said a native fisherman.

"With a fly?" I innocently inquired.

"Yes, sir-ee; and a awful splashin' and floppin' he made of it, too, before we got him ashore."

Just then a brawny woodchopper, who sat near me smoking his pipe, whispered in my ear—

"Ask him how many hoops his fly had on."

Indeed, we had encountered that same fly in the narrow stream, leading to the pool under the dam that very morning, and noticed with what care the channel had been dammed, so that not a fish of any sort could ascend the stream without becoming a prisoner in the net set to entrap him. This, we note, is one of the means the natives have adopted for "protecting" the streams, offering but a slender inducement to anglers to seek their haunts and spend money with them.

In the morning we sought and found passage upon a

SPRING SHOOTING IN ILLINOIS.

wagon load of oats for Brown's and Cedar Run. We started at 5 o'clock, while the air was fragrant with the perfume of the honeysuckle and other wild flowers, and ringing with the din of the wood robin, robin red-breast, lark and myriads of songsters, whose notes became so familiar to the lovers of nature. Bless me, what a delightful morning it was! Joe declared it to be well worth the journey, if only to imbibe the invigorating morning air while we enjoyed the rugged mountain scenery. The sun soon threw his radiant beams over the mountain top, and the valley below, lighting up every dewy grass blade with a sparkling brilliancy, equally by nature in this charming mood of hers. How every little violet and buttercup nodded and fairly laughed as the crystal dewdrop rolled from its petals to the grass below, giving yet another merry sparkle ere it hid from the threatening sun. How nimble and jolly seemed the chipmunks, as they chased each other over the fences and disappeared into the stone piles with a merry chirruping as our proximity grew threateningly near. All nature seemed to be in perfect accord, and no disturbing element was anywhere manifested. Even the crows plucked the farmer's young corn, unmindful of our approach, seemingly conscious that no malice could prevail in the farmer's bosom at sight of their despoliation upon such a charming morning.

Reaching Brown's, we had returned since our last visit, his horse and buggy were prepared to carry us up the precipitous mountain road to the dam on Cedar Run. In and about this dam we fished all day long, bringing many fine fish to creel, and dining sumptuously, as on the day before. At dark we fished in the pool below the dam, and succeeded in raising many large fish that were too shy to rise to our flies during the day. At 9 o'clock we left the pool, entirely satisfied with the day's sport, and drove down the winding, rugged road toward our stopping place. Through the pale moonlight, which now and then appeared through the gathering, threatening clouds, we had glimpses of the valley, nearly a thousand feet below, where the thread-like, silvery stream meandered and rippled among the huge boulders. As we approached the larger valley of Pine Creek, loftier hills were seen fairer than the sky, and a noble blue cloud, floating over the face of the moon, left us in total darkness and in doubt as to the ability of our gentle animal to find his way along the narrow, winding road without precipitating us into the dark chasm below. At last we reached the valley, and Brown, having heard our shouting on the hills, appeared upon the opposite bank of the creek, lantern in hand—a sort of beacon light—to guide us safely onto the narrow, winding road. We had now accomplished two full days of angling, and, having taken an inventory of our feelings and desires, Joe and I concluded that we had had exercise enough, and fish we certainly had in abundance. Therefore we sought transportation for Antrim.

And right here commenced our troubles. A circus was advertised to spread its tents in Wellsboro, twenty-seven miles distant, on the following day, and as a consequence every spring wagon on Pine Creek was in demand, and was engaged by the dwellers along the creek to take them to the show. Not a vehicle of any sort or description could be had at any price. While we were debating what to do in such an emergency, the denizens of the valley had commenced their migration to the distant village, that they might be there early in the morning to see the show come in. Mrs. Brown and her niece had procured the horse and buggy which we had used during the day, and intended starting for the show grounds at 8 o'clock in the morning. At last a chap was found who was going to the show with a common farmer's wagon, without springs, and alone. He intended starting at 12 o'clock that very night, and Joe and I—blamed fools that we were—engaged to ride with him. At 1:30 o'clock, in the midst of a rain storm, that beat upon the sides of the wagon, and even the curtains shouted for us to depart. We piled our baggage and ourselves into his dirty farm wagon. Joe took a seat by the driver, while I occupied the rear of the long wagon box (when it stood still long enough), seated on top of my well-filled leather bag. For the first mile it became an exciting and somewhat interesting contest—to Joe—between myself and the black bag, as to which should get on top of the other the greater number of times in a given number of minutes. Joe professes to have kept tally, and dares me by saying that I kept my end up pretty well, considering the opportunity I had. That bag had a way of getting from under me, when we struck a rocky spot in the road (which unhappily occurred every rod or two), that would have demoralized a less determined spirit than mine. I could hear the poles in my ribs from the sides of the wagon, and even the curtains occasioned to my spine occasioned from the thumpings of the wagon's tail piece, for they scarcely ever struck precisely the same spot; but this everlasting sitting down in identically the same place on the wagon bottom as the black bag shot from under me to find its determined position in the opposite end of the wagon, was, to say the least, humiliating to one's feelings, and calculated to take the bottom out of the most spirited and plucky of individuals.

"But everything has an end." Never before was this saying so fully, so consciously, I might add, realized by me. And so came our ride to an end at last, for we reached Wellsboro at 9:30 in the morning—wet, hungry, sleepy, footsore (Joe says the sores are not properly located) and fully persuaded that, rather than repeat the ride, we would risk our bodily comfort in the regions of the damned.

At this writing we are at home. I haven't seen Joe, but hear that if his stock of brandy and brown paper holds out he expects to be at his usual place of business in the course of a week.

A singular story reaches me from the Pine Creek road, that it seems to have rained trout along that route last week. I do not pretend to account for the phenomenon, but I do know that not a trout was to be found in either of our creeks when we reached Wellsboro. And all this justifies my opening sentence.

—The other day, when a flock of wild geese passed over Virginia City, and landed in one of their circles, Oley, the log-bowman and "Lone Archer of the Sierra," sent a shaft snouted them. It was a long shot, but it was well aimed. It went whizzing through the air and penetrated one of the wings of a flyer, causing it to flutter and lose place. In the flock.—*Sacramento Bee.*

THE guns have had a long quarantine across the mounted head of a noble ship, which has been assigned to them as a post of honor. If they could only speak, they would no doubt tell me how weary they are of their ignoble inactivity, how they long for their measured rations to testify to the strength of their barrels, and to extend again their noisy welcome to the returning hosts of the winged wanderers of rivers and marshes. Their silent petition remains no longer unheeded; the latent enthusiasm of their master reawakens in its wonted force, and he gathers up at last his various implements of the sportsman's craft to equip himself for the coming holiday. He has anxiously waited for it for many a day, and he longs to listen again to the soft melodious drumming of the snipe, and to enjoy once more the delicious tremor which sets his nerves all vibrating, when the sound of the alarmed cry of the flushed bird strikes his ear.

It is, however, quite a long way to realize all of these anticipations. In the days of auld langsyne, a distance of a couple of hundred miles would have offered serious obstacles to a snipe shooting excursion. By help of our iron-bound highways distances have been marvelously lessened, and I am now enabled to reach the snipe lands in its speed. All inconveniences of old-fashion travel have likewise been blotted out, and the modern palace car is but a transformation of a fixed into a moving home, which traverses day and night hundreds of miles, while its occupants enjoy a comfortable night's rest. Such is now once more our own lot. The deeply-wooded hills around Lake Chautauqua soon fade into the distance, the rolling prairie of Iowa and Nebraska are reached, and we are soundly asleep, and by noon of next day the whole scenery has become entirely changed into the monotonous aspect by which the rolling prairies of Central Illinois are characterized. Severe competition has now brought railroads to such a standard of perfection that the majority are about equally good and afford all of the conveniences the most fastidious traveler could possibly exact. While this, however, is true as respects to passengers of the human species, the same can hardly be said in respect to their four-footed friends and companions who are in the case of the sportsman the most indispensable portion of his outfit. While sleeping and dining cars administered profusely to my own bodily wants, the rough and jarring floor of the baggage car had to substitute the comfortable home kennel of the poor animal in my charge. While this, however, is true as respects to ships, as long as we have the means of transportation, it is a preliminary to an enjoyable shooting trip. There is certainly a sore need for a few common sense regulations, which ought to govern the transportation of dogs on railroads, since they are there the more liable to accidents than under other circumstance. As, however, matters stand at present, no uniform steps toward amelioration of the many complaints made in respect to dogs have been taken. There is no doubt about the positive guarantee of their safety to the care of careless baggage masters, who, with few exceptions, are in no manner concerned about the comfort of the charges committed to their care, and charge on many roads purely arbitrary extortion fees. There are but a few isolated exceptions to this unwarranted mismanagement, and the Lake Shore and Michigan Southern is to my knowledge the only road which has ventured to make a programme by which to adjust this difficulty. While traveling on it, the owner of the dog is insured against all accidents and loss, while a peremptory stop is put to the wholesale extortion which are on most roads practiced by baggage masters upon those whom circumstances place at their mercy. It would be well for many lines we could name, if they wish to increase their patronage, to adopt likewise the excellent rule made in this respect by the Lake Shore. It costs by it only the trifling sum of seventy-five cents to forward a dog the distance of more than 500 miles from Buffalo to Chicago. Over and above this signal reduction of average charges, a printed receipt is furnished which guarantees the owner in case of loss the payment of two hundred dollars, providing his property can be proven to be worth the same, or even more, if he chooses to press the claim. The owner is also insured. By giving the baggage master a trifling fee to insure his good-will, and the kind treatment of the dog committed to his care, he is sure to find a cozy, warm, resting corner and sufficient water and food to make his journey as comfortable as circumstances admit.

By payment of the usual extortion fees we landed at last, dog and all, at Chicago, which is, in the mind of the sportsman, the hunter's modern paradise, and though some grounds beyond it may be better than others, there is still an abundance of game along all of the roads leading from that city in any direction of the compass. Most of the river courses of the State offer excellent duck shooting, while also during fall and spring large bags of snipe are made on the immense tracts of alluvial lands which fringe their shores. There is no doubt that the large masses of migratory waterfowl which resort to the rivers and marshes of the middle belt of the United States follow chiefly two principal highways of migratory travel. One of these is along the lowlands of the coasts, where the shallow bays of the deeply indented shores afford an inexhaustible supply of food, while the other division takes its course along the great central artery of the continent, the Mississippi River, whence they deluge each of its immeasurable adjoining marshes, bayous and continents, which thus at proper seasons are literally swarming with water fowl of all kinds.

It is only a few hours of travel from Chicago to some of the best points on the Illinois River, which empties at Peoria into the Mississippi. We left at 10 o'clock in the morning, and enjoyed the same day a comfortable afternoon's shooting at the pleasantly situated town of Morris, where we obtained the first glimpse of the Illinois River. In the spring of the year, when its various feeders, the Fox, Des Plaines and Kankakee, are overflowing on account of the surplus of rains and melting snows, the Illinois River then truly ranks as a first-class water course. The beautiful valley along which it winds its way sometimes narrows and again widens until its bordering bluffs are often a distance of miles apart. As the river winds its way, the shores are low, they are everywhere fertile and are then converted into one vast sheet of water, which has thus, here and there, the appearance of a large lake, rather than that of a river with well defined shores.

There are also many islands dotting its surface. They have undoubtedly been converted into such, from a former peninsular condition by the eroding power of running water, which finds no obstacle for now channels during high floods in the soft and yielding nature of the soil through which it flows. They are mostly deeply wooded, and fringed with a heavy growth of willows, in virtue of which, particularly when overgrown, they offer the most tempting feeding and roosting grounds possible to thousands upon thousands of wild duck and geese, on their passage North or South.

Notwithstanding this great abundance of game, there are well defined times of the year when they are in full flight only, and during spring, even from the 25th of March to the 10th of April, the sportsman is apt to find the ducks gradually disappearing, and the snipe but sparsely arriving. The former come here in heavy flocks about the 5th of March, and from that time until the latter end of the month the sport is at its height. Toward the beginning of April, however, their ranks are getting thinned, and large bags of what are here called big ducks are no longer made. Where fifty mallards or more are in the beginning—a by no means surprising result of a day's sport—a dozen later on is all that can be reasonably expected from an average day's shooting. The weather is in the meantime still backward, and the snipe, which would more than compensate for the falling off of the big game, have not yet arrived to fill the gap. It is fair to assert, in regard to Central and Northern Illinois, that heavy snipe shooting can hardly be expected before the 15th of April. It is true that these birds often arrive as early as the latter end of March, but they are then merely the advance guard of the main body of the great army, which does not move until green streaks of vegetation variegates the monotonous aspect of the yellow and brown fringes of the river bottoms. The ground comes again to be covered with green, and in poor condition. They will not be well before the dog, and often rise at distances of over fifty yards or more, since they have not settled down to their proper feeding grounds, where later on they lie often close enough to bear approach within a few feet. In some of these respects they do probably not differ essentially from many other migratory species like the robin, whose cheery song may be heard in the early part of March, though it is not until the middle of the month that the body of these birds do not arrive until the beginning of April. The strongest, hardiest and most venturesome flyers arrive generally a few weeks in advance, and these are mostly, if not exclusively, composed of males. That such is the case in respect to many ducks is borne out by the testimony of the first receipts of the season in the game markets, which often display in early March assortments of hundreds of male mallards, the fine plumage of which would support the assumption that they are old birds, well qualified to endure long flights.

Arrived at Morris unfortunately about the time when many of the ducks had come and gone, and when snipe still luxuriated along the warm, food-teeming marshes of the northern part of the State. Where in the latter end of April bags of a hundred or even more could have been made in a single day, they have now to be made in a long and long tramp along as beautiful and tempting grounds as any sportsman could wish for. It is, however, but a short distance from there to Henry, Marshall County, which is one of the most famous duck localities of the State, and thither, to make up for disappointments in snipe, we wended next our way. But a few miles beyond that place is Chillicothe, where there are probably each spring a dozen or so waterfowl markets. The market there is one of the largest of the great game grounds east of the Mississippi. It seems to me that some restrictive laws should be passed to stop the immense slaughter made here by professional market hunters. As long as it is cold the game slaughtered by these destroyers reaches the great metropolitan markets in tolerably fair condition, but when a spell of warm weather intervenes, the ducks almost invariably find their way into the hands of the dealer, who, like so much putrid offal. The game dealer himself realizes no profits from a traffic subject to uncertainties of the weather, and thus in the nature of things pays prices far below the actual value which game as an article of choice food should command.

The market therefore becomes overstocked; tainted and fresh ducks are all mixed up indiscriminately, and sold finally at great losses to get rid of them. All this could be altered if properly controlled. The dealers could be allowed to keep their stock until the 1st of April. The continually increasing destruction wrought evermore upon them by professional loafers can lead in the long run only to their final extermination. The efficiency of firearms is now, moreover, much in advance of old-fashioned tools, and an army of pot-hunters armed with them now lines the whole length of the Illinois River, where formerly hardly a shot disturbed the flocks of passing ducks, which are now decimated in the most reckless manner.

The amount of havoc inflicted upon them may be estimated from the following statement. I was, while at Henry, assured on good authority that a party of from eleven to thirteen market hunters stationed at Chillicothe never averaged less for three weeks in early spring than 800 ducks each day. This is only one point of many, although probably one of the best, and the destruction of wild ducks will go on for some years to come in the most extravagant manner until the game is nearly exterminated. The enormous numbers of ducks which are being so rapidly disappearing, Henry is still at present a cozy corner for a sportsman. The accommodations which are to be had there at the Paskell House are unsurpassed by any in the State outside of the large cities, while its bill of fare rivals in excellence that of the best kept hotels in the country. It is but a step from its comfortable precincts to the noble, broad river, all teeming with life, and the proper and judicious use of the gun and the net may thus be enjoyed conjointly with the delights of excellent shooting. There are naturally quite a number of hunters living in and about that town. The most of them, however, make duck hunting their only specialty, as they find a ready market for their game; and although the prices paid for it are only nominal, they soon swell into respectable figures on account of the large bags, with every one of the ducks being sold for a dollar. A whole lot of dozen of canvas bags or mallards are frequently shot within a few hours, and nobody seems to consider it worth while to comment on such every-day occurrences. Smaller ducks are held in still lower esteem, and rank about the same among

Natural History.

FRASER RIVER SALMON.

BY MOWITCH—NO. II.

THE general opinion exists that these salmon die after spawning, prior to their return to the sea. My convictions are that this opinion, although strongly defended, is entirely an erroneous one, not supported by sufficient data or proof to establish its correctness. I am free to admit that a large number of salmon never return to the sea, and indeed the immense number found dead and in a dying condition in so many streams is an abundant evidence of this fact, but I contend that this circumstance is simply and wholly the result of natural causes, and not owing in the slightest degree to any inability to return to salt water. The facts of the case may be set forth as follows: From the time the fish leaves the ocean till it returns to it, no food or sustenance is taken (a fact proved beyond dispute), and on its way to the spawning beds its contact with rocks, gravel and other hard substances bruises and lacerates it from head to tail. In many instances you will see fish so lacerated and torn as to cause wonder that a fish in such a mutilated condition could make headway in still water, much less in continuing its course through the rough and rapid current encountered in the Fraser at almost every place fifty miles above its mouth. Then the spawning process is a great tax upon the physical powers of all fish, and indeed the same may be said to hold good as regards the act of reproducing their kind upon all animals, leaving them weak and helpless for the time being. Those persons that may have had the pleasures of fly-fishing accorded to them can not have failed to notice the difference between a salmon fresh from the sea and a kelt on a rod. Besides, this fresh water has, so to speak, a softening influence upon the flesh of salmon, destroying in this degree all the natural powers of the fish's body, and this to an appreciable and noticeable extent. Now the whole may be summed up in a very few words: The salmon who started from the sea full of health and vigor, strong in the body and strong in purpose, after many weary days, weeks, and in some cases months, of ceaseless toil vending its way up cataraets, rapids and falls, making leaps, and exercising powers that are as great as those of a jumper, bent upon the one sole purpose of depositing its ova in proper situations to enable the unerring laws of nature to be carried out, during the whole period taking no food to supply the wasting tissues strained to their utmost extent, finds itself sometimes hundred of miles away from its normal element, the wide ocean, emaciated, wasted, all most helpless, its fins and tail often so torn and lacerated as to be almost useless as means of locomotion. Still its purpose seems to last, and having fulfilled the highest purpose of its being, it now takes measures for its own preservation—namely, that of returning to the sea and there recuperating its wasted strength and health. However, each day it becomes more and more helpless; each day buffeted against cruel rocks that now, with its weak body, it is not able, as when in health and vigor, to avoid, so that it is almost sure to succumb to the blows and the noble salmon succumbs to the greater powers and dies. Its body is perhaps washed upon the shore of some stream, and so frequent are these cases and so large is the number of salmon who die in this way as to lead to the opinion that all Fraser River salmon die after spawning. Then comes a rich and bountiful harvest to the bears, coons and other carnivorous animals, while birds of prey, such as gulls, crows, ravens, buzzards, eagles, etc. become so surfeited as to be almost unable to fly. The settler's pig, if not securely penned, takes a hand in the free lunch so generously spread, and if he does not save, certainly he spoils his bacon, as nothing is more noxious than fishy pork, which evolves, during the process of cooking, an effluvia, to use a homely simile, "that would drive the dogs out of a tan yard." In nature, the salmon, after its long and weary journey, are lined to such an extent with dead and dying salmon and the air is polluted to such a degree as to almost make one swear to abjure salmon diet as rigidly as a Musselman does pork. Unquestionably those salmon that retain sufficient vital powers to enable them to return to the sea invariably do so, and this circumstance that came under my own observation goes a long way to establish the correctness of my views.

One autumn—during the month of October, if my recollection serves me right—the various creeks emptying into Burrard Inlet, an arm of the sea on the Gulf of Georgia, owing to the protracted drought were so low that salmon could not ascend them at the customary period of spawning. The inlet was fairly alive with salmon, most of them with their ova in a very advanced condition, ready for deposit in the sand, and as free to do so from the fish upon the slightest pressure. This state of affairs lasted for many days, and was the occasion of an occurrence that never took place during my residence on Burrard Inlet—a period of nine years—except this one year. A small fresh water pond, fed by the waste of a mill flume, was used for the purpose of storing saw-logs till wanted for use at the saw-mill, a half a mile or so below, when the logs were removed from the pond. This pond was made by running a dam across from two banks at about extreme high tide mark, and had a sluice gate in the middle, the gate (or stop log) being a matter of four or five feet above the highest run of tides at that particular season of the year. The salmon, driven to extremity, made use of the pond by leaping the gate and depositing their ova, after which they leaped the gate back into salt water, and none remained in the pond, which was proved in this way. The water escaped, owing to a break, about ten days or a fortnight afterward, leaving the pond dry, but no salmon were there, while large quantities of ova were visible at the upper end of the pond, the bottom of which was gravel to some extent. Now, were the former theory the true one, why did they not remain in the pond, where they saw an Indian one morning less than three hours later, catch over thirty salmon, gaffing them with a codfish hook fastened to the end of a twelve or fourteen foot pole, at the foot of this dam; so it will be seen I am not drawing conclusions

from an isolated or small number of cases. The necessity for using this pond occurred only for one season, and never have I known a salmon before or since to use the pond in question for spawning.

I believe that salmon return to the river of their nativity (perhaps not the particular tributary, but the main river) to spawn. In support of this I think it is worthy of mention that each river has its own kind of salmon. These are peculiar to itself alone, and these scaly gentlemen never seem to make a mistake, and go up the wrong one, as salmon that are peculiar to one river are each season of spawning to be found in such river, and in it alone. *Salmo gairdneri* has never been found in the Fraser, nor a suckeye in the Columbia. Some varieties spawn each year, others only alternate once. No disease has been observed in the salmon of this river beyond the maimed and diseased conditions above mentioned, caused by bruises and laceration. No parasites are attached to them after a few days' sojourn in fresh water. Salmon in the sea, and for a few days after entering the rivers, are sometimes infested with a parasite known as salmon lice, but these die and become detached shortly after being brought into contact with fresh water.

Their only natural enemy in fresh water is the leopard seal. These animals are few in number, and rarely ascend above tidal waters, so it might be said that the salmon, when once started on its upward journey, is free from enemies other than the *genus homo*, ranging from Mr. Leach with his primitive appliances seeks to secure enough for present use, and ensure food for himself and family during next winter. To the canny proprietor, who uses every endeavor to outvie his neighbor, and put up at least one thousand cases of forty-eight cans each during each day of the salmon season. Some idea of their immense numbers may be derived from this. One fisherman of my acquaintance caught with a drift net, one hundred fathoms in length, eight hundred and fifty-three salmon on a ten hours' drift. This of course was an outside catch, but five hundred to six hundred is not uncommon. I have seen salmon bellies—the choice portion for salting—hawked about the streets of the town of Yuh in seasons of big runs, and sold for one dollar per hundred, each belly of course representing one fish, the back portion being invariably thrown away, but sometimes dried by the Indians for winter use.

(To be continued.)

CAPT. MAY WARBLEB (*D. Tigrina*).—A specimen of this extremely rare *Dendroica* was obtained here yesterday. I send it to you that savant ornithologists may, if they desire, hold an inquest as to identity. I have not hitherto met this beautiful and rare bird anywhere in this Province. American naturalists seem to know little of its habits or migratory movements. Samuels says of it: "This bird is so exceedingly rare in New England that it can be regarded as a stranger. Of its habits I know nothing, and I can give no description of its nests and eggs." May this pretty stranger be regarded as new, and recorded an addition to our Quebec fauna? I think so. J.N. Quebec Morning Chronicle.

Maynard records having found this beautiful little warbler inhabiting the large coniferous forests of Maine, but we do not remember before hearing of its presence so far north as Quebec.

DO SNAKES HISS?—Richmond, Va., May 21st.—The belief is almost universal that snakes hiss. The "hissing serpent" is almost as common a phrase as the "unerring rifle" and yet I am by no means sure that serpents ever hiss, and am certain that rifles are never unerring. In nature, I have never heard of a snake hissing, and I have usually intimate with the snakes indigenous to this latitude, but have never heard one hiss, and do not think that I ever met a man who would affirm that he himself had heard them hiss. It may be thought sacrilegious to cast a doubt upon such a time-honored belief, but I should like to know the truth. ENQUIRER.

We certainly have always believed that some species of snakes hiss—*Heterodon platyrhinos*, for example; but should be glad to have the question here raised decided by the observations of the many field naturalists among our readers.

A CURIOUS ACCIDENT.—While out trout fishing in May, my friend M. and myself observed a very curious accident in nature. A song sparrow (*Melospiza melodia*), in trying to fasten a wire hair for her nest, one end of which was imbedded in the soft ground, got the noose around her neck in a way that it formed a running noose, and when we saw her first she was making frantic efforts to free herself, every one of which only served to tighten the noose around the poor bird's neck. We caught her and took off the hair, for which service she was apparently very thankful. We made an examination of the hair and found that the whole thing was an accident and not the trick of some country boy, as we at first supposed. E. B. GLEASON.

Elmira, N. Y.

LINEAN SOCIETY.—The Linnean Society on May 15th dissolved for the summer, to meet again probably in October or November. Among papers read at the last meetings were the following: One by Mr. S. D. Osborne on the Fringillidae which breed on Long Island. Eighteen species were given, though of a few the nest had not actually been taken. In this category occurred the names of the savanna sparrow (*Passerculus sandwichensis*), black throated bunting (*Spiza americana*) and rose-breasted grosbeak (*Contopus richardsonii*). The most common breeding sparrow, at least along the south side of the island, was stated to be the vesper sparrow, though both species of *Ammodramus* were also characterized as abundant breeders. The breeding season of the sharp-tailed finch, however, commenced earlier and continued much later than that of the seaside. A nest of the purple finch was recorded as having been taken at Bayside by Mr. Peersall, and several recent nests of the Cardinal grosbeak (*Cardinalis cardinalis*), from Staten Island, were mentioned. August 18th was given as an late date for fresh eggs of the goldfinch (*Astragalinus tristis*). Mr. H. B. Bailey gave some interesting facts about our common snowbird

game as perch does in comparison with black bass. Canvas backs will often visit this locality in great numbers, and as many as seventy-five have been known to be bagged by a single gun in one day. It is not natural that such circumstances give rise to perfection in all of the outfit necessary to the duck hunters' craft, particularly in respect to boats. While here we had the loan of one designed and built by Mr. Doty, an ardent and true sportsman, as evidenced by his being one of the few resident subscribers to *FOREST AND STREAM*; as well as a most accomplished shot. The excellence of his boats, designed and built by him, seems to deserve here a few passing comments. They were of the conventional type, which admirably combines lightness with absolute tightness, and to it are joined firmly the upper parts of pine wood. Having sharp stems and sterns tapering off in long symmetrical lines, they cut the water like an arrow, while their broad beam renders shooting as steady as on terra firma.

While there is no fear of capsizing, as so frequently happens in cranky skiffs, the sense of comfort and enjoyment becomes complete, since the labor of rowing them is reduced to a minimum on account of the lightness and structure.

The great first flights of mallards and canvas backs had already gone northward when I arrived, and the principal shooting was confined to the smaller species. I had not considered here of little or no consequence. The principal bulk of the canvas backs consisted of black, albinos, broadies, blue and green-winged teal, the redheads with a slight sprinkling of shovellers, widgeons, blue hills, wood ducks and whistlers. A few mallards appeared to be lingering still, and flocks of twenty or more were often flushed from near the margins of the many densely wooded and now overgrown islands which dot the surface of the river. They would, however, decoy only exceptionally, and were of little value from experience sufficient wisdom to avoid lurking dangers.

We carried, on this occasion, as well as on many other previous excursions, a twelve gauge Fox gun, with which, though light and insignificant looking alongside of the ten bore guns used here universally, I succeeded in making as long shots at the heavily feathered ducks as could possibly be expected from guns of far heavier calibre. I have never used this faithful and efficient instrument for more than three years, and although convinced that many others of foreign manufacture shoot equally well, I never saw it surpassed by any in close pattern and penetration. With small loads, never exceeding four drachms of Hazard's American Sporting Powder, I succeeded time and again in tumbling down passing mallards far beyond reasonable distances, and all this with no heavier loads than an ounce of number six chilled shot. Although I have fired several thousand shots from it, and subjected it to the roughest of field usage in expeditions extending from Labrador to Kentucky, it shows now no more signs of wear and tear than it did when newly purchased. The great defect of so many otherwise excellent breech-loaders is that they become shaky in the breech. This serious defect never affected the Fox gun, since in the case of my own, the sliding movement, the strain which rests in the breech, chiefly upon their breech, is entirely relieved. If, however, by some odd chance or long wear, looseness should happen, there is an ingenious contrivance attached to the barrels in the shape of a compensator, which, when adjusted, will restore quickly the original tightness of the barrels. The excellence of the workmanship of this gun, however, so perfect that in my own, even to the present time, no need has existed for it, nor probably will be by appearances for many years to come. Experience and rough usage afford certainly the most reliable tests, and all who ever used it will continue to use this unsurpassed gun, which reflects the highest credit upon American workmanship, will heartily endorse these assertions. It is for the most part made from interested motives, and in favor of far off manufacturers, but from experience based upon solid facts, which in themselves afford the best criterion of true merit.

While ducks are plentiful, spring snipe are apt to be scarce, and although I had come here with high anticipations of making large bags, I must confess to severe disappointments in that respect. The best looking grounds about here are covered with hundreds of these delights of the sportsman ought to have far off managers, but are deserted, and but rarely the scarp of any hunter's gun would break upon the stillness of the air. Paltry lots of a dozen or so would be the highest reward of a hard day's work through swamp and mire. In a couple of weeks I could have possibly bagged a hundred or more with ease when once they are in full flight. It seems strange that the main body of them will huger so long southward, where the great bulk of other migrating birds has already arrived, including, say late visitors as the blue heron, the barn swallow, and all of the species of rails. Of the latter, the least rail (*Porzana noveboracensis*) is, in truth, well named, as it is the least of its genus and also the least of all game birds, if entitled to that honorable distinction, in virtue of allowing a hunter's dog to come to a firm point before it. An excellent setter dog I had along with me, which actually no less than four of these singular birds alive, and above retrieving several others which he pointed and were shot. This would be sufficient evidence that the least rail has by no means a limited geographical distribution, and is not confined alone to the Eastern States. The error which has obtained in this respect is probably due to the fact that it is very scarce, and that it never comes unless actually forced by accident or by some keen-nosed snipe dog. The small size of the bird also causes many sportsmen, even if they come across it, to overlook it or regard it with indifference, and they are generally reluctant to expend any ammunition upon it. It breeds, no doubt, as far West as the Mississippi, to judge from specimens I succeeded in obtaining during former journeys here near Cairo and at Clinton, Iowa. The specific designation of *Noveboracensis* might be then fully altered and *Mississippiensis* substituted in harmony with its common English name. It arrives early in April, and I remember having shot one specimen of it at Clinton upon solidly frozen ground on the second day of that month. CHAS. LINDEN.

—Hon. Robt. B. Roosevelt has given \$100 to the Tilton Memorial Fund. A notice of this Fund will be found on our editorial page.

with intent to sell, any lobster less than ten and one-half inches in length, measurement to be taken from the extremity of the body to the other, exclusive of claws or feelers, shall, for every such offense, be subject to a fine of \$5; and in all prosecutions under this act the possession of any lobster not of the length herein prescribed shall be *prima facie* evidence to convict. Sec. 2. All forfeitures accruing under this act shall be paid one-half to the person making the complaint, and one-half to the city or town where the offense was committed. Sec. 3. This act shall take effect on June 1st, 1880."

Sea and River Fishing.

FISH IN SEASON IN JUNE.

FRESH WATER.	
Trout, <i>Salmo fontinalis</i> .	Muskellunge, <i>Esox nubilosus</i> .
Salmon, <i>Salmo salar</i> .	Pike or Pickerel, <i>Esox lucius</i> .
Salmon Trout, <i>Salmo conflens</i> .	Yellow Perch, <i>Perca flavescens</i> .
Land-locked Salmon, <i>Salmo gairdneri</i> .	
SALT WATER.

—Mr. L. L. Hubbard's "Summer Vacations at Moosehead Lake" should be consulted by all who wish accurate information about the waters of Northern Maine. See the advertisement elsewhere.

SEA TROUT FISHING.—*Boston, June 12th.*—Allow me to add an item to your very valuable fish and game directory. Such of your readers as desire good sea trout fishing, with pleasant surroundings and moderate prices, can board at a good hotel, kept by an obliging landlord, can find just what they desire at Tadousac, at the mouth of the Saguenay. The best time is from July 1st to Aug. 1st. The fish are very game, and range in size from one to five pounds. The hotel is kept by Mr. James Fennel, who will also furnish boats and guides. Guides charge from \$1.00 to \$1.50 per day, including boat, less rates if they are engaged by the month. For any further information address James Fennel, Tadousac, P. Q., Canada. Tadousac is reached by rail to Quebec, and thence by boat down the beautiful St. Lawrence. Fare from Quebec to Tadousac, \$3.50; distance, 112 miles, which is done in daylight, giving a chance to enjoy the scenery.

W. M. B.

EASTERN TOWNSHIPS, QUEBEC, June 8th.—Since the middle of May I have been rambling around the waters of this country with a seven ounce green-heart in hand after *Salmo fontinalis*. Brook fishing has been good, but pond (small lakes) fishing but medium. Last Thursday night I brought up at French's Hotel, Scotstown, and the next morning, with W. J. McDuff, a Vermont guide, I visited the bay, where I camped that night near the mouth of Mountain Brook, and Saturday night returned to the hotel. I fished but a few hours each day; my catch weighed thirty-four pounds. I saw one otter and moose, deer and beaver signs in plenty. Yesterday I went up to the still waters on the Salmon River, where I caught in a few hours twenty pounds of fine trout, ranging from one quarter to one and three quarter pounds each. Five pounds per day could be taken on a favorable day at the "Boys" by any good fly-fisherman if he felt so disposed. I saw numerous deer signs on the Salmon River, at the "Boys." I also saw a large number of black and wood ducks, both young and old.

Railroad fare to Scotstown from Sherbrooke, \$2, return ticket. Hotel, \$1 per day. W. J. McDuff's terms, \$1 or \$1.25 per day. A few large trout are taken in the rapids in front of the hotel. These waters are seldom visited by expert fly-fishers.

STANSTEAD.

CONNECTICUT LAKES.—Chester writes that the spring has opened favorably, with all promise for an excellent season's fishing. In the early spring deer were unusually abundant about the lake and the trail toward the settlement. Caribou also showed themselves in unusual numbers, and the moose have enjoyed a winter of undisturbed retirement, perhaps the best of evidence is that none have been seen. *Alce americana* loves to be let alone, and unless driven by invasion from his retreats, leaves to the deer and caribou the risky snow-time habit of occasionally straying into the vicinity of the settlements.

Uncle Tom has been making some improvements about his camp, and the comfort of his little circle of summer friends. Those friends will be glad to know, however, that in spite of slightly enlarged capacity his place shall still remain the same most characteristic hunters' camp that it has been, and none the less in keeping with the spirit of the forest in which it stands. R.

CONNECTICUT.—*Putnam, June 10th.*—The Hon. Charles Cleveland and Eugene Wheelock, Esq., have started on a monthly vacation among the trout brooks of Northern Maine. These gentlemen are true sportsmen. They have promised us a weekly report of their rambles, which I shall send to you. G. F. W.

ADIRONDACK TROUT FISHING.—*Moirs, N. Y., June 7th.*—Trout fishing is at its best, now in the little streams and ponds in this vicinity of the Adirondacks. Several parties from here have been up to both branches of the St. Regis Rivers, and all report the fishing splendid. Two that went to the Sixteen-mile Level, above Blue Mountain, caught a nice lot of large trout with a fly; twenty out of one hole near Indian Rock. They say the deer are very plenty now along the level, and that they saw five during the three days they were there. I intend to go up there the last of the month and stop several weeks in that vicinity. The trout fishing is better this month, but the black flies are not so bad in July as now, and one can find plenty of good fly-fishing then. I wish to say to those thinking of coming to the northwestern part of the

Adirondacks this season that they will find Brushston the best place to leave the cars to go to the hunting and fishing grounds. There is a good hotel within a few steps of the depot which has a good liveried attaché, and there is also another lively stable in the place, so parties will be able to get a suitable conveyance at any time to go to any part of the woods. It is as near and nearer to the hunting and fishing grounds than any station on the railroad except Moira, which is the same, but is a larger village than the latter, which is half a mile from the depot, and has no lively stable at present. The distance from it to the Blue Mountain House is twenty-four miles. A letter addressed to Giles' Hotel, Brushston, Franklin County, N. Y. (Edward Litchfield, proprietor), will reach it.

A. CORNISH.

NEW YORK.—*Constatleville, Lewis Co., June 7th.*—Fish Creek is a beautiful stream and full of trout. It rises above Lowville, and flows into Oneida Lake. It is sixty-five miles in length, and the angler will find excellent fishing all the way, with good camping grounds every few miles. Excellent accommodations may be secured at private houses at \$1 per day. In six hours of fishing the other day I caught six trout, weighing respectively thirteen, fifteen, nine, fifteen and twelve ounces, and sixty others weighing five and three-quarter pounds. My companion caught one hundred and twenty-five fish. Visitors may come here via Utica, Black River Railroad, thirty-five miles, \$1.40; stage to Constatleville, eight miles, fifty cents; lively to the creek, eight miles, \$5 for party of six, there and return. A pair of shoes with hob nails should be provided for wading. Parties desiring further information may address P. O. Box 73.

H. S. B.

THE THOUSAND ISLANDS.—*River St. Lawrence, Cape Vincent, N. Y.*—Here are to be found almost every species of fresh water fish. The gamy bass and the voracious pickerel are captured in large quantities, and it must be a poor fisherman who cannot secure a good sized string of these fish almost every day. The great sport, however, in this vicinity, is to capture a muskellunge—the king of fresh water fish. Enormous specimens have been caught here—one weighing as high as seventy-two pounds and many others varying from thirty pounds up, and a host of smaller ones. During the season of bass fishing, the number caught is almost incredible, from fifty to sixty per day being a fair average for the expert angler, and in many cases exceeding these figures. There are a large number of fishing boats manned by oarsmen who are not only familiar but able to conduct the pleasure seeker to the very best fishing grounds, and at moderate prices. In addition, the new and fast steam yacht *Reindeer* will make Cape Vincent her headquarters during the season of 1878, and will be ready at all times to tow fishing skiffs and their occupants to any portion of the river at moderate rates, and will also take excursion parties when desired. In the fall this is the duck hunters' paradise. The waters of the adjacent bays are black with water fowl, and the hunter cannot fail to succeed in his quest. In the fall this is the species of game are to be found in their appropriate season.

The Rathbun House is situated on a pleasant site, commanding a splendid view of the River St. Lawrence, and in close proximity to that noble stream. The rooms are commodious and cool during the hottest weather.

IOWA.—*Manchester, June 7th.*—The black bass season opened June 14th, and every boy and man who had a rod was on the banks of the Maquoketa with a soft-shelled crab or minnow. The catch indicates great hauls of large bass. A string of eight or ten, weighing from one pound to four and a half, was a very great string. The waters are up again, and the sportsmen will have to wait patiently until the rivers run down. We have the finest bass fishing in the State. We have ten dams within the county, containing two hundred acres, all filled with bass, old and young. The fishways, under the State law, will make Iowa the leading State for fish. Her waters are pure and sweet for all kinds of game fish. The Maquoketa runs through the country, and is made up of springs of pure water. During the trout, of March, 1879, are nine inches long and weigh seven ounces.

S. G. V.

FLY-FISHING FOR SHAD.—*New York.*—A short time ago there appeared in the FOREST AND STREAM a short letter from ("I think") Hamilton "on fly-fishing for shad, which was followed by a request from me to give further particulars, etc., and which you were kind enough to insert with a few lines of your own, calling on the "shad anglers" to impart their views through these columns—for which please accept thanks. Now it seems to me that the "shad fly-fishers" must be very scarce or very churlish not to have responded to your call before this. I am somewhat interested in the matter, as I have been repeatedly asked by sportsmen and amateurs that shad will not take the hook, no matter what lure, whether natural or artificial. It is useless for me to quote the FOREST AND STREAM against them, as the slight weight of evidence therein contained up to the present has not been sufficient to convince them. Am rejoiced to learn by the last FOREST AND STREAM that a shad has been caught in the Raritan by fly, and sincerely hope the good word will go bravely on until it will be no new thing to get a fine string of fish with the fly-rod.

SHADO.

CANADIAN RESORTS.

QUEBEC, March 10th.

VERY many of my American brethren of the rod and gun visit Canada during the winter season, some in search of health, some for the pleasure of travel, and some again to enjoy a little sport. With many of the latter class it is a question often asked, Where shall we go for the best fishing or shooting? To help such in their choice a little general information of the best fishing and shooting grounds may not come amiss. Beginning at the extreme western point of the Province is the Nepigon River, famous for its trout fishing, which is now well known all over the Union. Coming east there are several small streams running into Lake Huron, which perhaps are well fished, but which during the early part of the season afford fine sport. Of these the Sydenham, Saugeen and Silver Creek are trout streams, and can be

fished from Owen Sound or Southampton. The Maitland is a fine river for black bass in May and the early part of June; there are a number of small streams containing trout that run into it; any of these can be fished from the town of Goderich. A little further south is the Au Sauble, the river "tant Mieux" in Canada for black bass and pike in May, June or September—reached from Widder Station on the Grand Trunk Railway. This is also a good duck ground in late fall, and at same time snipe are plentiful. The next points are the fishing and hunting grounds of St. Clair flats; these are too well known to need description. A little further east is the Thames; this river is only mediocre. Like many others, it has been spoiled by dams and refuse from mills and works of various kinds. It is one that can be marked "Ich-abod," and so not worth going to. Rounding the end of the peninsula we come to the shooting ground of Point Pelee with its duck marshes of 3,000 acres, which affords good sport in some seasons, but is uncertain. Our next stopping place is the shooting ground of Long Point, which holds the best duck ground in Canada. This ground is strictly preserved by a company of gentlemen who have leased the whole of the marshes from the Government, but shooters can have access to it under certain circumstances—reached from Woodstock on the Great Western Railway, via the Port Dover and Lake Huron Railway. Here I may say that the whole of the western peninsula shooting grounds is one of the best quail grounds in the country, while wild turkeys are fairly plentiful in the counties of Essex, Kent and Lambton. Again taking up our journey eastward on the lake shore, the Grand River is the next stopping place. Here are found snipe, woodcock and ducks in season, while black bass, pike, muskellunge, etc., are plentiful—reached from Dunnville Station on the Grand Trunk Railway.

For bass fishing in the Niagara is too well known to need mention, so we cross to Toronto, and there take the road to Muskoka, with its trout fishing, its black bass, muskellunge and pike fishing, and its fine deer shooting in the fall; or take the Toronto and Nepissing road, and go north to Coboonk and the back lying townships, where there is also fine trout fishing and deer shooting to be found. From these places one can reach the town of Cobourgs, and from there go to Rice Lake and the lakes adjacent, where will be found fair shooting in fall and good fishing in summer, but neither of them what they used to be. Then anywhere along the River St. Lawrence, from Belleville to Brockville, will be found noted grounds for all kinds of fish, except trout; while the flight shooting for ducks about the points of the islands, especially in spring, is very good.

A paying trip back from the river can be made on the Kingston and Pembroke Railway, and fine bass fishing found at comparatively small expense. Arriving at St. Anne's we find the mouth of the Ottawa River, but if questioned about the fishing the answer resolves itself into this: "Too much sawdust, too little fish." There are some small rivers that run into it—notably the Rouge—where a night's hunting would visit for bass, but in my opinion this game is not worth the candle, which can be applied to all the streams about Montreal or within easy reach of it.

We are now in Lower Canada, and going down the river the first place is Sorel Marshes for duck, snipe, etc., and the St. Maurice River, at Three Rivers, for bass, pike, etc., but neither of these places would pay anyone to go a distance for all that is to be got. This last named place, a journey of eight or ten days from Montreal, is the old city of Quebec, which is the starting point for all the rivers of the lower St. Lawrence. These are all preserved and rented by Government to such as have time and wealth to spend in the pursuit of the lordly salmon, but as they are out of the reach of the average sportsman I will not take up space in describing them. From Three Rivers anglers can be taken up into the park of the Muskoka townships, but they entail considerable expense, and it is almost a necessity that a person understands the French language. Of course, interpreters can easily be found, but one cannot take them everywhere, and it is not nice, when you ask a man a question, to see his shoulders elevate to his ears, and listen to an answer as unintelligible to you as your question was to him, unless it is comprised in the three words, "Je comprende pas."

AU SAUBLE.

The Kennel.

—Address all communications to "Forest and Stream Publishing Company, New York."

COLLEY REX IN THE STUD.—We call attention to notice in another column of Rex having been placed in the stud. Rex is a descendant of the best dogs in Great Britain, and his progeny have proved to be of the purest character. He was claimed at the catalogue price at the show, but Mr. Lindsay refused to part with him. This is a rare opportunity for anyone owning a first-class bitch to produce good stock.

THE ST. BERNARD AS A FIELD DOG.—I have often wondered if the St. Bernard dog, either pure breed or crossed, has any special merits for general hunting purposes. Specimens of the breed are everywhere, and dog breeders and at bench shows I have never heard that they possessed any value as hunters, but my experience with the only specimen I have known intimately—and that only a half breed, its mother being a cross between a bull and mastiff—has led me to ask the question. I was spending the summer in Northern Michigan to recruit my health. The gentleman with whom I stopped had been to the country and its game, and after many trials seemed to have secured perfection itself. It was a splendid animal, weighing about 125 pounds, with massive jaws and muscles like an athlete. He had scent enough to follow a warm track readily, and was so intelligent and well broken that he seemed to understand and promptly obey every word or gesture. He would not more chase deer than he would a sheep, but was a terror to all other kinds of game. He was instant death to a coon or woodchuck, and the biggest badger or wild cat in the woods was no match for him, though he carried numerous scars as souvenirs of his encounters

with these animals. It was, however, as a bear hunter that his virtues were displayed at their best. No bear could make any long run with that dog at his heels, for at every step it was in danger of being hamstrung, while the dog was anxious to keep a proper distance from the bear's paws. This dog had the principal characteristics of the smooth-coated St. Bernards, and I should like to know if FOREST AND STREAM or any of its readers have had any experience with this dog as a hunter.

CORK.

We have never heard of the St. Bernard being used in the field either in England or America, but in Scotland the St. Bernard has proved a very valuable deer stalker in the well-known forest of Glentworth.

A TRIBUTE TO "PUP."

HOUSE OF REPRESENTATIVES,
WASHINGTON, D. C., May 31st.

Editor Forest and Stream:—

The following tribute to a faithful hound may not be deemed unworthy of a place in your columns. The sous-briguet, "Pup," began with him, and ended with him. I never knew a better dog. His achievements were among the hills and in the woodland range along the valley of the beautiful Kanawha. Many were the foxes that surrendered to the fleetness of his foot and the unerring certainty of his nose. We have some good dogs—he was the greatest Roman of them all. A pair of his youngsters promises the early adornment of my small pack, and a strain of his blood is prized above anything our section can boast:—

Hear! all ye lovers of the chase,
Who follow black, tan, pied, or red,
The best and noblest of his race:
The Prince of dogs, old "Pup," is dead!
No more will Joppling's cooing ring
His accents clear at early morn;
No more his eyes will brightness bring,
Responsive to Oak Leaves' horn;
Van Buren's voice on the hill top high,
May greet the Nimrod in the chase,
Delaney's yell from mountain nigh,
Give cheer and relish to the race;
From Mathew's Branch to old Sulfield,
Red fox or gray may frequent go,
With foot or ken that ne'er did yield
To man or dog, nor fast nor slow.
The old peach orchard on the hill,
May, listening, hear the opening pack;
The Laurel Hollow o'er the rill,
Resounding, give the echoes back;
Jeff, Plunder, Crowder, and the rest,
With Sertorius' Branch to long the reins,
While Fleet and Watkins, with a zest,
Make rapid pace with fox and hounds.
Like hurricane or cyclone driven,
By measureless, eternal wrath,
With lightning's flash, in bounty given,
To 'luminate the reckless path,
The eager pack may sweep the plains,
As swift as wings of love or light,
The featless horsemen lose the reins,
And lash his charger on to "sight."
But never over log or rail,
Will fox evade, or dog pursue,
A quicker or a colder trail,
Than, wind or storm, old "Pup" would do.
No pointer he, nor setter sly,
To steal on unsuspecting prey—
But loud he raised his battle cry,
A warning, as he sought the fray,
Descended from an ancient brood,
Unflinching, told he stood the test;
He vindicated royal blood,
Nor found his peer among the best.
His voice was music on the air,
As he through mazes fast did wind;
His nose wrought out the hidden trail,
His foot left little tracks behind;
His "bottom" never knew a flag,
In mountain, thicket, heath or vale,
By deepening gorge or lofty crag,
He followed, fate-like, on the trail.
Now, all ye hunters, mark the spot,
Where lies the friend who served you well,
In chase, or out, forget him not!
He stood by you until he fell.
His life was long, his labors hard,
*None men he never owned a foe;
He leaves a fame no blenheim marred,
He's gone where all the good dogs go.

J. E. K. (W. T.)

THE COCKER JUDGING.—Boston, June 10th.—*Editor Forest and Stream*:—Your correspondent, "Cocker," in issue of June 3d, is wrong in finding fault with the judge and judging of the "cocker class" at the last New York show, for the very simple reason that there was no such class. The fault, if any, should be found with the classification, which let us examine.

In 1877, the first year of the New York show, there were four classes for spaniels—namely, Irish water spaniels, retrieving spaniels other than Irish cocker spaniels, field spaniels of any other breed, dogs and bitches being in the same class.

In 1878, besides the foregoing, the dogs and bitches were separated and two extra classes made, one for clumber spaniels and one for cocker spaniel puppies. This was a step in the right direction, but was immediately followed by a very decidedly backward one, for in 1879 the Irish water spaniels—dogs and bitches—were thrown into the same class, and cocker and field spaniels placed together. This was the classification for 1880.

In previous years had the cockers in a separate class, and having thus formed our ideas of what a cocker should be, it is rather hard to have them upset by this, to us, new classification, though it has the sanction of such high authority as Stonehenge, who says, in speaking of the modern cocker, "the above title includes every

kind of field spaniels except the Sussex and clumber."

I hope in future shows we shall have a separate class for cockers. In regard to the particular case as to the award of first prize not being given to a cocker the facts are these:

A protest was received by the Board of Appeals and it was claimed that the judge had acknowledged that the winner had considerable English water spaniel blood, and was not a cocker, and therefore was not entitled to the award. Mr. Dalziel stated to the Board that the class was open to all kinds of field spaniels, not being confined to cockers, and in his opinion the prize winner was the best, although decidedly not a cocker. Surely, under the classification no fault could be found with him.

CORWEB.

THE DOG BREAKING ARTICLES.—*Piedmont on Hudson, June 14th.*—*Editor Forest and Stream*:—I, with several others, wish to know if you are going to publish in pamphlet or book the articles on dog breaking appearing in *FOREST AND STREAM*, since I hope you will, as they are the best and most humane I have ever seen. Your readers do not have to wade through a couple of hundred pages to find out what they want; the thing is in a nut-shell, and to the point. Many things the articles contain are entirely new.

W. F. S.

HORNELL COCKER CLUB.—*Hornellville, N. Y., June 7th.*—A kennel club was organized here May 24th. It is to be called the Hornell Cocker Club, and its aim will be to breed cocker spaniels as near perfection as possible, and to train them for the field. The members had great trouble to get stock that was anywhere near the standard, and it would surprise you to see some of the trash that was sent here on approval.

J. O. F.

A JUST SENTENCE.—John Flynn, of White Plains, has been sentenced to three months in the Albany Penitentiary for cutting off the ear of a dog left in charge of Benjamin S. Dick by a New York gentleman. The dog was a setter, valued at \$150. He is ruined as to value.

MR. WANMAKER'S ENGAGEMENT.—A. H. Moore Esq., of Philadelphia, Pa., has engaged Mr. E. S. Wanmaker, of Cool Spring, N. C., as field trainer for the Moorefield Kennels.

—Mr. W. F. Muchmore has moved from his old home at Basking Ridge, to Convent Station, Morris Co., N. J., where he is now prepared to take dogs to board for the season.

—*"The British Bloodhound"* is the title of a new book which is to be shortly published, from the well-known pen of Dr. Gordon Stables, R. N., author of *"The Practical Kennel Guide," "Dogs and the Public," "Ladies' Dogs,"* etc., etc. This will be the first book on this subject that has ever appeared. The Doctor has set himself to the task, and assisted by the best breeders of the day, by many old manuscripts and sketches, and by documents never before printed, he flatters himself he has produced a really sterling work, and one that cannot fail to be read with interest by every one who loves a dog.

KENNEL NOTES.

NAMES CLAIMED.—*Robin Adair and Pansy*—Mr. J. Otis Fellows, of Hornellville, N. Y., claims the names of Robin Adair and Pansy for his liver and white cockers, dog and bitch, by Wildair, out of Fannie, *Jimmy*—Miss Pauline Cohn, of Hornellville, N. Y., claims the name of Jimmy for her pure liver colored cocker puppy, by Wildair, out of Brooklyn, *Zampa*—Mr. F. Todd, of Portland, Me., claims the name of Zampa for his liver pointer puppy, by Mr. E. Culver's Duke (Frank-Quail II.), out of Mr. P. Lambreyer's Queen (Ben II.-Nellie).

BRED.—*Norah-Rory O'More*—Mr. Chas. H. Dayton's (Peekskill, N. Y.) red Irish setter bitch Norah to Mr. W. N. Callender's Rory O'More. *Nellie Horton-Tom*—Mr. George E. Browne's (Dedham, Mass.) Gordon setter bitch Nellie Horton—Munn's Duke of Gordon-Tilly's Dream—to Mr. C. E. Bailey's Gordon setter Tom—Major Stockton's Dash—Sally—*Flora-Rex*—Mr. John W. Burgess' (Orange, N. J.) imported Scotch colley bitch Flora to Mr. Lindsay's Rex, first prize winner, New York, 1880. *Delta-Tony*—Mr. H. W. Livingston's Delta to Owner's Ray.

SALES.—*Daisy Dean*—The Hornell Cocker Club sold on June 3d the black and white cocker bitch Daisy Dean (Wildair-Fannie) to Mr. M. P. McKoon, Franklin, Delaware County, N. Y.; also black and white dog puppy, by Wildair-Dolly. *Gipsy-Rory O'More* (whelp)—Mr. Chas. W. Bostwick, of Hudson, N. Y., has just purchased from Mr. Wm. N. Callender, of Albany, a Gipsy-Rory O'More puppy. *Connaught*—Mr. W. N. Callender has sold to Mr. W. F. Bentler, of Albany, N. Y., his red Irish setter puppy Connaught (Rory O'More-Margaret). *Chadwick*—Mr. W. N. Callender has sold to Mr. L. C. Murdock, Southampton, L. L., his red Irish setter puppy Chadwick (Rory O'More-Margaret). *Munster*—Mr. W. N. Callender has sold to District-Attorney L. Hotelling, of Albany, N. Y., his red Irish setter puppy Munster (Rory O'More-Margaret).

DEATHS.—*Sport*—Mr. E. F. Merrellott, of this city, has lost by distemper his prize liver and white pointer Sport. *Neva*—Mr. Fisher Howe, Jr., of West Hampton, L. I., lost on the 6th inst. his pointer bitch puppy Neva (Strong's Pete-Princess). Neva received second in her class at New York Show, 1880.

WHELPS.—*Clytie*—St. Louis Kennel Club's Clytie whelped on June 3d ten puppies—six dogs and four bitches—by East-Queen Bess—Mr. W. N. Callender's (Rory O'More-Kenard, Albany, N. Y.) Queen Bess whelped on May 31st nine beautiful puppies—five dogs and four bitches—by Champion Rory O'More. *Rose*—Dr. Wm. Jarvis (Claremont, N. H.) red Irish setter bitch Rose, Champion Palmerston-Florea, whelped on May 26th six puppies—four dogs and two bitches—by Champion Elcho. The puppies are all red, of course, and perfect beauties.

—*Trench* Show scoring cards, with complete table of points, by Edward J. Forster, Secretary Massachusetts Kennel Club. By the table, the value of the various points of any breed, according to Stonehenge, can be seen at a glance. Twenty-five cents per package, or live packages for \$1, prepaid. Send currency or stamps. Address Edward J. Forster, Charlestown, Mass.

June 23, Prospect Park.—Manhattan vs. St. George's.

PENNSYLVANIA UNIVERSITY vs. COLUMBIA COLLEGE.—Played at Hoboken, N. J., June 11th, and won by the Philadelphians by one innings and fifty-seven runs. The first inter-collegiate match ever played in this vicinity took place on Friday last on the excellent cricket of the St. George's Cricket Club's grounds. The University team gave the finest exhibition of free and brilliant batting that has been seen on any New York grounds this season, the cutting being remarkably clean and well timed, while the excellence of their fielding deserves the highest commendation. George Thayer topped the scores of his side with fifty-nine, made in fine style; but not without a couple of slices of luck early in his innings. The bowling of Hyde-Clarke and Conover was not up to their usual good standard, and we were amazed at the very inferior bowling of the Columbia boys. For the New Yorkers Hyde-Clarke and Conover played well and carefully, and the scores which they contributed were in every way deserved. We annex the full scores:—

COLUMBIA COLLEGE vs. HARVARD COLLEGE.—The first match of the Columbia College eleven's trip to Boston, and first inter-collegiate game between the two colleges, played at Longwood, Mass. May 31st, resulted in the victory of the New York staff. The Columbia boys took the Sunday evening boat for Boston on the evening of the 30th ult., and upon their arrival at the first found the arrangements for their reception for a game, but during the morning the lowering clouds gave way to bright sunshine and the match was witnessed by a very large number of spectators. Before noticing the scores we desire to say that the

THE TILESTON MEMORIAL FUND.

THE lamentable circumstances under which Mr. William M. Tileston lost his life are still fresh in the minds of our readers. One of the saddest things connected with the calamity at the Madison Square Garden is the sudden destitution of the widowed wife and her little children.

With a spirit worthy of the highest commendation, the Eastern Field Trials Club, of this city, having satisfied themselves of the actual state of affairs, are now actively engaged collecting money for a "Tileston Memorial Fund." In this labor of love the promoters of the scheme deserve, and we doubt not will receive, the cordial and generous cooperation of every sportsman who may read these lines.

Mr. Tileston was for several years prominently identified with the sporting press. His name, as a writer on field sports, was familiar all over the country, more especially to the readers of the FOREST AND STREAM, and we are not mistaken when we say that the response from those who thus knew him will be prompt and generous.

We make this appeal because we are satisfied that this is an urgent case. The money is sorely needed. It will go directly to those for whom it is given. Nothing further need be added. The subscription is open.

The committee having the matter in charge are Messrs. Chas. H. Raymond, P. H. Morris and Fred. N. Hall, P. O. Box 1,393, New York, to whom contributions may be sent.

Following is the acknowledgement of the Secretary up to June 12th:—

NEW YORK, June 15th.

Editor Forest and Stream:—

I have to acknowledge the receipt to 12th inst. of the following subscriptions to the "Tileston Memorial Fund":—

Total.....			\$135 00

FRED. N. HALL, Sec'y.

THE TEAM ABROAD.—Rifle shooting is dull now, with the team away and everybody waiting for news of their arrival and setting to work on Irish soil. The last news from Ireland shows that the Irishmen are working at a remarkable rate, and with a fine day (June 10th) six of them ran up an average score of 210. It is certain that Col. Bodine and his men have a real task on their hands, and it begins to look now more than at any previous time that there was to be a break in the line of American rifle victories.

THE WORK OF A STATE GAME PROTECTIVE ASSOCIATION.

THERE is in this State to-day a very definite field of work for a State game protective association; and it is highly important that this field should be clearly comprehended, and that the efforts of such an association should be very definitely confined to this field. In the light of the present condition of affairs we may not be accused of uttering truisms if we define the work of a game protective association to be the protection of game. A society which does this must begin at the very foundation, and—

First—secure right game legislation. We have a game law. It consists of forty-one sections. These are of patchwork growth—tinkered up and amended at every session of the Legislature. The law is notoriously incomplete, inadequate and inoperative. To change this condition of things is peculiarly the province of an association of intelligent and influential sportsmen, gathered from the various sections of the State, each representing the various interests of his locality. Such a body could frame a law which would receive the sanction of every man whose sanction it would be desirable to have. Such a law would possess all the merits which the present statute so conspicuously lacks. And, what is more, until an association of this kind does take up the subject of a State game law we shall never have anything satisfactory.

It is objected that a State association cannot enact laws. We answer that we have faith in the respectability and standing and in the moral and political influence of the sportsmen of the State of New York. Only let it once be thoroughly understood that a State game protective society really means work, and it will speedily become powerful by the hearty and active membership of scores of men who are waiting to-day for such a society, and it could secure at Albany just what game legislation it might be pleased to demand.

Having secured such laws as are necessary, an equally important step is—

Second—to provide for the enforcement of the game law. Game legislation is altogether too much of a dead letter. Its enforcement is a farce and a reproach to the State. Provision may be added to provision, and penalty piled upon penalty; what is everybody's business is nobody's business; neither is provision enforced nor penalty inflicted; the night fisherman, the bird snarer, the poacher and the butcher ply their infernal practices in season and out of season unpunished. Fish mongers and game dealers, grasping for the almighty dollar, serve as go-betweens for the restaurant keeper and the hotel proprietor, and shield the nefarious deeds of the pot hunter behind their guise of respectability and their moneyed weight. It requires vigilance to catch the skulking game thief, and it requires nerve to attack the law-defying marketmen. This has been the work of individuals, too long. It should be undertaken by a State Association. Will it be?

How best an association should proceed to secure the right execution of the game law it is not now the time to discuss at length. It has long been a subject of serious consideration among intelligent sportsmen; and it is generally conceded that the most efficient system is that of a game constabulary, appointed by the State, and assigned to particular sections, where local and personal considerations may not interfere with a discharge of duty. With the cooperation of a wide-awake State association this system might prove effective. It is at least worthy of attention.

It might be possible, also, to do very much for game protection by creating and fostering amicable relations between sportsmen and land-owners, removing mutual misunderstandings and making the interests of each identical.

Another and a most important field of effort is to secure the sympathy and cooperation of the press throughout the State. The influence of the home paper will be given not grudgingly nor fruitlessly when it is commanded by the earnest example of an association itself.

These two divisions of the work are of sufficient moment to receive the immediate and continued attention of any society professedly interested in game protection. Another branch of effort, equally important but to come as a complement of the other is—

Third—to replenish and increase the supply. To re-stock the depleted waters of the State and to introduce new species of food and game fishes is clearly the work of the State Fish Commission, but for the assured success of its labors that commission requires just the hearty support which a live, wide-awake and intelligent game protective society could give it. In the importation of game birds and animals, also, the most brilliant possibilities suggest themselves. There is no good reason to-day why a New York sportsman should be obliged for a day's deer hunting to make an expensive trip to Michigan, where they protect their game better; nor that to the New York business man a quail shoot should mean three days on the cars, and three hours in the field; for there is no reason why our own forests should not be full of deer, nor why in our own valleys and hillsides should not be heard the cheery note of Bob-White.

The work which we have briefly outlined is no boys' play. Its accomplishment demands systematic and earnest labor, involving expense of time and money, and some drudgery, of which the public can have no comprehension. Not until a body of men, who recognize these facts, shall associate themselves together and make the accomplishment of this work the chief object of their conventions, may we look for a remedy of the existing state of affairs. This work belongs to the New York State Association for the Protection of Fish and Game. Can the Association afford to shirk it?

HOW IT IS RECEIVED.

THE most decided indorsement which representative sportsmen have accorded to our remarks on the State Association last week has afforded us sincere gratification, for such an indorsement gives evidence that the time is ripe for a change, and is in itself also an earnest that the change will come.

Below we publish a number of responses which have come to us, and next week these will be supplemented by others of an equally outspoken character. This matter is one of vital interest to the sportsmen of New York. We invite and urge a full, free and candid expression of opinion from all men who have an opinion on the subject:—

SYRACUSE, N. Y., June 14th.

Editor Forest and Stream:—

You have expressed my opinion in regard to the "New York State Association for the Protection of Fish and Game" so well in your editorial of the 10th instant on the subject, that I have but little to say. Every true sportsman who reads that article will thank you most sincerely for it. It is bold and right. The Association has existed for a number of years under a false name, and it was time long ago for it to either reorganize or change its name.

At its last meeting at Seneca Falls it did not say one word or perform a single act for the "protection of fish and game." Its chief desire was to proceed to the slaughter of 13,000 pigeons as speedily as might be. Deer, birds and fishes throughout the State needed a friend, but the "Association for the Protection of Fish and Game" had no protection to offer. The business meeting was hastily and unceremoniously adjourned immediately after the next slaughter field was named and officers for the ensuing year appointed. Such proceedings have driven out many true sportsmen and prevented many others from joining. It is now only men who thirst for the sport which the traps afford them who manage the affairs of the Association.

It is most desirable to perfect an organization for the protection of fish and game. As you well said in your editorial, it is desirable to have this association become a power of this kind if it will; but if it will not, it ought, in justice, to drop the latter part of its name upon an association of sportsmen who love to protect as well as kill game and fish.

A great many sportsmen in this State will sustain you in the position you have taken on this question, and I hope will prevail among them that the State Association will yet see the ridiculous position in which it has placed itself and endeavor in the future to make trap shooting the pastime rather than the object of its annual conventions.

D. H. BRUCE.

ROCHESTER, N. Y., June 14th.

Editor Forest and Stream:—

Your vigorous editorial of the 10th inst. cannot fail to make a sensation among the many thousand readers who have by this time read the article and weighed the arguments it contained.

There are probably a great many others who feel on the subject as I do, neither wholly agree nor disagree with its sentiments.

If the State Association for the Protection of Fish and Game is to be judged solely by its actions at its annual meetings, even its friends would be compelled to admit that there is some inconsistency between its title and its action on the occasions when the time is mainly devoted to shooting pigeons over the traps. This latter pursuit certainly has no tendency to promote the protection of game, in or out of season, for it is the hope of every one who steps to the line that he will make a "clean score," that is, kill ten or twenty pigeons that have been caught at the breeding season, and are not naturally in good condition to be used for food. If this is not a fair representation of the matter, at least it is the opinion of one who has had fair success at trap shooting and confesses to find considerable pleasure in the various emotions awakened by a shooting match.

In defense of the State Association, it may be said that it carries out directly one of the professed objects of its existence, and indirectly contributes to fulfill the other function it assumed. The first article of the Constitution is as follows:—

This Association is formed for the purpose of securing proper legislation for the protection of wild birds, fish and animals, throughout the State, during the season at which it is improper to pursue them; for the vigorous enforcement of said laws shall be enacted, and for the promotion of kindly intercourse and generous emulation among sportsmen.

Everyone who has attended a convention of the Association must admit that it is preeminently a success "for the promotion of kindly intercourse and generous emulation among sportsmen," at least I never was at a Convention of so many men, where the intercourse was more friendly or the emulation keener, while fair. If the name of the Association might lead one to think that its conventions should be devoted to discussion of game protection, legislation, etc., let it be remembered that as the Association could not enact laws, it might waste a great deal of time framing bills that the Legislature would not pass. Furthermore, the subject of game protection could not be discussed, and anything new produced every year. The subject would long since have been exhausted. The clubs which form the State Association do carry out its protective purpose, and they are encouraged to continue in existence and usefulness by the annual meeting of the main body.

I make no claim of great usefulness for the Association.

tion. Its purpose is to afford its members amusement, and that is something not to be slighted in a country where there is a tendency to work too hard and not play enough. The week passed at the State shoot is to many a needed relaxation from exhausting work, and as such I hope to see it repeated. If the number of pigeons shot were reduced one-half, I do not think the interest would be in any way diminished, for as a test of skill the chances would remain as at present; one is as liable to miss in shooting at his first bird as at the tenth. Neither would it detract from the general enjoyment if the entrance fees to the various matches were cut down one-half. Manufacturers of guns, etc., could, if so disposed, make an interesting exhibition at each corner of the shooting the weapons, etc., in various stages of manufacture, as some did at the Centennial Exhibition.

EDMUND RICHMOND.
NEW YORK, June 15th.

Editor Forest and Stream:—

Your editorial of June 10th, alternately attacking and patronizing "The New York State Association for the Protection of Fish and Game," concludes by calling for a reply. Your personal request to the same effect was this day received. Courtesy demands acquiescence, and pressing professional engagements require the enforcement of the maxim, "brevity is the soul of wit."

I do not think your strictures upon the Association are quite merited. Its existence of twenty-two years has been accompanied by great increase in game, fish and birds, which result is in a large measure traceable to the efforts of the Association and its clubs. The time devoted to the business meeting of the convention is necessarily limited, and to the casual observer little is there accomplished. But the individual clubs and their members, and the committees, during the recess perform labors, the result of which is apparent in the improved laws upon our statute books, and in the increased variety, quality and quantity of game in our woods and streams.

To the efforts of the individual members at home and in the legislative halls are due our protective game laws. The tournament has its purpose. It brings together the sportsmen from every part of the State and tends to the cultivation of social intercourse and improvement in skill with the rod and gun. The recent contests may have appeared disproportionate to the work accomplished at the business meeting. Doubtless the retiring officers of the convention and these of the club, under whose auspices it was held, would dispute or explain this if requested. The recently elected officers and the Long Island Sportsmen's Association are charged with the management for next year, and they will not shirk the responsibility.

We believe that the result will be satisfactory to the large body of sportsmen in this State. The subject of game propagation and protection is of grave importance. Among the members of the State Association are men of individual reputation, possessed of all necessary mental and physical qualifications to originate and enforce such measures as may be prudent to effectuate the desired end. An organization is powerful in proportion to the strength of its individual members. To the individual members an appeal will be made in proper time for suggestions, and these will be submitted to the proper committee, who will present to the next Legislature the proposed bills as modified. Trusting that they will appear necessary or proper. Further, it is proposed to invite the most competent ornithologists and pisciculturists of this and other States to favor us with suitable essays, to be read at the next convention.

It is somewhat premature to give in detail the precise plan to be followed. The Long Island Sportsmen's Association has already taken action with reference to game propagation and protection upon Long Island, and to that end has appointed a committee consisting of the Presidents of its various clubs.

In conclusion, permit me to say that while criticism is easier than suggestion, we may still expect from such authorities as the FOREST AND STREAM and kindred papers some enlightenment as to what the Association can and ought to do. I trust that what is said here is not so much as desired. Trusting that we shall not, however, be called upon to cry despairingly, "save us from our friends." I have the honor to be, yours truly,

ABEL CROOK.

CAPTAIN BOGARDUS' NEW GUN.—We have this week been shown by Captain Bogardus his new Scott hammerless breech-loader, just received by him through William Read & Sons, of Boston. It was ordered some time since by the Captain, and is an exact counterpart in size and weight of his "old reliable Scott," which he has been using for years past, and which has done such remarkable shooting and scored so many victories. It is to-day as perfect as ever; and though looking like a veteran, yet does not show the hard usage and great strain it has seen. This new gun is one of W. & C. Scott & Son's hammerless, with their own patent side crystal apertures (which is a great feature of safety, as it allows the hammers to be seen at a glance), and also has the regular safety bolt. Two sets of barrels—one twelve and one ten—fit the same stock, and a more superb gun in proportions and general balance and fine workmanship we have never seen. The Captain is delighted with it, and will at once put it in service.

—The Coney Island season is fairly open. There were not less than twenty thousand people the first day at the various immense hotels, and still there was room for more. The Brighton Beach Road was running rapid, well-filled trains, and the Hotel Brighton was more than equal to the occasion, with our venerable friend Chadwick, formerly of Willard's Hotel, Washington, D. C., and recently from San Francisco (one of the best hotel men in the country), walking quietly around, always present when wanted. At Manhattan Beach the throng seemed still larger, and the Manhattan road was running an extra large number of cars. The music was fine, and there were accommodations for double the number of people.

THE ARMY WORM.—The Government Department of Agriculture is vainly exerting itself to cope with the army worm, which is now ravaging the land. Paris green will kill the pests, provided they eat it, and so will arsenic, if it can be put down their throats. All published suggestions have so far proved ineffectual. The following method has been tried on Long Island, and is sure and certain in its results: A deep furrow or ditch is plowed around the field. When the worms have accumulated in this ditch throw upon them unslaked quicklime and sprinkle with water. This kills the worms, destroys their eggs and is good for the land. To protect a conservatory or greenhouse, smear on a streak of lard and dab with sulphur.

The Long Islanders are troubled with another pest:—*Sayville, L. I., June 14th.*—Here-with I send you a specimen of a fly or beetle, called by some people a June bug. This insect will strip a leaf, like the specimen sent you, in a very short time. They feed on roses, fruit, young grapes—in fact, any young plant or tree. In the morning they are in the air, but at mid-day hang in bunches on trees and vines, and then can be shaken on to sheets, and scalded. They will take a morning bath in whale oil, soap suds, dine on Paris green, sleep all night in a box on a bed of white hellebore. Who can recommend a quicker killing process than scalding?

—The members of the Independent New York Schuetzen Corps, with their families, have made arrangements for a week's recreation during the summer at Lake Hopatcong, where they will not only have the beauty of the lake, rustic scenery, etc., but will enjoy their rifle shooting, as of old. A new feature will be glass ball shooting. A new departure, and one which we most heartily commend, will be the introduction of lawn tennis, croquet and archery for the ladies. Our wealthy Germans are, as a class, worthy of all praise for providing sports and pastimes for their families, and the plan of this year, inaugurated by Capt. J. J. Diehl, will place his name at the head of the list as a provider for such an occasion.

—The long-needed Greenwood Ferry promises to be provided in a short time, the undertaking of building the piers and carrying out the enterprise having been assumed by Mr. C. Godfrey Gunther, proprietor of the popular route to Coney Island—the Brooklyn, Bath and Coney Island Railroad.

**GAME PROTECTION.
IMPORTATION OF MIGRATORY QUAIL.**

QUEBEC, Can., June 12th.

Editor Forest and Stream:— I received yesterday two cages of migratory quail from Mr. Boynton of New York with only two dead ones in the lot of 200 birds, and they had been dead some time. It is really wonderful how well these birds have traveled. The system of a canvas cover instead of a hard board is excellent, as the birds do not knock themselves foolish.

I have shipped 100 birds, or one cage, to Mr. Romeo Stephens, of Montreal, who will turn them out in the new park, I believe. The remainder I will divide into colonies of ten birds at intervals of two or three miles, and so people the neighborhood with them. One lot of forty birds I will send adrift to the North of Quebec on the edge of the Laurentian range, where they can colonize to any extent.

The birds I released to-day were stiff on the wing, only able to fly a few yards, as I had used the cover to keep down the birds. They were very like young partridges (*Perdrix grisea*), and will certainly be described as such, so I do not expect to hear of the "quail" again unless I see them myself. I will, however, keep you posted. It is a great pity the birds have arrived so late in the season, because it will take them one month at least to nest and lay twenty eggs, say July 15th; then one month to hatch, say Aug. 15th; so there will be only two months for the young birds to grow before our cold weather commences in October, consequently they will not be strong enough to join the migratory flight in November. These experiments, however, rarely succeed on the first attempt, but perseverance will succeed.

The public, I am happy to say, take a great interest in this importation, for Mr. Public is very fond of a bargain where he has nothing to lose and something to gain; while our quail, quail-shooters and *Touretes perdrix* are ideas that please both he and she, especially the last idea, which requires a French woman or a cardinal to thoroughly understand.

W. RHODES.

MANCHESTER, N. H., June 14th.

Editor Forest and Stream:—

The 300 migratory quail ordered by the Manchester Shooting Club arrived here on the 9th inst., in good condition. There were only two dead, and one with a broken wing, which seems remarkable when their long confinement and voyage is considered. They have all been put down in some of our best localities, twelve or fifteen in a place, and in the manner recommended by the FOREST AND STREAM last season. We have no law to specially protect these birds, but rely upon the honor of sportsmen not to molest or shoot them, and the co-operation of the farmers for their protection. Whether our efforts will be rewarded or not remains to be seen. Mr. Tobey has the thanks of our club for his services. Have been hoping to see some communication to your paper from some one who has imported previously, as to whether the birds have returned to the places where they were liberated.

J. E. W.

The 2,600 bird consigned to Mr. Everett Smith, Commissioner of Fisheries and Game, were received in good order at Portland, Me. June 9th, and distributed to the parties who had ordered them.

BOSTON, June 11th.
I don't expect to hear from last year's quail until moving time comes in. In spring and early summer there is little to call people into the woods. Last year the returned quail were found mostly by the mowers who came upon their nests.
HORACE F. TOBEY.

GAME PROTECTION IN NEW JERSEY.

HACKENSACK, N. J., June 10th.

Editor Forest and Stream:—

I am glad to see you showing up the character of "game protective" associations whose only object is an annual shooting match. We should have genuine game protective associations, and they should be allowed to copyright their title, so that mere pigeon shooters cannot appropriate it.

Our New Jersey State Association is of no practical use in protecting game, and I am not certain that this work can be accomplished in any way but by county or town organizations. A local organization can do good work with very little trouble. In Bergen County we have a game protective association of three years' standing. Twice a year we advertise the law in the county papers, offering a reward of \$10 for evidence that will procure a conviction. We also keep posters in convenient places showing the closed seasons for all kinds of game, and the penalties for shooting out of season. If any person is reported to us as a violator of the law, against whom we have no direct evidence, we send him a letter of warning.

Our work has been productive of good result, and I think the Passaic County sportsmen would do well to follow our example. If they find any man "shooting on his own land" out of season, the law gives them full power to prosecute him.

X.

Game Bag and Gun.

JUNE IS A CLOSE MONTH FOR GAME.

—Address all communications to "Forest and Stream Publishing Company, New York."

WITH ONE BARREL.

IT is amusing to read of the wonderful shots sometimes made single, double, triple, quadruple, and even quintuple, by different persons in different parts of the country with their wonderful guns! One is tempted to give credence to the story of the man who insisted upon it—in fact he told the story so many times over that he actually believed it himself—that he killed two quail with one barrel, the birds springing from the ground the same instant and both flying off in different directions; he whirled around so quickly after killing the first one that he divided the charge, and down came both of the birds, dead enough! That was a wonderful shot. But while we admire these double shots at snipe and quail, and the long distance which game is brought down with choke bores and "half choked," we must not forget that one hundred yards, if correctly measured, is exactly three-hundred feet, at which, if our friends will set up a target the exact size of a quail or an English snipe and take a careful look, will find that the bird would appear to be away a "considerable long space of distance," and that a gunner who was careful of his ammunition would not shoot at it with much hope of hitting his game.

The writer has targeted good guns with first-class ammunition at accurately measured distances, and has found that a target the size of an English snipe at seventy-five yards is a very small mark to shoot at, and yet we have hit it. We once put two pellets of No. 6 shot through a business card one and a half by four inches at seventy-five yards exact measurement. The gun was a good one, for, in fact, than the average of guns now made; but before the card was hit his half a dozen charges were fired at it by as many different persons.

An experience of more than thirty years at gunning in different parts of the country, and at almost all sorts of game except alligators, with all sorts and conditions of guns, has convinced the writer that the average of game killed with shot is brought down inside of one hundred and fifty feet from the muzzle of the gun when fired. We have killed wild ducks in midwinter, when the fowl were in full and heavy feather, at longer distances than one hundred and fifty feet with heavy shot driven by extra heavy charges of powder. T shot, when forced in front of four drachms of good powder out of a good gun, are very dangerous to wild fowl at eighty yards off; but how many of the birds at that distance are hit by more than two or three of the shot? Not very often. One T shot will kill a wild goose if a vital spot is touched, or it will break a wing and thus secure the fowl; but what gunner of much experience at wild goose shooting has not been made heart-sick and disgusted when a goose has given him a "good by" as he flopped away, "on buoyant wings," with a broken leg dangling in mid-air? He won't use cuss words, but he will wonder why that one T shot didn't break a wing instead of a leg. We have killed deer with buck shot, dead; but not over one hundred or one hundred and twenty-five feet distance. That festive animal must be riddled, or he will give you a long, tiresome chase; he must receive such a shock from the force of the charge as will place him *hors de combat* at once, or he will give you a jolly good run, even if he have but three shots in his bag. We have "been there," and know whereof we speak.

We can readily believe that two or three snipe, springing from the ground at once and in an almost direct line, may be brought down "with one barrel" loaded with a multitude of fine shot, but such good luck is not usual with the average gunner after snipe.

The writer knew during the war of two men being killed by the same bullet; one man was following the other, the leading man was aimed at, the bullet passed through him and his follower, and both were instantly killed. The sharpshooter who made that "double shot with one barrel" told me (he was captured) that he saw but one man when he fired.

Wonders in gunnery will never cease, and gunners and the owners of guns will never tire telling stories of their exploits in the field, and the wonderful qualities of their particular guns; and we love to hear them, and we

SPRINGFIELD, Mass., June 14th.—Scores of the Rod and Gun Rifle Club made at their weekly meeting. Weather cloudy, with frequent rain and mist. Wind moderate from east-north-east:—

Military rifles two points allowance.

CREDMORF JUNIOR.—Mr. C. Godfrey Gunther, President of the Brooklyn, Bath and Coney Island Railroad, proprietor of the grounds located in the Lower Bay and known as Locust Grove, conscious of the wants of the neighboring military, the time lost and expense incurred by them in their annual target practice, has established, on the northerly side of this ground, a 300 yard rifle pit range, with four targets, to be known as Credmorf Junior.

The range can be reached by any of the cars of Hamilton, South, Wall or Fulton ferries going to Greenwood—the terminus of the Court-street, Third and Hamilton avenue cars—from which point the range can be reached by steam cars in twenty-five minutes. Excursion tickets 25 cents. The range has been rented to Mr. Heltwig, of 221 Sixth avenue, New York.

RECAPITULATING SHOTS.—A man of Troy, N. Y., claims to have invented and patented a pocket apparatus for the recapping of exploded shells used in rifles and other fire arms. Heretofore this operation has been done by hand at a slow rate and not always with accuracy. The apparatus is of brass and may be carried in one's pocket. A grooved cylinder, lying horizontally, contains 80 caps set on edge. At one end of this cylinder is a piece of mechanism somewhat resembling an office hand-stamp, having at its base a flange into which the base of the shell fits in such a manner that the vent is directly under a plunger. A spring in the cap cylinder keeps one of the line of caps fed close up to the plunger at a time, and when the shell is put in place and the handle struck with the butt of the hand, a cap is nicely inserted in the base of the shell at exactly the proper point and a hair below the base of the exterior to admit of the rotation of the shell in the socket of the gun. The machine is made in the several sizes adapted to the calibers of shells, and will recap at the rate of 380 in fifteen minutes, or 100 in less than five minutes. A Hartford, Conn., firm has recently got out a handy implement for the same purpose. It may be carried by the sportsman in the pocket, and operates as rapidly as the hand can place the shells and remove them.

THE SIGHTING OF HUNTING RIFLES.

NUMBER I.

IT is commonly supposed that bad shooting on game is due either to defective aiming, improper loading or poor aiming. But the more I experiment on sights, and try strange rifles, the more I become convinced that bad sighting is quite as fruitful a parent of misses as any of the others put together. It is now almost impossible to get a rifle that does not shoot well enough, at least at hunting ranges. The fixed ammunition now furnished is almost as accurate as one could desire; yet many a miss is scored by the beginner, and even by the experienced hunter, which is due solely to the sights.

If the ingenuity of man is sublime, so also is his stupidity. How many thousands of dollars have been spoiled by the loss of a top or the pepper-caster; and what mighty intellectual throes it must have taken through long languishing ages of time to give birth to a screw-topped one.

Yet I think that even the old pepper-caster is eclipsed by the monumental stupidity of some rifle-makers in the sights they put upon their sporting-rifles.

Let us look first at the front sight—a huge chunk of bastard metal, shaped like a slice of watermelon, and mounted on a block nearly half an inch high; so dull in color, you can hardly see it, unless the sun strikes it just right; high enough to raise the telescopic aerial feet, if you happen to catch too much of it, having a beautiful slope at the back, so that the brightest spot will vary all the way from the tip to the base, according to the position of the sun, and so artistically sloped off on either side that either side will be brighter than the center when the sun is on that side. When the sun is just above the horizon, and again when it is overhead, walk out in the light with the rifle having one of these marvelous sights on the end. Then, keeping your eye fixed upon it, turn entirely around, so that the light passes all around the circle of the horizon. Do you see how the center of brightness shifts all over from side to center and from center to tip? Do you see how difficult it is to find the true center (even when you have plenty of time to look for it); when the center of brightness is above, below or on one side of it? And can you not see how easy it is to mistake it when you do not have time enough, which is often the case on game, especially when it is running?

If not satisfied with this experiment, place eight targets at the eight principal points of the compass, and standing in the sun, shoot them in succession. If not extremely careful to find the true center, and often if you are never so careful, you will shoot over, under and to the sides.

Now, in target shooting there is comparatively little danger, of being misled by this, though even there it is a nuisance, for the shooter always shoots in the same direction, with sun in same position; has plenty of time to find the center, and can to some extent correct for error caused by the light. But it is necessary to say that in the field, and especially, when game is off-sighting its disappearance, this is almost impossible.

Suppose now, you knock off this fashionable fraud, bore a hole with a screw thread through the sliding block, and screw a ivory through it and file it down to a small ridge, perpendicular behind, leaving the top as flat as the average globe. Let the top be wide enough to suit your eye, but have no slope on either side or behind. Take this out in the sun and turn round with it, and you will find it as hard to miss as it is to hit a barn with a hammer. A metal sight made in the same way, but sloped a little on the top of the back, will have somewhat the same advantage, though nothing can equal ivory or white agate for certainty in this respect. Agate is, however, quite brittle, and ivory takes grease too easily and becomes dull. But agate may be set in clamps or through a large wedge-shaped hole from the under side of the block; and ivory may be freed from grease in a few moments by boiling the sight in some alkali or in alcohol. The white sight is not equal to gold or brass for running shooting on snow, or for shooting against the sky, if cloudy. But there is no metal that shows the center with equal certainty in all light conditions, and can be so clearly seen at dawn or dusk, in the woods or the open plain. The liability to break is the only objection, and this is easily obviated by having an extra one.

Of course this may be cut as fine upon top as the shooter may desire; but I recommend flatness of top for the following reasons: there is no unction that the rifleman so quickly lays to his soul which is so flattering and so delusive as the idea that a shot a few inches over or under the mark is a good shot because it is a "line shot." In duelling where there is a mark nearly six feet high within ten paces, a "line shot" means something. In shooting on game where the mark is seldom over eighteen inches wide, (the vital parts much less,) and distant from seventy-five to two or three hundred paces, and running, perhaps that, a "line shot" also means something; it means a miss three times out of four—perhaps five out of six. It is just exactly here that bad shots, bad rifles, and bad loading show the very least. The "line shot," as it is generally called, means on the vertical line above, or below, and this is just the easiest and most worthless of all shots. The easiest too, unless in a cross wind, can hit above or below the mark with great ease. The poorest rifle, especially at long ranges, will strike the vertical line far oftener than the horizontal; and bad loading sends the ball too high or too low twice as often as it sends it to either side. He who fancies that a variation of a few inches from the horizontal line of the mark is a good shot, will find himself elegantly sold when he tries any game less than an elk or a buffalo. Learn to hit the horizontal line of the mark, and then you may talk about "line shots." Of course the vertical range is important enough, but by no means to be neglected. I only mean that of the two, the horizontal range far the more important, and far the harder to attain.

Such being the case, the front sight should be shaped to insure good horizontal work without sacrifice of good vertical work, and for this purpose a sight flat on top is the best, provided the flat part be not too wide.

Now the very best of shooting can be done at a target, and often at game when standing, with a front sight almost as sharp as a knife-blade. But in a bad light, when the game is dim and indistinct, or when running, it is not easy to watch with the eye too much of the sight or mistake the point altogether, as it is for a humorist to flood the world with twaddle after he once gets an established reputation. The flat top obviates this difficulty to almost the same extent that the thread and ball or globe sight does. The only objection to it is that it involves some sacrifice of vertical accuracy. This objection is truer in theory than in fact. Wonderfully accurate shooting can be done with a very broad front sight if it be of such uniform color and brightness that you do not mistake a corner or the base for the center or top, and be clear and easy to see. But even if such a sight caused a variation to the side equal to the variation up and down caused by a sharp sight, one would not lose one-third as much game by it as by the sharp one, for nearly three shots out of four at big game are side or quartering shots. It will not hurt such a sight to have the back top edge slightly sloped off; and with a metal sight this should be always done, and all below it dulled and rusted with acid or iodine. The slope will then shine like a little star, and not be easily confused with any part below.

The principle of Beards' combination sight is first-rate, but the color of the open sight is too dull and the light strikes too much on the base. Makes it one-half and soldier a bit of gold on the top. Then brighten the back end of the gold and make it square and rust all below it with acid; or, what is better yet, cut off the open sight entirely and put a small ivory sight as above described, either behind or in front of the rest. This will leave room to see the globe and part of the ball above the ivory.

There are but two objections to low sights: First, they are easily hidden by snow-fall or the base of a snow-drift in a snow storm. Second, you cannot raise the trajectory much by taking what is called a "course bend." The first of these is easily obviated by carrying rifle upside down and occasionally wiping it. And the second I do not hesitate to pronounce the greatest blessing in the long run that a hunter could have conferred upon him be he tyro or Leatherstocking, whether he shoots in the mountain or on the plain, in the woods, or the open hills.

T. S. VAN DYKE.

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

NEW YORK ARCHERY CLUB.—One of the largest gatherings of archers in the United States, with perhaps the exception of the tournaments held last year, was witnessed Saturday afternoon, June 12th, on the Archery Lawn, Central Park. The occasion was the first spring field day of the New York Archery Club, which had been postponed from Decoration Day last. At one time we counted some sixty ladies and gentlemen, all shooting at one end of the lawn, and the other end of the lawn with signals marking the several distances of the American and Columbia Rounds, which were shot over during the afternoon. All the neighboring clubs were invited, and members were present from the Cedarwood Archers, Poughkeepsie, Nottingham Archers, Sherwood Archers and Lawn Club, all of Elizabeth, N. J.; Spuyten Duyvil Archers, Brooklyn Archers, Manhattan Archers and Ascham Archers, Williamsburg. Although the club has its annual prize meeting in the fall, Messrs. Watson & Pond put up three of their double rawhide bows, two for the ladies and one for the gentlemen, together with a belt, quiver and case for score book, all of which were open to all.

Miss Drangage, of the Nottingham Archers, of Elizabeth, won the first ladies' bow with a score of 230 at the Columbia Round. Miss Morton, of the New York Club, won the second bow with a score of 220. Mrs. De Luna won the belt and quiver with a score of 147.

Mr. S. H. Ipper won the gentlemen's bow with a score of 234 at the American Round.

Mr. A. B. Brezee, of the New York Club, presented at the last meeting a magnificent badge, to be known as the Columbia badge, for competition among the ladies of the club every six weeks; but a score of 230 or over being necessary to win it. This badge was shot for Saturday for the first time, but 250 not being made, it will remain without an owner until the next contest takes place, when some lady may be more fortunate and be able to wear it with honor.

The guests and members all noted the first meeting of the New York Club a success, and with hearty congratulations and expressions of mutual good will toward each other, separated to spread the growth of good fellowship throughout the archery world around and in New York. The following are some of the best scores:—

Columbia Round—Miss Morton, New York Club, 230; Miss Drangage, Nottingham, 230; Mrs. De Luna, New York Club, 147. American Round—Mr. Ipper, New York Club, 234; Mr. McLean, Manhattan, 274; Mr. Auten, New York Club, 209; Mr. Poursall,

Brooklyn, 233; Mr. Sergeant, Spuyten Duyvil, 133; Mr. Stoutenborough, Brooklyn, 144; Mr. Young, Cedarwood, 123.

A CHALLENGE TO THE NEW YORKS AND ORTIANES.—Chicago June 12th.—Editor Forest and Stream.—From present appearances "pen contests" are about the only ones that are liable to take place between the New York Archery Club and the Ortilan Archers. We, therefore, hereby challenge both of the above named clubs to a match at the Single York Round, to take place on Saturday, June 19th, at 3 P. M.; we to shoot a team of four men against a team of five from each of the above-named clubs.

Knowing how anxious both of the above clubs are to shoot, we shall consider the challenge as accepted, and proceed to shoot on our new grounds at Lincoln Park at the above specified time.

H. B. WILKINSON,

Secretary North Side A. C.

NEW YORK AND BOSTON.—New York, June 11th.—The Ortilan archers hereby challenge the Pequot archers, of Boston, Mass., to shoot a friendly match, each club to shoot on their own grounds and send scores to the FOREST AND STREAM. Match to be at either the Double American or York Rounds. Teams of six.

W. HOLBERTON.

Portland Ortilan Archers.

ROBIN HOOD ARCHERS.—The Robin Hood archers of Nyack held their annual meeting Saturday, June 5th. Reports showed the club free from debt and with seventy members on the roll. The first field day will be held Saturday, July 3d. A challenge from the Ortilan archers, of Hackensack, N. J., was accepted, the match to come off about the middle of July. The officers are as follows: President, S. L. Bendish; Vice-president, E. Merritt; Secretary, A. Merritt; Treasurer, Mr. J. A. Arnold; Lady Paramount, Mrs. J. Griswold; Robin Hood, J. O. Davidson; Maid Marion, Miss S. Crumie; Executive, C. C. Griswold, J. Hart, T. De Witt, J. Cleveland, A. Merritt and G. Crumie.

NORTH SIDE ARCHERY CLUB.—On the 4th of June the members of the North Side Archery Club, of Chicago, together with several visitors from other societies, shot the York Round upon the beautiful south lawn in Lincoln Park, in North Chicago. The grounds chosen are the most perfect for the purpose conceivable, being perfectly level and covered with a sward of thick and closely mown grass. All the surroundings of green trees, flowers and bushes, enough in themselves, were enhanced in loveliness by the blue and wrinkled background of Lake Michigan, flecked with its froth-crowned waves. A large company of ladies and gentlemen witnessed the shooting, and but for the tempest of wind which swept down the range the day would have been all that could have been desired. On account of the fierce sale it was not possible to shoot double ends, as no target could have stood for a moment with such a wind at its back. The shooting was done at six targets, three gentlemen at each target, and the high score made was the shooting was very good, considering the trying wind. A few of the scores were misplaced, so that only the following can be given:—

Names.	100 Yds.	80 Yds.	60 Yds.	Totals.
Will H. Thompson, Crawfordville, Ind.	31-32	32-31	22-34	88-362
Walter Burman, Chicago, Ill.	32-33	32-31	22-34	77-341
Forrest B. Highland Park, Ill.	21-32	32-31	18-28	82-280
O. W. Kyle, Highland Park, Ill.	24-34	32-31	18-27	71-275
J. Adams, Chicago, Ill.	18-31	32-30	12-28	62-243
E. B. Wynn, Highland Park, Ill.	18-31	32-30	12-28	62-243
C. G. Hammond, Highland Park, Ill.	15-33	10-26	17-37	48-184
N. B. Swartwout, Highland Park, Ill.	14-30	14-24	14-24	42-178
N. B. Swartwout, Highland Park, Ill.	14-30	14-24	14-24	42-178
W. S. Granger, Chicago, Ill.	14-30	14-24	14-24	42-178
Granger Smith, Toledo Ohio	14-30	14-24	14-24	42-178

* Score at 100 yards omitted.

Several other gentlemen made good scores, notably Mr. J. O. Blake and Mr. John Wilkinson, but the records were misplaced and their scores were necessarily omitted.

The occasion was a very enjoyable one, and but for a shower of rain beginning during the last half of the sixty yard range would have been without an unpleasant incident. The shower prevented two or three of the gentlemen from concluding the shooting at the sixty yards range. Such meetings, composed of representatives of different societies, should occur more frequently, as they greatly advance the pastime and are the means of the formation of true and lasting friendships. The North Side Club is growing in numbers and skill, and some of its members will be found in the highest rank among the prize winners at the grand national meeting at Buffalo. A team composed of Messrs. Burman, Adams, Wilkinson and Blake would be among the most formidable in this country.

VISITOR.

NORTH SIDE ARCHERY CLUB.—Chicago, June 12th.—Through the courtesy of the Park Commissioners, the North Side Archery Club, of this city, have been granted permission to use the beautiful south lawn in Lincoln Park for archery practice. This makes the finest ground for this purpose I have ever seen, being perfectly level, with the lake for a background, and skirted on three sides by beautiful shade trees. The club meet for practice every pleasant evening, and hold a field target meeting monthly. The club is now ready for challenges from all, and for all Rounds.

T. A. L.

Yachting and Canoeing.

ATLANTIC YACHT CLUB.

IT was natural that the annual regatta of the Atlantic Yacht Club, held Wednesday, June 9th, should have been looked forward to with more interest than common, as it was the first racing of the year among the boats of the club, and so many boats have been launched this spring that owners and the public were anxious to learn how much we had improved upon the standard of last year, both in point of speed and general qualities. Unfortunately the racing received a damper in the way of a want of wind, and what promised to be one of the finest matches ever sailed in this country, and which would have been a very pleasant evening, and held a field target meeting monthly. The club is now ready for challenges from all, and for all Rounds.

chief. She has won four first prizes and the Bennett Cup, failing to finish in the race of the Atlantic Yacht Club on Wednesday, June 9th, for lack of wind. This record has not been equaled by any new yacht, and there is apparently more in store for her whenever she chooses to show fighting colors.

The day was a fine one for racing, and the Seawanhaka Yacht Club is to be congratulated upon the entries and success of another annual Corinthian race. Our position in favor of such racing is so well known that we may be spared further remarks at the present. The excellent arrangements of the club were lived up to as usual, and the thorough manner in which the yachts were headed gives proof of the growth of Corinthian seamanship among the navy, for a few years ago it would have been a difficult matter to ship enough amateur hands to man such a fleet.

Send stamp for Catalogue.
Rifles, Shot Guns, Revolvers sent C. O. D. for examination.

THE AMES SPORTING CANNON,
MADE BY THE
Ames Manufacturing Company,
Chicopee, Mass.

THIS GUN is a small bronze breech-loading cannon, adapted to the use of campaign clubs, celebrations, yachting, signal and sporting purposes generally. The gun is made of U. S. Government standard bronze, is 28 inches long, 1 1/2 inches caliber, and weighs 20 lbs.; it is mounted on a solid cast iron carriage weighing 112 lbs. It can be readily carried in a procession by two men, and meets a want long felt for a small, convenient and safe gun. Metallic shells are furnished, which can be loaded and fired instantaneously, and by their use the possibility of fire being left in the gun is obviated. The shells are filled with a powerful explosive and fired by a U. S. service percussion cap. The gun is simple in construction; easy of operation; no exposure in loading and firing; and is the most complete breech-loading gun made for this purpose.

TRADE "BEATS THE WORLD."—MARK.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Creosote, CHARLES S. GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco in general, have been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed by the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, and no one else has the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Try them and you will use no others.

Manufactured by **GOODWIN & CO., 207 and 209 Water st., NEW YORK.**

Sleep is Prevented by Heat!!!

WESTON RAVILLENE,

USED AS A LOTION OR IN THE BATH opens the pores of the skin and soothes the nerves and allays the IRRITABILITY WHICH CAUSES RESTLESSNESS AND PREVENTS SLEEP.

Its judicious use will produce a healthful glow in the skin and REMOVE ALL DISAGREEABLE ODOR FROM THE PERSPIRATION. The acidity of the body, if not removed by free perspiration, PRODUCES RHEUMATISM AND KIDNEY TROUBLE. In fact, the SKIN BEING THE PURIFIER OF THE BODY, MUST ACT OR DISCLOSE RESULTS.

WE MOST EMPHATICALLY CLAIM THAT THIS PREPARATION ENABLES A HEALTHFUL ACTIVITY OF THE SKIN.

PREVENTS AND CURES MOSQUITO BITES.

Many of our LEADING PHYSICIANS have given this article their HIGHEST APPROVAL, but refuse the use of their names, because of the testimony of others, which testifies to them in silence where even the most beneficial results must follow their recommendation of the secret preparations.

Can be mailed to any Address. Price 25c. for sample.

Depot 351 Sixth Av., New York.

Our Alaska Letter.

SITKA, April 23d.

I TAKE advantage of a temporary cessation of bright, warm, dry, glorious weather to write up a little, for during the last eight weeks I have not been willing to stay in doors an unnecessary minute. During the winter months we had our share of unpleasant weather, but the spring, so far, has made full recompense. To-day it is raining a little; not enough to show in the rain gauge, but the contrast with the days gone before makes us willing to "sit by."

During March we had but nine days on which it rained, and fourteen on which more or less snow fell; and of the 744 hours, 493 are marked "b. c." (blue sky and passing clouds), 143 with snow or hail, and 66 with rain and 67 cloudy. No fogs. April, so far, has done nearly as well, there having been eleven days with clean twenty-four hours record "b. c." and but six in which rain has fallen during fifty-six hours, and snow fell on six hours of two days early in the month; thus, in 1272 hours, we have had but 123 of rain, 148 of snow, and the temperature has been of the healthiest.

It's time we began to get a little good weather, for we have just passed through the most severe winter recorded during forty-five years. I quote from Dale: "The thermometer showed below zero but on four, and the lowest temperature recorded was four degrees." This winter, "below zero" has been a moderate temperature, if it didn't get too far down. We have had seven degrees several times. We are improving the sunshine by doing a little shooting; there are quantities of oldwives and shublers; the grouse are beginning to report for duty, and are brought in quite plentifully by the Indians, whose desire for bits exceeds that of most of us for sport, to be earned by tramps through a country which, ordinarily rugged enough, is now piffallen with soft snow. A few mallard also are brought in by the Indians. The standard price for grouse and mallard is "two bits."

Ptarmigan have vanished, and are probably safe from even the Siwash's pursuit, way up in the mountains, sunning themselves on the snowbanks.

Very little venison is brought in, and it is worthless. The Indians are all busy fishing, and all along the beaches are sprinkled with shanties, where the squaws and chil-

dren are busy smoking and drying halibut, herring and herrings' eggs, the men being away in their canoes providing. There are any number of banks, beginning about five miles from here, where halibut of most excellent quality and enormous size are caught. I had wondered how the Indians managed to handle, in their rather crank canoes, great fish weighing sometimes three hundred pounds, but have learned. They do not fish from the canoes, but set lines which are attached to floats—generally bladders—to which are fastened little flags on staffs. Among a group of them the fisherman watches, and when the hooked fish has exhausted itself towing the float, he is secured.

The herring are here in force. These are caught by means of poles and boards, armed with sharp nails at an angle. These are thrust under the schools, which swim about two feet deep, and the fish are gaffed out, "hooked up," as the process, slightly altered in details, by which pike and suckers are in our rivers caught in spring, is called. The herring spawn in salt water, and their favorite places are the quiet bays along the shores, and there every kind of kelp and seaweed is crusted with the spawn, and as the tide goes down and one walks along the beach, every step crushes myriads. The Indians do not collect the eggs deposited on the seaweed, but plant at half-tide marks rows of branches of cedar and balsam, which, in a tide or two, become covered with spawn; these are replaced by others, and hung up to dry. The spawn is eaten dried, raw and cooked in various ways, and is very palatable in either.

Into the bays, where the spawning occurs, a number of small fresh water streams empty—a number unusually large just now, as many come from melting snow banks—but I noticed no bushes or spawn in the immediate vicinity of the streams, and although I examined carefully, saw no signs of herring running up the fresh water streams. The pools and rifts of Indian River are as clear as crystal, and not a fin of herring or trout was in either.

We are getting just now plenty of the fish called cod here, and I am in the minority when I take issue with the nomenclature, and again when I pronounce the redfish, which is now plentiful and good, and weighing, in some cases, thirty to forty pounds, to be a "Norway haddock." Clams, which during the winter added much to our happiness, are now seldom in the market, whether it is because of any let up in their value, or because most of the old klootheen (women) who in winter gather them are now busy with the less permanent herring, I cannot say. Alaska clams are different from any that I have ever seen elsewhere. Among our others there is one they had bred on Quil Creek, whose earliest reminiscences are of clams, which grew both in his back yard and front garden, so I referred to him for information, and asked him "whether the clams here were *Calista convexas* or *Mya artharinas*." I will spare you the first part of his reply, but after a bit, during which he obtained control of himself, he informed me that they "seemed to be a cross between a soft-shelled clam and a scallop, they had the head and right-cap of the former and the body and shell of the latter." I know that they are very delicious, and with a flavor peculiar to themselves; have just about as much of the genuine clam flavor as do the "little necks." Besides clams we have very good mussels and scallops, and the Siwashes indulge in boiled squids.

We get no crabs in the immediate vicinity, but in summer very fine ones are brought from a bay about fifteen miles from here. Up the country somewhere there must be some very large ones. I have procured from Indians crabs of great size, the largest is of dimensions as follows: length 5½ inches, breadth at intersection of nippers ¾ inches, nippers, or mandibles, or whatever may be the name of the biting apparatus, longer than the head and right-cap of the former, larger than 2 inches, armed with, in each side, two teeth, larger than those of a man. These claw-legs are studded with rows of projections one-quarter of an inch high.

I have procured also from the Indians several pieces of two kinds of coral, which they say were found on the adjacent shores. I have sent them to Prof. Baird for identification.

Neither salmon trout nor brook trout have as yet put in their appearance, and it is any stream we know of. An Indian woman last week had a small string of the latter, but I couldn't find out where she got them, and you may be sure I tried hard enough. We have seen very few wild geese this spring: last fall they flew over in great numbers going to the South, but they seem to have staid there, or gone back by some other route. There are lots of robins here now, but I think that they are merely transients; they don't nest in this vicinity; I saw in flocks last fall and now are returning probably to the Yukon neighborhood, where Dale found eggs.

The spring is very backward in one respect; ordinarily by this time the lower mountains are clear enough of snow for prospecting, but this year the miners, of whom we have quite a colony, are in the dumps. They have come here to hybernate, and have about used up their stakes, and the non-expensive amusements of ball playing and sitting around on the rocks whittling are about all

they care to indulge in. I wish right here to speak a good and true word for them. During the whole winter the miners have conducted themselves in the most orderly and respectable manner; they have not evinced a particle of opposition to any step which has been made necessary for the better government of a few, who are miners only in the sense that fishers are fish, viz., in living on them; and they have given their willing cooperation in carrying out such simple laws as we have found it advisable to establish from time to time.

I think that before long there will be a "rush" for the Chilkat country, where it is reported that placer work will pay. Here we have nothing but ledges of auriferous quartz, that require money and time to develop. Up to last fall the Chilkat Indians have objected strongly to the white men penetrating their country, and during the winter they opposed the entry of Mr. Muir and a missionary—and in so doing were about half right, but reports have come in lately that they would welcome the whites; and to-day "Sitka Jack" returned from a trip there on which he started last fall, and tells me that the Indians will be glad to have the white men come. I was confident when I let this party of semi-civilized Siwashes go up there that they would plant a seed which would eventually produce a good crop, and so it has proved; but I've been roundly abused by the missionary organs because the crop did not follow immediately the planting. As a matter of course, Prof. Muir and party, following so close on the trail of Sitka Jack, found it more or less ornamented with intoxicated Siwashes. It was the native way of welcoming Jack, and if that revered and scientific party had had a little savvy and waited a bit they would have found that Jack's liquor would have run out, especially as according to their report Jack got all the Indians between here and Chilkat drunk and kept them so, and then had enough left to fill up the two Chilkat villages with liquor, which "flowed like water." Of course, considering the source, the published story, from which the above is quoted, can't be exaggerated, but if it isn't Jack's canoe must have had tremendous carrying capacity.

Now the truth is, that is assuming that Jack tells it, no "whiskey" was carried at all—that would have been unlawful—but Jack owns that he did carry a barrel of molasses, and that is strictly in accordance with law. And that barrel of molasses may have been instrumental in opening the Chilkat region to our miners. Undoubtedly Jack, when it gave out and he got sober, mourned for more, and wished himself back among the white men from whom all blessings of that sort flow, and those who mourned with him its early demise believed in the tales he told them of the good that the Sitka Indians were receiving from the whites. Jack himself made over \$300 last summer at the cannery, and the suit of clothes which he carried with him, starting with it on him and probably entering all villages so arrayed, did more toward converting these primitives than would a bushel of tracts and a cord of Bibles, a blue frock, brass buttons and colonel's stripes, a navy cap, with gold band and decorations.

If the miners start for the Chilkat, and several tell me they shall, and get well treated, and strike it rich, that barrel of molasses will become as famous as the "barrel of money" and "barl of apple sass" of political and theatrical renown.

Seriously, I believe I did right, and that the visit of my trained Indian has had an excellent effect upon his wild friends, and that during the summer a great deal will be done toward developing the northern region, where it is reported there are good placer indications. A little schooner is now outfitting to start.

April 28th.

The first salmon of the season made his debut to-day, that is, if he is a salmon, and not some species of salmon trout.

Five of these beauties, from thirty to forty inches long, came alongside to-day in a canoe paddled by a wild looking and awe-struck Siwash, who with his crouching klootheeman (wife) and papoose in the bow, gazed upon our guns and us with an expression that I feel sure to be unfamiliar with the sight. He was a stranger, and was taken in, for he took willingly the two bits each that were offered them for the fish, and no Sitka Siwash but would have asked us treble the price. Through an interpreter I interviewed him. He had spent the winter (and that means the last seven months) on a shanty on the western shore of Kruzoff Island, from which Mount Edgecumbe rears its eternally snow-clad peak, and he told me that he had walked up among the foot-hills of that mountain range there was a little lake, from which there flowed into the Pacific a small stream, and that from the headwaters of this stream he had hooked these fish, and each by the gash of the gulf in its silvery side confirmed that part of his story; and that these fish staid all winter in this lake, and ran down the stream in spring.

Now, Mr. Editor, if that Indian told the truth, and the interpreter ditto, either this is not a salmon, or it is a salmon with very peculiar habits. Before cooking, the flesh of this fish was as

red as that of the reddest fleshed brook trout. Frying for breakfast and boiling for dinner took from it every vestige of red tinge, leaving it almost as white as halibut. Three of the five were females, with well developed ovum.

I would seek that stream, and would capture some of these fish, but for a reason: Among my curios I have a necklace, not very pretty, but, to say the least, unique; it is composed of, alternately, the incisors and molar teeth of bears and beavers. The latter I should not object to watching build their dams, but I do not care to observe too closely, when armed but with a fish-rod, any of the relations of those who furnished the larger portion of my necklace, and lots of them live in the immediate vicinity of this stream. It may be true that "bears when not molested or irritated are harmless," but I am the owner of a bear, a small one, who in some respects resembles Artemus Ward's kangaroo; he is "an amorous little kuss," but he gets irritated mighty easy, and when he does it is only because his teeth are as yet not more than one-twentieth the size of those on my necklace, that I don't have considerable cause for irritation myself.

Now, my dear friend, I am sure you were born about the 1st of March. Wasn't that rather early? What do you do with this brute when he grows up is a puzzle to me. Some of my friends propose that some day we shall take him ashore, let him run, and several of us provide a foundation of truth for the killing-of-a-bear-in-Alaska-story, which we shall have to tell when we get home—viz., utilizing "Joe" with our rifles. PISCICO.

FRASER RIVER SALMON.

BY MOWITCH—NO. III.

Concluded.

SALMON spawning in different places may be fairly accounted for in this way: About the same time each season, salmon seem to be actuated by the common desire to proceed to the spawning beds, and the ova are developed to a greater degree in some individuals than others, although each variety of salmon starts from the sea at about the same time. As the ova become fully developed and matured, a branch off to the various tributaries then at hand and perform the act of spawning, while those not ready to deposit their spawn keep on till such time as they are ready, and so on till all have completed their allotted task. This, when viewed in the proper light, shows the wise provision of nature in many ways, but more especially in this respect. Did salmon all leave the sea at the same time, with the ova in the same condition, they would necessarily be compelled to resort to the same place, which would not afford the necessary room for the countless thousands—millions would perhaps be the best term—and overcrowding would frustrate and render nugatory the purpose sought to be accomplished.

That grilse spawn, I fully believe, not by my own knowledge, but from the testimony of many intelligent fishermen who are confident on this point; and certainly if they do not, and these supposed grilse are mature salmon, the different sorts of salmon frequenting these waters must be many more than commonly believed. There can be no doubt that fish of a small size, in every respect resembling grilse, are frequently caught full of spawn.

There is but one mode of capture of salmon by the whites, that is by drift nets varying in mesh from five and three-quarter to eight inches. Traps and weirs have been tried without any great success, and, financially speaking, proved a failure. The principal modes of capture practiced by the Indians are by means of scoop nets, used at the heads of eddies; traps of various construction. Stripped some of the most ingenious and ingenious in their construction, and always detachable from the spear-pole, are made by different tribes in various forms and shapes, often very primitive in character, but very effective in use. Both day and night are resorted to account in the salmon season. In spearing, a pitch-pine fire is used at night, as is the case in other parts of the world. The Indians of Babine Lake (about 120° long, 126° west), have a most ingenious way of capturing them with as little trouble as can well be imagined: A dam is built across a suitable stream, on the upper side of which, from bank to bank, a canoe or canoes, as the case may be, are placed lengthwise across the stream. The gunwales are depressed slightly and allowed to catch under projections of the upper side of the dam, so as to keep the canoe in position and prevent it from being carried over the dam. The Indians sit leisurely down on the banks of the stream and smoke the pipe of tobacco or kinnikinnick, whichever they may have the most of, confident of a rich return for their scanty labors. The results are as follows: Salmon arrive at the foot of the dam, and, instead of leaping, depositing themselves in the canoe instead of the water, and with their heads up, as they do for the noble red man's purpose he tows it ashore, empties it of its live and kicking cargo, and replaces it for another supply. Then comes his patient squaw, who proceeds, with considerable skill, to split, dress and dry the fish for their common support during the next long and dreary winter. No salt is used in the drying process, the fish usually keep remarkably well. The salmon storehouses are usually placed throughout British Columbia in the branches of trees, thirty to forty feet and even higher from the ground, and are reached by means of a notched pole, which makes an admirable substitute for a ladder. Many of these houses are very large, capable of storing many tons of salmon, and appear to be joint property of the tribe, depositing themselves in common. The Indians inform me that the reason of placing these houses so high is that by this means the dried fish is kept free from the ravages of blow and other flies, and assign no other reason for this custom. Many persons allege that it is to protect the salmon from dogs and other animals; this is an evident error, because ten feet is ample a protection from dogs, and a few feet would be, and as for climbing animals—such as muskies, martens, weasels, etc.—a moment's consideration will convince you that coons, martens and the like are generally as profi-

cient in climbing notched or other poles as are Indians. All the salmon of the river are perfectly harmless as regards poisonous effects to any animal. I have known of no injurious results arising from the flesh being eaten raw, boiled, fried, roasted or dried, and it is eaten with avidity by dogs and all other carnivorous animals when obtainable. In its dried state it is sometimes fed to Indian ponies, in seasons of much snow and scarcity of their usual fodder, with no noxious effects or objectionable results. On the other hand, from the most authentic and reliable information, the result of long experience and repeated experiments, it appears that *Salmo ginninal*, the Chinook or Columbia salmon, when eaten by dogs, under some circumstances, is as deadly to *Canis domesticus* as would be a dose of strychnine, although not as speedy in its results. This feature I do not attempt to account for, but leave it to others with the matter under their immediate observation. Now, as regards the taking or non-taking of a fly, I do not think that sufficient data are at hand to charge the noble *Salmo pacificus*—to use a generic term coined for the occasion, intended to include varieties peculiar to the Pacific Coast—with an offense of such magnitude. Perhaps it will be well to refer to the story told respecting the scion of nobility who, sent out for the species of fly he was not to touch, and the natural resources of Oregon, at the time of joint occupancy of said territory by the British and American nations, condemned the whole country as comparatively worthless—not worth the trouble of setting up or having a fuss made about, and perhaps more graphically than elegantly expressed his disgust by the statement "that if the whole country was not water, I don't care, even the salmon would not take a fly." Without touching the Columbia, of which river I confess to be comparatively ignorant, I am willing to admit that salmon will not take a fly in Fraser River; but this, if from no other cause, might fairly be attributed to the extremely muddy character of the water of the stream. A salmon could not see a fly, at least in the lower part of the river, were it within six inches of his nose, but I do not believe that they have been fished for enough to let us know whether they will or will not take a fly in the tributaries or clear water streams. One gentleman of my acquaintance (a Nova Scotia and New Brunswick fly fisher) showed me a salmon which he stated he caught in the Coquiam River with a fly, and I have the fullest faith in the veracity of his statement. You may ask how it is that in a country so long known as the best, such a question has not been fully tested and set at rest, pro or con. I will endeavor to explain: In the first place every stranger of fly-fishing proclivities is usually met upon his first inquiry by the assertion of some wisecracker or another who perhaps never saw a salmon fly or rod, that the salmon will not take a fly, and there is no use in trying. The latter assertions are usually made by a man, and perhaps he accepts the situation, and never attempts to prove or disprove the correctness of the statement. Again, if any one does try he probably does so using the flies and selecting the season in accordance with his former experience, derived in other countries, and after a few failures gives it up; but the principal or main reason is probably this: The little value attached to the salmon here prevents anglers from making it a fish of monetary or intrinsic value; and although I would not by any means charge salmon fishers with being mercenary wretches, still I may be pardoned for the belief that if salmon could be purchased on the Restigouche, Godbout or similar rivers for five cents a piece, Messrs. Abbey & Co. would sell less six-strip bamboo rods, use the same localities for fishing, and their fish would be cheap or easy of capture. People as a rule do not amuse themselves by shooting chickens in their own poultry yard, while I can readily imagine wild jungle fowl shooting to be an agreeable pastime. I was fond of jack fishing when a boy in Ontario, and many a night have I spent at it, robbing myself of the sleep I ought to have taken, to enable me to do my work properly next day. Even now, when I am a man, I find it very tiring, although having every opportunity of doing so had I been inclined, and seeing scores of salmon taken nightly by the Indians within a gunshot of my door. I was also fond of trolling with a spoon, and I practiced it to some extent in salt water here, catching as many sometimes as a dozen fine salmon in an afternoon, but the best part to prevent me from doing it was my disgust when after bringing my catch home, and finding for my use, I had to boil the others for my dogs or throw them away. The pleasure of being able to send a valued friend a present of a fine salmon, which is appreciated; would by some be thought to be a huge joke; while others would feel that an insult or slight was offered and intended at being the recipient of such a present. So strangely do circumstances change cases in this world of ours. These reasons may account in a great measure for the apathy existing in respect to a sport so highly valued under a different state of affairs.

Fearing that, if extended any further, this paper may get tedious, I will close by saying that, to do a stint of ichthyology, the salmon of the North Pacific present a field perhaps not equalled, certainly not excelled, by any other part of the world; while to the Canadian Department of Fisheries the establishment of proper hatcheries is a subject worthy of its most serious consideration, as not alone applicable to Fraser River, but to almost every stream emptying into the ocean on the seaboard of "The Pacific Province of the Dominion." *New Westminster, British Columbia.*

WINTER PELAGE OF *LEPUS CAMPESTRIS*.—Editor *Forest and Stream*.—Statements respecting the color of *Lepus campestris* in your recent issues are getting so decidedly "mixed" that I beg a little space in your columns for an explanation of some of the apparently contradictory reports. As often happens in such cases, the truth is not all on one side. The "jack rabbit" of the plains does turn white in winter, and it does not, according to the latitude of the locality. From the plains of the Yellowstone to those of the Saskatchewan, or to the northern limit of the habitat of the species, *Lepus campestris* turns white in winter, while in Kansas, in Southern Nebraska and Southern Wyoming it, as a rule, does

not, or undergoes only partial change, as is the case generally over the belt of territory between the areas named. Mr. Guild's statement (see *FOREST AND STREAM* of June 10th) is unquestionably correct for the portion of country to which it relates, as is, of course, your own for the region further northward. In perhaps most species of mammals in which the pelage turns white in winter, the amount of change varies at different localities, the whiteness increasing in purity from the South northward, as is well illustrated in our common varying hare, or "white rabbit" (*Lepus americanus*), and in the ermines. In these species the change at the extreme southward is often only partial, while many individuals do not undergo the change at all. In *Lepus campestris* the winter pelage, even at the northward, never becomes so intensely white as in *L. americanus* and the Arctic hare, the brown of the under fur being visible on the slightest disarrangement of the pelage, while there is usually a more or less brownish area on the middle of the back in even the whitest examples. As these points are noticed in some detail in my "Monograph of North American Leporidae" (North Am. Rod. Coates and Allen, pp. 297, 304), it is unnecessary to devote further space to the subject here. J. A. ALLEN.

Cambridge, Mass., June 11th.

THE SNAKE KILLER.

THERE is a bird, I know not if it has been described by naturalists, inhabiting the southern portions of California and Arizona, popularly known as the "Road-runner." This bird is a little less in size than the eastern partridge or quail, and has the same general appearance, but with a long slim tail like the magpie; bill, black and straight and about one-half longer than that of the common jay; solitary in its habits and rarely two are found together. Its ordinary way of escape from its enemies is by running, using its wings to aid it after the manner of the ostrich. A horse must be put to it to drive one of these birds from the road, when it chooses to use the road ahead of it, instead of running out to one side to let the horse or team go by. It largely affects the arid plateaus or mesas of the region named, where the largest number of the species of cacti abound, and where, lying in the sun asleep, or watching for its prey, is found the large yellow rattlesnake, quite too plenty for the nerves of this eastern traveller. One of the varieties of cactus, pronounced by the native Mexicans as if spelled "chayer," drops every year a burr—egged shaped, and armed all over with long sharp needles. When this burr becomes dried by the fierce rays of the sun the needles pierce the flesh on coming in contact with it. Indeed it is stated by many who have tried the experiment that the burr with its hundreds of needles, or driving pins, is moisture from the hand, when placed near the eye, that it will of itself move and pierce the flesh. In the region where these burrs are scattered over the plain, our bird finds a rattlesnake asleep, perhaps, or coiled at rest. He runs silently and with speed and seizes these burrs, and quickly makes a circle of this impassable material around the snake. This done he seizes a burr and tosses upon the reptile. The sharp barbs pierce the now exposed back of the unfortunate sleeper. Flinging its body about it strikes every nerve upon the wall of burrs and becomes literally covered with the horrid thorns. Thus tormented, maddened, too much loaded down with the burrs for flight, the snake bites itself repeatedly and soon is dead. And our bird approaches and with no danger to itself, tears and eats the snake, and only leaves a heap of burrs. The burrs made by this bird are seen everywhere in the cañon districts of Arizona. I have named the bird the "snake killer" from its habit of hunting the rattlesnake.

It was a matter of surprise to me on shooting one of these birds, to find that it belonged to the flesh-eating class, instead of being seed and grain eaters, as its general appearance would indicate. I have seen many of these birds, but have never heard of any of them crying. It seems to be silent and solitary, as I have never discovered more than two in the same neighborhood.

GEO H. WYMAN.

The bird referred to is the ground cockoo chaparral cock, *Paisano* or *Faisano* (*Geococcyx californianus*), a not very distant ally of the cockoo. Its habits of feeding on snakes is well known to naturalists, and the supposed practice of surrounding its sleeping prey with the fruit of the cactus has already been described. But is it certain that these circles of cactus fruit are made by the bird, and for the purpose mentioned?

SWALLOWS, BATS AND BEDBUGS.—The explanation offered by Mr. R. M. Conway in regard to bedbugs on swallows is very interesting, but rather misleading, inasmuch as he seems to take for granted that he has solved the problem, whereas he has thrown but a very feeble light on the subject. The object of all inquiry is, I suppose, to learn as near a true knowledge of the subject in hand as possible.

Mr. C. may not be aware of the fact, but bedbugs do occur on swallows, as will be testified by any close observer.

As for this parasite on bats, I think no one would deny their presence. I have found them frequently, but on quite a number of lives (I have seen *subulatus*) examined by me, and I did not find a single bedbug. As I have had no experience at the South, I know nothing of the habits of the bats there. But as no bat was ever seen or known to hang in the house or barn referred to in my article of May 6th I am led to conclude that they were not the conveyers of the bedbugs. And if they had been, this would not explain why the bugs are found on the barn and swallows, and not on the young swallows were hatched. The bats were seen for a month or more prior to the time.

Bats are not very numerous in that locality, so I cannot think that they hang from the trees, and thus infest them with bedbugs, which afterward get on the swallows. Every year, swallows, bats and bedbugs are as numerous as ever, in their season; but the parasite is as

longer found in the house. As far as it goes, I think the theory advanced in my first article will hold.

The question is, do the bedbugs come from the bass woods, (I hold that they do), and if so how do they get there? W. P. M.

THE BLUE GROSBACK IN MASSACHUSETTS.—On May 20th Mr. Gordon Plummer, of Brookline, Mass., shot in that town a beautiful specimen of the adult male blue grosbeak (*Contopus caprimus*). This is believed to be the only specimen of this species ever taken in Massachusetts. None previous to this have ever been recorded. We have the record of one specimen only, taken in New England, which was shot in Maine nineteen years ago, and is now in the possession of Mr. Geo. A. Boardman, the eminent ornithologist.

THE LONG ISLAND INSECT PESTS.—*Boston, June 22d.*—I noticed, in your issue, an inquiry from an aggrieved correspondent in regard to the destruction of the trees of his section by June-bugs, as to "what he should do about it." Let him place half a dozen tubs of water around his yard near his favorite trees, sink a keg in each till nearly level with the water, and place thereon a lantern. If the bugs are very numerous he can take a hogweed and a cedar post. Attracted by the light they bump their heads against the glass and drop into the water, and if oil is dropped on the water, the next morning you will have a bushel, more or less, of the most demoralized animals that ever walked on six legs—or more. The oil clogs up their spiracles and suffocates them, while they can't swim worth a cent anyway. Cooperation is the death of bugs. J. P. TRU.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN FROM MAY 25TH TO JUNE 1TH.—1 horned lizard (*Phrynosoma cornuta*), 1 racoon (*Procyon lotor*), 1 European hare (*Lepus europaeus*), 2 woodchucks (*Arctomys monax*), 2 red foxes (*Vulpes fulvus*), 1 night heron (*Nycticorax nycticorax*), 1 bald eagle (*Haliaeetus leucocephalus*), 1 mocking bird (*Turdus polyglottus*), 1 alligator (*Alligator mississippiensis*), 1 opossum (*Didelphis virginiana*), 1 pigeon hawk (*Accipiter fuscus*), 4 spreading eagles (*Heterodon platyrhynchos*), 1 hog-nosed snake (*H. platyrhynchos*), 5 black snakes (*Basiscanion constrictor*), 2 water snakes (*Tropidonotus fasciatus*), 2 water snakes (*Tropidonotus sipedon*), 1 king snake (*Ophiodon tereticauda*), 1 mountain black snake (*Coluber obsoletus*), 2 timber snakes (*Agkistrodon contortrix*), 1 water snake (*Agkistrodon aquiliformis*), 1 garter snake (*Eutaenia arctica*), 1 garter snake (*E. sylvatica*), 1 indigo snake (*Spizella obsoletus*), all presented. 1 Virginia deer (*Cervus virginianus*), 1 zebu (*Bos indicus*), 1 fallow deer (*Dama vulgaris*), 4 prairie dogs (*Cynomys ludovicianus*); born in the garden. N. H. NAPP.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING JUNE 15TH.—One black snake, presented by Mr. J. Frazer, New York City. One horned gull (*Larus argentatus*), presented by Mr. D. W. Lubring, New York City. One Virginia cardinal (*Cardinalis virginianus*), presented by Mr. F. B. Tighman, Eight menobranchi (*Menobranchia lateralis*), presented by Prof. Burt G. Wilder, Ithaca. Two red breasted toucans (*Ramphastos dicolorus*). Two military macaws (*Ara militaris*). One flamingo (*Phoenicopterus ruber*). One spider monkey (*Ateles alata*). One bush monkey (*Colobus cynceus*)—all purchased. One fallow deer, 2 timber snakes (*Agkistrodon contortrix*), 4 water snakes (*Agkistrodon aquiliformis*). Four white swans (*Cygnus albus*). Two black swans (*Cygnus atratus*)—all born in the menagerie. W. A. CONKLIN, Director.

Fish Culture.

—Address all communications to "Forest and Stream Publishing Company, New York."

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

NO. VII.—FISHWAYS.

GERMANY and America are the only countries which make any great display in fish culture, if we except Egypt, which has a passing knowledge of the fish and a very little apparatus. The limits of fish culture as regards apparatus does not seem to be clearly and sharply defined, or at least understood, by all alike; thus: in America, fish cultural apparatus is understood to include only hatching implements and their accessories for gathering spawn, feeding fry, etc., and the tanks and appliances for transporting living fishes, excluding fishways or fish ladders. In Germany, on the other hand, fish culture, while in America the latter are included and transplanted apparatus is, by the classification of the awards at the Fishery Exhibition at least, placed in the list of apparatus for bringing fish to market. The limits of fish culture are hard to define; so imperfectly do they blend into natural history, protection, food resources and other questions of interest that a fish culturist of the broad general nature must have a passing knowledge of all those things, including geographical distribution, protective laws, fishways, anatomy, classification and nomenclature, as well as to be conversant with the approved forms of hatching apparatus and the character and treatment of the eggs of the different fishes which come within his province; therefore, by an elastic interpretation of the term fish culture, perhaps fishways may be admitted within its meaning.

Europe is not profuse of devices for aiding fish to ascend obstructions in the streams, most of the models shown being the old fashioned ones, having plain partitions at right angles, or merely a series of pools arranged on a slope, whereby the fish leap from one to the other after the fashion of the original Scotch or Irish fish ladders; and in this connection it may as well be stated that the oldest salmon ladder known to the writer was built in Scotland, in 1826, a description of which will be found below among the models exhibited in the English department. A tour through the Exhibition in search of fishways reveals the fact that but three countries make any display of them, a circumstance which leads one to suppose that the other countries have nothing in this line worth showing, and, judging from the known literature of fish culture, it is much to be doubted if the question of the passage of fishes over obstructions, natural or artificial, has been made a subject of special study outside of Great Britain, Germany and America, where it has of late years received a large share of attention as one of the

means to be employed to preserve the fishes and increase the food resources of the respective countries.

ENGLAND.

The models in the English department are all from the Museum of Economic Fish Culture, at South Kensington, and are in wood and plaster, being apparently made without reference to scale, and are as follows:

Model of fish pass at Deunton Weir on the Leith, Perthshire, built in 1826. A gradually widening sluiceway with the explanation:—

Length of ladder, 250 feet.
Width at top, 9 feet.
Width at bottom, 40 feet.
Gradient, one foot in twenty-seven.

This way has projecting partitions reaching nearly across, with openings on alternate sides, and the question arises why the way is made wider below when the water passes through openings of the same size all the way down.

Model of fishway at Warkworth, on the Coquet, Northumberland, built by J. Tait, Esq., agent to the Duke of Northumberland. Partitions running all the way across, their tops sloping upward, having a notch in the middle. The flow of water is regulated by a movable section at the upper end, which is hinged at its junction with the other portion, allowing it to be elevated or depressed according to the state of the water.

A model is shown of a fishway constructed on a principle either unknown or at least unpracticed in America, called by Dr. Buckland "a diagonal board on weir," in which the face of the dam is made sloping (inclination not given, but about 25°), and a board is set up edgewise running diagonally down its face, throwing the water to the right or left, as the case may be, the fish being expected to rush up by the side of the board, which would seem to have the effect of deepening the water on the face of the slope and also retarding it to a slight degree.

A catalogue of the English exhibit has been promised, but at present writing, in the sixth week of the Exhibition, none has appeared, and as there are only very meager descriptions upon some of the articles, we must guess at some things, and as on this model there are the following inscriptions: "See Photo. of Durham Weir," and "See Fishery Reports, p. 44, 1870, and p. 36, 1869," it is perhaps to be inferred that a fishway has been built upon this principle, but not having access to the reports mentioned, at present, it is impossible to state this as a fact.

Buckland's fishway. This is partly on the principle of the above, having two boards, "flash-boards," if they may be so called, which converge and direct the water flowing down the sloping face into a sort of funnel. The face slopes at perhaps an angle of 45°, and these "flash boards" are at about the same angle with the crest of the dam. At the foot of the sloping face is a pool formed by a semi-circle of large rocks cemented into a wall, which gives the salmon a chance to start, while below the wall is the trunk of a tree thrown across to form a sort of lower pool and deepen the water around the rocky basin.

Model of a fish pass turned upon itself. Original at Tavistock, in Devon; dam six feet high; a succession of pools; reference to Fishery Reports 1869, p. 26.

Model of pass built in 1871, on the Severn, at Penarth, near Cardiff. The dam is a succession of pools with notches on alternate sides; height of dam, seven feet; difference of level between the pools, ten and a quarter inches.

Buckland's ladder. Model of one on the "Stour," Canterbury, said to work well. A succession of pools made by removable partitions sliding in vertical grooves; the bottom of the way being level, the upper pools are deep.

Model of Markworth dam, on the "Coquet," the property of the Duke of Northumberland. On one side of the dam is a fish trap with sluice gates, necks, etc., for taking trout, and a fishway upon the other. This is leased by Mr. W. R. Pape, the gun-maker, and the label tells us that in four years there were 131 tons of bull-trout taken here. (See Fishery Reports 1873, p. 8.) The ladder is made by partitions running up the dam, the height being less than the other, causing the largest flow to be made on alternate sides.

"Ladder within a ladder." Mr. S. Bateson's plan, at work near Golspie, Sutherland, Scotland, over a fall of sixty feet. (See Report, Scotch salmon ladders, p. 131.) A series of steps having on alternate ends a double step, or, as its name suggests, a smaller ladder or easier way within the greater one, which serves to break the force of the water.

GERMANY.

Herr von dem Borne, Berneuchen, exhibits the following:—

Model of Brackett's fishway (American) in tin.

Model of McDonald's fishway (American) in wood.

Model of Shaw's fishway (American) in wood.

Model of fishway with partitions making deep pools, the water flowing through a hole in the bottom of each partition instead of over top.

Model of old style fishway with alternate projections.

Model of above doubled to return near the dam.

Model of fishway with alternate projections, those on one side being at right angles with the sides of the way, and those on the other slanting up stream at an angle of 45°.

The Royal Prussian High Bailiff (Landroste) shows a working model of the salmon pass near Osnabruck, on the Ems, at Haneken, in Holstein, having partitions running across with notches on alternate sides.

Mr. Carl Schuster, Freiburg in Baden, has on one of the above plan, turned on itself, and a few brook trout four or five inches long in it, which appear contented to remain in the deep pool at the bottom and breathe the well oxygenated water which comes to them as they crowd to the surface to get the larger aperture to receive it. This model is of tin, ten feet in length, if straightened, and is one foot in width; the bottom being covered with gravel.

In the collective display of Thuringen (the district of the Thuringian or Hercynian Forest) is shown, by the Fish Cultural Society of Ohrdruf, a model of McDonald's (American) fishway, labeled "the latest model. Cr. Schramm," but no acknowledgment, leaving the observer to suppose that Mr. Schramm was the inventor.

Mr. Heinrich Ruesamen, trout culturist at Welschendorf, near Bad Ems, has a model of the old style of

way, with the alternate projections and the improvement of having the bottom covered with boulders and big stones as well as gravel.

The Fish Cultural Society at Heilsberg exhibit a fishway labeled "for small brook trout." It has partitions running across, with a round hole in the bottom of each. The fall in this model is one foot in two, thereby causing a doubt as to its being made on an exact scale. No particulars are given as to the height of dam overcome, or, in fact, whether it is an actual model of an existing fishway or not, or if it is. If the former, it would be interesting to know the height, etc., as well as the size of the fish which can climb so steep a staircase.

AMERICA.

Considerable ingenuity has been expended upon fishways in America, and most of the models exhibited by the United States Fish Commission were made by Mr. Charles G. Atkins, of Bucksport, Me., to a definite scale, which affords the student all the information as to height, length and fall or inclination. They are all made in pine and coated with shellac, making a very attractive collection, which is much admired, the only exceptions being the "McDonald" and the Shaw fishways, which were made and sent by the inventors themselves. They vary or are divided into three classes, according to genera, as "spiral," groove, inclined, etc., and again into species, as, "inclined fishways with steps," and those without. First, we have

"Groove fishway." Model of Fishway. James D. Brewer, inventor, Muncy, Lycoming County, Pa. In this fishway the water runs in a zigzag groove, which breaks its force without the formation of eddies. Patented.

"Box, step or pool fishways." Model of fishway. James D. Brewer, Muncy, Pa. Patented by Daniel Steck. In this the water is retarded in its descent by means of transverse sloping floors.

"Inclined ways without steps." Model of old Pennsylvania fishway. Built at Columbia, on the Susquehanna River, in 1866. Designed by James Worral. Scale, one eighth of an inch to the foot. C. G. Atkins, Bucksport, Me. Plain chute.

Model of old Pennsylvania fishway. Built at Columbia, on the Susquehanna River, in 1873. Designed by James Worral. Scale, one-eighth of an inch to the foot. C. G. Atkins, Bucksport, Me.

"With partitions at right angles." Model of rectangular return fishway. Scale, one-fourth of an inch to the foot. C. G. Atkins, Bucksport, Me.

Model of the fishway over the dam at Holyoke, Mass., on the Connecticut River. Patented by E. A. Brackett, Winchester, Mass. Scale, one-eighth of an inch to the foot (1-90). Model by C. G. Atkins. A submerged piece of cob-work, surmounted by a grating, serves to turn the fish into the fishway. It carries a column of water two feet wide and two feet deep, which reaches the bottom with no perceptible velocity, the current being less than two miles an hour. Height of the dam, thirty feet; length of the fishway, 400 feet; the incline, one in fifteen. The lower end is turned upon itself for a short distance.

"With partitions placed obliquely." An adaptation of Foster's plan. Model of one built at Penbrooke, Me. Designed by C. G. Atkins; has partitions running partly across and sloping slightly upward.

Model of Foster's fishway. Invented by H. H. Foster, East Machias, Me. Scale, one-fourth of an inch to the foot. Same as the above in arrangement, except that the partitions have a sharp inclination up stream.

Model of oblique fishway. Invented by Alfred Swazey, Bucksport, Me., in 1876. Scale, one-fourth of an inch to the foot. In this the one partitions run entirely across, but are lower on alternate sides.

Model of the fishway at Lawrence, Mass., on the Merrimack River. The Brackett plan of partitions; foot turned on itself for a short distance.

"With rectangular compartments." Fishway designed by Everett Smith, civil engineer, and Commissioner of Fisheries of the State of Maine, Portland, Me. Scale, 1-33. A long sluice leads the water down stream to the head of the fishway, where it is reversed, having its foot at the head of the fishway.

The ordinary semi-partitions from alternate sides are divided by longitudinal ones into squares, one of which in each section is covered with gravel, while the alternate one is bare.

Model of rectangular compartment fishway on the inclined plane system, in an extended arrangement. Scale, one-half of an inch to the foot (1-24). C. G. Atkins. Turned near the foot.

"Spiral fishway." Model of Pike's spiral fishway, devised by Hon. E. G. Pike, of Connecticut. Scale, one-half of an inch to the foot (1-24). C. G. Atkins. In this way the partitions are very long, and run from opposite sides.

Model of rectangular compartment fishway on the inclined plane system, in spiral arrangement, devised by Charles G. Atkins, of Bucksport, Me., in imitation of Pike's spiral fishway. Scale, one-half of an inch to the foot (1-24). C. G. Atkins. Showing the great economy of space and material effected by the spiral arrangement. Further advantages of the spiral arrangement are the facility with which water can be admitted at different heights of the river, and continuity of the outlet to the dam secured, so that the fish will readily find it. Has an upper and lower sluiceway, to be used at different stages of water.

Model of the fishway at Bangor, Me., on the Penobscot River; designed by Charles G. Atkins, and built by the city of Bangor in 1877 at a cost of \$8,000. Scale, 1-33. Height of the dam, sixteen feet (4.1 meters). This is a working model, and one of the finest make. It has rectangular compartments covered with gravel, and flashboards on all partitions in the upper portion. The sluices are arranged in a sloping manner, in order to admit the water at different levels.

Shaw's fishway: A spiral arrangement of deep pools; designed and exhibited by B. F. Shaw, Anamosa, Iowa, (Commissioner of Fisheries for the State.) Lithographs, with complete specifications, accompany it.

"Moving float fishway." Model of Everleth's fishway, devised by F. M. Everleth, M. D., of Waldoboro', Me. Scale, one quarter of an inch to the foot (1-48). C. G. Atkins. The peculiarity of this fishway is the movable attachment at the upper end, which, by its own buoyancy, rises and falls with the fluctuations of the river, thus ensuring that the entrance shall always be at the

right hinge to admit the requisite quantity of water.

¹²With counter-currents from below." Working model of the McDonald fishway, by M. McDonald, Lexington, Va. Patented. This fishway is constructed upon the principle of having three sets of transverse partitions sloping upward. The water passing through the sluice from the dam tends to sink in the middle line of buckets, and emerges at the sides at a lower level, being checked by abutting against other partitions placed below them at right angles which deflect the water up stream, and these currents from below operate as retarders to the fall of the water from above. One has just been constructed on the Savannah River, Ga., which has an inclination of one foot in three.

STRIPED BASS AND SHAD IN CALIFORNIA.—*United States Commission, Fish and Fisheries, Washington, D. C., June 16th.*—Editor *Forest and Stream*:—Among the fish heretofore taken by Mr. Livingston Stone to California, in behalf of the California Fish Commission, were a number of young striped bass in 1879, and I am just in receipt of a letter from Mr. B. B. Redding, of San Francisco, dated June 8th, in which he says: "I have just returned from market, where I had the pleasure of inspecting a striped bass about a foot long, caught this morning in the brackish water near Sausalito." Other authorities speak of the great abundance of shad in the Sacramento, and Mr. Redding says he saw one weighing eight and a half pounds. They are now taken in all the rivers of the coast, from Wilmington on the south to the Columbia on the north. A specimen of the Columbia River shad, forwarded by Prof. Jordan, is now on its way to the Smithsonian Institution.

¹³An additional shipment of young shad to California has just been made by the U. S. Fish Commission, leaving Washington on Saturday, the 13th of June. A dispatch from Mr. Stone of yesterday, from Fort Laramie, announced the entire success of the transmission up to that point.

SFENCER F. BAIRD, Commissioner.

The Kennel.

CONDITIONING DOGS FOR SUMMER WOODCOCK SHOOTING.

ALTHOUGH the States of New York, New Jersey and Connecticut have passed laws restricting the sportsmen from shooting woodcock during the early summer, yet, both Delaware and Maryland still continue to allow the slaughter of the half-fledged long-bills in their territory. To those, therefore, of our shooting brethren who have been driven to look for other "fields and pastures new," and who cannot forego, from long accustomed habit, the annual woodcock Turkish bath, we would say a word on the conditioning of their dogs for the work before them.

Volumes have been written on caniology, and chapters have been devoted to the getting up of dogs for the bench, but we find little that is really practicable about preparatory conditioning for the field. We, therefore, do not think that it will be amiss, at this time, to call the attention of the summer shooting fraternity to the absolute necessity of putting their dogs in proper trim before they expose them to the most severe and exhausting kind of all field tests. It is the unfortunate impression of many who own sporting dogs that all that is necessary to fit the dog for a week's woodcock shooting is that his nose should be cold and his eye bright before taking him from off the chain at home. This should not be, and common sense should teach us that to keep up the strain of working well throughout the longest days of the year, and in the hottest weather, requires that the animals should be in more than ordinary good condition of health before submitting them to the fiery ordeal. This can only be brought about by regular exercise and by feeding good, unheating food, aided perhaps with several doses of some cooling, simple medicine a few days before they are taken out.

When the shooting in past years was mostly had by the gentlemen of this vicinity, in large mountain districts, where the beating was confined principally to the swales, or to the large timbered swamps, intersected by cool brooks and streams which had their headwaters in the mountain springs, then, had as it generally was, some relief could be found by both man and beast. No matter how stifling the day, there was almost always enough air stirring in the gulches way up on the mountain sides to enable the young enthusiast to do a very tolerable day's walking, and with frequent breathing spells, to be up and at the birds until the fiery ball in the west warned him that his day's work was done. Almost every one, in those times, had his favorite ground, and many are the days that we ourselves have all day long helped to awaken the echoes of the grand old crags about us; but the glory of those days is gone, and we for one have learned that we did wrong, and a chronic state of moralizing has driven us to openly confess it, and make amends. But, for all this, we cannot expect to have many followers in our new departure; for even now, in despite of ourselves, we find our eyes fixed on the calendar, to see when comes "the fourth." Sunstrokes, thirst and mosquitoes are almost forgotten, and we wonder if there are five broods again this year at the "old house spring;" but if there are, they are not for us, for that famous spot is in New Jersey.

Turning, therefore, to Maryland and Delaware, whose laws admit of woodcock shooting on June 10th and July 1st respectively, we find the best grounds to be in the low, flat tracts of country, hemmed in with thick impenetrable brush-wood of a rather stunted growth. True it is, that woodcock are found extremely plenty in "the branches," particularly in dry seasons, when early freshets have not at the breeding time inundated the country round. But to beat out these grounds thoroughly it takes a blue-ribboned salamander; no bubbling springs are there to greet the ear and give most blissful drops of comfort. Nor is there any country in our experience where sport is more uncertain; for though there may be scores of birds on the range to-day, a sudden atmospheric change and they are gone. Conjecture then is at a discount; nor are there weary hills to climb to find the shifted birds stored away, safe and sound, along the murmuring rills. Now, if there is one thing above another that tends to buoy up the sinking frame it is the guesswork of finding game—a sort of Japhet-in-search-of-a-father kind of feeling that causes one to look and walk, and walk and look, no matter how tired and exhausted he may feel, or how blank each cover may be found. We remember once, in spite of ourselves, having been seduced into making the rounds of Harford County, including Spesutia Island, which took almost a two weeks' jaunt, and at the same time it was as plain as the nose on a man's face, on the very first day, that the young birds had been drowned out early in the season, and the old ones had drifted away to try their luck in some more elevated section. Where that was the moon alone can tell.

But to those who wish to try woodcock shooting at this season, we say have a care for your dogs—if not for the sake of humanity, then for your own. Be early to rise, and do your best work before the day grows unbearable. Endeavor to locate the water-pools on your beat, and every now and again leave the cover and refresh your dogs with a swim. If the depth of the pools and ditches is not sufficient for a bath, then sop up water with your hands, and continually wet their heads and necks. At noon time rest a while in an open shady spot, and you will find it will repay you later on when the sun has lost a little of his power.

Dogs on grounds such as we have described are subjected to the attack of ticks; it will be well, therefore, to carefully examine the dogs' coats, and particularly the head and ears, before kenneling them for the night. Should you find any of these wretched tormentors, as you most undoubtedly will, remove them forcibly, and dress the parts afflicted with some mercurial preparation. To insure good sport all dogs should be fitted by training for the field as race horses are for the turf—and this more particularly applies at the approach of the heated term. Exercise in moderation will remove the surplus fat, and there is nothing better at this season to insure good health than the following course of treatment: Give several days before taking the field a teaspoonful of sulphur at night, followed in the morning by a dose of sulphate of magnesia, varying from a dessert to a tablespoonful. Perhaps the best way to administer this mild cathartic is to dissolve it in water and pour it down the animal's throat, omitting all food until an hour or two after. Later in the day, when the medicine has taken effect, then the usual exercise may be given. Adopt this plan—it is a simple one—which can do no harm, and you will find that it will prove most beneficial.

HORSEHAIR FOR DISTEMPER.—*Blacksbury, Cal., June 10th.*—Editor *Forest and Stream*:—For the benefit of canine fanciers, and more particularly for the welfare of the dogs themselves, the following simple remedy is submitted: Take hair from the tail of a horse, cut, as fine as possible, say from the twentieth to the fortieth of an inch in length. Give one heaping teaspoonful in the dog's food once a day until the dog is cured. If administered in time three or four doses are usually sufficient. Feed liberally with any light cooling food. In extreme cases, when the animal shows weakness in the loins, make running sores in the breast and back of the neck with seatons, using the cut hair internally. The above remedy will also cure all diseases caused by worms. A friend of mine, dealing in and driving stock on very dusty roads, formerly used up from three to six dogs during one season, always losing them when young. Since using the "hair cure" he has now worked a couple of dogs until they have grown old in his service. J. H. W.

Horsehair cut fine will no doubt create local irritation, and rid dogs, to some extent, of worms, but how it can cure distemper we utterly fail to see.

THE BEAGLE JUDGING.—*Bloomington, N. Y., June 10th.*—Editor *Forest and Stream*:—If not encroaching too much on your space as a breeder and lover of the beagle, I would like to say a few words in regard to the most extraordinary judging which occurred in that class at the last New York show. I will premise by saying that I did not own a single dog in the ring. At all shows hitherto in this country I believe prizes have been awarded to dogs rather under thirteen inches than over, and the public was getting the idea that a beagle was a diminutive hound, when all at once we find three hounds, large enough to be full sized harriers, bearing off all the honors, while some most excellent dogs of the hitherto acknowledged standard, among them the two prize winners in 1879, are passed by without a commendation. The dogs chosen this year were the largest and evidently the swiftest in the lot. How are either speed or large

size desirable in a beagle? Stonehenge tells us that the intention (of breeding beagles) has always been to obtain a hound of delicate nose, united with so slow a pace as to keep the "field" to keep up without aid of horses. Sportsmen in this country who use beagles for hare hunting know that as the intention is not to run the game down, but drive it to the gun, speed is of little account. In regard to size Stonehenge insists that foot beagles "should not exceed nine inches in height, but for Young England they are often used up to eleven and even twelve inches." He gives the measurement of Damper, a typical beagle of these days. The same authority says down the size of harriers at from sixteen to twenty inches. It is evident, therefore, that the prize winners at the late show were full sized harriers, as one measured nineteen inches at the shoulder. If judging at shows is to be done in this manner our knowledge of typical dogs will soon be even more confused than it is at present. E. T.

THE NEW YORK DOG LAW.—Mayor Cooper's dog catchers commenced their raid upon the canines of the metropolis on Monday last. They are to receive thirty cents for every dog they deliver to the keeper of the dog-pound, which is situated at the foot of Sixteenth street, East River. The first day's catch was estimated at several hundred. Owners of dogs should bear this in mind, and keep their pets within doors during the heated term.

KENNEL NOTES.

NAMES CLAIMED.—*Nero*.—Mr. T. H. Wynnan, of Sebco, Maine, claims the name of *Nero* for his white and black cocker dog puppy, whelped May 7th, 1880, by owner's Point out of *Flo*. *Dan*.—Mr. D. W. Culver, of Jersey City, claims the name of *Dan* for his liver and white pointer puppy, by Mr. E. M. Culver's Duke (Frank-Quail), out of Mr. P. Lumbreyer's Queen (Ben II. Nellie). *Sancho*.—Mr. J. H. Cable claims the name of *Sancho* for his liver pointer puppy, by Mr. E. M. Culver's Duke, out of Queen. *Lancewood*.—Mr. E. S. Wannaker, of Cool Spring, N. C., claims the name of *Lancewood* for his red and white setter dog puppy, whelped March 18th, 1880, by Rich out of *Lorna*. Mr. W. writes as follows: "This puppy was presented to me by Dr. Wm. Jarvis, and selected by him as the choice of the litter. He should develop into something grand, as I consider the dam (*Lorna*) unapproachable in the field for style, grace, beauty, pace, endurance, staunchness and general excellence. Having trained her, I am competent to judge." *Lady Venus*.—Mr. E. L. Marshall, of Chariotmont, Va., claims the name of *Lady Venus* for his imported fox terrier bitch, by Spot, out of Nell. *Lady Diana*.—Mr. E. L. Marshall claims the name of *Lady Diana* for his fox terrier bitch puppy, by Mr. Cornell's Natty (Gamster-Peeger), out of *Lady Venus* (Spot-Nell). *Evangeliste*.—The owner of *Evangeliste* is Mr. R. G. Hall, of Portland, Maine. *Daisy*.—Mr. Fred. Scott, of Bristol, Pa., claims the name of *Daisy* for his lemon and white pointer gyn, out of Mr. T. Greene's Girl, by Mr. Wm. F. Steel's Glenmark. *Katleckerbocker*.—Mr. Geo. Miller, of Jersey City, claims the name of *Katleckerbocker* for his liver and white pointer dog puppy, out of Girl, by Glenmark. *Mattie*.—Dr. H. B. Wyant, of Peekskill, N. Y., claims the name of *Mattie* for his liver bitch puppy, whelped February 2d, 1880, by Mr. John L. Martin's (Milford, Mass.) Sam, out of Vivian.

WHIPPS.—*Gretchen*.—Mr. Alfred W. Bennett's (Boston, Mass.) St. Bernard bitch *Gretchen* (recently purchased from Mr. L. C. Collins) whelped, June 18th, twelve puppies, eight dogs and four bitches, by owner's Don. *Grace*.—Mr. N. Elmore's (Granby, Conn.) pointer bitch *Grace*, Seal, whelped, June 19th, eight puppies, seven dogs and one bitch, by Guy, Snapshot-Fanny. Five liver and white and three lemon and white. *Bella*.—Mr. Edward L. Mills' (Washington, D. C.) orange and white English setter bitch *Bella* whelped, June 9th, ten puppies, three dogs and seven bitches, by Champion Leicester.

BRED.—*Peckham Eye-Bruff*.—Mr. C. H. Clayton's (New York City) setter bitch *Peckham Eye*, by Mr. C. H. Raymond's Guy Manning, out of Mr. Dudley Olcott's Flash, has been bred to Mr. J. C. Parrott's Bruff by Mr. C. H. Raymond's Pride of the Border-Fairy.

PRESENTATION.—Mr. M. P. McKoon, of Franklin, N. Y., has presented a friend, Mr. N. Elmore, of Granby, Conn., with a very fine English Foxhound bitch puppy.

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

PRIVATE PRACTICE CLUB.

MAY SCORES.

THE inactivity and curvetous usually attending upon the first half of the spring season has not to have overtaken the good archers of the Private Practice Club, for the general average is well up to the old record of April, though no score at the York Round quite equalled the best of last month. It is pleasing to think that if members can score as well at the coming national meeting as they have averaged for May, we should record from the Private Practice Club alone the following double Yorks: \$33,728, 674, 678, 510, 500, 489, or seven scores exceeding that which would equal place at the last grand national meeting, and four scores exceeding that which won the medal. The scores exceeding 150 points at 100 yards have not been quite so numerous as last month, only two instances being recorded, Mr. Peddinghaus getting 133-151, and Mr. Will H. Thompson 143-151. At the 80 yards range Mr. Peddinghaus reached 150 points no less than six times out of eight rounds, with a last score of 171; Mr. L. D. Devoil once, with 148-150; Mr. Will H. Thompson five times, with a best score of 141-150. The 60 yards shooting national meeting, and four scores exceeding 150 points was recorded as two or three made in scores of 160 and over were made by Edwin Devoil twice, with best score of 21-129; by Maurice Thompson once, with 22-132; by L. D. Devoil once, with 23-143; by L. L. Peddinghaus twice, with best score of 22-134; by Will H. Thompson fifteen times, with best score of 24-144; and by Frank H. Walworth once, with 22-130.

These 60 yards records are an encouraging feature of our American archery, since they prove that at the one range where we have had considerable practice we obtain scores which would not discredit the veterans of Great Britain. It is at the longer ranges that they so greatly excel us. It is no uncommon thing for their leading shots to score as many points with 21 arrows at 50 yards

unable to obtain, on account of the difficulty about transportation. It is hoped the matter will be settled between the manufacturers and the railroad, as everyone here who has used the smoke balls prefer them to glass balls. Card's rotary transparent-handicap rise, 20 balls each—

H. Dittmar.....	6	J. G. Hermann.....	3
J. Bohling.....	6	L. B. Radin.....	3
Palmer and Dittmar, first; Lemcken, Van Staden, Miller and Palmer, second; Kelly and Radin, third.			

Sixth match at balls:—

L. Palmer.....	4	Hoyes.....	4
J. Ficken.....	2	Wm. Lemcken.....	2
L. Palmer.....	2	Geo. Butler.....	2
P. Kelly.....	3	H. Miller.....	2
H. Van Staden.....	3	J. N. Hermann.....	2
C. C. Doscher.....	2	L. B. Radin.....	2
J. Bohling.....	2	2

Butler, first; Palmer, Dittmar, Doscher, Hoyes and Radin, second; Kelly, Van Staden and Hermann, third.

Wednesday, second day.—First Match at balls:—

L. Palmer.....	8	E. Collins.....	8
Capt. Anderson.....	9	J. Thomas.....	8
H. Van Staden.....	9	Wm. Lemcken.....	8
H. Van Staden.....	9	John N. Hermann.....	8
J. Vogt.....	6	J. H. Miller.....	8

Palmer, Hermann and Anderson divided. J. D. Gotschins, referee.

Second match at balls:—

J. Thomas.....	7	Chas. Townsend.....	9
H. Van Staden, Jr.....	5	Capt. Anderson.....	9
E. Collins.....	5	J. H. Miller.....	9
Dr. Talbot.....	10	5

Dr. Talbot, first money, Chas. Townsend, second money; Collins and Anderson divided third money.

Third match at balls:—

J. H. Miller.....	8	Dr. Talbot.....	10
E. Collins.....	8	Dr. Henry.....	10
J. Thomas.....	7	7

Dr. Talbot and Henry divided first and second money; Miller took third money.

Fourth match at balls:—

J. H. Miller.....	5	Dr. Henry.....	9
Dr. Talbot.....	10	L. Palmer.....	9
Chas. Townsend.....	10	E. Collins.....	7

Dr. Talbot and Townsend divided first and second money; Dr. Henry took third money.

Fifth match at balls:—

L. Palmer.....	9	H. Van Staden.....	8
E. Collins.....	10	Capt. Anderson.....	8
C. C. Doscher.....	8	Wm. Lemcken.....	8
Geo. Butler.....	6	John N. Hermann.....	8
E. Collins first; Miller, Palmer, second; Van Staden, Anderson and Hermann third.			

Sixth match at balls:—

Townsend.....	9	H. Dittmar.....	8
Dr. Henry.....	10	J. H. Miller.....	8
E. Collins.....	10	Chas. Oftermann.....	9

Dr. Henry and Collins divided first; Townsend, Palmer and Oftermann divided second; Talbot and Dittmar shot off third prize, and won by Talbot.

SEVENTH MATCH AT BIRDS:—

Henry Rottman.....	1	J. Thomas.....	6
J. H. Miller.....	2	M. Libbe.....	6
Geo. Butler.....	2	E. Collins.....	6
W. Lemcken.....	6	Chas. Oftermann.....	6
Capt. Anderson.....	8	Geo. Butler.....	6

Thirs, first; Deir and Anderson divided second; Oftermann, third.

EIGHTH MATCH AT BIRDS:—

J. H. Miller.....	8	Chas. Oftermann.....	3
Geo. Butler.....	9	J. Vogt.....	7
Geo. Butler.....	9	Capt. Lehmann.....	7
Wm. Lemcken.....	8	4

Miller, Beier and Lemcken divided first, second and third.

THIRTEENTH MATCH AT BALLS:—

L. Palmer.....	9	E. Collins.....	5
C. Doscher.....	0	J. Besson.....	5
P. Kelly.....	2	J. H. Hermann.....	3

Won by E. Collins.

FOURTEENTH MATCH AT BALLS:—

Peter Kelly.....	9	F. Smith.....	8
J. H. Miller.....	9	E. Collins.....	8
J. H. Herriage.....	10	C. Townsend.....	0

Herriage, first; Townsend, second; eight ties shot off and won by Palmer, third.

FIFTEENTH MATCH AT BALLS:—

J. H. Herriage.....	9	J. H. Ficken.....	8
C. Townsend.....	10	Dr. Burdett.....	8
C. Townsend.....	10	Peter Kelly.....	4
Carling.....	7	Lewis.....	10

Collins, Lewis and Townsend, first; Herriage, Hermann and Burdett, second; Carling, third.

SIXTEENTH MATCH AT BALLS:—

J. Bohling.....	6	C. Townsend.....	10
Dr. Burdett.....	6	C. Hoffman.....	8
Lewis.....	9	E. Collins.....	8
Carling.....	9	Jack.....	8
Hoyes.....	10	H. Dittmar.....	10

Smith, Townsend and Dittmar divided first; Lewis and Carling divided second; Burdett and Collins divided third.

SEVENTEENTH MATCH AT BALLS:—

Cummings.....	6	J. H. Ficken.....	5
J. Bohling.....	9	Capt. Anderson.....	8
Carling.....	10	Jack.....	6
Dr. Burdett.....	10	R. J. Brinckerhoff.....	6
P. Kelly.....	3	H. D. Ford.....	9

Carling and Burdett divided first; Bohling, Dittmar and Ford divided second; Collins and Anderson divided third.

EIGHTEENTH MATCH AT BALLS:—

C. Townsend.....	9	C. Oftermann.....	7
E. Collins.....	8	Capt. Anderson.....	6
Carling.....	8	Capt. Anderson.....	6
H. D. Ford.....	8	Hoyes.....	6
Dr. Burdett.....	10	Jack.....	8

Burdett, first; Bohling and Townsend divided second; eight ties shot off and won by Collins and Herriage who divided third.

NINETEENTH MATCH AT BALLS:—

J. H. Miller.....	7	C. Townsend.....	10
L. B. Radin.....	8	Wm. Hughes.....	8
E. Collins.....	10	10

Burdett, first; Bohling and Townsend divided second; eight ties shot off and won by Collins and Herriage who divided third.

TWENTIETH MATCH AT BALLS:—

J. H. Miller.....	8	H. Van Staden.....	8
H. Hall.....	10	J. W. Hermann.....	8
H. Hughes, first; Hall, second; Miller, Van Staden and Hermann divided third:—			

Fifth match at balls:—

E. Madison.....	9	C. Townsend.....	10
Dr. Burdett.....	10	Dr. Talbot.....	10
W. Hughes.....	9	S. Smith.....	10
J. Bohling.....	10	C. Townsend.....	10
T. Townsend.....	8	Power.....	8
J. Thomas.....	9	Tofey.....	8
L. Collins.....	8	Herriage.....	8

Ten ties shot off and won by T. Hall, first; nine ties shot off and won by Miller, second; eight ties shot off and won by Collins, third.

FOURTH MATCH AT BALLS:—

Tofey.....	9	T. Hall.....	14
L. B. Radin.....	13	Carling.....	14
E. B. Redden.....	13	E. Collins.....	14
Dr. Talbot.....	12	E. Collins.....	14
Smith.....	6	C. Townsend.....	15

C. Townsend, first; Madison, Hall, Carling and Collins divided second and third.

FIFTH MATCH AT BALLS:—

Dr. Talbot.....	9	H. Dittmar.....	8
E. Madison.....	10	L. B. Radin.....	8
Dr. Burdett.....	7	J. H. Miller.....	4
C. Oftermann.....	4	J. Bohling.....	4
Herriage.....	7	Carling.....	4

Madison, first; Talbot and Hughes divided second; Deier, Collins and Dittmar divided third.

SIXTH MATCH AT BALLS:—

Dr. Talbot.....	5	W. Hughes.....	9
E. Madison.....	6	Dr. Burdett.....	9
J. Bohling.....	8	Herriage.....	9
G. Heier.....	7	John J. Berkold.....	7

Talbot, Hughes and Madison shot off for first; won by Talbot. Bohling and Herriage divided second; Heier and Berkold divided third.

SEVENTH MATCH AT BALLS:—

Dr. Talbot, 5; Hughes, 5; Burdett, 4. Second tie: Talbot, 5; Hughes, 4.			
---	--	--	--

Talbot, Hughes and Madison shot off for first; won by Talbot. Bohling and Herriage divided second; Heier and Berkold divided third.

BOGARDUS VS. RIMMEL.—A series of three matches have been arranged between Capt. A. H. Bogardus and Rimel, the English pigeon shooter, with whom Bogardus shot for the championship of the world, August 7th, 1875. The conditions are one hundred wild pigeons each, Rimel to stand at twenty-nine yards, Bogardus at thirty yards in the first match, and if he wins this, at thirty-one yards in each of the succeeding matches. The first two of these contests are set down for Brighton Beach Fair Grounds. June 30th and July 2d, at 2 o'clock p.m. The third time and place to be determined, will be shot within ten days after the second.

IVY POISON REMEDY.—New Haven, Conn., June 17th.—A great many remedies have been suggested for the cure of the troublesome eruption caused by contact with the fresh foliage of the species of *Ivy*, familiarly known as poison ivy, many of them completely killed the poison and stopped its spreading, in a very satisfactory way. Of course, the skin will be discolored by the caustic for a few days.

FIXTURES.

June 24th, at Hoboken, N. J.—St. George (23) vs. Mr. Duncan's Princeton team.
June 25th, at Ardmore—Merion vs. Girard.
June 26th, at Chestnut Hill—Belmont vs. Chestnut Hill.
June 27th, at Staten Island—Germantown vs. Staten Island.
June 28th, at Frankfort, Ky.—Oxford (1st) vs. Merion (2d).
June 29th, at Hoboken, N. J.—St. George vs. St. Paul's School.
June 30th, at Baltimore—Baltimore vs. Merion.
June 30th, at Newark—Manhattan (23) vs. Newark (1st), July 1st, at Stanton.

GIARD CRICKET CLUB'S VISIT TO NEW YORK.—The Girard Club of Philadelphia turned up in the metropolis last week and played and won two first eleven matches, one from the old Manhattan and one from the old St. George. Besides this, they put a second eleven in the field against the Manhattan one of the days when the first was working destruction at Hoboken. We went over the first day to see them play the Brooklyn club, and it only took half an eye to "photograph them into our heart." It is a grand batting eleven, a fair bowling one, with good fielders, and a crack wicket keeper. The accession of the Hargreaves family to this comparatively new organization, of course, places it at once in the foremost rank of American clubs, and we consider, from what we saw, that the Young America will have at last to work hard when the Girard eleven is in full practice.

GIARD VS. MANHATTAN.—Played at Prospect Park June 18th. Won by the visitors by 87 runs on the first innings' totals. The Manhattan captain won the toss, and took the innings, and his team did good work enough against the fast bowling, but were all abroad as how to obstruct the wickets from Tom Hargreaves' excellent underhands. The fielding was not up to the mark at first, and the dozen extras were put on before the second wicket was disposed of. O'Grady, with the gloves, did well, and there was some old time shyness by the brothers that was good to see. Noxley (professional) handled his bat nicely, particularly when the ball was to the off; and Wilson's old-style square-leg hitting, and Morris' well timed and careful placing of the ball did much to gloss over the rather poor exhibition of several of the other batsmen. The innings closed for St. On resuming, after an excellent luncheon, the Girards commenced what turned out to be a formidable innings. Five of the team secured double figures, and six batted for more than an hour. Hooper, by far, did the best work, and Morris behind the wickets was sharpish. The fielding was good, as only one catch was missed, and Middleton especially deserves credit for his clean picking up and excellent return. Hosford made a rattling good catch at deep long-field, which ended Tom Hargreaves' career on the first ball. The veteran, Joe Hargreaves, contributed 41, but his blue cap was not faded enough to show that he had had much practice. The feature of the match was the smart and brilliant letting go of Brooks, a Lancashire man of the Tom Humphrey school, who not out 75 was obtained by good old round cricket. The innings resulted in 181 for the visitors, and the second innings of the home club was commenced before the wickets were drawn. Annexed is the full score:—

NOS. 39 AND 40 PARK ROW (TIMES BUILDING), NEW YORK

[Post Office Box 2923.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JUNE 24, 1890.

TO Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to Forest and Stream Publishing Company. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

Dr. D. J. MALBY.—Our readers will recall with interest the interesting sketch of "Bear Shooting in North Minnesota," published in our issue of May 13th, over the signature "M. D." Its author was Dr. D. J. Malby, of Detroit, Minn., a brief notice of whose death, on the 8th inst., has just reached us. Dr. Malby's letter could not fail to inspire in its readers a personal interest in himself and a hope to know more of him. The short obituary notice before us is a simple record of a busy life, a fine christian character and a loving circle of friends. Having enlisted in the Ninety-fourth New York Volunteers in 1861, he participated in eight pitched battles, was taken prisoner twice, and after the war resumed his medical studies at Watertown, N. Y., thence going directly to Detroit. He had numerous friends in this city, where he attended a course of lectures in the fall of 1877. At the time of his death Dr. Malby was thirty-seven years of age. He leaves a wife and three children.

SOMETHING NEW IN PYROTECHNICS.—The new form of pyrotechnics, which are for sale by Messrs. Hartley & Graham, are so much superior to the old style of fireworks that we think they must in a great measure displace them. The device is an exceedingly simple one, so simple, in fact, that one wonders that it was not invented before. The star cartridges are to all appearance like an ordinary shell, but they are filled with the same materials that are employed in Roman candles, sky-rockets, etc., and we have fireworks shot out of a gun. The advantages are simplicity and rapidity of firing, a complete absence of the dirt and danger attending the old method, and, not the least important, a very decided difference in the cost. For political celebrations in the public streets these star cartridges are far preferable to all other pyrotechnics, because there are no sparks to endanger the spectators, and no dangerous sticks to fall. For the lawn and for yachting purposes these cartridges prove equally adapted. Fourth of July and other displays of fireworks have hitherto been attended with expense and damage; the invention of star cartridges obviates both.

—The International Fishery Exhibition at Berlin will close on the 30th of this month, and Prof. Goode and staff expect to sail for home either on July 1st or 8th, arriving about the 15th or 22d.

THE AMERICAN AWARDS AT BERLIN.

AMERICANS have every reason to be satisfied with their representation at the Berlin International Fishery Exhibition. Notwithstanding the limited time afforded by the tardy action of Congress to make an appropriation for the purpose, Prof. Baird, having the extensive resources of the National Museum and the Fish Commission to draw upon, prepared an exhibit which has proved superior in variety and completeness to that of any other nation. The American display at Berlin has received very much attention from the intelligent visitors who have visited the Exposition, the ultimate effect of which must be to very materially increase the foreign demand for American fishing products, and so to largely stimulate our commerce. The immediate result has been a harvest of prizes for this country, which is among those to which a gold medal and an address of thanks will be transmitted.

The award which will give the most genuine satisfaction, not only to his personal friends but to all who are interested in the growth of this branch of the nation's economies as well, is that of the first honorary prize to Prof. Spencer F. Baird, of the Smithsonian Institution, Washington, and the United States Commission of Fish and Fisheries. The action of the Berlin judges is a recognition of the preëminent services of Prof. Baird, who has done more than any other individual to advance the science and industry of fish culture. The FOREST AND STREAM speaks for the fish culturists of the United States when it indorses this award as just and well-deserved. We may add just here a bit of news which has just come to us from our Berlin correspondent, namely, that Prof. Baird has just been made an honorary member of the Société d'Acclimatation, Paris, by the unanimous vote of its members, in recognition of the great work he has accomplished in advancing fish culture to the rank of an industry worthy of being prosecuted by great nations.

Other American awards at Berlin were: Gold medals with special honorary mention: The United States Finance Department and the United States Fisheries Commission; gold medals: United States Fisheries Commissioners Leonard, of Bangor, Me.; Atkins, of Rockport, Me.; Ferguson, of Baltimore, Md.; Green, of Rochester, N. Y.; McDonald, of Lexington, Va.; Mather, of New York; Stone, of Charlestown, N. H., and Chase of Detroit. Silver medals: Alaska Commercial Company, of San Francisco; the Beardsleys, of New York; Booth, of Chicago; Potter & Wrightington, of Boston; the Portland Packing Company; the Russia Cement Company, of Rockport, Mass.; Rosenstein Brothers, of New York; Thorne, of Massachusetts; Thurber, of New York; Ward, of America; Hagedorn, of New York; Everson, of Brooklyn, N. Y.; Wilcox Crittenden, of Middletown, Conn.; Chase, of Detroit, Mich.; Merriam, of New York; United States Fisheries Commissioner Brown Goode, of Washington; the Forest and Stream Publishing Company, of New York; Noble, of Richibucto, Canada, and Spribner, of New York. A large number of Americans received bronze medals, diplomas and honorary mention, of which the particulars are not yet at hand. A farther and fuller account of the awards will appear in due time from our representative at Berlin.

THROUGH THE MOUNTAINS OF VIRGINIA.

IT gives us much pleasure to lay before our readers the following plan of an extended camping trip through the Blue Ridge and Alleghany Mountains of Southwestern Virginia.

It is proposed that a party of gentlemen shall start from Lynchburg, Va., on Wednesday Sept. 1st, and striking at once into the Blue Ridge, traverse all the most desirable districts for sport and scenery in that country; go as far north as Bath County, and return to Lynchburg on Wednesday, Sept. 29th. The precise route will be determined by the gentlemen who have projected the expedition, and whose familiarity with the section is sufficient promise that it will be well chosen, both for sport and for enjoying the rare natural scenery. The country is far famed for its beauty and the magnificence of its landscapes, and at the same time it will possess all the charms of novelty. September, the month chosen, is that in which the most enjoyment can be had in outdoor life; in that climate one may be tolerably sure of fine and temperate weather. The anglers of the party will get the cream of the black bass fishing in the higher waters of the James, and excellent trout fishing is also to be had; for those who prefer it there will be "pheasant" and deer shooting; and of all pure mountain air and an ever-changing series of panoramic landscapes.

The mode of travel will be the most comfortable that it is possible to provide, namely, by Jersey wagons, carriages and saddle horses, while extra saddles will be taken, so that the carriage horses may be employed for excursions to and fro while the party is in camp. Tents will be provided with servants and everything necessary for making travel and camp as thoroughly comfortable

and luxurious as possible. The journey will be made by easy stages, with outriders to secure the best camping grounds, and when the special attractions for the sportsman, artist and tourist warrant it the party will remain in camp two or three days. In short, the party will make it a rule to derive the most pleasure and profit from the trip, and while the general plan will be thoroughly perfected before the start, it will be so elastic as to be modified by the relative attractions of the route. Arrangements will be made for the regular transmission of the mails.

The projectors of this admirable scheme are our well-known correspondent, "Ringwood," and Major R. C. Saunders, of Careyswood, Evington, Campbell County, Virginia. The latter gentleman, besides knowing the mountains of Southwestern Virginia better, perhaps than anyone else in that part of the State, is also preëminently fitted for conducting and making pleasant such an expedition. He has in former days owned a great deal of property there, has hunted through the mountains for twenty successive falls, and is widely known and respected among the mountaineers, both personally and by reputation, which, as will be readily understood, is in that country peculiarly advantageous. It will be the endeavor of those engaged in conducting the expedition to make everything pass off well, and we can see no reason why it should not be done. The tickets for the trip, from Lynchburg and return, will be \$100 each. This will include everything, except blankets, which the gentlemen joining the expedition are requested to provide. One half of this sum will be payable on August 1st, when the lists will be closed, and may then be sent to Major Saunders as above. The remainder will be payable on disbanding at Lynchburg. The number of tickets will be limited.

Readers of the FOREST AND STREAM who may be desirous of joining the expedition are urged to give in their names at once. The party will be a party of gentlemen, whose companionship will be thoroughly agreeable. There will be no objection to ladies, nor will there be any reason why they should not enjoy the trip.

We bespeak for the party who shall leave Lynchburg next September a complete realization of all the pleasant experiences the anticipation of such a trip presents to the mind.

CAMPING OUT.

CAMPING out does not necessarily mean roughing it. You can with a little experience and forethought have nearly all the comforts of home, with many other comforts, that locked up denizens of the city can only wish for. Your bed can be made of the choicest hemlock boughs, soft as eider down. You can bolt down the fresh air from the mountains, the zephyrs from off the lake, the wind that comes sighing through the forest—any one of these, or all at once, it's only a question of lung capacity—until the eyes sparkle and the cheeks glow with the stimulus begotten by the almost intoxicating air, while the chest expands with strength, and hands and face attain from sun and storm the bronze and brick color that tell of health and vigor, and your nose, meanwhile, shall brighten up and shine like the danger signal on a locomotive.

To the camper-out there are many elements lending their aid to augment his beatitudes. His pleasures are only measured by the lapse of his vacation. Wooded by all the charms and blandishment that June can offer, idle as the day is long if he chooses, calling no man his master, free to tramp away over the hills before the dew is off the ground, or free to lie in bed all day, it approximates more nearly to perfect bliss than anything else this world can offer. It is a butterfly life, this floating carelessly and almost unconsciously upon the summer air, bidding farewell to the conventional restraints of society, becoming boys again, forgetful of worldly trials and living only in the sunshine of merry retrospection and a care-free present.

Buy through tickets and escape from your brick and mortar bondage. Come along to unrestrained freedom, to an unbroken quietude of mind. Do not let business overshadow and annihilate your love of quiet sport by flood or field, but give rod and gun their proper share of time, and your reward will come though you never ruffle a feather nor raise a fin. Give care a cross-buttock and get away from yourself. Come where you can humor every caprice and taste the sweets of idleness; where the gloss of pretense is rubbed off; where fashion becomes demoralized and style becomes paralyzed; where there are no store clothes, no "biled shirts," no plug hats; where you are free from the discordant combination of cats' cornets and curs; where you can lay your troubles at nature's feet, for the cornucopia of her charms and blessings are absolutely inexhaustible.

If failing health requires a stimulant not too severe, come where you will find a ceaseless supply of that priceless panacea, pure air, which is more inspiring than an invitation to drink. A genial, life-giving atmosphere it is; so pure and balmy that it would almost give life to a cremated body.

The greater part of our misery in this world is caused

by your yearning for something better. We are rarely satisfied with what we are and with what we have, and are too frequently complaining. One of the places where this mental condition does not exist is up to your knees in a trout stream, with the trout taking hold.

There are some annoyances, the principal one being the little black flies, the mosquitoes and the midgots; but do not allow them, though they attack you on all sides by legions, to preclude your enjoyment. The old campaigner knows how to successfully repulse their attack. There are the days of no luck, when the trout refuse to rise, but the angler who returns at dusk with an empty creel has not necessarily wasted his time, for if he has cultivated his observing faculties his day will have been a "idle time" not "idly spent." He will surely learn some new lesson, and perhaps discover some secret of nature, for there are plenty yet undiscovered. He may have walked off some superfluous flesh, knocked some pretty ailment in the head, and renewed his lease of life.

A moderate indulgence in the sports of forest and stream is certainly conducive to health and longevity; carried to excess it may tend to unfit one for the sterner and more important duties of life. It would perhaps operate much as medicine properly prescribed for the various body diseases does—be beneficial up to a certain stage, which being attained it would be more safely dispensed with. Guides are not as a class noted for longevity, nor do they retain their strength and activity up to the age that the occasional fishing and shooting man does his. He takes his medicine when he does not require it, but because he may be obliged to, and it does him no good. This may or may not be the reason, but the fact remains.

THE JULY MAGAZINES.—Articles of special interest to FOREST AND STREAM readers are: *Scribner's*: "Does Vivisection Pay?" THE NEW YORK STATE ASSOCIATION.

ROCHESTER, N. Y., June 14th.
Editors Forest and Stream:—

Yours of the 11th inst. was duly received, in which you request my opinion concerning the future programme of the New York State Association for the Protection of Fish and Game.

As the name implies, we are supposed to do something in the way of more efficient game laws, and also in the encouragement of the propagation of fish and the introduction of game birds to restock the now depleted waters and fields of our State. It is not surprising that the observer it would seem as if we have lost sight of our object, and only met for the purpose of selecting the place for our annual meeting, and then to indulge in a tournament for the balance of the week. Not a word is said about the protection of fish and game.

In that we are wrong. If we were to have animated speeches and essays urging upon the various clubs forming our Association, the importance of restocking our fields and streams with game birds and game fishes, it would have the effect to excite a spirit of emulation among them, and every club's standing then would be determined by what it had done for the general welfare, and not by its number of crack shots who can make a clean score at the traps. It is well known that a few years ago quail (so called) were abundant in all parts of our State. Owing chiefly to severe winters they have now nearly all disappeared. What better thing can the clubs of our State do than obtain quail where they are plenty and liberate them here, thereby insuring us good shooting until another severe winter destroys them, when, of course, we must do it again. Stocking fields and streams of course calls for a better enforcement of the game laws. Let it be known that the game constable has his local club at his back with money and influence, and it will make his work easier and more effective.

The propagation and protection of fish seems to be well provided for, but with game birds it is different. One is under the fostering care of the State, the other must be cared for by the various clubs of the State. I believe this would be done if discussion were had in our State convention, and the importance fully impressed upon the delegates. The game laws of the State should be discussed and needed amendments suggested, and a committee formed to urge the passage of the same by the Legislature. These matters should be discussed and settled in convention, and not left to a committee to report in the future, the members of which, living hundreds of miles apart, will never meet for consultation. To facilitate the business, there is no suggestion of a good one, that the various clubs, in their meet-

ings, discuss the game law of the State, section by section, and present the result of their deliberations to be acted upon by the State convention? Another thing might be done: put off the selection of the place for holding the annual meeting until the second or third evening of the convention, then we must fill in the space, and something of interest to sportsmen generally would undoubtedly be brought out. Delegates would come prepared to express their views and experience, and out of it all would be obtained much of practical importance.

What about the tournament? While it would undoubtedly interfere somewhat with the deliberations of the convention, I am not yet in favor of its abolition. If it is to usurp the legitimate business of the convention, the sooner it goes the better, and believe it can be left, kept in its proper place, and furnish innocent recreation to the delegates and others in attendance. I am not of those who condemn trap shooting as a cruel amusement, or as being the cause, except remotely, of the diminished number of pigeons. To the super-refined there is an element of cruelty in all field sports, and to those not so sensitive there is something repulsive in the stories of big bags of game made and spoiled by the hot weather. The destruction of pigeons by the netters who send them dead to market by the car load, and also the great destruction of squabs for the same purpose, is the primary cause for their diminished numbers. The old birds are as unfit for food, when first caught, as a setting hen. In our trap shoots they are fed and kept long enough to be in good condition for market. But I am not going to quarrel with those who differ with me about trap shooting, and will only say that if we can in the future, as in the past, keep our tournaments free from all taint of gambling, I am not opposed to it.

Perhaps some may think, because I agree with you in so many things, that I agree with your views expressed in your editorial of last week. So far as the beneficial influence of our Association is concerned, and that we would more properly be called the "New York State Association of Pigeon Shooters," rather than the "New York State Association for the Protection of Fish and Game," not entirely. Judging from appearances, you are not far out of the way, but in reality there is a decided influence for good in the object claimed by our name in our conventions. The influence of all the clubs forming our Association is in favor of the protection of fish and game, although it may not, as it should, appear in our meetings, it is nevertheless felt in framing and enforcing our game laws. From the Lewis County Club, of Lowville, which has done such splendid work in protecting the deer of the North Woods, all through the State can be found clubs who are giving their influence and their money to that end. It is to be regretted that all this does not appear in the reports of our conventions, so that the vast number who read our proceedings might better understand the spirit that rules us. If the effect of your editorial shall be to correct these shortcomings you will not have written in vain.

I have written you at much greater length than I intended, and still there is much more that might be said. We need good, honest criticism, and no doubt it was the welfare of our Association that inspired your article.

WM. J. BADCOCK.

Editor Forest and Stream:—

Permit me to read to you what is in my article, "The Work of a State Game Protection Association," especially in the second clause, you "hit the nail on the head." I am informed that six weeks ago "floating" for deer had commenced "up in the woods"—as we call the North (to you) Woods. Local authorities can or will do nothing to stop it. Some arrests were made last season, but as I well remember, in some way or another. This year I have heard of no attempt being made to stop it. Judges, justices and attorneys all participate in the hunt, and when some poor Frenchman gets arrested and put in jail he sends for some prominent legal gentleman and says: "Can't you fix it so I can get out of here? You know how it is yourself, Judge," and soon the public hear that said Frenchman has his liberty. You are on the right track, go ahead.

SING SING, N. Y., June 15th.

Editor Forest and Stream:—

Your editorial article on the New York State Association for the Protection of Fish and Game, in issue of June 10th, is an excellent and well exposed, long standing and constantly growing abuse. If there is in this State a considerable body of men who really desire that our game should be properly protected, it seems almost strange that they should for so long have been willing to allow another body of men, with aims and practices totally different, to usurp the title properly belonging to the former. No one who will take the trouble to follow the proceedings of the so-called New York State Association for the Protection of Fish and Game for the past few years, can find in them anything pertaining seriously to the protection of fish or game, and much that directly militates against such protection.

For this reason those who wish to act in the matter of game protection have a right to demand the Association in question to disavow its course or its name, and if it will do neither, then the game protectors, if there are any, ought, out of respect for themselves and their good name, to organize for the purpose of doing the work the others fail to do.

Game protection will now receive the approval and support of the general public, and the name of game protector can never be so dishonored, manly and legitimate sense that it should to long, is the only evidence of existence shown by the largest Association assuming that duty and taking that name.

This is not written as an ethical consideration of trap shooting, but to charge the New York State Association for the Protection of Fish and Game with utterly neglecting the work it is supposed to do, and with introducing those who demand that it be done, into the game. Trap shooting, when called by that name, may or may not be perfectly proper; but trap shooting by game protectors certainly is not. A political convention devoting itself to singing Moody and Sankey hymns would, on the same ground, be amenable to censure. That this Association adds to the gravity of the charges against it by the form of its dereliction cannot be denied; but that

point need not now be enlarged upon. The way seems now opened to those who are dissatisfied with the conduct of the Association to give some force to their opposition; and it is the writer's earnest hope that the views, *pro* and *con*, of those interested shall be fully expressed, and if it shall be found that the opposition is sufficiently strong, to take proper action.

With a one-fourth part of the time, energy and money devoted to trap shooting by the so-called New York State Association for the Protection of Fish and Game, an earnest and honest organization could put game protection on a worthy foundation, and double the sportsman's resources in this State.

FLY-FISHING FOR BLACK BASS.

THIRD PAPER—ARTIFICIAL FLIES.

FLY-FISHING and the art of making artificial flies dates back at least to the ancient Greeks and Romans. During the early days of the Roman Empire, the rod, line, hook and artificial fly were well known. Noli do la Morinière tells us that the lines were generally made of horsehair, single, double and plaited; and according to Aelianus the hair was colored in different ways. The fishing rod was chosen with reference to the supposed weight of the fish to be caught, and the resistance it could offer. The hooks were of copper or iron, and coated with tin. The art of making flies of feathers and other materials has, perhaps, never been carried further in our own time, even in England itself. It is possible that the national love for fly-fishing was introduced into Britain by the Romans.

It is with some degree of trepidation that I approach the subject of artificial flies, for I am afraid that I hold some very heretical notions on the subject. But of one fact I am positively convinced, and that is, there is a good deal of humbug in this matter, as evidenced in the many time-spun theories and hair-splitting arguments that are advocated and advanced (pertaining to the construction and use of artificial flies) by some anglers, but which theories do not hold good in practice.

In England, more especially, do anglers proceed to extremes as theorists in the matter of artificial flies for trout fishing. They seem to divide themselves principally into "colorists," or those who think color of paramount importance to form, and "formalists," or "entomologists," who maintain that form is everything, and profess to imitate the natural fly, in its proper season, in every particular of form and tinting. But there is no evidence that one class is more successful than the other, as anglers. On the other hand are the followers of Mr. Pennell's system, or plan, to live, confine themselves, and advocate the employment of, but three "typical" flies—green, brown and yellow palmer, or "hackles"—and claim that they are sufficient for all practical purposes, and can be made available for different waters and seasons, by increasing or diminishing the size of the flies, as circumstances seem to demand. While the adherents to this latter theory are fully as successful, from all accounts as those who have a list of nearly a thousand named flies to choose from, and enjoy the satisfaction of having reduced the perplexing matter to a delightful simplicity, and of obviating the troubles of a repeated changing of the cast of flies as practiced by others—they must sometimes feel a regret deep in their hearts for casting down and sweeping away the idols and cherished traditions, and to a certain extent the poetry of fly-fishing by their iconoclastic though sensible opinions and practices.

Where fish are plentiful and in a "biting mood," almost any fly, be it never so rudely tied, and of the least possible resemblance to anything in the insect creation, will be successful, even if clumsily cast; on the contrary, there are times when the best made flies, cast by the most skillful artists, are necessary to induce a rise. Between these extremes must we look for rules for our general guidance, and without occupying further space with arguments, *pro* and *con*, it will be sufficient to say that there are certain general rules which apply to the character of the fly to be used at certain times, and which rules are the result of, and founded upon, the experience and observations of fly-fishers for many generations past.

These rules, so far as they apply to black bass fly-fishing, are few and simple:—

1. Flies should be small, rather than large, the average trout-fly being usually large enough.
 2. On bright days, and with clear, low or fine water, flies should be quite small, and of subdued, dark or neutral tints.
 3. For cloudy days, and high, turbid or rough water, larger and brighter flies should be used.
 4. For very dark days, or from sunset until dark, or on moonlight evenings, gray or whitish flies, of good size, should be employed.
- I shall not go into an entomological description of flies and their counterfeits, for it is neither requisite nor advisable, in view of the necessary limited space of these papers. I will merely state that the majority of artificial flies are of two kinds, and are intended to represent the perfect winged insects of certain orders, and the larvae of others; thus, most trout flies are the pretended imitations of some of the species of the orders *Diptera* and *Neuroptera*, the former comprising the two-winged insects, as the gnats, mosquitoes, midges, etc.,

ishing at Tim Pond is unequalled in any place in Maine. Trout are very gummy, but not large. They run from six to fifteen inches in length. In a good breeze over the lake a person can have magnificent sport. Black flies are plentiful, more so than usual. The camp of Mr. Kennedy Smith is a sportsman's home in every sense of the word. He knows just how to cater to one's taste, and is always ready to do anything and everything for one's comfort. We advise our brother trout fishers to give him a call this season, and we guarantee them all the trout they want and a desire to visit him again.

F. HAINES.

SALMON IN THE SACO—Biddford, Me., June 21st.—There have been taken during the past two weeks thirteen salmon in the Saco River, just under the falls at this place. This is quite unusual, as seldom have more than one or two been taken during a season, heretofore. These have been taken in nets by those dipping for alewives and striped bass, and have weighed from eight to twelve pounds each. One was lost by the breaking of the net, supposed to weigh twenty-five pounds. Some very large salmon have been seen within a week trying to leap the falls between Saco and Biddford. It is hoped by all lovers of fishing that we shall have a fishway constructed here another year, after which time the Beaverkill Club do not expect a large amount of time and money in travel and expenses and then fall to fish.

F. HAINES.

June 22d.—Seven more salmon were taken in the Saco River to-day, making twenty in all thus far this season, instead of thirteen as I wrote you. One to-day weighs fifteen pounds, the others about nine each.

F. H.

THE BEAVERKILL CLUB—New York, June 19th.—How is the following record for two fly-rods on Balsam Lake, Wilkesmoe Lake and the Beaverkill? Saturday, June 12th, 33 trout; Monday, June 14th, 117 trout; Tuesday, June 15th, 53 trout; Wednesday, June 16th, 107 trout; Thursday, June 17th, 22 trout—total, 351. All fine fish. Protection pays. The members of the Beaverkill Club do not expect a large amount of time and money in travel and expenses and then fall to fish.

GEO. W. VAN SICLEN.

The Rifle.

THE IRISH-AMERICAN MATCH.

WITH our next issue we hope to be able to lay before our readers the result of the Irish match which Col. Bodine and his men were sent over to shoot. The team arrived safely at 4:30 o'clock on the morning of June 13th. A letter from a team member to the *FOREST AND STREAM* says of the trip that "some of the team were quite sick and did not get fairly on deck until the following Wednesday. Clark, Fisher and Laird were very sick, but are all right now. Jackson, Rathbone and Dealing have had colds this morning, sitting up so late last night for the team to get in have them severe colds. We passed the time on shipboard in the usual fashion, betting on the run, etc., playing cards, with an occasional shot at the gulls and stormy petrel that followed the ship."

The team did not reach Dublin until Tuesday, the 15th, having to endure two days of lionizing. Col. Bodine, however, is in dead earnest, and will set his men to work at the earliest opportunity. There was the usual blunder made as to the baggage, which did not follow along after the team in the usual style of traveling by check, but instead remained behind at Cork. It came up to Dublin on Wednesday morning, the 16th, and no time was lost by the American team in rattling out to Dollymount. The Irish team were at work going over the ranges, and they were at 900 yards when the visitors squadded down at two adjoining targets and made a few sighting shots. It may be significant, but not a single bullet-eye was made as an opening shot. Rathbone and Rockwell were an opening center, Scott, gun, an inner and Brown an outer, while the others missed the target entirely. The wind was not unfavorable, blowing up from the targets.

The regular practice of the American Team began on the 17th, and all of the men fired the full complement of forty-five shots except Jackson, whose ride broke down. The score stood:—

	800 Yards.	900 Yards.	1,000 Yards.	Total.
Farrow.....	74	68	70	212
Jackson.....	73	69	70	212
Scott.....	72	69	70	211
Fisher.....	71	68	70	209
Laird.....	71	68	70	209
Brown.....	71	68	70	209
Clark.....	71	68	70	209
Rockwell.....	71	68	70	209
Rathbone.....	71	68	70	209
Jackson.....	71	68	70	209

The team suffered under the absence of any flags on the range, the only wind indicator being a balloon bag fastened on a pole, and which, while good enough to indicate direction was of no value in showing the force of the air current. Flags were promised, however, and will be in position. Rathbone was not himself at all, suffering from his old-time complaints, asthma and rheumatism. On the 18th the men were again on the range. Rathbone remaining in his room at the Shelburne Hotel. The wind was very trying and variable, particularly at 1,000 yards. The scores of the day stood:

	800 Yards.	900 Yards.	1,000 Yards.	Total.
Farrow.....	73	69	70	212
Jackson.....	73	69	70	212
Scott.....	73	69	70	212
Fisher.....	73	69	70	212
Laird.....	73	69	70	212
Brown.....	73	69	70	212
Clark.....	73	69	70	212
Rockwell.....	73	69	70	212
Rathbone.....	73	69	70	212
Jackson.....	73	69	70	212

On the 19th came a sort of a test between the two teams in the shooting for the Long-range Challenge Cup by the Irish rifleman, and into which competition the Americans were invited. The two teams have carefully avoided discounting the match in any way by shooting a full score beforehand on the same day, side by side. In the shoot of the 19th seven of the American and ten of the Irish Team competed, the ranges being 800, 900 and 1,000 yards. Ten shots were allowed at each range, with two sighting shots. There was a drizzling rain and mist, which much hindered the sighting shots. As the Americans are accustomed to shooting in a good light, it was admitted that the practice could not be taken as a test of their merit. The following are the individual scores:—

	800 Yards.	900 Yards.	1,000 Yards.	Total.
Farrow.....	48	41	47	136
Scott.....	48	41	47	136
Clark.....	48	41	47	136
Jackson.....	48	41	47	136
Fisher.....	48	41	47	136

Rockwell retired after making six shots, in which he made 12. Brown retired after his ninth shot with a score of 39.

IRISH TEAM.

	800 Yards.	900 Yards.	1,000 Yards.	Total.
Miller.....	48	41	47	136
W. Rigby.....	48	41	47	136
J. Rigby.....	48	41	47	136
Murphy.....	48	41	47	136
Coghlan.....	48	41	47	136
Rankin.....	48	41	47	136
Farren.....	48	41	47	136
Johnson.....	48	41	47	136
Joynt.....	48	41	47	136
Sullivan.....	48	41	47	136

*Retired.

Monday the 21st found the men at it again, but the flags were not up as promised, and Col. Bodine having decided that only six men should shoot on the American side, and not whom the six should be, the men were, in reality, practicing each on his own merits, without any team practice. Rathbone and Dealing, who have a vast store of brand of tea and braced himself up on it. The day was a fine one, clear and still, the scores standing:—

	800 Yards.	900 Yards.	1,000 Yards.	Total.
Clark.....	73	71	73	217
Rathbone.....	73	71	73	217
Farrow.....	73	71	73	217
Rockwell.....	73	71	73	217
Jackson.....	73	71	73	217
Scott.....	73	71	73	217
Fisher.....	73	71	73	217
Laird.....	73	71	73	217
Brown.....	73	71	73	217
Clark.....	73	71	73	217

This is the last report which has come to hand, and shows that the men, with proper handling, may do something creditable. An error is made in keeping the men up to so near a date before the match as single atoms, rather than having them put together with equals, and shooting with the proper system of give and take. Instead, the 20th average for the first six in the last mentioned practice, it should have been 210 at least.

On the Irish side all is enthusiasm and hard work. One can hardly to the notes of busy preparation for beating the Americans at the butts and feasting them at *dejeuner*, and in the ball room. The two tasks, so distinct, are undertaken with an equal amount of heartiness and good will, and as heretofore Major Leech is the great guiding spirit in all that is being done. The association has changed its offices from Grafton street to Suffolk street, close by, where Messrs. Rigby, the gun makers, have placed a suite of apartments at the disposal of the Knights of the Rifle. The *snatchet sundown* cantrips are hatched and carried through with celerity, but they have, all of them, either of two objects—to secure the overthrow at the ranges of the sons of Columbia, or to add to the pleasures of their sojourn. The Major, who has been chosen Captain, has already drafted a lengthy programme of competitions, which are to form the basis of selection. The dates fixed for these competitions have been largely availed of by shooters in various parts of Ireland and in England. The final selection of the team will be "made by public competitions, open to those qualified to represent Ireland in the International Match for the Elcho Shield at Wimbledon." The competitions are divided into two branches, and may in the rough be classified as primary and final.

The dates on which the men shot were May 5th and 12th, the home or Dublin folk firing close to the old ground at historic Dollymount, whilst others looked after the bulls-eye at places which to them were most convenient. There is a large number of "coits," or novices, patronizing the pastime nowadays. Murphy, Fenton, French, Brewster and Warren are among them, unknown outside the rifle circles of the metropolis. These gentlemen are amongst those down at Dollymount, or, to speak more correctly, Raheny. Then, of the old ones, we had John and his cousin William Rigby and William Russell Joynt, toiling away in their old postures on the green sward in front of the targets. Joshua Milner, who is perhaps the best known out West, will make preparation for the match, but neither Edmund Johnson, "Jim Pollock," or S. G. O'Connell, Henry Dyer (the "fast boy"), or W. A. Chester, have yet signified their intention of taking arms. Indeed, both Messrs. Johnson and Pollock have intimated that they will be no more than anxious spectators at this coming match. Johnson will be a decided loss, as he was a really brilliant shot, but the Grafton street goldsmith has been off in Egypt on a holiday, and only returned the other day to find his hands full of business. Whilst the home men were doing some excellent work at Raheny, their brethren in armor at Belfast, Fernagh, Canan, Dundalk, and London, were pounding away at the common enemy—the bulls-eye. Captain Fenton, of the Seventy-seventh, adjutant of the Irish Centennial Team; Major Young, Mr. Plunkett, member of Parliament for Gloucester; and Mr. Vignoles shot at the Hounslow ranges, near London, and they report satisfactory work. Then McKenna, Barrett, J. P., Brithwaite and Walsington shot at Belfast another. Murphy at Dundalk, Capt. Somerset Maxwell over his private ranges at Arly Cottage, Mountingair, whilst at Cavan (Droonken House, demense), Capt. Sanderson, Major Jones and Mr. Adams put up some encouraging scores.

"Old Reliable," William Rigby and John Rigby are quite in their old form, which means that when they are down at Raheny the bulls-eye has an especially rough time of it. The captain has reserved to himself "the power of altering or adding to these rules to meet a contingency." The reservation, it may be said, sounds like a sweeping one, and so in truth it is; but under the circumstances the Major has, as he himself would put it, "done the right thing." Quite a number of these rule matches between who display a skill in their use. In the early contests it was always found most difficult to ascertain whether the Rigby muzzle-loader or the American breech-loader had the advantage. In team shooting there was no gainsaying the fact, admitted on all sides, that the weapon of our good friend, Cousin Jonathan, was the more successful. However, in what may be termed individual or single handed contests, such as the Benoit Long Range Match in 1874, and the recent range match in 1875, the tool scores were made by the Irish rifle. Subsequently American armorers succeeded in still further improving their methods, and the remarkable scores made by Bruce and others in the Palma Match of 1877, at Creedmoor, all but conclusively settled the superiority of the breech-loading match rifle. No one appeared to be more thoroughly convinced of this than the captain of the English Elcho Shield Team, and in the '78 match, almost all the English fired with two guns. The English team, however, sustained a crushing defeat at the hands of the Irish Eight, seven of whom used their old and tried muzzle-loaders, and put on record the highest score as yet put up in England. In '79, the success attending the breech-loaders was no better, and the riflemen from the Land o' Brown Heather were victorious. At the termination of this match, Mr. John Rigby, when called out to return thanks for the cheers given for

Ireland (Mr. Rigby had made two hundred and fifteen points, the highest recorded at Wimbledon), said that the Irish Eight would gain their next victory by the aid of a breech-loading weapon, and since then the Dublin gun maker has been hard at work to perfect the arm he conceived, and to-day the Rigby breech-loader is in the hands of many of the Irish rifle shots. The Rigby system consists in a certain combination of rifling and bullet applicable to any breech-loading action, the specialty lying in the barrel and ammunition, and not in the method of breech closing. The bullets are much harder than those of the Sharp or Remington rifles, and the friction between it and the barrel is reduced to almost the smallest possible amount. English powder is used, and it is claimed that the necessity for elaborate cleaning is obviated, and moreover, misses that are unaccountable to the shooter are completely abolished. It is quite on the cards that the Irish Team will use these new weapons, and if only a part of all that is claimed for them be true, the Americans will have to look well to their laurels.

On Whit-Monday, May 17th, the shoots began. The scores on that day being:—

	800 Yards.	900 Yards.	1,000 Yards.	Total.
P. J. Murphy.....	69	71	67	207
Henry Corlan.....	61	66	66	193
W. R. Joynt.....	60	66	66	192
W. B. Warren.....	60	66	66	192
Wm. Rigby.....	63	64	61	188
L. F. Banks.....	62	64	62	188
J. K. Milner.....	66	61	61	188

On the next day's shooting the scoring stood:—

Miller.....	60	57	65	182
J. Rigby.....	65	61	59	185
W. Rigby.....	64	59	59	182
Joynt.....	70	57	55	182
Murphy.....	68	62	52	182
Coghlan.....	62	61	49	172
Warren.....	60	44	47	151

All fired with breech-loaders except Milner. Warren used a Remington Match Rifle.

On the 21st, there was another of the preliminary tests, the scores running:—

	800 Yards.	900 Yards.	1,000 Yards.	Total.
Murphy.....	67	61	62	190
Joynt.....	63	59	63	185
Coghlan.....	62	62	61	185
Miller.....	69	61	61	191
Rankin.....	54	69	57	180
W. Rigby.....	57	60	61	178
Warren.....	56	60	57	173

On the 26th, under fair weather, the scoring ran, at Raheny:—

	800 Yards.	900 Yards.	1,000 Yards.	Total.
Joynt.....	65	69	68	202
W. Rigby.....	64	68	69	201
J. Rigby.....	64	68	69	201
Rankin.....	69	63	68	200
W. Rigby.....	68	63	68	199
Warren.....	57	60	57	174

This was the close of the first series of shoots, and the best of three scores each man is shown as follows:—

	May 22.	May 15.	May 17.	May 19.	May 22.	May 26.	Total of Best 3 Scores.
Coghlan.....	198	198	203	174	184	—	599

To determine who is to constitute the teams and reserves, a further competition took place in Dublin on the 4th and 5th of June, each man to fire, on each day, fifteen shots each, at 800 and 900 yards, and twenty shots at 1,000 yards. This competition took place on the North Bull, by the kind permission of Mr. Vernon, of Clontarf Castle, and as the ground was new to some of the riflemen, each man was given two sighting shots at 800 yards on the first day only. The following gentlemen, having been nominated by the Captain, obtained places without being required to enter the second stage: Maj. Young, Capt. Fenton, Mr. John Rigby. Those invited to enter the second stage were as follows: R. Barnett, J. P. Belfast; Capt. Somerset Maxwell, Cavan; James Murphy, J. P. Dundalk; Henry Coghlan, W. R. Joynt, P. J. Murphy, R. B. Warren, J. K. Milner, Wm. Rigby, L. F. Banks, Dublin.

On the 4th of June was very unfavorable, blowing great gusts at all the ranges, and on the second day, June 5th, the wind was choppy in the extreme. The scores, out of a possible 230, at each range, stood as follows:—

	Friday, June 4th.	Saturday, June 5th.	Grand Total.
Miller.....	73	70	212
Joynt.....	72	74	216
Dyer.....	68	73	203
J. Rigby.....	65	71	197
Murphy.....	67	67	194
W. Rigby.....	73	64	195
Coghlan.....	70	69	193

From these figures it will be seen that the Irish team got into this match in better trim than at any previous one. They have taken time by the forelock, and have been for a fortnight past a practical working team ready squadded, and so far as they are able, will put in play some team system. The Americans have yet to get their team practice, and from its composition, there is more than a grave doubt that the team of visiting riflemen will not be such a compact body of self-helpers as the teams that have represented America in previous years in this match have been. Yet the prestige and the odds are in the favor of the Americans. They can (having accidents) win the match if they will, and, if they do not, they will be held to a strict accountability on this side the water. If the capabilities of the American-made rifles are allowed full play, and if the perfect discipline which has marked the successful efforts of previous American teams be put into practice, there is no reason why another American victory should not be scored. Farrow has been doing magnificent work with his long-range Baid rifle, and if the odds members of the team were as able to go it single-handed as he, team help would be dispensed with; but they are not; and Col. Bodine must abdicate the title of "Old Reliable," if he is to earn the questionable honor of being the first beaten American team Captain.

CHOICE OF A HUNTING RIFLE—Corpus Christ, Tex., May 29th.—Editor *Forest and Stream*:—Sir: I have waited patiently for the new rifle which would supersede everything as a game weapon in safety, accuracy and rapidity of firing, and to this end I have

tem followed in her construction. The builders are confident, and will, we believe, guarantee higher rates when called upon. If we are asked to assign the reason for the lack of high speed in New York built yachts, and to explain the phenomenal pace of the yachts of other countries, which, by the way, are rapidly taking rank with the "Thornycrofts" of England—we would point to the different practice in hull and engine construction. In the yachts of other countries, following the ancient methods handed down to us from time immemorial. We have the same clumsy build, innumerable little pieces of heavy scantling in the frame and with keelsons, bilge strakes, clams, wales, deadwood, knees and hooks, all of which contribute to increasing weight while adding only a negligible amount to strength. The yachts of other countries are of the type of boiler, carrying a great body of water besides, and attempt to get speed out of the same old steam engine of the same type which has been used down to us from previous generations. Of course, in the matter of whittle a little away here and there, and cut a little here and there, the yachts of other countries are not so much to be envied. There is a great amount of useless and damaging weight, which must ever remain one of the features of the old way of the construction of the yachts. However, we detect a radical departure from all the shortcomings of the past and discover in their vessels and fittings an adaptability to use to be found in no others. Lightness and strength are the two great requisites of high speed, and these the Bristol builders have combined in a most striking and successful manner, to say nothing of the incomparable design and beauty of their models, alongside of which our efforts in New York seem clumsy and almost uncouth. They adopt the same style of construction in frame and wood skin; select both from the highest quality in the market; serve both the plank to the frames, and as a result obtain the lightest, strongest vessel. They have the hulls of their yachts supplied with power from their patent oil boiler, weighing just one-half of the ancient shell affairs, besides needing only a few minutes to raise the starting pressure. In the center of the hull they supply a compound or simple engine, which again are marvels of lightness, combined with strength, and through which the maximum power is got out of the steam. In addition, they supply a very effective propeller of their own design, obtained after numerous competitive trials between launches and yachts. As they are more desirous to have their yachts go fast than to have them from stem to stern, everything works in harmony and to best advantage. It is no wonder that with such superior adaptation to the parts the yachts of other countries are able to do with difficulty in keeping ahead of almost anything afloat in America. Some very erroneous impressions have been generally going about their work is too light and cannot stand the usual wear and tear. As we have numerous testimonials and endorsements at hand from gentlemen who have sailed on the yachts of other countries, as well as from our own experienced yachtsmen, we feel that the yachts of other countries are the fullest, indestructible as thoroughly reliable and trustworthy in everyday practice, and in point of speed and ease of management of the old-fashioned affairs we have in New York dub fast steam yachts. In regard to "sea-going" qualities, we venture to say that no other yachts in the world do so well. The yachts of other countries are long, high-speed steamers may possess until he has driven one like the *Leda* into a head sea at a fifteen-mile rate. Her behavior in weather is so good, and her speed so fast, that the *Leda*, *Promises*, *Ocean-Gems*, etc., was astonishing even to us, though our expectations ran high. We propose to revert to this subject at greater length in our next issue. We refer to the *Leda* for sale at Bristol, R. I., must rest content with the assurance that we have no interest in these yachts, other than to make them as good things as the yachts of other countries. We refer to the *Leda* for sale at Bristol, R. I., must rest content with the assurance that we have no interest in these yachts, other than to make them as good things as the yachts of other countries. We refer to the *Leda* for sale at Bristol, R. I., must rest content with the assurance that we have no interest in these yachts, other than to make them as good things as the yachts of other countries.

VALUE OF BULKHEADS.

Editor Forest and Stream:—The recent accident in the Strand ocean liner by the sinking of the *Narva* has brought to the mind of every one conversant with nautical matters the fact of the great value of construction of bulkheads in yachts. We refer to the absence of water-tight bulkheads, of which every passenger steamer ought to have five or more according to their size, the same in bulkheads in yachts. We refer to the fact that the *Narva* was constructed with bulkheads she would not have sunk. The fire, which added to the horror of the situation, although caused by the fire in the boiler, was not caused by the bulkheads. The efforts of the Board of Inspectors ought to be directed toward this evident fault in construction. Since the object of construction has been for so long a time a profligate theme to be lost; and secondly, merchandise. No greater boon could be vouchsafed to the public than the compulsory construction of vessels with this important life-saving addition—not only life-saving, but adding greatly to the strength and durability of the vessels.

HANSMORFF MFG. CO.

We entirely concur with our correspondents in relation to the necessity of devoting a little more mechanical skill and a little less gorgeous and ostentatious display to our river steamers. Many yachts are open to the same criticism.

THE GOOD OLD KEEL.

IT affords us great pleasure to publish the following terse and witty apostrophe from the good old keel, from no less an authority than Henry Steers, Esq. The composition was delivered as a speech before the New York Yacht Club at their recent annual dinner, and pointedly refers to what is patent to unprejudiced observers, that keel yachts can be built every bit as fast as center-boarders:—

"I had hoped that some one of the owners of the keel schooners would have responded to this toast. The subject of keels in center-boarders has been for some time a profligate theme for discussion, and the respective owners of each of these kinds of vessels have proved conclusively to the world in general and themselves in particular that their own boats are much superior to the others in speed, comfort and safety in all kinds of weather, particularly when it blows. They thoroughly understand the subject, and talk very learnedly about it, to the edification of the public at large, and with great satisfaction to themselves.

"I am sure that some one of the owners of the keel schooners would have responded to this toast. The subject of keels in center-boarders has been for some time a profligate theme for discussion, and the respective owners of each of these kinds of vessels have proved conclusively to the world in general and themselves in particular that their own boats are much superior to the others in speed, comfort and safety in all kinds of weather, particularly when it blows. They thoroughly understand the subject, and talk very learnedly about it, to the edification of the public at large, and with great satisfaction to themselves.

"I want it distinctly understood, however, that I am not to suffer professionally for any remarks that I may make which might be construed as an attempt to disparage the yachts—one of the most famous and fast sailing center-board craft that this or any other club ever possessed—I think it will be obvious that my center-board friend's opinion in this case should not be entitled to that weight which it would have in the minds of all yachtsmen on any other subject connected with yachting. I myself have had not any such opportunity of comparison, and therefore can look at the subject unprejudicedly. My previous prejudice, but even were it otherwise, is not susceptible of proof. Mathematics that the keel boat is much the better and more reliable vessel.

"It can be shown that we get better proportions in the circumscribed area of the parallelogram in keel boats than in center-boarders. We also get a much lower center of system, and while the meta center may not be as high, still we can calculate the distance between the meta center and the center of system better in the keel boat, and these two points are the true guides of stability and safety. Again, by getting a greater distance between the center of system and the water line in keel boats than can be done in center-boarders, we certainly derive a benefit from the increased pressure of water between these two points. Furthermore, the stability being mostly artificial, the requisite amount of stability to the amount of power or sail can be accurately determined, thereby insuring a thoroughly safe boat, which result has not been and cannot be reached with center-boarders.

"I have now demonstrated theoretically, practically and mathematically that the keel boat is the only kind of craft worthy of notice by the thorough sea-going yachtsman.

"Before concluding, I will trespass upon your patience for a few moments to glance briefly at the keel boat from three important points of view not hitherto touched upon, namely, the historical, the poetical and the artistic.

"First, the historical point of view. The very earliest keel boat of which we have any authentic account is entered upon the page of history as the Ark, commanded by Capt. Noah. The newspapers of that period having all been destroyed, we have no records of her qualities as far as regards speed, and we find her name connected with but one important race, namely, the human race, which to-day would cut a very small figure had she not been a stanch, seaworthy, A No. 1 keel yacht. There appears to be no doubt that at one time at least she was fast, very fast, upon Mount Ararat, and her captain and crew appear to have been perfectly satisfied with her performance in that regard. She distanced all her competitors, and left them so far behind that they have never been heard of since. As they are now some 6,000 years behind time, they would probably be ruled out of the race, even should they yet arrive. It is probable that the rest were center-board boats, which fact would account for their failure to put in an appearance, as the weather upon that occasion was exceedingly stormy, and they, without doubt, came to grief in the heavy seas which prevailed, and were washed overboard. The keel boat, however, lived through. This incident alone appears to have put a damper upon center-boarders for many succeeding centuries, and it is only within the last fifty years that they have begun to emerge from obscurity, and are now struggling to recover from the utter demoralization consequent upon that untoward event.

"Since then the keel boat has sailed triumphantly down the sea of time, and has survived the wreck of empires which it raised to the zenith of commercial prosperity. We behold the keels adapting themselves to the various tastes of the successive nations of antiquity, diversifying and changing to fit upper structure, but always with the same deep, underlying principle of keel. At one time she appears the gorgeous galley of Cleopatra, adorned with silken sails, bearing that illustrious but scantily-clad young woman on her various missions of love and vengeance across the blue waters of the sparkling Adriatic. Again we behold her (not Cleopatra, but the keel boat) carrying Commodore Julius Caesar with his cohorts of Roman noses to the shores of Great Britain and distributing civilization and the arts and sciences among the benighted inhabitants of that heathen island. Still later we see her waiting Captain Columbus and his crew of adventurous mariners over the trackless wastes of the unexplored Atlantic, on a voyage of discovery, with whose momentous results probably most of us are more or less familiar. Where would now be the British lion had it not been for Commodore Oar and his keel boats? Instead of standing on the Tower of London, with bristling mace and erected tail, roaring defiance to the world, he would have been sitting upon his haunches in his native cang, on the banks of the Thames, glaring with hungry eyes upon a howling wilderness. Where would now be the American eagle, had it not been for Captain Columbus and his keel boats? Not where he now is, perched upon the dome of the Capitol at Washington, surrounded by a halo of Star Spangled Banners and Fourth of July orations, and waving fast upon the inexhaustible supply of buncombe which flows continually from the bulls beneath him. Instead of enjoying all this luxury, he would be sitting in a stump beside some of the fish-holes in the Rocky Mountains, ignominiously watching for a chance to steal from some fish-hawk his hard-earned supper. Without the assistance of these keel boats one-half the globe would be a trackless forest, and the civilization of the world would be confined to the mainland of the Eastern continent.

"Thus we see, that the keel boat is preeminently the boat of history, and is associated upon its pages with many of its most glorious and important achievements. It is also that which has given kind of record recognized by literature, poetry, painting and the arts. We read of

"The hardy mariner whose keel plows through the realm of undiscovered seas, and not 'the hardy mariner whose center-board plows through the realm of undiscovered seas.' Also

"The thunder laden keel

Whose cleaving heels o'er the rebellious crest

Of angry ocean ride,

and not

"The thunder laden fleet,

Whose cleaving center-boards o'er the rebellious crest

"Instances innumerable like these might be cited to prove that poetry not only deals exclusively with keel boats, but also considers the keel itself an essential element in their construction. This fact is applicable in an equal degree to painting. Who ever saw an idealized boat represented on the canvas with a center-board? Take, for instance, that celebrated series, Cole's 'Voyage of Life.' Do we behold that allegorical infant embarking in his life? Do we behold that allegorical center-board atoking up in the middle? By no means. A genius at once as poetical and practical as Mr. Cole would never think of intrusting as important a matter as the 'Voyage of Life,' to anything else than a keel boat.

"And now to return to the level of actual life, and the circle of our own observation and experience. I would ask what description of craft has reflected the greatest credit upon the association to which we belong? What kind of a vessel was it that twenty years ago beat this port, and having crossed the Atlantic to meet on the other side the assembled yacht fleets of Europe, sailed a race in which she so far distanced her competitors, that when the news arrived that she was ahead, and the question was asked, 'Who is second?' the answer came back, 'There is no second—the keel yacht America!'

"What kind of a vessel was it that a few years ago went from here to Cewes and amused herself by sailing around the Fast Fish, and then came back, and sailed a race in which she so far distanced her competitors, that when the news arrived that she was ahead, and the question was asked, 'Who is second?' the answer came back, 'There is no second—the keel yacht America!'

"What kind of a vessel was it that a few years ago went from here to Cewes and amused herself by sailing around the Fast Fish, and then came back, and sailed a race in which she so far distanced her competitors, that when the news arrived that she was ahead, and the question was asked, 'Who is second?' the answer came back, 'There is no second—the keel yacht America!'

"We find, therefore, that the keel boat is the boat of history, the boat of poetry, the boat of painting, and the boat of the practical sailor. It has been handed down to us from the remotest ages, hallowed by classic associations, indorsed by all the nations of antiquity, and through all the vicissitudes of thousands of years has never become obsolete or discredited. It has been the successful boat of our forefathers from time immemorial, and will be the successful boat of our posterity through all future generations!"

THE DOGS AT HEIDELBERG.—The students' dogs at Heidelberg, one of the great German universities, is thus pleasantly described by Mark Twain in his new book, "A Tramp Abroad":—

Nine tenths of the Heidelberg students were no badge or uniform; the other tenth wore caps of various colors, and belonged to social organizations called "corps." There were five corps, each with a color of its own; there were white caps, blue caps, and red, yellow, and green ones. The famous staff of lighting is confined to the "corps" dogs. The "Kneip" seems to be a special peculiarity of theirs, too. Kneips are held, now and then, to celebrate great occasions—like the election of a beer king, for instance. The solemnity is simple; the five corps assemble at night, and at a signal they all fall loading themselves with beer, out of pig mugs, as fast as possible, and each man keeps his own counts—usually by laying aside a lucifer match for each mug he applies. The election is soon decided, when the candidates can hold no more, a count is instituted, and the one who has drunk the greatest number of pints is proclaimed king.

It seems to be a part of corps etiquette to keep a dog or so, too. I mean a corps dog—the common property of the organization, like the corpsward or head servant—then there are other dogs, owned by individuals. I have seen six students march solemnly into the grounds, in single file, each carrying a bright Chinese parasol and leading a prodigious dog by a string. It was a very imposing spectacle. Sometimes there would be about as many dogs around the pavilion as students; and of all breeds and of all degrees of beauty and ugliness. These dogs and their owners were not there for any other purpose, and had no amusement for an hour or two at a time except what they could get out of pawing at the gnats or trying to sleep and not succeeding. However, they got a lump of sugar occasionally—they were fond of that.

It seemed right and proper that students should indulge in dogs; but every body else had them too, old men and young ones, old women and nice young ladies. If there is one spectacle that is unpleasant than another it is that of an elegantly dressed young lady towing a dog by a string. It is said to be the sign and symbol of blighted love. It seems to me that some other way of advertising it might be devised, which would be just as conspicuous and yet not so trying to the proprieties.

THE CAPE HUNTING DOG.—Among the most recent additions to the Zoological Society's collections in Regent's Park, London, is a Cape hunting dog. It is a queer beast, with shifty ways that give it an appearance of irresolution and occasionally of crazy bewilderment, induced, no doubt, by the consciousness that its features justify its being looked upon as neither a dog nor anything else. The animal has a long, narrow head, and a long, pointed snout as far from the last wolf. In a wild state it is a creature of intense ferocity, and as active as it is fierce, sweeping in packs from province to province, ravaging the colonist's flocks and hunting down the wild herds of the plains. Nothing is safe from it when at liberty, and in captivity it is said to be untamable. Probably, therefore, no other species has been so much the game of the sportsman. Its life is so miserably circumscribed, so flat and dull as will this wild hyena-hound of Africa.

NOTES AND QUERIES.

FISH MOORED IN GILLS.—Why do writers on angling write of fish with "hooks in their gills?" Are fish often, or ever, caught in that way?

Fish are hooked in the jaws or in the stomach—sometimes by the back or tail, but I do not remember in fifty years of angling to have seen one taken with a hook in its gills.

PUBLISHERS' DEPARTMENT.

UNBROKEN CONFIDENCE.—Peck's Sun, Milwaukee, Wis., in referring to Warner's Safe Remedies, has the following: "H. H. Warner & Co., Rochester, N. Y., are the sole proprietors; we have a perfect faith in the efficiency of their preparations, and an unbounded confidence in the truth of all that is good, and said of them."

Bench Show Scoring Cards, with complete table of points, by Edward J. Forster, Secretary Massachusetts Kennel Club. By the table the value of any particular point of any breed, according to Stonehenge, can be seen at a glance. Twenty-five cents per package, or five packages for \$1, postpaid. Send currency or stamps. Address Edward J. Forster, Charlestown, Mass.

—We call attention to advertisement of mastiffs for sale, in this issue.

Sportsmen's Goods.

THE AMES SPORTING CANNON,
MADE BY THE
Ames Manufacturing Company,
Chicopee, Mass.

THIS GUN is a small bronze breech-loading cannon, adapted to the use of campaign clubs, celebrations, yachting, signal and sporting purposes generally. The gun is made of U. S. Government standard bronze, is 12 inches long, 11 inches caliber, and weighs 20 lbs.; it is mounted on a solid cast iron carriage weighing 112 lbs. It can be readily carried in a procession by two men, and meets a want long felt for a small, convenient and safe gun. Metallic shells for cartridges are furnished, which can be reloaded and fired indefinitely, and by their use the possibility of fire being left in the gun is obviated. The shells are filled with common coarse sporting powder, and fired by a U. S. service percussion cap. The gun is simple in construction, easy of operation; no exposure in loading and firing; and is the most complete breech-loading gun made for this purpose.

The Bimel.

PURE Laverack pups; Carlowitz in the Stud, fee low. Sire's record: send two 3 cent stamps. M. VON CULIN, Del. City, Del.

The Bimel.

IMPORTANT TO EXHIBITORS.

MR. H. G. FOSTER, of Leeds House, Stockton-on-Tees, England, the most successful exhibitor of dogs of pure in the kingdom, has for sale a very handsome pug bitch, age two years; just been served by that grand dog, Young Comedy, sire Immense Comedy, winner of first prizes and cups at all the principal exhibitions in England, Ireland and Scotland, including champion prizes at Crystal Palace, London, Birmingham, Dublin and Edinburgh. Also champion prize at English Kennel Club's Show this week in London. The bitch will be warranted to be in whelp, and must prove a valuable investment; her litter of puppies will amply repay the purchaser, she will be carefully sent in proper traveling box, from Liverpool, on receipt of twenty-five pounds. Mr. H. G. Foster has bred and exhibited the following celebrated pug dogs: The Immense Comedy, champion of the world; Champion Cleveland, Molke, Banjo, Odin, Tichborne, etc., and can refer any intending purchaser to Hugh Dalziel, Esq., of London, the judge at the late New York Show. Full pedigree given with each when sold.
H. G. FOSTER, Leeds House, Stockton-on-Tees, Co. Durham, England. July 24-1t

FOR SALE.—Three handsome red Irish setter pups, eight weeks old, large, strong and healthy, out of Nora, she by champion York x Belle; and one brace of handsome Llewellyn pups out of Belle, she by Pride of the Border x Kitty and Warrier, both parents being thoroughly broken and prize winners. Prices reasonable. For particulars and full pedigrees, inquire of the CONTESTA KENNEL, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

ANTI-RUST.

FOR THE PROTECTION OF

Fire-arms, Cutlery, Skates, Surgical Instrument, and all metal surfaces, from oxidation.

It is a strict hygienic preparation, containing no mercury or animal oil; is not injurious or offensive, and will never gum or become rancid in any climate. To sportsmen it is specially recommended for sea-coast shooting.

MUSCAPHILO.

A perfect protection from the action of black flies, mosquitoes, gnats, sand-flies, and other in- sects so annoying to sportsmen and tourists.

Containing no noxious vegetable oil, it is re- fractory to disintegrating odors; will not soil the com- plexion; prevents tanning, sunburn and chap- burn of face and hands; and washes off readily.

Sold by Schoverling, Daly & Gales, and Houglins & Hinch, New York, and John F. Lovell & Sons, Wm. R. Schaefer, Bradford & Anthony, Pope Manufacturing Co., and deal- ers in sportsmen's goods everywhere.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING AND BLAST-
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, es-
tablished in 1822, have maintained their
reputation for seventy-eight years. Manu-
facture the following celebrated brands of Pow-
der:

DUPONT'S DIAMOND GRAIN,
Nos. 1 (coarse) to 4 (fine), unequalled in strength,
quickness, and cleanliness; adapted for Glass
Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,
Nos. 1 (coarse) to 3 (fine), burning slowly, strong,
and clean; great penetration; adapted for Glass
Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,
A quick, strong, and clean Powder, of very fine
grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING,"
FG and FFG. The FG for long range rifle
shooting; the FFG and FFG for general use,
burning strong and moist.

SPORTING, MINING, SHIPPING, and BLAST-
ING POWDERS of all sizes and descriptions.
Special grades for export. Cartridge, Musket,
Gannon, Mortar, and Mammoth Powder, U. S.
Government standard. Powder manufactured
to order of any required grain or proof. Agents
in all cities and principal towns throughout
the U. S. Represented by

U. S. B.—Use none but DUPONT'S FG or FFG
Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point
of strength and cleanliness. Packed in square
cansisters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. cansisters and
6 lb. kegs. A fine grain, quick and clean, for up-
land prairie shooting. Well adapted to shotguns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 6 lb. cansisters
and 6 and 12 lb. kegs. Burns slowly and very
clean, shooting remarkably close and with great
penetration. For field, forest, or water shooting.
Sparks any other brand, and it is equally suc-
cessful for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFG, FFG, and "Sea Shooting" FG in kegs of
25, 24, and 6 lb. and cans of 5 lbs. FFG is also
packed in 1 and 1 lb. cansisters. Burns strong and
moist. The FFG and FFG are favorite brands
for ordinary sporting, and the "Sea Shooting"
FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

Shot Gun and Rifle Powders Revolutionized.

DITTMAR POWDER.

Champion Shot Gun and Rifle
POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is
absolutely safer than gunpowder, as it cannot explode when not confined, and does not
strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion
wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and
all the leading shots, use DITTMAR POWDER in their matches. Our challenge
to shoot a long range rifle match, as published in our circulars, was never accepted,
and is yet open to the world. Address

the vessel was only taking lumber on her return trip, we had the deck all to ourselves.

Friday, the 11th, the weather was foggy and drizzly, wind very light all day. Busied ourselves arranging fishing tackle, etc. In sight of Cove Island Light at the end of the Indian Peninsula at midnight.

Saturday opened warm and sunny; hardly any wind; only sailed ten or twelve miles last night. We found ourselves off the Flower Pots after breakfast. As the vessel was going very slowly, Capt. S. and I lowered the canoe into the water by ropes at each end, and, towing her to the bows, we both got into her from the dolphin strikes and paddled off to visit the "Pots." They were three in number at the time of our visit, although formerly there were seven, the remainder having been overthrown by storms, or human vandals. They are composed of immense blocks of stone weighing many tons, over thirty feet in height apparently, and stand in the water at the southeastern limit of the island, which is nothing but a mountain of rock covered with evergreens and shrubbery to its very summit. The Flower Pots have the appearance of cones inverted or standing on their apexes, and, in my opinion, were formerly part of the mainland, or rather main island, which have become detached and worn to their present shapes by the action of the water. The lake, or rather bay, for we enter the Georgian Bay as we pass Cove Island, was very clear at this place, and we were able to see the bottom at a great depth. After enjoying a slight stretch on shore, we picked a few wild flowers for the ladies and paddled off after the vessel, catching up to the boat when she was opposite the Bear's Rump, an island of rocks covered with evergreens, and of such a shape as to entail on it the euphonious name given above.

The cook gave us a very fine salmon trout for dinner, which the men had caught before we came up. The night was light and starry, as we slowly forged through the middle of the largest of fresh water bays. I remained on deck enjoying the scene and cigar until 1:30 A.M.

Sunday morning. Light and sunny; breeze still light; caught a large black bass with trolling hook, and almost caught a trout, but he flung himself off the hook as he was leaving his native element. The captain stated that he caught nine salmon trout on the last trip up, but that we were now going too slow for fishing. The line used in deep sea trolling is both the thickness of a slate pencil, the spoon is some three by two inches, and the hooks some two or three inches long.

At dinner time we passed the Western Islands (the spot where the ill-fated steamer *Waubesa* was supposed to have foundered last fall with all on board). We arrived in Midland about 6 A.M., having experienced a very delightful voyage up. Midland we found to be a very enterprising town, situated on the eastern shore of a small bay of the same name opening into the Matchdash Bay. Its chief industry is lumbering; and it is also, at present, the terminus of the Midland Railway, of Canada, which was finished here the present year.

Monday we intended to leave on the Midland Railway for Bracebridge, via Orillia, but owing to an accident which happened to one of our number we were obliged to wait over until Wednesday, when we left by the noon train, reaching Orillia at 2 P.M. Left Orillia at 4:15, via Northern Railway for Gravenhurst, where we took the steamer *Winona*, and, after a pleasant voyage of some sixteen miles on lake and river Muskoka, we reached Bracebridge.

Bracebridge is the chief town of the district of Muskoka, and is situated at the head of navigation on the Muskoka River. We found the hotels full of sportsmen and guides, all getting out for a shoot in the woods or a fish in the rivers and lakes, so plentiful hereabouts.

On Thursday, after a good deal of bargaining and talking, we made arrangements with a livery-keeper to take us to Baysville, some sixteen miles from Bracebridge, and come for us for the sum of \$12, which we at first thought was rather exorbitant, as we all, bag and baggage, only made one load, but going over the room in a civilized mode. We started after breakfast and made the sixteen miles in time for supper at the other end, and, of all the roads I ever saw, that is the worst—some forty-nine hills, all of bare rock, at one time called the "Devil's Gap." The wagons had to be unloaded, and everything hauled over it in stone boats, it was so precipitous. I think our appearance, as we were on the road that day, would have caused a little comment in a civilized town. A large wagon, filled with boxes and bags, etc., a buffalo robe stretched over, and all bound securely with ropes; on the top of all the ladies in large hats, and the male portion of the parties in havelocks. Our driver added not a little to set off the group. We were honored by the livery-keeper himself, as ladies were an unusual article in that country, and had to be driven carefully. He was a tall, dark, fine-looking, strapping fellow, and had formerly been a guide and trapper before this region had been opened up, and he was very entertaining with his stories of olden times in the woods we were going through.

We found Baysville a lively village, situated on a

branch of the Muskoka River, about two and a half miles from Trading Lake, of which it (the river) is the outlet. As usual with Canadian towns, the nucleus of the village was a sawmill, located at the first falls on the river, and in consequence was at the head of navigation. We drove immediately to the river bank, and pitched our tent for the first time. We procured our fishing permits from Mr. Wm. Higgins, who is the sub-inspector for this region. We also got our boats, etc., through him. He is the principal sporting character in the neighborhood, and keeps a number of hounds.

It seems like olden times once more, to be sitting around a camp fire with the varying light reflecting on the white canoes at our backs.

Friday morning we struck tent and left Baysville for Trading Lake, all of us in one boat twenty-feet long, and vouchsafed to be a good sea boat. We also towed a flat-bottom skiff containing our luggage, which had been considerably decreased by our constituting Baysville a storehouse, and leaving the trunks, etc., there. As our injured companion required some rest, we determined to camp at the foot of the lake over Sunday, and so pitched our tent in an open glade on a bank possessing an extensive view of the lake, where we remained until Monday amusing ourselves by getting enough fish for our own use, eating berries, and exploring the neighboring islands. We caught one speckled trout weighing four pounds. The view from our tent was very pleasing, indeed. In front, as far as the eye could reach, stretched the beautiful, cool lake, its surface dotted with islands, the banks in some places very rocky and high, and indented principally on the northwest with deep floods, which give to the lake its second name of "Lakes of Bay."

Monday, July 21st, 1879. Up very early; sunrise reminded me of those lines of the poet beginning thus:—
"The morn, in russet mantle clad,
Walks o'er the dew of yon high eastern hill."

Struck camp after a hurried breakfast, and made for up the lake, with a fair wind, turning our large boat into a sail craft by the help of an oar and part of our tent. The flat bottom we surmised the "polywog," on account of her propensity to waddle in towing.

The upper part of Trading Lake is divided into two large bays, one running to the northeast and the other to the northwest. We decided to take the last as our scene of operations, and dined at noon on the point of the peninsula separating both the bays, and constituting the half-way mark also. Reached the end of North bay at 6:30 P.M., having enjoyed a delightful sail of eighteen or twenty miles from the foot of the lake with a fair wind.

Pitched camp in a grove of pine trees about six or eight feet above the level of the lake. Back of us, and on all sides, the mountains rose to considerable height. Black flies were rather troublesome; the other pests are out of season.

Ned Gould, the champion hunter and fisher of these regions, lives about half a mile from our camp, across the end of the bay. He was very obliging to us during our stay, letting us have his canoes, etc., whenever we wanted them.

We remained in this locality over a week, fishing, shooting, etc., and enjoying ourselves thoroughly. For food, that, as regards fishing, we had made a mistake omitting to bring worms with us, as this being deep fishing period, the trout all lying at the bottom were gorged with minnows, and would only look at special bait, such as worms, of which there are none to be procured in the country. However, although we did not catch as many as we had hoped to, those we did get were large, and we have no doubt but had been a month or two earlier we could have caught immense numbers, as the water appeared to be teeming with them.

As for shooting, we had some good sport with ducks, and a number of very exciting chases after loons. These are large birds of the duck species, about the size of geese, black on top with a white breast, and are unsuitable as food on account of being too tough. The duck is very thick and close, and is said to ward off any ordinary shot or bullet. When skinned and cured the pit is used in the backwoods for the seats of chairs, etc., and in towns and cities for boxes, muffs, etc., and is very durable.

At night the birds emit a weird, mournful cry, like a person drowning. We were once in the act of creeping against a very strong wind, and then they have to try a distance before accomplishing the feat. To counterbalance this disadvantage they can remain under water a long time, and swim very rapidly while so immersed. We chased one for a long time one day, and had eventually to get Gould and another man to help corner him up. When we got him he was almost full of buckshot.

Friday, July 23, also, after taking the ladies, took a trip up the north branch of the Muskoka River, which empties into the bay just opposite us. We paddled up to the falls, some three or four miles, and on our arrival there, unanimously concluded that the scenery we had passed through was the finest of its kind we had ever seen, The

Muskoka and the Georgian Bay Islands.

THERE is nothing so pleasant as reading an account of a fishing or hunting trip with pleasant companions and plenty of sport, except the trip itself; and I, for one, although enjoying the sketches very much, always feel a want, in most of them, of practical information.

Persons of ample means can, of course, take advantage of any narrative they read, and go and do likewise, still I have no doubt there are numbers of your readers who, like myself, are very eager to go on just such jaunts, but not able to go if they are too expensive; also many others who would be saved much trouble and loss of time and expense if they had any practical experience to guide them.

The following is an account of a trip made among the lakes and hills of Muskoka and the Georgian Bay Islands waters.

Our party consisted of four—Capt. S., his wife, M., her companion, Miss F., and myself. Our outfit was as follows: One barrel containing provisions—ham, corn meal, dried beef, syrup, tea, coffee, etc.; one bag of hard-tack (not the veritable hard-tack of the old salt, but Canadian, large, square and very palatable, costing five cents per pound), one canvas sailor's donkey or waterproof bag, for each of the men; one trunk for the ladies, a bundle of bedding covered with a buffalo robe, and a box ten inches square by forty inches long containing guns, fishing tackle, ammunition, etc., and a small hatchet; one tent ten by ten feet, five and one-half feet high at eaves, so no inconvenience of stooping, and having a partition in center. The tent was in two pieces, top and sides, and made into a bundle like a carpet-bag. The poles came apart in the middle, so that they, with the fishing rods, were a very small bundle. No boats, as we expected to get them at our destination.

We procured a passage on the large schooner *Midland Rover* from Goderich to Midland City, and left "G." on Thursday, the 10th of July, 1879. Weather rainy all day, but very pleasant in the evening, with a light southerly wind. We remained on deck chatting, singing and enjoying the novelty until almost midnight, As

river turned almost at right angles every quarter of a mile or so, and seemed to have been cut out of solid banks of evergreens some seventy or eighty feet high, which were reflected in the water almost as perfect and distinct as they would have been in a mirror. Every now and then, on suddenly skimming in our birch around a sharp corner, we would disturb a covey of young ducks feeding on the wild rice growing close to the banks. We spent an hour or so fishing below the falls, and experienced very good sport indeed.

Saturday, S. and I canoed a long distance up the North River, making some three or four portages and traveling some twenty or twenty-five miles, but had very little luck.

Monday we struck camp and left for Baysville, wind dead ahead, rowing. At 11:30 A.M., wind getting fresher, we ran under the lee of Lone Tree Island, for shelter and refreshments. Twelve A.M. we started again; 12:30 we rounded to in a bay to leeward of half-way point, lying under the shadows of the hills.

"Up from men's homelike where the cliff breaks away,
And the warm scented trees drop dewy green."

A thunder rain-storm coming up with the westward, we pitched our tent and made things taut for the night. Nine A.M., wind going down a little, and it being a lovely moonlight night, we held a council of war, and determined to up sticks and continue on down the lake. We halt a weird but delightful pull for some four hours, and reached our first camping ground at 1 A.M.

We left Baysville Thursday morning, and, taking our old track, arrived at Midland at 5:30 Friday evening.

Saturday we hired a Mackinac skiff and half-breed boy of eighteen years for the remuneration of \$1 per day and keep. For the benefit of the uninitiated I will remark that a half-breed is a schooner-rigged sailboat of from twenty to thirty feet long without water ways, and they are very safe, fast boats when under good management. Taking our camping outfit, the captain and I, with the boy, left for the islands down the bay to pick a camping ground, leaving the ladies boarding at a private house in town. Reached Prince William Henry Island, or, as it is called by the Indians, Boseley Island, about 6 A.M., running under a bay on the eastern shore, pitched our tent and caught a number of large bass for supper.

Sunday was a glorious day. Capt. S. and Joe, our half-breed, left in the boat after dinner for Midland, and were going to stay over night and bring the ladies out with them in the morning, leaving me to keep bachelor's hall, but as I had one or two visitors from the Indian village situated on the south end of the island, I stayed in my tent, not long by myself. Monday turned out fine; got up early, made a raft and paddled off to rock in the bay a quarter of a mile or so from shore, and caught a good string of fine large bass and pike. Folks got out about 1 P.M., and as the ground was rather rocky for camping where we were, we moved camp to a large bay at the back of the island, where the present camping ground is the best we have yet been in.

"By the glossy waters of a bay,
The golden tangles of the sunbeam play,
And quiver in the breaking waves."

The bank rising gradually from the water, smooth and grassy, and dotted with clumps of scrub oak and black-berry, and some small shrubs, which he was in the park, it was formerly the site of an Indian village, the ruins of which are still visible. Rumor has it that at the time the French were massacred and driven out of Ventary-nisheno (about twelve or fifteen miles from here) large quantities of gold and silver were buried on this spot, and some credulous persons of the present generation evidently put faith in it, as the ground in the vicinity of the ruins is all full of holes, apparently of recent excavation. Some of the holes are as large as cellars, others on a smaller scale. Scattered through the bay were numbers of rocky islets arising precipitously out of the water, off which we found good fishing, bass and pike of large size being numerous. We remained on the island a week, fishing, shooting, etc., ducks having begun to fly. Thursday, Sunday and Monday the wind was in the bay, took my birch canoe and we went for a long paddle among the islands to the northeast. We got some very good fishing and also had a lively hunt after a hare, and had to give it up on account of a thunder storm coming up and chasing us back to our tents, which we reached about dusk, having traversed over twenty miles.

On the day morning we struck camp and moved into Midland, where we found the Rover almost loaded with lumber. Leaving Midland at dusk, we reached Goderich on Tuesday at 7 A.M., after a pleasant voyage down the lake, very similar to our trip up. As we arrived off Goderich Town we were forcibly reminded of Coleridge's lines, running thus:—

"Oh dream of joy—is this indeed
The light of day, the top of the hill?
Is this the hill? Is this the peak?
Is this mine ain country?"

The lighthouse, a church and the hill are almost all one can see of Goderich from the water.

We resolved to spend our time in Georgian Bay part of our trip was by far the most pleasant, and also the cheapest, as, if we had remained there all the time, our expenses would have been reduced two thirds.

The fishing among the Georgian Bay Islands is good, bass and pike predominating in the small bays and maskalonge and salmon trout outside. The bass and small pike can be caught by hand, and the larger fish by trolling; but I always find, wherever I have been, that a great deal of time and expense will be saved by procuring, in the first place, guides to show you the best fishing spots.

A party of four or five could, by starting from Goderich, easily spend two or three weeks among the islands at an expense of say ten dollars each, which would include hire of large canoe, grub, and guides, etc., and a great many things. As regards equipment, I have tried a great many things; American patent camp beds, Canadian ditto, and can say that all a person wants is a buffalo skin between two, a blanket apiece and one strong suit of coarse tweed clothes, with a change of unmentionables. Throw in a large ulster for heavy weather, and your outfit for the outer man is complete. I generally carry a suit of oilskins as a precaution.

SPRING NOTES FROM MINNEAPOLIS, MINNESOTA.

MAY, 1880.

May 1st—52°, 83°, 64°.—A large fish hawk, measuring sixty-five inches from tip to tip of wings, was shot near the city to-day. This bird is not at all common here.

May 2d—72°, 91°, 66°.—First Bartram's sandpiper. Marsh marigold (*Caltha palustris*) in bloom.

May 3d—66°, 90°, 70°.—Chimney swifts. Evening grosbeaks on Nicollet Island. This is the last time the grosbeaks were noticed. The very warm weather at this time doubtless hastened their departure, as they usually remain much later.

May 4th—70°, 86°, 67°.—Night hawk.

May 5th—66°, 82°, 70°.—Rose-breasted grosbeak, red-eyed vireo, warbling vireo, blue yellow backed, blackburnian, golden-winged, chestnut-sided, yellow, Tennessee, and Nashville warblers, lark-finch, cow-bunting, king bird. A pair of robins building in a tree across the way.

Wood anemone, plum trees, oaks, ironwood, etc., in bloom. The slippery elm has passed from blossom to fruit. The very warm weather of the last few days has forced everything ahead, so that we have passed directly from a late to an early spring. A great number of birds have arrived, many of them several days ahead of their usual time. Some of the trees and bushes which but a day or two since were bare and winter-like, are sufficiently in leaf to cast quite a decided shade.

May 6th—72°, 91°, 69°.—House wren, Harris' finch, chickadee, redstart, Baltimore oriole, whippoorwill, solitary sandpiper, willet, olive-backed thrush, Traill's flycatcher. Great abundance of white-throated sparrows.

Two kinds of wild gooseberry (*Ribes cynosbati* and *rotundifolium*) and the larger bellwort (*Uvularia grandiflora*) in bloom.

May 7th—53°, 56°, 46°.—White-crowned sparrow and orange-crowned warbler.

Rue-anemone (*Thalictrum anemonoides*), Juneberry (*Amelanchier canadensis* var. *alnifolia*) and cultivated red currant in bloom.

May 8th—52°, 70°, 53°.—Cape May warbler, Maryland yellow-throat, clay-colored buntings, Ridgway's sparrow, bobolink, barn swallow and Carolina rail. A set of four eggs of the long-eared owl (*Nyctaleus*) obtained from an old crow's nest, from which I took a set of five crow's eggs last year. The nest is about twenty-five feet from the ground in a tamarack tree in a dense tamarack swamp. The eggs were in very different stages of incubation, one being nearly fresh, while another contained a large embryo. Red-winged blackbirds nesting. Numerous Bartram's sandpipers.

In bloom: hoary puccoon (*Lythospermum canadense*), sweet white violet (*V. blanda*), blue violet (*V. cucullata*), dandelion and crab apple trees.

May 9th—52°, 68°, 54°.—Red-headed woodpecker.

In bloom: columbine (*Aquilegia canadensis*), red-berried elder, Indian turnip (*Arisema triphyllum*), whittow grass (*Draba caroliniana*), strawberry, white birch, etc.

May 10th—55°, 65°, 59°.—Upon skinning a clay-colored bunting to-day I found the flesh literally full of white, worm-like parasites. Every part of the body, from the head to the root of the tail, contained the parasites, but they were fewer in the muscles of the breast than elsewhere. In the small amount of muscle on each leg there were thirty or forty of these worms, and so numerous were they in some places that the muscles were much enlarged. Although thus afflicted the bunting was fat, and seemed in good condition generally.

Early meadow-rue (*Thalictrum dieciem*) in bloom.

May 11th—58°, 83°, 65°.—Yellow throated vireo, Wilson's black-cap (*Myiodytes pusillus*), Wilson's thrush, Alice's thrush, Savanna sparrow and water thrush (*Sialurus naevius*).

Many oven birds in full song, clay-colored buntings, redstarts, a Harris' finch, chestnut-sided warblers, Tennessee warblers, blue-headed vireos, etc.

In bloom: yellow violet (*V. pubescens*), Canada ginger, *Asarum canadense*, wake robin (*Trillium cernuum*), red cherry and red raspberry (*Actaea spicata* var. *rubra*).

May 12th—63°, 64°, 60°.—Much rain; cool. A scarlet tanager.

May 13th—56°, 68°, 60°.—Black-poll and bay-breasted warblers, short-billed marsh wren. Brown thrush's nest containing three eggs. Tennessee warblers very numerous.

Creeping crowfoot (*Ranunculus repens*) in bloom.

May 14—60°, 76°, 62°.—Indigo bird, orchard oriole.

In bloom: painter's brush (*Castilleja coccinea*), larkspur violet (*V. delphinifolia*) and blue-eyed grass (*Sisyrinchium bermudiana*).

May 15th—62°, 80°, 63°.

May 16th—63°, 78°, 70°.—Buck-bean (*Menyanthes trifoliata*) in bloom. The plum and crabapple blossoms have about all fallen.

May 17th—67°, 85°.—Yellow-winged sparrow, Cana-

dian flycatcher, black tern and a blue-winged yellow warbler (*Helminthophaga pinus*). The capture to-day of a male of the last-mentioned species is the first time that I have detected this warbler here in six years' collecting. It is certainly a rare bird, and may be simply accidental. Dr. P. L. Hatch includes it in his list of 1874, a single specimen having been secured.

A lark finch's nest containing one egg.

New flowers in bloom: water-leaf (*Hydrophyllum virginicum*), bird's-foot and arrow-leaved violets (*V. pedata* and *hastata*), choke-cherry, wild cranesbill (*Geranium maculatum*), overlasting pea (*Lathyrus ochroleucis*), wood betony (*Pedicularis canadensis*), ground plum (*Asragalus caryocarpus*), dwarf blue-berry (*Vaccinium pensylvanicum*), wild black current (*R. floridum*), dwarf raspberry (*Rubus triflorus*), golden corydalis (*Corydalis aurea*).

May 18th—75°, 83°, 69°.—Catbird's nest, just completed. Heard the very singing for the first time this spring.

Bellwort (*U. sessilifolia*) small honeysuckle (*Lonicera parviflora*) and long-flowered puccoon (*Lithospermum longiflorum*) in bloom.

May 19th—64°, 77°, 60°.—Ruby-throated hummingbird. Along the edge of a certain piece of woods a pair of hummers breeds each year, and during the nesting season the male may be found at almost any time sitting on the dead top of one or another of two or three particular trees. Here he passes hours, his repose interrupted by only occasional brief periods of absence. He was at his post again to-day after the long winter's absence, while the female doubtless was engaged at no great distance in arranging for the nest. This quiet, inactive way of whiling away the time does not seem to accord in the least with the usual restless disposition of the hummingbird.

An oven bird's nest containing four eggs of the owner and two of the cow bunting. The nest was in an old wood road, close by where there was a nest two years ago.

The gold thread (*Coptis trifolia*) and showy orchis (*Orchis spectabilis*) are in bloom.

May 20th—49°, 56°, 49°.—Great-crested flycatcher and olive-sided flycatcher. A crow's nest, containing four large young, and a cooper's hawk's nest, containing four slightly incubated eggs. These two nests and the one from which the long-eared owl's eggs mentioned above were taken, are in the same corner of a dense tamarack swamp and quite near together.

In bloom: star-flower (*Trientalis americana*), star-grass (*Hypoxis erecta*), stemless lady's slipper (*Cypripedium acule*) and false Solomon's seal (*Smilacina trifolia*).

May 21st—47°, 60°, 53°.—There was sufficient frost last night to kill and blacken the young leaves of the small oaks, sumach leaves, ferns, etc.

A wild pigeon's nest, containing one egg nearly incubated; two rose-breasted grosbeaks' nests, each containing three fresh eggs, and a cow bunting's egg in addition; a catbird's nest, two eggs and a scarlet tanager's nest just completed. The wild pigeon breeds here regularly, but only in isolated pairs. I have found many nests, but never one containing more than a single egg or a single young bird. Yet most, if not all, of our authorities say the pigeon (*Ectopistes migratoria*) lays two eggs. Is it a fact that two eggs are generally, or even occasionally, laid?

May 22d—57°, 68°, 53°.—Black-billed cuckoo.

Song cranes (*Cardinalis rhomboides*), rock cress (*Arabis laevigatus*), and swamp saxifrage (*Saxifraga pensylvanica*) in bloom.

May 23d—60°, 61°, 58°.—Spiderwort (*Tradescantia virginica*) and golden ragwort (*Senecio aureus*) in bloom.

May 24th—63°, 78°, 70°.—Yellow-billed cuckoo, Wilson's phalarope and a mourning warbler. The last is a rare bird in this locality, though common in the heavy timber a hundred miles further north. Three Carolina doves' nests, with two eggs each; one of them was within two feet of the ground in a dead bush in open brush land. A loggerhead shrike's nest containing six eggs nearly hatched. One red-winged blackbird's nest with four eggs, and many just being built in hazel and oak bushes near a pond. Found a robin's nest which was so nearly tipped from its place in the crotch of a tree that the two young birds it contained lay upon the side of the nest. The robins however had not deserted it and the female was sitting upon the nest, unsteady as it was. Many catbirds' nests, most of them just completed; one with five eggs.

Upon knocking the top off from a muskrat house on the edge of a slough, the young muskrats apparently but a day or two old, were disclosed. They were hairless and showed not the least sign of their eyes opening. The nest was of dry grass and not more than an inch or two above the level of the water.

In bloom: Arrow-wood (*Viburnum lentago*), meadow parsnip (*Thaspium barbinode*) sweet sorrel (*Rumex acetosella*) and carion root (*Smilax latifolia*).

May 26th—72°, 77°.—Whippoorwill's nest, two fresh eggs; three wood thrushes' nests, two containing eggs, the third not finished yet. Heard several Nashville warblers singing in a tamarack swamp, where they doubtless breed each year. Their song is very much like a weak reproduction of the Tennessee warbler's piercing trill.

Flowers in bloom: dwarf cornel (*Cornus canadensis*) bishop's cap (*Mitella nuda*), bush cranberry (*Viburnum opulus*) silky cornel (*C. sericea*) and *Smilacina bifolia*. May 27th—60°, 62°, 51°.—Saw a swallow-tailed kite. Found two chestnut-sided warbler's nests, one containing three fresh eggs, the other still incomplete. These nests were in low hazel bushes on the edge of a wood.

Took five nearly fresh eggs of the yellow-billed woodpecker from a hole in a partly dead poplar tree in a piece of heavy timber. The hole had been newly excavated by the birds, as was evident from its clean and neat appearance and the great quantity of chips upon the ground at the foot of the tree. The entrance to the hole was but an inch and a half in diameter—so small that the birds had to struggle considerably in passing in and out. The male was most devoted to the nest and displayed much distress and boldness at the intrusion. He remained in the cavity until a hole had been chopped through the solid wood into the nest. A downy woodpecker's nest in the top of a tall, bare, poplar stub; eggs somewhat fresh. Found three power's nests, one of an abandoned farm. One of them contained young birds, while another was just in process of construction. The situation of the latter was quite novel. The birds were building their nest against the smooth side of the building so that a large nail which projected about two inches from the wood would be embedded in the body of the nest, and so hold it firmly in its place. The nest was begun just below the nail, so that it could be built up to and around it. The idea was a good one and showed some engineering ability upon the part of the peewees.

The yellow pond lily (*Nuphar advena*), small yellow lady's slipper (*C. parviflorus*) and wild rose (*Rosa blanda*) are in bloom.

May 28th.—70°, 82°, 65°.—A warbling vireo's nest, one egg; sparrow's nest, three fresh eggs, and a cow bunting's.

In bloom: Large yellow lady's slipper (*C. pubescens*), lupine (*Lupinus perennans*), Senega snakeroot (*Polypogon senega*), yellow water crowfoot (*Ranunculus multifidus*), Clintonia (*Clintonia borealis*), pitcher plant (*Sarracenia purpurea*), loosestrife (cultivated) and the hairy pucoon (*L. hirta*).

May 29th.—67°, 78°, 59°.—Found a least flycatcher's nest containing four fresh eggs. It was placed on a low horizontal limb of a large maple tree in a pasture. The nest of this species are here usually placed in an upright unequal fork of a small tree or sapling in deep woods. The present case was, therefore, exceptional, though I have found them somewhat similarly situated before. An oven bird's nest containing four fresh eggs, and a cow bunting's, a yellow warbler's, with two eggs, and two red-eyed vireos nests just completed.

The horse gentian (*Triosteum perfoliatum*), frost grape (*V. cordifolia*), blueberry (*C. canadensis*), and small white lady's slipper (*C. candidum*) are in bloom. All the species of lady's slippers are now in bloom except the large white (*C. spectabile*), which blooms about the middle of June.

May 30th.—70°, 75°, 52°. May 31st.—52°, 65°, 50°.—Yellow-headed blackbirds are building their nests.

With the close of the spring ends this outline record of some of the more noticeable occurrences in nature. The season has been one of many fair promises repeatedly broken. At first it seemed as though the spring would be an early one, but the prospect soon changed, and all through March and April there was a predominance of cold, rough weather. About May 1st a sudden change to excessively warm weather occurred, and the vegetation which had been held in check by the cool weather was urged into unwonted activity. The same sudden advance was noticeable elsewhere, particularly among the birds. As great a change took place in the appearance of woodland and prairie in a few days, as usually occurs in two weeks. The birds arrived at great numbers, many of them several days or a week ahead of their usual time, so that species usually appearing at different dates were migrating in company. This change obtained throughout the month of May, nearly everything being slightly in advance of previous years. The migration was soon over and the birds busy with their nesting duties.

FISHING NOTES FROM MIRAMICHI.

MIRAMICHI, N. B., June 10th.

SALMON and trout have been very late in putting in an appearance here this season. Neither net fishermen nor anglers did anything before the 1st of June. Since that time a good many salmon have been caught in the bay and river, although they have not yet come within the reach of our anglers to any extent.

Messrs. John White, Skinner and Law, of St. John, Robert Orr, of Fredericton, Ernest Hutchinson, John Johnson and the writer, with a few others, have done Indian town for sea trout, about 1st of June and afterwards. Messrs. White, Law and the Skinners had excellent luck for a day or two, taking four or five hundred of excellent weight and condition. The rest of us were there just as the St. John men left, and had ill luck. By going alone to special places on the Rensselaire, I managed, in a day and a half, to take sixty trout and a nice ten pound salmon; but my companions, who fished nearly all the time near Indian town Brook, took scarcely anything. We did better at the Ox Bow, on the Little Southwest, however, though the fishing has not been first class anywhere so far.

Some good sized trout have been taken at Bariboug late, but three-pounders are scarce there, only about half a dozen having been caught this season.

Messrs. Keary, Doyle and others made a trip to Tabus-

intac a fortnight ago, and went down stream some seven miles below the portage road leading to the river from the Bathurst road.

They secured some splendid fish, but had a tough time of it, as the river is so narrow on either side of the stream, and it has to be waded all the distance by horses or men.

Several trips have been made by different parties to the Big Hole on the Northwest Miramichi, twenty miles above Newcastle, but there were no signs of salmon until a day or two ago. We shall have good salmon fishing there for two or three weeks, and thereafter, through July, above, at the Square Forks of the Sevege, the Big Falls and other favorite pools land of access, but "good when you get there."

From the present time forward for six weeks the "rough waters" of the Nepisiguit, which are the most easy of access of all our salmon waters, will be inviting to fishermen. Canoe men and all necessary supplies can be had at Bathurst, only four miles from the pools, on the line of the Intercolonial. The charge on the rough water is \$1 a rod per day. The fishing on the Northwest Miramichi is free and excellent.

The Restigouche Club, composed, as you know, of New Yorkers, is in full possession of what used to be public fishing in the Restigouche and Metapedia. I do not grudge its members their fine privileges, but regret that the angling available to us ordinary mortals who have not a plethora of this world's goods is being narrowed year by year. We have, however, one consolation, which is, that being "a" the manner born, we know some fine pools beyond the ken of lessees and clubs, though we have to reach them through portages and fords by catamarans and gunboats. A neophyte at the business was taken with us last season on a trip after salmon. It was none of your holiday affairs, but a case of roughing it the most earnest and hearty manner. To reach a point some thirty miles from the last hotel had to follow the previous season's trail even when it led into and through the river. When our destination was reached and the sport was begun, our neophyte, who had shown game, said it was glorious "even if we had to swim some to get here." If any members of your New York Club wish to have Broadway and Fifth avenue soaked completely out of them, send them along in July for a cruise to some of our special pools on Miramichi tributaries. If they can "stand the training" I will guarantee the salmon.

D. E. S.

BASS AND MASKALONGE FISHING.

THE THOUSAND ISLANDS.

"WELL," said my friend C., as he came in my office one day last week, "I'm off for the Thousand Islands to-morrow."

"What for?" I inquired.

"Fishing, of course, and a couple of months' cool weather."

"Yes, I suppose that is it somewhat cooler up there. But what are you going to fish for?"

"Fish for bass and muskellunge—going to catch 'em, too. Never failed yet, when I went there. Bass fishing has just commenced, and I'd rather catch them than brook trout, although I know the men of the fashionable clubs consider it inferior sport. But I don't see why they should."

"Why not?"

"Well, when you catch a bass, you get a larger fish, and one that is fully as gamy, makes a harder fight, is stronger, and up to just as many tricks. They are just as fine for food, to my taste, when taken from the cold waters of Lake Ontario, as the average mountain brook trout. You may smile at this, but such is my opinion; and there are others that agree with me. If you will go upon the St. Lawrence, I think that you will become convinced very soon. Sportsmen are beginning to understand how gamy they are, and the result is that the Fish Commissioners have stocked half of the available streams in the Eastern States with them. Bass fishing is better now than ever before. How seldom you land, in ordinary fly-casting, a trout that weighs more than a pound. A two-pounder, taken wild from lake or river, is the event of your fishing trip, and save in Maine, or occasionally in the Adirondacks, one of that weight is very rare. Yet how many black bass you take that weighs less than a pound, and how often three and four pounds come to your landing net. A five-pound bass is not such a rarity as is a two-pound trout. I fish for black bass with brook-trout tackle, except that I use a trifle larger flies. The rod, the line, and the leader are the same. A three-pound bass seizes the fly. I straighten the line and hook him. He shoots twenty or thirty feet to the right like a flash, then zigzags thirty feet to the left. Seeing he is fast, he does what the trout never does, leaps four feet straight up into the air, quivering and shaking, and then alighting head foremost, he makes another dart and another leap. I have had them jump six times in quick succession in their endeavor to shake the hook from their mouths. The trout makes no such frantic efforts, although I am saying nothing against the sport of trout catching. The trout being less strong, gives up the fight sooner. The bass will struggle and leap until he turns over on his side of sheer exhaustion, and even then he is good for one or two more darts and leaps when he gets sight of the landing net. With my ten-ounce rod and trout flies, I have been a half hour bagging a three-pounder. A two-pound trout will give up in five or twelve minutes. Along my opinion there is more sport in catching half a dozen two-pound bass, than three times the number of trout as they average in ordinary streams."

"Where are black bass to be found in greatest numbers?"

"The best ground easy of access to New York City is unquestionably in lower Lake Ontario and the St. Lawrence River for twenty miles below where it flows from the lake. All along the Jefferson County shore, and at the islands opposite, bass are very plentiful. There are most excellent shoals off Grenadier Island, near Cape Vincent, at Galloo Island, at the Duck Islands, and at the head of Amherst, Long Island, and Carleton Island, all of which cluster around the opening of the river. The fish run larger there than in the rivers of the State. All the region of lower Lake Ontario is famous fishing ground. Go to Cape Vincent and hire boatmen to take you to the grounds. Going down the river, from the latter named place, the famous Thousand Islands begin,

and among them the bass fishing is especially good, although it becomes worse the further down you go. There is little use in going much below Alexandria Bay. Near Clayton good sport may be had, but not so excellent as about the islands in the lake."

"Bass do not rise so readily to the fly in the lake waters as in the St. Lawrence River; but they take bait readily, and may be captured on trolling rigs. I have known two hooks to take one hundred and fifty fish of an average weight of two pounds in twelve hours, off the Grenadier Island shore. An average catch there by ordinarily skillful anglers is from thirty to fifty fish in a day's sport. Just as good grounds may be found in the St. Lawrence, which are some twenty miles from Cape Vincent, directly out in the lake. The Carleton Island Club, of Utica, that goes to the island from which it takes its name, four miles below Cape Vincent, has frequently numbered three hundred fish as a day's catch by its half dozen boats."

"The season begins about the 1st of June and lasts until the middle of September. June is probably the best month in the streams, and July in the lakes, but I have taken larger fish from the lakes about the first of September than at any other time."

But how about the maskalonge fishing? Well, as to that it is a different kind of sport. Maskalonge, of course, are not as plentiful as bass, and they are more particular in their likes and dislikes as to weather and bait. You cannot catch them every day, but you must study the weather and winds carefully if you want to succeed. Those who have spent a season on the St. Lawrence know just when to exchange their bass tackle for the heavy trolling spoon, that is indispensable for this business. A thirty or forty pound maskalonge is an ugly customer to handle, and I know of parties that have worked over an hour, faithfully, too, before they could get one alongside the boat, and the gaff hook to him. It is a red letter day in the annals of most sportsmen that witness the capture of a forty-pounder, though I have seen and captured many of them, and know of cases where as high as half a dozen were taken by one boat within as many hours. When one of this size strikes your hook your first impression is that you have hooked a log or something of the sort. You will begin to pay out line and yell at the oarsman to back water with fear of breaking the trolling line. When you will discover that the supposed log is possessed of the animatedst sort of animation, and you will think that there is a two-year old steer at the other end of the line, judging from the pulling. Now comes the work and sport. Keep a taut line all the time; don't let him get an inch of slack if you can help it. If you should happen to allow him a foot or so I wouldn't give much for your chances of securing him. Out of water he comes, with his immense mouth wide open, shaking the spoon fiercely, as a bull dog will shake a smaller canine, and with just as much of a display of grit. I don't know as I can think of a fish that the term "bull dog" fits better. When he disappears after this performance he will seek the bottom and immediately return for another fight above the water. Thus it continues, with occasional rushes toward you, of the wrong kind, the fish, when you are working, will get some slack if possible. When ten or fifteen minutes of this sort of proceeding has passed (you will think it an hour at least) he will be quiet and perhaps allow himself to be drawn in close to the boat. To all appearances he is tired out and all you have to do is to take him in; but look out that you don't get "taken in"—bailly, too. Right here comes in one of his most successful tricks—and this he will play every time, too. His apparent giving up is only for the purpose of recruiting strength for another feature of the contest, and nine times out of ten the novice loses both fish and spoon, together with a portion of the line. Seemingly exhausted, he is drawn along, perhaps lying on his side, until he is within a few feet of your hands. You can see his great, wicked-looking eye perhaps, but you won't see it long. Like a flash he shoots forward and, directly under the hook, is the time that your dex-

terity and presence of mind are needed, if ever. If by any means the line is fouled, or if you don't manage to bring him up gradually, he is gone; and the remarks that you will make would astonish Denis Kearney himself. But we will suppose that you manage matters all right. When he stops or is checked at the end of this sport, the line will be paid out to nearly its original length. He will first start under the hook, and the program I have described will be repeated again and again until from genuine exhaustion he is hauled alongside, and by the aid of the gaff hook lifted aboard. You will then be happy, and look for another one."

"Are the fishing grounds difficult of access?"

"Not at all. Go to Capt. Vincent and inquire for Ed. Fox. You will find him readily, and he knows just where the grounds are. He has cultivated an intimate acquaintance with every portion of the river in that vicinity, and will direct you so that you can't miss the best points. Furthermore, he won't take a cent for his information, and the more fish you get the better it pleases him. A. D.

New York, June 26th.

BASS FISHING IN ILLINOIS.—Peoria, June 19th.—I am provoked to write you by the article of Charles Linden, entitled "Spring Shooting in Illinois," in your issue of the 17th inst., who is wrong in saying that he has the mouth of the Illinois River. He says he went to Henry's forty miles above here, and if so, he ought to know better than to make such a mistake.

I make a point of this because I want to say that at Copperas Creek Dam, twenty-nine miles below here, is to be found, at the proper stage of water, as fine black bass fishing as one can wish for. Some five or six years ago the State built a dam with a submersible gate, at Henry's forty miles above here, to improve the navigation of the river. After that dam was finished, the fishing below it was very fine; but recently another dam has been built at Copperas Creek, about seventy miles below Henry. Since that was finished, the fishing at that point is the finest we know of in the West. At present the water is too high, as boats and fish pass over the dam, the volume of water in the river being remarkable for this season of the year. We think there is no doubt but that some of the best fishing will be had on the river from July 10th and on till October there will be plenty of sport at Copperas Creek Dam. The best route by which to reach the dam will be to come to Peoria; from here either regular packets or other boats leave for the dam

and points below nearly every day. There are no hotel accommodations that I am aware of, at least it is the custom to camp out for long stays, or take luncheon for short ones. There is also, near the dam, Spring Lake. It is parallel with the river and about three-fourths of a mile distant on the east side of the river. It is fed by springs and connects with the river about two miles above the dam. The water in this lake rises and falls with the river, is always cooler than the river, and generally clearer, and is full of bass, perch, crappies, etc., and always affords fine sport. We have never heard of fly-fishing in this section for bass. Everybody uses minnows. I am reading with much interest the articles of Mr. Henshall, and wish they would come often. I am a subscriber to *FOREST AND STREAM* through the courtesy of a friend. When the first numbers came I hadn't time to read them and threw them aside; finally I took several home from the office, thinking I would look them over out of compliment to my friend. To sum up, I wanted to go a-fishing right away, and I began adding to my messenger supply of tackle, much to the profit of your advertisers. I have a split bamboo from Hoskins on the way, and by the time the water goes down will be ready for business. I have seen no letters published from this section. Your journal has proved itself powerful enough to interest one who formerly had very little time or fancy for such things. C. B. A.

We have no doubt that the errors noted in Prof. Lindgren's article were purely inadvertent; and we take the more pleasure in publishing our correspondent's letter, as the concluding part of it is added testimony to the good influence of the *FOREST AND STREAM*.

A DEAD "RISE."—*Miramichi, June 19th.*—On Wednesday (8th inst.) I was fishing at the Ox Bow, Little Southwest Miramichi. My companions were Dr. Holden and M. C. Baillie, of St. John, and Mr. Joyce, of Chatham. The wind blew upstream from an easterly direction, but we were doing fair work with trout of from one-half to three pounds. I struck a two-pounder which showed considerable game, and had played him sufficiently to justify my beeching him, which I proceeded to do. Just as he was within a foot or two of the shore, however, off he went, leaving on my hook a smelt of ordinary size, but partially digested. On making examination I found that the smelt was firmly hooked about half an inch from the caudal fin, and I had as much trouble in unhooking it as an ordinary trout would have given me if I well hooked. A good many smelts were in the river at the time, and the trout were feeding upon them. In the case of the one that rose to my fly on this occasion, the smelt had been swallowed as far as possible, and the process of digestion was going on, the tail of the victim meantime protruding from its captor's mouth. When the latter rose to take my fly and I struck for him, the hook became fastened into the smelt as I have described above, frequently seen smelts, to the number of two or three, thrown from a large trout's mouth when struck heavily or played vigorously after being hooked, but I never before hooked the dead fish when striking at the live one. D. G. S.

RYE BEACH FISHING.—*New York, June 24th.*—Col. Withers, of Rye, while fishing near Rye Beach last Monday, caught fifteen blackfish in about two hours. He says that the fishing has not been so good there during many seasons as it is at present. His largest blackfish on Monday weighed six and a half pounds. It has since been eaten. He presented it to Mr. Minott Mitchell, a gentleman well and favorably known in real estate and petroleum circles, who is summing himself at White Plains this year, where he says he simmers more comfortably than he would in his city residence. Mr. Mitchell invited some choice spirits to partake of the fish, and they accepted. The writer hereof regrets that he was not included in the party. Mr. Mitchell has had unusually good luck blackfishing this summer, but nothing like that of his friend, says Col. Withers. Ambition now is to catch a seven-pound blackfish for the purpose of presentation to Col. Withers. T.

NEW BRUNSWICK.—*Boston, Mass., June 23d.*—Have just returned from York Co., New Brunswick. Captured six bears and all the trout wanted, in the waters of Cranberry and Killbuck. Fishing has been good for trout in all the waters till lately. It needs heavy rains for successful fly-fishing, especially for land-locked salmon. WARFIELD.

WISCONSIN.—*Appleton, June 10th.*—Bass fishing was never so good on the lower Fox as it is this season. Large strings are taken daily by professionals and non-experts. Roberts "Resort" is being extensively patronized by parties from Chicago and Milwaukee. Island Park, further up the Lake, has a fine hotel now, and fishing in the adjacent waters is superb. F.

FLY-CASTING.

FLYCASTING.—*New York, June 18th.*—Editor *Forest and Stream*.—Fishing clubs are being formed throughout the State, and when they are formed they mean business; and I venture to say that the labor performed and the money expended for the propagation and preservation of fish, and the laws enacted through the influence of the Onondaga Fishing Club alone for the past two years, exceeds that of the State Conventions for this past five years.

Article Second, of the Constitution of the State Association for the Protection of Fish and Game. Good. But any member of a club who has taken an active part in getting ready for the holding of a State Convention knows that the whole burden of the club consists in getting the birds from afar, building coops for them, a grand stand upon which to see them shot, suitable grounds for this purpose, providing conveniences for the shooters and spectators, and flaming posters all over the country announcing the great State shoot; while if the club happens to have one member who takes an interest in fly-fishing, to him alone is intrusted the arrangement for fly-casting. And my experience has been that everything is sacrificed in the shape of comfort and convenience, to be near the shooting grounds, even going so far as to dam up a small brook, rippling through a cow pasture so full of weeds that not twenty feet width of clear water could be procured. At the locality unknown to the visiting sportsmen

and only to be found after persistent effort and hunting through the shooting grounds for some one to tell you, and the time so early in the day, that, unless you are on hand the day before and find the committee, and thus learn the locality, the chances are you will arrive after the contest is over. But, says the managing club, the entries for fly-casting are so few we cannot afford to waste any time on you. I reply: Not when there is any interest taken by the managers to make the contest attractive. Overgo Waterbury and Syracuse did not lack in entries, although the actual value of all the prizes offered in either did not equal that of a single prize offered in a number of shoots.

At the present price of fly-rods, so far as money is concerned, a man had better stay at home and buy him one, for it would cost less than to go to a Convention and win one. But a gentleman sportsman, with a good gun, loves to point to some little *senior* as a trophy of his skill; and I venture to say that the "Game Fishes of the United States," as first prize for fly-casting at the Seneca Falls Convention, would have drawn more entries than all the \$50 rods that could have been offered. For the fly-fisher is a man who loves to read. F. V. R.

Fish Culture.

TENNESSEE SHAD.—*Nashville, Tenn., June 19th.*—A shad supposed to be one of the offspring of those deposited in the Cumberland River a few years ago was caught here the other day, weighing three pounds. Hickory shad are quite common here, and often very abundant. J. D. H.

The Kennel.

MR. DALZIEL'S LETTER TO THE LIVE STOCK JOURNAL.

"INCIDENTS of the New York Show," is the heading of Mr. Dalziel's last letter in the *Live Stock Journal*, under which the famous English judge expresses his views of the different classes of disappointed exhibitors he met with at the New York Show. In referring to the many protests against the judging, Mr. Dalziel writes us below. We deem it best, however, to republish the protests in question, that we may make clear to our readers the two points upon which he touches in particular.

The first was submitted to the Board of Appeals, but that body only entertained that part of the protest which referred to the judging of class 40, "Red Irish Setter Dogs." It read as follows:

TO THE WESTMINSTER KENNEL CLUB.—*Gentlemen*.—We, the undersigned, exhibitors in the present dog show, do respectfully ask your honorable club to call together the Board of Appeals that they may consider what we deem to be most erroneous decisions on the part of the gentlemen acting as judges in classes numbered as follows: Nos. 19, 20, 23, 25, 33, 34, and 40. Your attention to this protest is much respected. A. E. Godeffroy, W. H. Holabird, A. H. Moore, William Moore, Ch. Denison, Garrett Koch, James Moore, A. T. Tappan, William Mann, Lewis and the undersigned, and I believe, competent men, of other dogs in Irish class than Elcho III.

Mr. Dalziel says: "I will deal with it by briefly stating facts. In judging this class I had the honor of being associated with the Hon. John H. Wise of Richmond, and S. T. Hammond, Esq., of Springfield, and two more fair-dealing, patriotic, and, I believe, competent men. I have never judged with them."

"When the Irish Red Setter class came into the ring I pointed out that the dog Byron was, I considered, an Irish red and white setter. Mr. Wise, read from, as I then thought, the schedule, that white it was provided, was admissible. This was really read from the description of 'Stonehenge,' in condensed form. The mistake being afterwards discovered, the red dogs were judged alone; and the judges, impressed with the grand form of Byron, unanimously recommended that he should have an extra first prize, and to this the Committee cordially agreed. No English reader will be surprised at this; it is here of everyday occurrence; and the Westminster Kennel Club Committee would have been justified in giving 100 extra prizes had the judges recommended them to do so."

"I leave the Irish setters with one word to the Westminster Kennel Club:—These dogs are not 'Red Irish,' as their catalogue reads, but 'Irish setters,' red or red and white."

"Now I will deal with the protest in general. As is usual, the Westminster Kennel Club sent out a premium list, with copy of the regulations governing the show, and those who made entry of their dogs knew that they did so under the conditions therein clearly stated."

"Rule 8 says:—
"The scales of points given in the third edition of the 'dogs of the British Islands,' by J. H. Walsh ('Stonehenge'), will be used by the judges, and no other, in judging the dogs."

"The meaning of this clearly is that if the judges failed to agree, point-judging according to Stonehenge should be resorted to."

"At the New York Show no such necessity arose, in the opinion of the judges, whatever disappointed exhibitors may have thought."

"Rule 10 says:—
"The decision of the judges will be final in all cases, except where mistake, fraud, misrepresentation, or collusion can be shown; in any such case the Committee of Appeal must decide all questions, except those of merit, and the dog may be rejected."

"Can anything be clearer, and where, I ask, do the protesters find their *locus standi*?"

"I inclose a full copy of the rules, Mr. Editor, and shall be glad if you will give your opinion as to whether there exists one justifying these protesters. The Westminster Kennel Club Committee in entertaining them, for I hold it was their duty to protect their judges from the insulting charges of unfairness or incompetence, especially when made by persons of whose competency to form an opinion there was no proof. On the contrary, in the only instance I had an opportunity I proved the utter incompetency of a protester against the awards in spaniels, before the Court of Appeal, putting a most

elementary question on the breed, which he admitted his inability to answer."

The second, was from A. E. Godeffroy, Esq., which was not acted upon by the Board of Appeals. It was as follows:—

MR. GODEFFROY'S PROTEST.

NEW YORK, May 12th.
THE WESTMINSTER KENNEL CLUB.—*Gentlemen*.—I beg to protest against the award in class 5, where my bitch Brantels was given as best dog, and the other dogs no dew claws, a point which is according to 'Stonehenge' and Vero Shaw, as necessary as solid white in a bull-terrier. Yours respectfully, A. E. GODEFFROY.

On this Mr. Dalziel writes: "And now, one word with Mr. Godeffroy. I will deal only with his objection to my awards in St. Bernards. Mr. Godeffroy objects that I gave first prize to a dog that had no dew-claws. My having done so would surprise no one in England who has read my frequent protests against the high value put on them. It is pretty well known that I consider these appendages as useless as they are ugly. Mr. Godeffroy refers to 'Stonehenge' and Vero Shaw; but great authorities as these gentlemen may be, Mr. Godeffroy must learn to know that it is not every judge who will bind himself by their opinions or their crotchets."

"I believe Mr. Godeffroy has in his kennel the blood of old Champion Tell; and I should suppose from his protest that he is ignorant of the fact that Tell, like Prince of Wales, is much more than a great specimen, was as innocent of dew claws as the dog I placed first in New York. And would Mr. Godeffroy be 'surprised to hear' that I have in my possession a letter on the subject from our great naturalist, Darwin, in which he describes dew claws as 'accidental monstrosities.'"

"As the rules provided only for protests in case of 'mistake, fraud, misrepresentation, or collusion,' I think my apology is due to my co-judges, and myself from the gentlemen who entered and published these protests, who were one and all voluntary exhibitors, having bound themselves by the rules governing the show, and that with all the advantage of knowing beforehand to whose judgment their animals would be submitted. HUGH DALZIEL.

The Editor of the *Live Stock Journal*, in answer to Mr. Dalziel's query, says: "There is nothing in the rules which on this side of the water would have made such protests admissible."

WORKING DOGS IN THE MOUNTAIN SVALES FOR SUMMER WOODCOCK SHOOTING.

IT is in the swales, on the sides of the grand old mountains, and in the springy basins on the top, where in ordinary seasons the woodcock can be found. The towering mountain, whose knob seems to have been squeezed by the hand of Kihleborn, the spirit of the stream, from whose fingers the legend tells us that fine rills of water gush forth, and whose feet are frequently seen to watch the slowly drifting clouds the water which trickles at our feet, and down whose steep sides the slope is broken here and there, by level spots on which the springy grass grows high and the waters gently ooze. Here on these giant steps the woodcock nests and rears her young; nor does she quit her secluded home for the meadow swamps below, unless driven by a protracted drought. Should the season be fair and wet, and frequent sun showers replenish the tiny rills, the woodcock and her brood find ample boring ground, and they are not forced to leave the gloomy music of the whip-poor-will for the still more doleful clinking sound of the rusty cow-bell in the valley pasture lands at the mountain foot.

It is in these odd crannies, that many a woodcock hides away, and thus escapes from the intrusion of the sportsman. If it had not been for secret spots like these, many of which still continue to hold the weird traditions of the past, the woodcock in certain localities would have been utterly exterminated.

To us the acme of woodcock shooting is in such like places. Of course, there is a deal more hard work in climbing the mountain sides, but when the ground is well known, and the excellent beats can be mapped out for a week's sport, and a good bag at the end is generally the result. There is something exquisitely beautiful in mountain swale shooting, as each nesting place has its own lovely view, and each so entirely different from the other. One may be grandly wild with nothing but a sea of forest trees mounting to the skies, and at the next turn of the mountain the view is of a more important cultivated valley framed in on either side with crags, and the darkly wooded slopes brings one back from thoughts of the outer world. But there is rarely an Eden spot without some drawback, and here it is again the snake which destroys much of the pleasure of the sport, and frequently in fact deters, from fear, the sportsman altogether from shooting in the fastnesses of the mountains. Therefore, before passing on to the more important part in hand, it may be well to give here the mode of treatment should the sportsman or the dog be bitten by a reptile, either the rattlesnake or the copperhead, commonly called the "pitot." The absorption of the poison through the blood is so exceedingly rapid, that it is utterly impossible under any circumstances to remove the whole of the poison by the use of the most important principle is, first cleanse the wound by washing, and if it is of such a character that a slight incision with a knife can be made, let it be done at once, and the poison sucked out by means of the lips. Second, it is necessary to sustain the nervous system through the terrible depression which must inevitably issue. This can perhaps most readily be done by the use of a copious draught of warm water, which, carbonate of ammonia, five grains can be added every fifteen minutes. When quinine can be procured, fifteen or twenty grains every four hours should be administered in connection with the stimulant. If the carbonate of ammonia is not at hand, use spirits of hartshorn which can be found in almost every farm house. A test of its strength should however be made by the case of a more important remedy, taking a teaspoonful of pure water, and by dropping the hartshorn into it until the water becomes turbid, its strength can then be tested and the doses thus regulated should in succession be increased.

When the dog is bitten, lacerate the wound, which cleanse with water, and apply the hartshorn, also giving whiskey in small doses until the animal cannot stand. Of course it is much better to suck the poison out, and

under certain circumstances we would not hesitate to do this to save the life of a valuable animal.

To resume; For practical work in the hot weather there is no dog for us like a strong, light-colored pointer. It is necessary that he should have a deal of white about him, that he may readily be seen as he passes rapidly back and forth in the maze of rhododendron and mountain brushwood. To lay down any particular rule for hunting on these swales is impossible for each one varies so much from another that the sportsman's own judgment must decide the knotty question. But we have noticed one important point; that when practicable it is best to beat up the ravines, for when the birds are moved and driven on ahead they do not make as long flights as when approached from the side above them. In such cases they are apt to top the scrubby bushes and shoot at half a dozen times, while the dog will leave the water course. These swales may not always at first be found in the bed of the swale, but still if he has been undisturbed he will be found close at hand. The boring and markings of the bird on the edges of the brook will inform the sportsman that birds are present, even if his dogs fail to detect the scent. He will, therefore, stand a double chance, and save much time by keeping well to the bed of the swale, and working his dog at short distances. In this particular shooting the gun can assist the dogs more than in any other. In the early season, when one bird is found, it is fair to presume that the rest of the brood are not far off. If after carefully beating up still further they are not found, it is always well to try for them on either side back from the brook, for they may have shifted to some neighboring spring. Still, the swale should be the centre of the beat, and when other minor streams are found to run into the main one, the wings from which they head should be carefully looked out.

EASTERN DOGS FOR PRAIRIE CHICKENING.

ASHFIELD, Mass., June 21st.

Editor Forest and Stream—
In a recent issue of FOREST AND STREAM I notice a correspondence from Iowa entitled "Dogs for Prairie Chicken Shooting," in which the views of the writer differ so essentially from my own that I am tempted to present a bit of my experience for the benefit of Eastern sportsmen contemplating Western trips. I am a believer in the doctrine that thorough friendly discussion tends to eliminate many important facts otherwise unnoticed, and that gentlemen sportsmen can confer themselves to the benefit of the game by exchanging views. I am not prepared to disagree with a good grace. Through no wish to extol my own prowess, but for fear your correspondent might remark that I am only an ignorant Yankee, with no knowledge of prairie shooting, I would state that I trained dogs on Western birds, principally prairie chickens, every season from 1857 to 1865, which gave me a fair chance to learn something of the business. Since that time I have courted English and Irish setters, and have been convinced that the English setter is the best for the purpose, and especially ruffed grouse, and our strongest point of difference concerns his statement that "dogs trained on prairie chickens will work well on ruffed grouse, and that dogs broken on Eastern game will not work on prairie chickens." I would like to see him take a brace of his high-flying prairie chicken dogs into the dense thickets for ruffed grouse on these rough New England hills, and show me how they would do. I work the dog of the first week, or for that matter, ever show as fine work as is done by our dogs that have first received a special, thorough education on this bird. I would much sooner engage to make good workers on prairie chickens of half a dozen good lively dogs broken on Eastern game than to take a brace of regular prairie flyers to tone down into shape on ruffed grouse. I have always found it much easier to increase the pace and range of a good lively dog than to circumscribe the limits of one to whom high-flying and wide ranging had become a second nature. Of course, it could not be expected that an Eastern dog could become an expert in a single day when the habits of the game and nature of the country are entirely different from anything previously experienced. However, handlers will find that the rigid discipline to which they have been accustomed on ruffed grouse (if No. 1) is a "mighty handy thing to have round," as Davy says, when they are swinging them at long distances where everything is new. If Eastern sportsmen will recall to mind what wretched work they have sometimes made when working their dogs on a new bird at home, when they have allowed themselves to become more anxious to fill the game bag than to take time to enforce good discipline and to exercise patience and perseverance, until the poor animals understood their wishes, they will wonder less at the failures of Eastern dogs on prairie chickens. While I will admit that Eastern broken dogs may never be quite as fast on chickens as though they had always been taught to "fly," it is all "bosh" that they can never be learned to do good work on them, and their extra stanchness and docility will more than compensate for slight want of good pace before you get along there. Then you will not only run your dogs, but you will have a sure source of pleasure both for this and future years, and not be dependent on the uncertain method of hiring a dog.

RUFFED GROUSE.

FEARS AND MANGE.—Tolland County, Conn., June 21st.—
Editor Forest and Stream—Fears are very often the cause of a skin irritation resembling mange, which, if allowed to run on, will assume the forms of the regular disease. Take your dog, once a month, muzzle him, and

wash him well, first with kerosene (white oil), whale oil and neatfoot, mix equal parts of each. For a pointer about one pint in all. Then clean off with soap, and rub dry. This will not only kill the vermin, but also keep them off for some time after. The dog thus treated will never have the mange if housed in a clean place. For the first appearance of the disease try mild ointments first, such as sulphur and lard. But first of all muzzle your dog, and keep him so until well. The best cure is prevention, for the red mange once well into a dog's skin will kill him in time, and all you can then do is to relieve him as much as possible.

MARS.

PHOTOGRAPH OF FAUST AND BOW.—We have received a photograph from Mr. Charles H. Turner, Secretary of the St. Louis Kennel Club, of Mr. J. M. Tracy's excellent painting of the pointers Faust and Bow. The picture from which the photograph is taken is about thirty-six inches in length by eighteen inches in height, and depicts the dogs in the field surrounded by autumnal foliage. The subject is a very beautiful one; Faust stands "hard and fast," while Bow is in the back-ground backing him. Mr. Tracy has also painted a sister picture of this, which is even said to be of greater excellence; in this one, Kesswick is pointing and Jessamine backing. Another grand picture from the brush of Mr. Tracy is Mr. Turner's painting of Berkeley, which has been pronounced a gem by all the competent judges who have been fortunate enough to see it. Mr. Tracy is an artist of rare merit, and his animal drawing is both careful and accurate. The St. Louis Club has made a control over the oil-paintings, but photographs of them can be had on application to Mr. Tracy, St. Louis, Mo.; price 75 cents each.

THE ILLUSTRATED BOOK OF THE DOG.—We have just received from Messrs. Cassell, Petter, Galpin & Co., 596 Broadway, part No. 11 of Mr. Peter Shaw's excellent series. It is a grand number, containing a very finely finished colored lithograph of the typical deerhound, Spey, the property of Mr. Thos. Moore, a long and wonderfully well compiled chapter on coursing, a description of the Whipper, or Snap dog, and the staghound, and a complete list of the packs of foxhounds, over one hundred in number, in the United Kingdom in 1889. This book should be in the hands of every American lover of the dog.

KENNEL NOTES.

DEATH.—Buff.—Mr. A. H. Sharpless' (Catawissa, Pa.) fine Bismarck setter buff died on June 14th from injuries sustained from colliding with a locomotive on March 31. But was over of Mr. J. H. Roberts' Maud, she out of Mr. W. H. Knight's Dot, by Dr. Brooks' Bismarck.

SALES.—Berkeley-Ruby (whelp).—Mr. Edw. O. Ladd, of Everett, Mass., has purchased from Mr. John Kotler, Jr., President of the Massachusetts Kennel Club, a Berkeley-Ruby bitch puppy, whelped April 18th. Berkeley-Ruby (whelp).—Mr. Thos. A. Addison, of Chelsea, Mass., has made the following sales of his Berkeley-Ruby dog puppies: one to Mr. J. P. Hawes, Boston, Mass.; one to Mr. H. A. Spencer, Chelsea, Mass.; one to Melben W. Lothrop, Chelsea, Mass., and one to Mr. G. Frank Holmes, Chelsea, Mass.

NAMES CLAIMED.—Flourish.—Mr. Edw. O. Ladd, of Everett, Mass., claims the name of Flourish for his Irish setter bitch puppy whelped April 18th by Berkeley, out of Ruby. Jupiter Tonans.—Mr. Burr Hollis claims the name Jupiter Tonans for his black, white and tan ticked English foxhound dog puppy, by Catech, out of Drum, presented by Mr. M. P. McKoon. This puppy is said to be a splendid specimen of the foxhound. Lorne.—Mr. J. W. Jackson, of Opelousas, La., claims the name of Lorne for his pointer dog, whelped May 10th, out of St. Louis Kennel Club's June, by Faust. Lottie.—Mr. J. W. Jackson, of Opelousas, La., claims the name of Louise for his pointer bitch puppy, whelped Nov. 7th, out of St. Louis Kennel Club's Jaunty, by Bow.

BRED.—Queen-Croxteth.—Mr. A. E. Godfrey's (Neverask Lodge Kennels) champion pointer bitch, Queen to Croxteth. Moya-Rover II.—Mr. A. E. Godfrey's (Neverask Lodge Kennels) red Irish setter bitch Moya to Rover II. Flirt.—Mr. G. D. Macdonald's (Lachne Kennels, New Brighton, S. I.) cocker bitch Flirt (all liver), litter sister to Cora (First Montreal and First New York, 1880), has been bred to Cunningham's Biju, all liver (first Montreal, and should have been first New York). See FOREST AND STREAM, London Field, Toronto Town and Country, etc. Pups due about August 23th.

WHELPS.—Beatty.—Mr. A. E. Godfrey's (Neverask Lodge Kennels) imported black and tan setter bitch Champion Beauty whelped on June 23th seven puppies—five dogs and two bitches—by Mr. A. H. Moore's imported Bolo. Two puppies are since dead. Flirt.—Mr. Geo. D. Macdonald's (Lachne Kennels, New Brighton, S. I.) cocker spaniel Flirt, on May 18th, whelped three dog puppies, by Mr. McKoon's Captain.

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

NEW YORK ARCHERY CLUB.—This club has had no shooting for two weeks, owing to the Park Commissioners having forbidden the use of the archery lawn in the Central Park until after it rains again. It makes it very bad for the club, as it has several challenges on hand, and but poor scores can be expected from any team that has little or no practice. From present prospects it may be two weeks longer before they can shoot again.

ORTAITA ARCHERS.—The monthly meeting of the Ortaita Archers took place at Hackensack, June 23d. Col. Frank Brandreth won the gentlemen's badge with a score of 307, at the American Round. Mrs. W. Holberton won the ladies' badge with a score of 165 at the Columbia Round and a one yard handicap at each distance.

W. HOLBERTON.

PRIVATE PRACTICE CLUB.—Highland Park, Ill., June 14th.—To the members of Class II, Private Practice Club:—We have the club round of forty-eight arrows at eighty yards, and twenty-four arrows at sixty yards, on Saturday, the 23rd inst. Please report your scores to Dr. E. B. Weston, Highland Park, Lake County, Ill., who will compile them for publication in FOREST AND STREAM. My score will be sent to each member on the 28th.

C. GRANVILLE HAZARD.

BROOKLYN vs. NORTH SIDE.—Chicago, June 23th.—In the match between the Brooklyn team of five and the North Side team of five (later from this city) the North Side team came out victorious by a score of 100 to 89. The match took place Saturday, 19th inst., and scores exchanged by mail—

NORTH SIDE TEAM.					BROOKLYN TEAM.

Answers to Correspondents.

THE present depression in mining stocks in New York is apt to lead the Eastern man into a misapprehension of the true state of mining matters in Colorado. Nothing could be more unjust or more hurtful than to judge of Colorado mining at large, by quotations from the New York Mining Exchange. The observer of one of our quotations for the mining stock of one of the companies of the price at which the stock quoted six months ago. And he may thereby infer that the Colorado mines are a bubble. It may be true, I may say that it is true, that some of them are bubbles—not bubbles in fact, but bubbles when they come to be stocked a five or ten times their true value, and what any one on the spot could have told you six months ago was five or ten times their value. But the men who hold of them and manipulated them were not all right. They were short-sighted, too. They have nearly killed the geese that laid the golden eggs. They have bred such a distrust of Colorado mines that they will find it difficult to restore any confidence in them. Their opportunities for money-making—looking at the matter from a selfish standpoint—are gone. No mine hereafter will float with the same ease on it. They say they will be under the thumb of the names of other men. But, great as the hurt is to themselves, they have hurt Colorado still more. Their conduct has served, and will serve to block to some extent the advancement in the development of Colorado mines. Men in the East see, right under their noses, the mining swindles that have been perpetrated. They do not seem to know, all the sound mining industry that is going on in Colorado, and they are apt to attribute it to the swindles about mines, and, unless they have been here, they will most likely say: "No; I don't want anything to do with it." I know that the depression in mining stocks is sympathetically due, in part, to the depression in various materials which now exists. But the illegitimate use of mines by speculators has done the most harm.

I have been referring to the condition of the New York market, and the Eastern man, however, has never, in the work of discovering and developing goes on here without abatement. Indeed, there are more men mining and prospecting now in Colorado than ever before. The

season has witnessed an enormous influx of men who come to engage in that work. In the spring the arrivals of such men in Denver daily ran from 500 to 1,000. The streets of the town were full of them. The hotels were crowded, and the large overflow was taken up by the hundreds of persons who rented furnished rooms to the strangers. All these men were on their way to the mountains. They came from all over the country, and many from Canada. Some days the Kansas Pacific trains came in in sections, so great was the load. Some idea of the extent of the immigration may be got from what happened to the price of real estate in Denver. Denver is nothing if not a depot for supplying the wants of the men in the mountains. Its population, directly or indirectly, lives on that. Just as Denver thrives or flags, it is a sure indication of the success or failure of the mountain work being done there. It is increasing, or that the mining industry is drooping; and nothing is a surer test of the prosperity of Denver, than the price of its real estate. Well, there was a general advance in its price all over the city, and a great advance; and the quiet citizens of the East may open their eyes, perhaps, when I say that in some quarters of the city the advance through the winter was from 500 to 400 per cent. of new buildings; and the number of new houses of them would do credit to the handsomest streets in New York. Hotel accommodations have been greatly extended, and are still inadequate.

The new arrivals of the spring did not stay long in Denver. The snow still lay deep on the mountains; and very, and almost unprecedentedly, deep in the regions beyond the main divide. That was an insuperable obstacle to prospecting. But the new comers, eager for their silver hunting, could not bear to defer long their start for the mountains. Every new and they were possessed of enough the streets some canvas-topped wagons, drawn by its two mules, bound for the Gunnison or Breckenridge, or what not. The untanned faces of the uninitiated prospector could be seen under the canvas, the wagon was brand new, and the shovels and axes that could be seen sticking out had plainly never been used. Less frequently could be seen the little "jacks," two or three together, with packs of great size on their backs, and on their heads the mountain hats. In a few weeks, most of the thousands of prospectors had gone. I have no idea that they will all get rich. There are but few prospectors who ever have got rich. But those to whom they will sell their prospects will get rich, for there is not the slightest doubt in the world that they will find prospects to sell. There is no hunting about Colorado as a place where there are large mineral deposits. There are plenty to be found. They have to be uncovered; they have to be developed. After that capital is to be put into them at their true value; not then they are to be worked—not mismanaged, and not to be stolen from, and they will, and the State will, yield riches to an enormous extent. But many times there will be sure to be errors of judgment. What I mean to say is, that the New York mining market is not a true indicator of the character of the interests here; that the United States mines, each of which has its proper price; and that, despite the depression in New York, the mineral richness of this State is being rapidly developed.

The business of silver mining in Colorado has a system about it which is probably unknown to persons in the East who have not, by a visit to these regions, been an eye-witness to it. By silver mining I do not mean the mere working of a mine which has been ascertained to be good, has been developed, and which contributes its regular monthly quota to the United States mints. That, to be sure, is real mining, but what I mean by silver mining at large is not only the ultimate working of a mine, but its previous discovery, development and sale to the persons who do ultimately work it. All these are regular stages in the growth of a mine; they are the successive chapters of its history. A word about this regular growth will throw some light which will perhaps be desirable to some of your readers on the subject of acquiring a paying mine.

In the first place, as to the discovery of mines, one who was not familiar with this corner of the earth would be surprised to see the number of prospect holes, or "holes," as they are here called, which show, or are expected to show, mineral. When a person stands in a mining camp and looks about him he will see the mountain sides on every hand plentifully dotted with heaps of fresh, yellowish earth. These each indicate a "hole" ten feet or more deep, and a hole is a hole, and a hole is a hole, at a distance, more like scattered rifle pits than anything else. These prospect holes will extend for miles about the camp. When it is taken into consideration how many mining camps, large and small, there are in this State, one can get a faint idea of the number of holes there are for sale. It is not every hole which, at ten feet, can show mineral. Some of them do, but with the majority of them greater development is necessary to strike ore. Ten feet is the minimum depth to which holes are sunk, in the first instance; not that there is any particular virtue in ten feet of depth, only that it is supposed to represent work worth a hundred dollars, which amount of work is needed annually to keep the title to the claim good. A ten foot hole, indeed, does not of itself entitle the digger to locate and record a claim so as to make it his by law. He has first to make a discovery of mineral. But the law is generally disregarded in this respect; and claims are often staked off and recorded on a mere digging, without the discovery. The disadvantage of this method to the locator is that, by law, it permits another to come and prospect on his claim. The law is at the back of the intruder; and so, far, he is secure. But the sentiment of the mining camps is against him; they are against the intruder. The claim claim jumping, hood is that if he persists in it he will either be shot or hanged, or "run out" of town. The mining camp is probably right and humane (regarding the locator) in its feeling, yet it is no good to a young camp to have all the country about it, while as yet Eastern capital has not come in to develop the discovery holes. The people at camp who engage in mining have, perhaps, spent all their money in digging the discovery holes. New coming prospectors can find no place to dig. The camp has not yet attained celebrity enough to attract capitalists, and there it lies stagnant for months, to the detriment of its inhabitants—although it may be a very deserving camp—until the capitalists come in; whereas, if the claims on which no actual discovery had been made, but on which

the owner had sunk his last dollar, were open to be prospected on by fresh prospectors who had money, the camp would develop more rapidly.

This brings us to the second stage—of sales by prospectors. These men seldom get rich. One reason is, that if one of them ever gets money he almost immediately squanders it; but the fact is that they seldom get much. They make a discovery or sink several (ten foot) holes. The operation—the hunting for and selecting a spot, and the work—takes time. When it is through, or soon after, the prospector has reached the end of his purse. He then wants to sell his property. But Eastern buyers are not yet in the camp. If there are any buyers at all they are Western men, who have come prepared to pay only low prices. A sale perhaps is made for a few hundred, or a thousand or two dollars. The prospector takes the cash and goes off for the new fields, the well-known "biggest thing yet," which is as shifting as the pot of gold at the base of the rainbow. In the new fields he goes through the process over again. So his life is spent. Occasionally there is one who keeps cool, has luck, and prospers; but most of them rove and gather no moss, and love the change, excitement, hope and independence. In this way the mines get into the hands of the cheap buyers. We now come to the third stage—the period of partial and preliminary development of the mine. The cheap buyer has to pay something for his cheap purchase. One great reason why he has been able to buy cheap is because the property is wholly or comparatively undeveloped. It may be that the hole he has bought already shows mineral. It may be that it shows none at all, but shows indications that mineral is in the neighborhood of some hole that does show good ore. The cheap buyer, in short, takes his chances. He buys an uncertainty. Maybe the hole will prove absolutely worthless; maybe it will prove a second "Robert D. Lee," and maybe he will be able to sell it again at not more than \$500 advance. At all events, when he has bought, he generally goes to work on a moderate scale to develop the purchase. He sinks deeper, or runs in a tunnel. If he finds encouragement, and especially if he takes out some ore which will pay as it comes out, for the development that produces it, he will develop his property pretty thoroughly. If the purchase turns out badly he may abandon it entirely (and some man a year after may take it up and strike rich ore in twenty-four hours); or he may, as I have said, sell out at a slight advance; but if the development is quite favorable the mining hole will reach the fourth stage—that is, it is put on the market to Eastern purchasers.

Of mines at this stage I need not speak at length. I wrote something about them in my last letter. It is undeniable that they have been made the subject of swindling operations. Rarely they have been sold above their true value; oftener they have been sold at or below their true value to men who have then stockpiled them at far more than the mine could bear, and sold the stock for more than its worth. That business has probably seen its best days—fortunately for the East and West both. But many, many sales have been made to discreet, prudent, investigating Eastern men, of mines at, and generally below, their real value; and these purchasers work the mine to their profit.

The fifth stage is when the mine gets into the hands of the ultimate owners and is systematically worked. At this point the mine is out of care as ever. Many a mine in the older days failed to pay, solely because of a dishonest or incapable superintendent, while the same mine, in fresh hands, has afterwards paid handsomely.

I have tried to sketch, briefly, the general history of mines, successful and unsuccessful. Of course there have been and will be found exceptions to this general description, but probably the majority of the prospect holes of Colorado will follow the course I have described. When one sees the great number of "holes" there are in the State, one only wonders that so many are valuable.

LEX.

TRAPPING WILD PIGEONS.

CORRY, Pa., May 16th.

ON the Philadelphia and Erie Railroad, ninety-five miles from Erie, in the midst of a vast forest, reposes the little village of Kane. Without architectural beauty, and lacking in many of the comforts which are to be found in the cities of the East, Kane nevertheless presents certain classes of people attractions rare and valuable. The village is situated upon the highest point of land on the Philadelphia and Erie Railroad, and the clear, pure air thus insured at all seasons is productive of robust appetites and correspondingly perfect health. This advantage alone is sufficient to draw a large number of Philadelphians to Kane every summer, and with it must be considered the fact before mentioned, that upon every side for miles extends an unbroken forest, with its innumerable charms for the lover of nature. There is yet one inducement to pleasure seekers unmentioned, one which comes with regular irregularity and one whose various phenomena are interesting and wonderful alike to the scientist and to the unpretending student of nature—the immense flock of wild pigeons which nests about on every five years in the vicinity of Kane. There are three such flocks in the United States—one in Michigan, another in Missouri and the third and largest, that with which we have to deal, in Pennsylvania. These flocks drift about from season to season following the crop of nuts and rarely going beyond the boundaries of their own States. The woods in the vicinity of Kane are largely beech, except in the case of a narrow strip of land on the immediate cause of the birds' nesting, where they have this year was an immense crop of beech nuts last fall.

I could not learn how, but certain it is that in some way the birds learn the location of the richest harvest and are always on hand at the right time to enjoy it. Last fall a few pigeons were observed in the woods near Kane, and the "old settlers" and editors, said that with the spring would come the flock. The few stray birds remained in the neighborhood all winter, and during March the prophecy was verified by the appearance of countless millions of pigeons.

The birds built their nests over a territory of about twenty square miles, and began hatching April 1st. Their presence in such vast numbers soon drew together a crowd of gunners and others bent on destruction as a

means of enjoyment or of gaining a livelihood, and from that day to this a ceaseless slaughter has continued.

We reached Kane at 3:30 P.M. and sought accommodations at the Thompson House, which, however, had not yet opened its doors to summer travel. An inquiry at the Kane House resulted differently, and we registered there. We were up early the next morning, and at 6 o'clock were on our way to the "roost," in an easy riding carriage drawn by a team of spanking grays. Our road lay through dense woods, and was not more than fifteen feet wide. On each side the trees rose a solid wall nearly a hundred feet into the air. The grandeur of that still morning scene, the invigorating air, the prospect of a cool and pleasant ride, all the surrounding circumstances tending to exhilaration in the highest degree.

However, "it is a long lane that has no turning," and after traversing twenty-one miles, the driver delivered himself of the information that the nesting ground had been attained.

Only a few pigeons were in sight, flying from tree to tree, but the trees were full of nests. In a few moments a gun was fired in the immediate vicinity, and instantly hundreds of birds became visible. It is unlawful to shoot birds within a mile of the roost, or to trap them anywhere, yet the law is broken in both ways continually and with impunity. The nesting ground is from one and one-half to two and one-half miles wide and about twelve miles long, and in this space and vicinity there are several hundred gunners and about eight hundred trappers constantly engaged in slaughtering the helpless birds. One hundred and fifty barrels, each containing 350 dead birds, and as many carriages, holding from six to eight dozens of live ones, are shipped every day from the different towns within a day's journey of the roost. Such work as this is not only wicked, but it is in the highest degree foolish. If the trappers and hunters would remain outside of the roost and take the birds in their own flights, and from long lines, they would be a source of revenue all summer. As it is, the natural result of the birds' departing must come, and that in a very short time. Indeed, the trappers admit that the birds are already beginning to leave, and Frank and I were a source of suspicion to these law-breakers, as we had no guns and exhibited no evidences of legitimate business. We had expected this, however, and had brought a pocket full of cheap cigars; a small number of these I judiciously distributed, and thus secured a few and a few only of the many trappers with whom we conversed failed to become talkative under the influence of the weed.

The first requisite in the pursuance of the trapper's art is a stool pigeon. A bird is selected while young and is made to perch upon her owner's finger. He is then raised about six feet from the ground, and the finger gradually lowered. Finding his support sinking, the candidate uses his wings and flutters or hovers to the ground. Being again raised, he again hovers to the earth. This training is continued for weeks and sometimes months, and is not discontinued until the habit of hovering becomes a part of the bird's nature. A net about ten by forty feet is procured and one side fastened to stakes in the earth, so that it will flop over—if you will, it is put on the market to Eastern purchasers. Close to the net, and where it will rest when "sprung," is spread buckwheat, or other grain, and salt, for the birds are as fond of salt as a deer of a salt lick. The stool pigeon is then fastened to a movable platform near by. The net is fastened to bent saplings in such a manner that by pulling a string it will be thrown over the bait. The trappers lie concealed in a "bow-house," a hut built of hemlock boughs, and await results. When a flock appears, the stool pigeon is made to hover, and the birds, thinking he is free like themselves, and in search of edibles, light, and soon find a net between themselves and freedom. The prisoners are placed in a coop until a wagon load has been captured, and are then taken to the nearest express office for shipment. Live birds have been as high as \$3 per dozen, but are now selling at sixty cents in several places. The average price during the season of five weeks has been about \$1. The business of trapping is therefore a lucrative one. Two years ago two trappers made \$5,000 in two months, and Irvin Kintlinger and Lyle Dickson have so far this season trapped more than thirteen hundred dozen. A large proportion of the trappers live in Ohio and follow the birds wherever they roost from year to year.

The birds and gunners are not the only enemies of the nest. The birds are as much preyed upon by the hawk as by the human hand. The hawk is a bird of prey, and it takes care of themselves in its own way. The hawk leaves the roost for food and return at irregular intervals, but the mature birds have their unvarying periods of flight. The hunters take advantage of this, and, posting themselves on a hill anywhere within five or even ten miles of the nesting, shoot the birds by hundreds as they fly away for food or home to feed their young. The nesting is in Forest County, twenty-one miles northwest of Kane, and sixteen miles southeast of Sheffield. To those desiring to reach the ground I would advise going direct to Kane, which, although further from the nesting than Sheffield, would be preferable for several reasons. Good hotel accommodations can be had for \$1.50 per day, and a good livery stable is located in the village. A team and carriage, together with a competent guide, may be procured for \$3 per day.

G. S. B.

THE CAUSE DISCOVERED.—Most of the readers whose eyes scan these pages have suffered from headache, lassitude, nausea or pain in the back; but who doubt if they knew what the cause was? They may have read of ten or twelve cases of this kind, but have not known the cause. This is a truth which has just become known, and the result which Warner's Safe Kidney and Liver Cure has accomplished. The cause of these troubles is caused by diseased kidneys and liver, and the remedy which cures the cause removes the pain which arises from it.—Lad.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

THE VICTORY IN IRELAND.

THE rifle match between the American and Irish Rifle teams at Dollymount, on Tuesday last, added another to the series of American victories, and the list remains unbroken. For some weeks past the brilliant shooting of the Irish riflemen has been a source of much discomfort and some apprehension to many on this side the water. The shooting of the Irish riflemen when the match came off was far in advance of anything shown in their practice; but on the American side the figures are almost beyond belief, so superior are they to anything now on record in long range shooting. The day, in its climatic conditions, was of course very well adapted to the making of fine scores. The Irishmen did not get the boisterous, rattling, stormy weather to which they are accustomed, nor did the American team get the hot, dry day in which they would have been at an advantage, since they could the better endure such a condition. There was a medium day, with an overcast sky. The wind does not appear to have been very difficult to manage, and altogether it seems that the dozen men, who had schooled themselves to grasp success under any and all conditions of adverse wind and light, found themselves finally brought to the test on a day to their own liking. Nothing then remained to them, with the fine day before them, than to pile up the bulletseyes until, when reduced to plain language, it seems almost fabulous to say that such averages as 215½ and 213½ were made; that no less than five perfect range totals are in the scores, and that but a single miss and a single outer mark the record of 540 shots fired. The match will form a bright spot in the annals of rifle shooting, and the series of Irish-American matches seem destined to live on by the very momentum of their brilliancy.

The match result may be a sore disappointment to the Irish rifle maker, who for four years past has been busy at work in the preparation of his breech-loading match rifle. The old muzzle-loaders had been abandoned, since after repeated trials they were found incompetent to cope with the match rifle in its breech-loading form, as we have it here in America. Mr. Rigby, to be sure, has failed to secure a victory by his new rifle for his home team, but he has succeeded in making for the credit of Ireland a match record, second to nothing ever before

shown by any team of British shooters. The match was singularly lucky in being such a close one at such high figures. On the whole, the victorious riflemen were so nearly beaten as to moderate any extra jubilation, while the beaten riflemen were so nearly victorious that there should not be a shade of shame in their disappointment.

There was much to criticize in the manner of the selection, and on the principal that success justifies the means for its accomplishment it might be proper to keep silence on that topic now. In time it may be of interest to know the facts in the case, and the FOREST AND STREAM has accordingly put on record in its columns not only the manner of selection, but its opinion of the mode. There are many details of the match of which the notes sent by cable, and from which our account of the match is written, fail to inform us. It is not at all unlikely that with closer pushing the American team might have done even better—possibly have turned the 1,300 point—but there was no defect in the line. The team displayed that best sign of a well organized body—shooting in a bunch. With an area of differences of but six points in a team of six men, the American squad may be regarded as showing no stragglers. There were no laggards in the party. In the Irish team there are but eight points of difference; and it is a curious fact in connection with the match that John Rigby, the Nestor of rifle practice in Ireland, should have had the lowest score in the whole dozen experts at work.

It is hardly fair to say yet that the inferiority of the new Irish breech-loader is established. It may be that the gentlemen of the home team at Dollymount have not yet learned all the fine points of their weapons. They certainly secured the finest sort of work from them, and we must confess that the experienced John Rigby, with the lesson of the American breech-loader before him, has met the problem of a first-class long range rifle success. The real truth is that for a dozen years—from 1862, when the Elcho Shield matches were established—British shooters generally were content with a very wide margin of misses. It was expected that a certain number of the shots fired were to go wild of the target. It was the American rifleman who first seriously made the "highest possible" his goal, and toward it he has at last succeeded in pushing the riflemen of Great Britain; those of Ireland being the more ready to learn the lessons which Americans had to teach. Again and again the aged pupil has tried to surpass the youthful instructor, but success has thus far leaned only in one direction, and the naturally buoyant spirit of the Irishmen will no doubt sustain them now, and urge them to be "up and at 'em again." It is to be hoped that they will soon give Creedmoor another visit; and while we may not promise them such a day as the 29th, they may perchance happen upon the Irish day they are so long expecting, and beat us on our own range.

The high character of the scores brings up a question which has often been discussed—viz., the advisability of so modifying the means of discrimination of excellence that finer differences of merit may be discovered. Perhaps this may be met by a lengthening of the distance fired over, or perhaps the carton system may be adopted. When there are so many bulletseyes made in a match it becomes a fair matter of inquiry whether some way of determining the relative value of bulletseyes is not in order.

Walnut Hill, Bennings and Creedmoor have put forward admirable champions, who could after a two weeks' siege of Irish hospitality pile up such scores as are found in our rifle columns. It is not likely that a stronger Irish team than the present will ever be pitted against the Americans. The Irishmen have improved wonderfully, and it speaks volumes for their merit when out of the 270 shots fired by her champions not one will be found in the outers of the target.

Col. Bodine may now return home to the warm welcome which he is sure to get. He has shown himself to be the "Old Reliable" in meeting the best team ever organized against American riflemen and seeing them one dozen better in the way of scoring.

Apart from all shooting interest in the match, it has a special importance as a means of making two great peoples better acquainted with each other. The Irish people are proud to welcome a really American body of citizens, under whatever pretext they may visit the old country; and if the match has no other significance it at least opens a broad current of friendship and good will.

OUR RIFLE SUPPLEMENT.—In addition to the exhaustive account of the Irish-American match, published in our Rifle columns to-day, we furnish our readers with an illustrated supplement, showing the exact position of each shot fired by the two teams at the 800, 900 and 1,000 yards ranges. For these diagrams we are indebted to the courtesy of the New York Herald, which, with usual enterprise, displayed on its bulletin board each stage of the shooting, while the match was still in progress, and on the following morning published full scores with the diagrams.

Much interest in the match was manifested in this city. Great throngs were gathered before the bulletins in the afternoon, and even delayed going home until they had a copy of the Telegram with its target illustrations,

THE FLY-CASTING TOURNAMENTS.

IN our Sea and River columns to-day we publish a communication calling attention to the lack of interest manifested in the fly-casting tournaments at the New York State Convention, and to the insufficient provisions made for the trials. The writer expresses what has long been in the minds of the anglers of the State, and now that the subject is started, we trust that it may be taken up in earnest.

Angling is, *par excellence*, the solitary recreation of contemplative minds, and the Lone Fisherman is, by general acceptance, the type of the craft. But it is hardly a sufficient reason why the competitors at our annual fly-casting tournaments should be so limited in number and so severely let alone by the other delegates present. The truth is that this part of the week's programme has been given too much the character of a side show, the success or failure of which had no appreciable effect upon the ebb of the occasion.

An examination of the records of the convention for the years 1873 to 1880, as contained in the FOREST AND STREAM, shows that the numbers of competitors in the fly-casting tournaments have always been meager, ranging from six to ten, and never exceeding a dozen. This representation is in striking disproportion to the number of skilled fly-fishermen in the State, and to the claims of the delicate accomplishment itself. The day of small beginnings, which was not to be despised, has never given place to the greater things which should follow.

This is manifestly wrong; it is putting the art of casting the fly on a plane decidedly below its merits.

We shall not attempt to point out where all the blame rests, for of that we are not fully convinced ourselves; but it is enough now to suggest that the remedy lies with the anglers themselves, and to designate one or two changes which are of imperative importance.

For the past ten years it has been generally understood that the first prize in fly-casting would, as a matter of course, go to one of two men, who, year after year, divided the annually dwindling honor between them. The first thing to be done, then, is either to bar out from the competition those men who have had things all their own way for so long, or else to provide another competition where less expert anglers shall have some chance of winning a prize. True, neither Mr. Seth Green nor Mr. Reuben Wood entered the lists this year, and it may, therefore, be objected that the drawback we have mentioned did not exist at Seneca Falls, and the field was open to all. But the interested public had had no assurance that Messrs. Green and Wood were not to compete; nor has it any assurance that they will not compete next year. Until it is understood that a competition in fly-casting does not imply a competition with these experts the trials will be sparsely attended, and will excite little interest. The Seneca Gun Club, who had in charge the arrangements for the last convention, conscious of this trouble, sought to obviate it by adopting the course we have suggested; but at least one of these experts very naturally retorted that the club was overstepping the bounds of its authority. We trust that those who do have the authority will consider the subject, and by taking early action insure a greater success in 1881 than in years past.

Mr. Seth Green and Mr. Reuben Wood have fairly earned a position outside of the ordinary fly-casters. Their skill and deftness are acknowledged, and they may safely rest on their laurels. Should they voluntarily offer to withdraw from the regular yearly competitions, and instead give an exhibition of their art for the entertainment and benefit of the younger anglers, the action would be at once appreciated as graceful and becoming. An expression of this kind from them in the FOREST AND STREAM would have a vast deal of influence in determining the success of the anglers' tournament on Long Island next year.

The second thing required is that fly-fishermen throughout the State should manifest their interest in this matter, and so elevate the importance of these contests. When their charms are suitably presented, they will be accorded to and provided for. Then, prizes which legitimately belong to the successful competitors with the rod will not be given for excellence in other branches of sport; nor will the fly-casting be ignored and slighted.

—After a brief and fitful existence amid the beautiful surroundings of Springfield, Mass., our late esteemed contemporary, *Out-Door Sports*, has succumbed to the inevitable and gone over to the majority. The general complaint was too much localism, which led to inattention, the immediate cause of the untimely taking off. In short, the field chosen by our friend was so utterly devoid of the nutritive herbage necessary to newspaper subsistence that the melancholy event we now chronicle was a foregone conclusion. We tender to those who watched over *Out-Door Sports*, as well as to those who did or did not support it with their subscriptions, substantial consolation at the rate of \$4 per year, or \$3 for six months.

BOOKS FOR SUMMER READING.—"Canoe and Camera; or, Two Hundred Miles Through the Maine Forests," by Thomas Sedgwick Steele, price \$1.50; "Camps and Tramps in the Adirondacks, and Grayling Fishing in Northern Michigan," by A. Judd Northrup, price \$1.25; "Trouting on the Brulé River; or, Summer Wafaring in the Northern Wilderness," by John Lyle King, price \$1.50; "Bodines, or Camping on the Lycoming," by Thad. S. Up de Graff, M. D., price \$1.50. For sale at this office.

—When the State Association meets at Coney Island, our Western friends will have in addition to the many attractions at the shore, the opportunity of seeing how the Brooklyn, Flatbush and Coney Island Railroad is operated, which can dispatch trains of from eight to twelve cars every three minutes when necessary. They are drawn by engines as large and powerful as those of the Pennsylvania road, and weigh about thirty-two tons each. They have run as many as 250 trains a day without any crowding or inconvenience. The road is laid with all steel rails, and operated by telegraph and Rossom electric signals, which work automatically. The whole is under the supervision of Supt. Wm. E. Donovan who has been twenty-four years in the service and is a natural born railroad man as well as an expert telegraph operator, and when work is lively he never trusts subordinates, but is always on hand.

MIGRATORY QUAIL.

WE publish this week additional reports of the safe arrival of the migratory quail, and shall be pleased to hear further of the birds. Those who may this year observe the return to their nesting ground of former importations are particularly requested to transmit such information to us, for there are a great many interested ones who are watching for news of this kind.—

CHATHAM, Ont., June 20th.

Editor Forest and Stream:—
Two hundred migratory quail arrived here in good order, on the 9th inst., only one having died on the way. They were turned out at the Big Point Preserve, thirteen miles from here, on dry ground adjoining the marsh. Yesterday three members of the club went down and reported them calling in all directions. Their call is something like a young turkey. They were found very hard to put up, but by walking past three abreast to the spot from whence the sound came they generally managed to raise them, but not until they had been almost walked upon. They flew very fast when they did get up. One of the members, a slow shot, doesn't think he will care for them.

They have taken more to the wet ground, but have not gone far from where they were turned out. Our keeper is scattering food for them, which no doubt tends to keep them from wandering off. They are very fond of corn, which seems to be a large grain for so small a bird. I saw one swallow a large peanut, shell and all, that was put into the cage when they were in the express wagon.

NOTTOWAY COURT HOUSE, Va., June 21st.

Editor Forest and Stream:—
There have just been received at this station two hundred migratory quail from Turin, Italy, sent by Mr. Louis de Fernex, to be put out on his sporting farm near this place, which he has recently bought of Mr. C. D. Epis. We learn that Mr. de Fernex intends to put out many varieties of fish and game on this farm, and is especially pleased with the quail, as it has large quantities of corn in it; he also pleased with the health and climate. How is this for old Virginia by one from sunny Italy.
There are quantities of game here this season of all kinds, and particularly quail as we have had a dry spring, which was favorable for their raising their young.

VIRGINIA.

BIDDEFORD, Me., June 18th.

Editor Forest and Stream:—
The quail, for which some of our citizens subscribed, have been received in good condition, and distributed by George F. Calef, President of the Fish and Game Society. They were let loose in Biddeford, Saco, Buxton, Hollis and Parsonfield. Other parties have secured and let loose another large lot in Kennebunk. All apparently doing well.

Our river, the Saco, seems to be pretty well stocked with salmon, for they have caught some fifteen, weighing from ten to twenty pounds. Mr. Ed. Hanson caught a nice one this morning, Friday, June 18th, weighing eleven pounds. Our Fish Commissioner ought to take notice of this and have fishways constructed. The river once was famous for salmon, but none have been caught for a long number of years until now.

C. J. C.

PROTECT THE NESTING QUAIL.—The following hints from a Rockland (Me.) correspondent are timely and worthy of adoption:—

I want to say a word of caution in regard to the nests of the migratory quail. Having learned some things last year, I have not to learn them over again.

All the nests found last year were in the hay field, and were found while haying. In a number of cases the bird was killed or wounded on the nest, and so the eggs (in one case there were fifteen eggs) were lost. In other cases, where the grass was mown clean from the nest, leaving no cover, the nests were forsaken. But in some cases, where the grass was mown from one side of the nest, and it was discovered in season to place a tuft of grass back and over it, every egg (in one case fifteen) was hatched. A bunch of grass as large as a water pail will save fifteen quail; but where the birds lay so close it is hard to find them till the machine has passed

over them, and it is too late. The farmers are all right, and would gladly do anything in season, but are not expected to tramp through the grass searching for birds' nests. Hundreds could be saved by a person passing along before the mowers with a stick, rustling the grass and discovering the nests, so that a tuft of grass might be left to cover the nest. After the birds get to coming back they will nest earlier, and the young will be out of way of the haymakers.

P. S.—I let out 101 quail on the 10th, received from Hon. Everett Smith, who is deserving of great praise for his efforts in introducing the quail into Maine. They were all strong but five, and they were good runners.

JAMES WIGHT.

THE TILSTON MEMORIAL FUND.

NEW YORK, June 26th.

Editor Forest and Stream:—

I have to acknowledge the receipt to date of further subscriptions to the "Tilston Memorial Fund," as follows:—
Previously acknowledged \$393 60
W. B. S. 25 00
A. Laundy 5 00
James P. Hall 2 00
Total \$425 60

I enclose copy of letter received from Mr. P. C. Ohl, and would add that we are informed by several clubs that they are making up lists, an example which we trust that others will follow.

Yours truly,

FRED N. HALL, Secretary.

PLAINFIELD, N. J., June 26th.

Mr. P. H. MORRIS.—Dear Sir:—Yours concerning circular, etc., relative to the fund for the family of the late Wm. M. Tilston to hand. The same will be presented at meeting of the New York Game and Fish Protective Society June 26th.

I will also state of being at present engaged painting a picture of an English snipe, which I will donate to the fund, suggesting same to be raffled for, your committee setting a price on the picture.

The list I have headed with \$10; regret I cannot do better, but trust the call will be liberally responded to.

Yours very respectfully,

PERCY C. ORL.

GAME PROTECTION.

WORK FOR GAME PROTECTORS.—Editor Forest and Stream:—Your editorial upon what should be the true work of the State Association for the Protection of Fish and Game meets with a responsive echo in the hearts of thousands of devotees of the rod and gun. I confess that I feel very strongly upon the subject, and, while I do not presume to criticize either individual action, nor the intentions of the honorable body, it seems that their past proceedings are open to severe censure. For the past twenty years these representatives from different clubs have met in solemn convention, and with a grand flourish of trumpets have incontinently proceeded to the slaughter of thousands of pigeons, and then adjourned. At the last meeting, not even the pretense of work was indulged in, and the barren stubbles and woodlands of Western New York, which once resounded to the cheery whistle of the gallant Bob White, attested better than I the practical results of the State Association for the Protection of Fish and Game. We all realize how our game is disappearing under the indiscriminate assaults of "pot-hunters," and others who, often enrolling themselves under the banner of sportsmen, and equipped with pot-metal guns and bags in preserving and introducing forth for the slaughter of everything they meet, from a sparrow to a young hog, while the farmer, realizing his loss, and not discriminating between people who carry a gun, wages war against all who shoot. The farmer must be shown that his best friend is the true sportsman, who protects his stock, fences and game. If we will only unite, gentlemen sportsmen, in emulating the good deeds of each other in preserving and introducing game, as we now do on deciding personal prowess at the trap, in a few years we will not only have the birds, but also the good-will and assistance of our farmer friends. I do not condemn trap-shooting *per se*, but object most decidedly to the practice that has obtained of trap-shooters banding together under the misnomer of sportsmen's clubs, and devoting all their time and money to the trap, without thought or care of how our miserable inefficient and changeable game laws are violated on every side.

HENRY F. ATEN.

NEW YORK, June 22d.

Editor Forest and Stream:—

In answer to your request, I beg to say that I did not attend the annual meeting of The New York State Association for the Protection of Game that was held this year, nor have I for a number of years past. I have no doubt the meeting was a genial assemblage of skilled shots, in which test trials with the shot gun, rifle and pistol absorbed several days of time. One evening was devoted to a supper, and but a few moments to casual and ineffectual talk upon the laws for the protection of game, their manner of enforcement, or the habits and history of game and fish. This, at least, has been my experience of the action of those meetings I have attended, and for that reason I have not been at the recent meetings of the Association. I prefer to find and kill my game in the open field and forest. I am frank to say that I consider this a higher amusement, more bracing to one's manhood, more congenial to gentle and humane tastes. There are, however, many gentlemen who prefer trap-shooting. If the vast amount of its money prizes and its betting accessories, there would be no objection to it as an amusement. As now managed, it brings together a great crowd of people who come to make money, and whose habits are totally at variance with those of a true sportsman. The different county societies for the protection of game have been the salvation of game in the State of New York, and have largely established a code of laws and decisions which will always aid by example and precedent those who are seeking to further this work. The State Association does but little in this regard. It would seem, therefore, as if its title was inaccurate.

CHAS. E. WHITEHEAD.

A WORKING SOCIETY.—Plainfield, N. J., June 21st.—Editor Forest and Stream:—I must, as a loyal member of my tribe, ask for a little space to express my opinion

about game protective societies, and the threatened violation of the woodcock law, as in your two last issues you speak so disparagingly of the present societies that sportsmen would hesitate of joining a society for the protection of game if his money was to be used toward some pigeon shooting tournament.

Now, the society of which the writer is a member has solely for its purpose the protection of the State's non-game and fish, and as the law of this State forbids non-residents from killing game within its domain unless members of a game protective society (which means \$2 per year), it is but just that said money be devoted to the propagation and protection of game. Such an association was needed, and such an association we have. Its members are empowered with authority to arrest any violator anywhere in the State. This society is known as the New Jersey Game and Fish Protective Society, organized May, 1879; Secretary's address, W. L. Force, Plainfield, N. J. The society is in a very flourishing condition, and if sportsmen, farmers, land owners and others desire to see game and fish protected they should join it. In reply to "W.," who mentions in yours of the 10th the intention of property owners, somewhere in Passaic County, going in a body on the 4th of July to shoot woodcock, claiming they have the right to shoot them on their own land, it seems to me that any bird, wild by nature, and protected by State laws, unless proven to be of damage, cannot be killed on one's own land. However, if "W.," or any one else, will give this association the necessary information of any one violating the game laws, the offender will be prosecuted to the law's fullest extent. This September law for woodcock may be repealed next year, but while a law live up to it, and give these birds the first chance they have had in a hundred years to raise a brood in peace. Don't say, "If I don't shoot them some one else will," but say, "I won't shoot them and no one else shall."

VICE PRESIDENT.

Game Bag and Gun.

JULY IS A CLOSE MONTH FOR GAME.

—Address all communications to "Forest and Stream Publishing Company, New York."

NEW JERSEY STATE SPORTSMEN'S ASSOCIATION.

THE third annual meeting of the New Jersey Sportsmen's Association was held in the spacious parlors of the Continental Hotel (the headquarters of the New Jersey sportsmen), in Newark, on Monday evening, the 29th inst. There was a large gathering of delegates from the different clubs and the best of feeling prevailed. Sheriff J. J. Toffey, of the Jersey City Heights Gun Club and President of the State Association for the year, presided in his usual felicitous manner. Representatives from the following clubs were present and took part in the exercises: Essex Gun Club, of Newark; Forester Club, of Newark; Palisade Gun Club, of Jersey City; Jersey City Heights Gun Club, Rod Gun Club, of Newark; Raritan Shooting Club, Our Gun Club, of Jersey City; Englewood Gun Club, Eureka Gun Club, Wagonbas, of Newark; Morristown Gun Club, Midway Gun Club, Fairview Gun Club, Hackensack Gun Club, Little Falls Gun Club, Newark Shooting Club and the West Side Game Protective Association. Several new clubs presented their credentials and were received as members of the Association. After the reading and adoption of the minutes of the last annual meeting, a committee of one from each club was appointed by the President to make arrangements for and to select the club to manage the next annual tournament. They reported very unanimously to give the honor of the same to the Palisade Gun Club, of Jersey City. The following officers were then unanimously and with good feeling elected for the ensuing year: President, B. S. Payne, of Palisade; First Vice-President, Dr. J. Burdett, of Jersey City Heights; Second Vice-President, Jacob Pentz, of the Essex; Treasurer, W. C. Conover, of the Midway (re-elected); Recording Secretary, Justice Von Lengerke, of Palisade (re-elected); Corresponding Secretary, Dr. J. Q. Bird, of Jersey City Heights, also a reelection.

It will be remembered that the running of the State tournament for the present year was given at the last annual meeting, unanimously, to the Jersey City Heights Gun Club, as to that club was due the honor of initiating a movement for the formation of the State Association, and it was by the efforts of its officers and members that the first annual tournament, last year, was such a triumphant success. But owing to unforeseen difficulties in the securing and fencing of the grounds of their club in time this year before the flight of the wild birds would be over, Jersey City Heights very reluctantly were obliged to decline the high honor, and it was therefore given of a late day to the Essex, of Newark. Too much praise cannot be given to this club for the Herculean efforts to make it a success. Coming so late—only two weeks to obtain prizes, arrange grounds, print programmes and attend to the ten thousand other incidentals of a four day's tournament the club has done wonders, as the programme will testify. The prizes are rich and ample. The grounds at Erb's have been fitted up regardless of expense, and the arrangements in every way bid fair for a very creditable result. There seems to be a genuine good feeling among all the delegates and the earnest wish for the Essex boys to meet with the success they so well deserve.

After the election of officers a very lively and interesting discussion ensued on the proper enforcing of the game laws and the propagation of game and fish. Eloquent speeches were made by Dr. Burdett, Dr. Johnson, Jacob Pentz, Mr. Beecher, President Toffey and others, and it was very evident that the recent hot shots in FOREST AND STREAM had hit the mark in more than one case. On motion of Mr. Pentz the following was unanimously adopted: That the State Association be requested to see to the more efficient carrying out of the present game laws, and for the procuring of quail to be let out in certain sections of the State, and also for the

The Rifle.

THE IRISH-AMERICAN MATCH.

THE fourth of the series of Irish-American contests with the rifle was fought at Dollymount range near Dublin on the 29th ult., and for the fourth time the Irishmen were compelled to admit that the Americans were the better marksmen.

The Americans since their arrival in Ireland have been compelled to lead a pretty active life on account of many festivities, but they are not much given to such things, and Mr. Frank J. Donaldson, the Secretary of the American National Rifle Association; Captain Jackson, of Boston, whose bronzed face and manly figure attracted much attention; Rockwell, the Boston stationer; National Guardsman and member of the State Legislature, and Mr. Laird, the Government clerk from Washington, have had to sustain most of the "lionizing." Colonel Bodine has had a very emphatic way of leading his men away early from evening fêtes, so that they should get plenty of sleep and keep the clear eye and cool head so necessary to an expert rifleman. The members of the team have been if anything rather over-efficient—not in conversation, for a more modest set of men it would be difficult to find—but there was rather an individual testing of the range than a display of team discipline such as was expected. It was not until Saturday last that the men really did take a "long, strong pull" together. The men were all of them very anxious about the weather. The Irishmen wished for just enough of that Irish boisterousness to change the range to upland the Americans. Just a little twist of weather, and one of the Irish team expressed it. The visitors, on the other hand, wanted an American day imported for their use. They would gladly have had the mercury high up in the thermometer, and a wind from whatever quarter it cared to blow. A "fish-tail" wind might reduce the score somewhat, but the Americans felt confident that they were as well able to shoot with the most troublesome of all breezes as the Irish. The day really was cross, but not so cross as it seemed. The weather during the opening hours was threatening, but no rain fell.

At 11 o'clock the crowd began to assemble on the long sand bank opposite Dollymount. Tramway and janting cars had been well patronized all the morning, and discharged their visitors at the end of the long, narrow bridge which connects the North Bull with the mainland. This was the same ground upon which the victory of Col. Gildersleeve and his team was won in 1875. There were four targets, with a gap between the two pairs. The North Bull is a long sand bank opposite the pretty little village of Dollymount, from which it is separated by an inlet varying in depth and width according to the tides. The range is a mere hill of low drift sand, on which stiff grass is growing. Compared with Greedmoor it is bleak and uninviting. In the rear of the targets in place of the green soddied bank of the American range there is an open space, and the sea is seen as a thin, gray streak, beyond which appear houses, of course out of range. On a fine day the view from the range is striking and attractive. It is bounded to the north by the distant dusky outlines of Lambay and Ireland's Eye, and by the broad slopes of the Hill of Howth, which in clear weather appear checkered with varying tints of green and purple, amid which are seen masses of blue, gray and brown rocks. To the left are thickly-wooded uplands stretching far inland, with intervals of undulating meadows, contrasting prettily with the sombre green of the foliage above them. Here are the cottages and villas of the suburbs of Clontarf and Dollymount. Turning to the right the spectator obtains a splendid view of the bay and its southern boundary, with the numerous islands and reefs, the red and white outlines of the Dublin and Wicklow huts, with clusters of elegant residences in the middle distance. Right in line from the rear of the firing points is the dusky city, bristling with slender spires and tall factory and brewery chimneys and overhung by a murky canopy of smoke. There is a bit of a hut or house on the range, into which the members of the Dublin Rifle Club hurry when an unusually heavy shower threatens to break the range. There are few or none of the conveniences of the American rifle range. There are no pits for the markers, as it would be impossible to dig them in this low sand bank, but beside each target is a mantlet behind which the marker stands secure, thrusting out the disk from the thesides. Although the range was closed by its owner, Sir Henry Vernon, soon after the last match, five years ago, and although it was not re-opened for rifle practice until the 2d of June, there is scarcely any change noticed. A great convenience was given by the erection of a series of wires by which connection by telephone was established between the firing points and the markers' shelter.

For two days before the match day the weather has been stormy, and the Americans were somewhat afraid that the contest was going to be a sort of "save who is the best" match, in which every shot would be the weather. The Irishmen, however, looking upon the match as a piece of luck, but the weather in the morning hours was good enough to suit even the most exacting rifleman. The wind was a "G o'clock" one—straight down the range, making easy shooting so long as it held steady both as to direction and force. It was a wind, however, that was apt to veer to the right or left and become a "fish-tail" breeze. The day was warm and pleasant, and just when one would tempt a great crowd out. The plan of procedure laid down by the over-busy Major Leech was to have the shooting at the 800 yard point begin about noon; that at 900 yards about 2 o'clock, after luncheon, and then at 4 o'clock, after the people had been driven back from the 900 yard point, to begin the 1,000 yard shooting. By 10:30 the American team had started from their hotel. The rifles carefully wrapped up in the corners of boxes of cartridges, which the team seemed very unwilling to let out of their possession for a moment; telescope cases, and blankets or spreading on the ground, made up a very good wagon-load of baggage. Along the road to the range many attempts had been made at ornamentation. The American and Irish flags were intertwined over many a porch, while green boughs across the road were to be seen at intervals on the tramway along the border of the bay.

There were motes, too, such as "Hail Columbia!" "Welcome to Clontarf Plains!" and "Our Guests," at various points. The Irish team was first on the ground, but the Americans, having once arrived, soon settled down to business and opened their cases of cleaning utensils and examined carefully their rifles, their wind gauges and Vernier sights.

Major Leech offered to toss up for choice of targets, but Col. Bodine said he would be perfectly satisfied with the target upon which the Americans had been practicing since their arrival. The men as squadded were: At target No. 1, John Rigby, William Rigby and J. K. Milner; at the next target were George Fenton, J. Russell Joynt and S. S. Young, who shot in the order named. Targets 5 and 6 were set apart for the Americans. H. Rathbone, W. M. Farrow and F. H. Brown followed each other in that order on target No. 5, while on the next target, No. 6, the shooters in order were H. E. Clark, S. I. Scott and Homer Fisher. Mr. Laird, who, with Dr. Scott, represented Washington on the American team, was the coach at target No. 6, while Secretary Donaldson filled the same post for the squad headed by Rathbone.

A number of American travelers were present on the range. Col. Bodine exercised general supervision, so long as it did not interfere with the perfectly efficient work and keeping back the crowd that closed in about it.

It was 12:30 when the firing began, John Rigby discharging the first shot and bringing out the "magpie" disk for an "inner." Rathbone, who led off for the Americans, scored a bulls-eye, as did Fenton on the Irish side in opening for the other squad. Clark on target No. 6 got only a "center." The opening round left the teams separated, the center of the American line up with bulls-eyes, while two of the Americans had slipped into the center about the bulls-eyes. Young, who is an Irishman, living in England, uses a Farquharson-Metford rifle, but all the other members of the home team have the new Rigby breech-loader. Scott, of the American team, shoots with a Remington rifle. Farrow has the long range Ballard, and all the other Americans use the Borchardt and Sharps rifle. Having started in and reached a tie, each of the marksmen carefully adjusted his sights for the second shot and a dozen bulls-eyes all along the line was signalled by the markers. In the next round Rathbone made a center, while all the other Americans followed the Irishmen's example and scored bulls-eyes; the Irishmen thus got their first advantage in the match. In the next round Rathbone dropped again, as did John Rigby, and the center of the American line was broken. The Irishman had discovered that it was a day for high scores, and Major Leech, so far as he was able, was putting in practice a sort of team discipline. Wm. Rigby was as slow and considerate as ever, while the Americans, too, shot very slowly. More care in the fifth round by the Americans and a "nipper" by Young Joynt, of the Irish team, put the teams on an even footing, but Rathbone was unlucky and lost the center of the Irish in his first. All shots scored only three bulls-eyes. A little freshening up of the wind in the seventh shot caught Clark and gave him a center, but all the other members of the team were warned in time and got bulls-eyes, as usual. The teams were now shooting very evenly, and except the opening inner of John Rigby every shot had landed within the radius of twenty-seven inches which bounds the center, in the next round the center of the Irish was kept. John Rigby had in the first score a center, and William Rigby followed with a similar shot in the next round. The Irish manager felt that his men were falling behind, but at such an early stage in the match no great anxiety was felt. In the eleventh round Wm. Rigby hit the "magpie" section of the target. His cousin John became mistaken at seeing a "G o'clock" breeze, and a miss-shot, and he, too, made an inner. In the last three rounds of this distance the Irishmen made a great effort, the Americans had closed their work and had put on record a total of 436 or but fourteen points short of perfection in the highest possible. This the Irishmen could tie or possibly pass. On the thirteenth round they had reached 376, and two bulls-eyes all around would bring a tie. The word was passed along, and by taking plenty of time and extra care that result was accomplished and a great cheer went up when the fine double score was announced.

It will be seen from the scores that at the 800 yards range, of the ninety shots fired by the American squad, twelve were centers, one was an inner, while seventy-seven were in the bulls-eye. On the Irish team the figures were eighty-three, three inners and seventy-nine bulls-eyes—the three inners were made by the Irish.

The wind had been very steady during the morning, and the Americans were anxious to be on with their work, so, hastily disposing of lunch, at 2:30 they were again at the firing points ready to open the 900 yard stage. The cooling of the guns by the half hour rest had upset the calculations as to elevations, and the opening at 900 yards brought only twenty-seven in a possible thirty to each of the teams, maintaining the tie. The firing at this range was fully up to the average of the 800 yard distance. Clark was doing far better than at the lower distance, and the really fine weather for shooting led the Americans to stand ready to drop to the firing points with the utmost readiness after each shot, in order that nothing might be lost by change of weather. Rathbone, who had been the best in the consecutive bulls-eye right through the mid range of the match, and went back to 1,000 yards with a score of 145 in a possible 150, while Clark, having put in a perfect 900 yard score, retired to the last range with 148 points in the same possible. Scott, who had been very ill the day before, was causing some anxiety to Col. Bodine. His score of sixty-one at the 900 yard range was the poorest on the American team. Among the Irishmen the shooting was very even, and would have been deemed extra fine. They had dropped eight points in the range total from that reached at 800 yards, while the Americans, by holding up to the same total, had that much advantage. William Rigby had scored an inner, while John Rigby and Joynt had been equally indiscreet in the American team, by five centers each had reduced their scores to seventy, while Young was the only Irish shooter who did extra well at this range. Once during this range there was a dispute about one of Brown's shots, but an examination of the target showed it to be a center in place of a bulls-eye, though for a time it looked like a miss to the squad at the firing point. The analysis of the shooting at this

mid range showed that in ninety shots the Americans had secured seventy-eight bulls-eyes, ten centers and two inners, Farrow and Scott making these last. On the Irish side there were seventy-one bulls-eyes, sixteen centers and three inners—the two Rigbys and Joynt being the inner makers.

The admiration and enthusiasm excited by the match up to this point will be readily understood by the following table of anything like a miss or even an "outer" in the entire shooting at the 800 and 900 yard ranges. The cheering of the crowd was equally distributed to the contestants and to a number of celebrities who now arrived on the ground, among them Earl Cowper, the Lord Lieutenant of Ireland, and Edmund Dwyer Gray, the Lord Mayor of Dublin. The popular excitement was unmeted throughout, and the spectators never lost their interest in the proceedings. Ranged upon three sides of the rectangular space within which the contestants were grouped, the crowd craned their necks after every shot, and burst into storms of applause whenever a special bulls-eye or display of skill excited their admiration.

There was no delay in getting back to the 1,000 yard range, and at 4:30 the firing for the last distance opened. The sky was clouding up, more wind was coming on and rain seemed imminent. The crowd held on, however, for with a margin of less than two bulls-eyes, the interest ran high. The opening at the 1,000 yards struck the key-note of success, for the Americans put in six bulls-eyes, while Milner with an inner and the two Rigbys with a center each made a very scattered opening for the Irish team and increased the lead for the Americans. The Irishmen were again beginning to see defeat before them, and having no efficient team system to fall back upon, were soon hopelessly confounded. Each man for himself was the rule, and on the second round, when each of the Irish marksmen had steadied himself for a bulls-eye, unlucky Milner sent a bullet no one knows where, and the first and only miss of the day was put on record. Young, too, was beginning to waver, and shot an inner. These shots were the home key-note to the Americans, and considering that they had a sure thing of the match, were a trifle careless and not so exact as they would have been had the pushing been closer. The Rigbys had evidently become disheartened, and they followed each other off the target again and again. There was a rally towards the end, and twice the Irishmen put in perfect scores at this range, but the odds against them had become too great. The Irish team had a sure thing, when Brown put in an outer, the only one of the day, though a slight "pull-off," but on the next shot he recovered and the hopes of a break on the part of the Americans were dashed to the ground. Fenton opened his sleepy blue eyes very widely when he saw himself rewarded with an inner, the only one he was rewarded with at this range. Only two of the Irishmen scored over seventy points at this range, while three of the Americans were above that figure, and Scott came within a single point of a highest possible. When the last shot was fired from the Irish wing of the field, ready pencils footed up the figures and declared that America was the victor by twelve points. Clark was the leader, individually, with 340, as good a total as the famous one of Bruce, made in the Centennial match, but Bruce's was better, as he still held the last shot, and had a sure thing had never been seen shooting. Major Leech said he was almost reconciled to defeat by the fine scores put up. It was 6:30 when the match was finished.

Near the close of the shooting and shortly before 6 o'clock an untoward and exciting incident intervened to interrupt the contest. Smoke and flame began to rise from the ground and cross the space between the firing stations and the buffs. The flame was considerable, but the smoke rolled in such dense volumes across the ranges that the contest had to be suspended.

The interruption, it was ascertained, was due to the burning of the dry grass or furze adjacent to the range, which had been set on fire by the match of some careless pipe smoker on the outskirts of the target ground. The flames were extinguished, and after a delay of about fifteen minutes the shooting was resumed.

Farrow's eleventh shot was challenged by Col. Bodine as a bulls-eye, after it had been signalled as an inner. Col. Bodine wished to have the target examined, but Maj. Leech produced a rule prohibiting any examination.

This in brief is the story of the match, as fought out on Tuesday last. The exact record stood as follows:—

When the match was over cheers were given for the American and Irish teams. Col. Bodine was presented with a handsome bouquet by one of the ladies present. Acknowledging the compliments paid himself and team, Col. Bodine said it afforded him pleasure, as captain of the American team, that they had won, but as a representative rifleman he felt regret at the result from the sense that the riflemen of Ireland richly deserved victory this time because of their exertions to secure victory, and he was sure the feelings he expressed were the feelings of the American people.

In the evening the American and Irish teams attended a private banquet given in their honor by the Lord Lieutenant. Col. Bodine says he does not intend to disband his team until the termination of the meeting of the Irish Rifle Association and of the festivities to which the Americans have been invited as a team.

The following table gives the running record of the match, indicating exactly where the gain was made or the loss sustained by each team. For purposes of comparison the score of the match of 1876 is placed in juxtaposition.

1876.		1880.

To show the excellent quality of the work accomplished, the following figures taken from the scores of the important long range matches shot since the new targets came into use in 1874 are given. In 1874, the scores of the six leading members of the American team that shot for the Elcho Shield, the figures are as follows: Scotch team, 1,168; English, 1,071; Irish, 1,055. In 1875, when the Irish team won the shield with the advice of the American team on the ground, the scores ran: Irish team, 1,161; Scotch, 1,165, and English, 1,136. In 1876 the English team was successful, and the leading six scores from each team were: English team, 1,161; Scotch, 1,114, and Irish, 1,036. In 1877 another Irish victory occurred, with the scores as follows: Irish team, 1,230; English, 1,148, and Scotch, 1,061. And for the Irish team for the Irish team was scored in 1878, the totals of the scores of the leading six men being: Irish team, 1,203; English, 1,202, and Scotch, 1,186. Last year the Scotch team took the shield, and the scores of the best six men of each team were: Scotch team, 1,141; Irish, 1,123, and English, 1,143. When American riflemen defeated a "crack" Canadian team in 1875, the figures were 1,103 for the Americans and 1,057 for the Canadian six. In the Centennial match, when the Palma was first shot, the shooting extended over two days, and five teams were engaged. The totals of the scores of the leading six men on each team are as follows: First day—Scotch team, 1,202; Irish, 1,202; American, 1,199; Australian, 1,185; Canadian, 1,177. Second day—American team, 1,175; Irish, 1,182; Australian, 1,151; Scotch, 1,123, and Canadian, 1,101. In 1877, when Sir Henry Hallford came over with his British team, made up of the best English, Scotch and Irish riflemen, the scores were: First day—American team, 1,240; British, 1,232. Second day—American team, 1,273; British, 1,220. In each of the two days the best mentioned eight men were engaged on each side, but the figures are the totals of the leading six scores, giving, of course, the advantage of throwing out two men who may have failed. The only real duplicate of the present match was the last Irish-American match shot at Creedmoor on September 21, 1876, when, with six men on a side, the scores were: American team, 1,165; Irish, 1,151. In that match the average for the Americans was 214.6 per man, out of a possible 225, and for the Irish 215.54. In the present to-day the averages were: American, 215; Irish, 213. All the men who have taken in this match are men of experience with the rifle.

In the Irish team John Rigby stands out bold and foremost. Though the active, energetic, blarney-spouting Arthur Blennerhassett Leech is the nominal captain of the team, John Rigby is its real captain and head. He is the leading member of the house of John Rigby & Co., Dub in, gun makers. He is a general armorer, and you can purchase there a fowling piece for the knocking over of woodcock, or another style of weapon for the knocking over of your best friend should he say ought to displease you. In times past the "saw handle," muzzle-loading dueling pistols, for which the house became famous, were in great demand, but of late years the demand has fallen away. Taking the Elcho Shield record for J. Rigby is found in the first Irish team in 1865 with a

score of 131, old target, again in 1866 with 143, in 1867 with 139, in 1868 with 112, and a like score 1890. In 1870 his score was 145, and 149 in 1871. He led the team of 1872 with 154 points, and when in 1873 the Irishmen were successful for the first time, he was a member with a score of 154. In 1874 his score was 164, new target, and when in 1875 the Irish were again successful, he was in the squad with a score of 183. 1876 was his score in 1877, and in 1878 he headed the winning Irish team with the best score ever made in the match, 215 points. Last year he was again head of the team, with 195 points. He was in the first Irish-American match, and led the team with 155 points. In 1879 he was not in the second or third matches of this series, nor in the Palma matches of 1879 or 1880. He is tall and straight in stature, and an expert workman, a scientific rifle shot and an educated gentleman.

William Rigby is a cousin of John Rigby, and is associated with that gentleman in the firm of John Rigby & Co. He has visited America as a member of Irish teams, and in his quiet, almost solemn way of shooting, impresses the spectator as a formidable adversary. He is about forty years of age, and uses a position exactly similar to Milner's in doing. He has been a pretty steady representative on the Irish eight, and has in private competitions enjoyed a good run of success. In 1875 he led the Irish eight. Shot also in 1869, 1867, 1868, 1871, 1873, 1874, 1875, 1876, 1877, 1878 and 1879. He was in Sir Henry Hallford's British team at Creedmoor in 1877.

Joshua K. Milner is a genuine Irishman. He is a young man, his years being about thirty, and in build he is lithe rather than bulky. As a rifle shot he has enjoyed great experience, and as a member of the Irish eight on several occasions has done gallant work. While at Creedmoor some years ago his spirit of fifteen consecutive bullseyes at 1,000 yards made him famous. His posture in firing is a peculiar modification of the back position—the barrel rests upon the upturned toes, while the heel is tucked into the right arm-pit.

Lieut. George Fenton is another of the Irish team men of great experience. His great, stalwart form and broad, resolute face have been seen on other occasions at Creedmoor. He is thirty years of age, full six feet tall and weighs 187 pounds. In all his shooting he expresses a firm belief in the superiority of the new target, and has been successful in his opinion. He is a member of the Irish eight at Wimbledon, and has been on the Irish eight several times. He was for a long time a firm advocate of the prone, or "belly" position in firing, and thought it as good as any other, though he now shoots in a back position.

J. Russell Joynt is one of the "colts" of the Irish team. He is a young man, but is able to do good work, and each year witnesses a steady improvement in him. He has shot on the Irish eight on several occasions. S. S. Young is an Irishman with an English residence. He is English in his habits and place of practice. In 1875 he led the Irish eight when they captured the Elcho for the first time. Unlike all the others mentioned, he has never been to Creedmoor.

The doings of the American team men are comparatively well known to readers of the FOREST AND STREAM, and a few personal facts about each will be given.

Col. John Hodge, who has been selected as captain of the team, is a native of New York State and a descendant of one of the old Huguenot families which settled in Ulster County. He is about fifty-three years of age. His business, until recently, has been agriculture, railroad and steamboat freights; but at present he is attached to the Court of General Sessions in New York City. His experience as a riflemen dates from 1845, and even then he was a remarkably fine sportsman. Later he began long range shooting, and has become so elegant a marksman that he has won the name of "Old Bullseye." He was a member of the first American team that contested with the foreign team at Wimbledon, and in 1876 won the match. In 1875 he was again a member of the American team in the great match against the Irish riflemen at Dollymount, and in 1876 was a member of the American team which competed successfully against all comers. He is about six feet in height and of fine presence.

W. Milton Farrow was born in Belfast, Me., in 1844. He is about five feet nine inches in height, and of spare figure. From early boyhood he has been devoted to running. In 1876 he took an interest in long range rifle shooting, and organized a rifle club at Belfast, Me. He was a member of the team which won the Palma in 1877, where he practiced at long range. He went to Creedmoor in 1878, where he was a member of the team which won the match on the American team which contested with and defeated the Canadians. He was the eleventh man in the competition for a place in the American team which shot the "walk over" for the international trophy in 1878. In the same year he won the first prize in the champion match at 200, 600 and 1,000 yards, with a score of 139 out of a possible 169. Last year he spent most of his time in Europe, and returned with a large number of prizes. Among these were the West prize of £100, shot for at Wimbledon, and a Severn china vase offered as a prize by the French Government, in a match for "all comers." He shoots with a Ballard rifle.

Col. H. P. Clark was born in Dutchess County, N. Y., in 1839. He is five and one-half feet in height, of spare figure, dark complexion, and has gray eyes. He is a dentist, and represents the Empire Rifle Club, of which he is president. He was for seventeen years connected with the National Guard; at one time was quartermaster of the Twenty-third Regiment, N. G. S. N. Y. He has done considerable shooting with a military rifle.

He began shooting at long range in 1876, and in the fall meeting that year at Creedmoor won the first prize in the short range match against 23 competitors. In 1877 he tied the scores of Jackson and Hyde for the Stewart prize in the aggregate target, which was finally won by Mr. Hyde. He also won the third prize in the champion's match at the same shoot. He was a member of the American team of 1878, which shot the "walk over" for the international trophy.

Samuel I. Scott is a dentist at Sandy Spring, Md., where he was born in 1847. He was a farmer in his early days, and afterward learned dentistry. He began rifle shooting with the Maryland Rifle Club about three years ago. He joined the Columbia Rifle Club, of Washington, D. C., in June, 1879, and has won several prizes. His first noteworthy score was in a match last year, when he made 99 in a possible 100 at 500 and 600 yards. He won all the first prizes in the six day short-range matches in the same tournament, and in a match at 1,000, 1,100 and 1,200 yards made 180 in a possible 225. Last fall, in the competition for the Wimbledon cup, he won the second prize.

Homor Fisher is a native of Connecticut, thirty-nine years old. For several years he has been in the gun business at No. 269 Broadway. He began long range shooting in 1877, and has ordered many made good scores. He has won many short range prizes, and in consequence of his places on the American team of 1877 was a member of the team which won the match at Wimbledon. He next below T. Lamb, who was selected as captain of the team, won the first prize in the third class of the long range tournament at Creedmoor, and last April he won the Remington \$300 prize.

Ransom Rathbone was born in Salem, Conn., in 1831, and

until late years has been in the leather business. He is slightly round shouldered, has a dark complexion, a spare figure, dark hair, is five feet ten inches in height, and has blue eyes. He began long range shooting in 1875, and in 1876 won a place on the American team, making the highest individual total score ever made up to that time in an international match, making a tie with J. K. Milner, of the Irish team. He shot in the Irish-American match immediately after the international match. He was also a member of the American team of 1878, shooting in the "walk over." In a match at 300 and 600 yards last year he made twenty successive bullseyes, with T. Lamb, and in shooting of the tie made another clean score, and won the match.

J. F. Brown was born in Chester, N. H., in 1833, and now lives in Chelsea, Mass. He stands six feet in height, is strongly built, has a dark complexion and blue eyes. He began long range shooting on the Walnut Hill range in 1877, and had won a large number of prizes. His greatest achievement was making thirty-one consecutive bullseyes on the long ranges, closing with a score of 218, in a match between the Massachusetts and Walpole clubs. He was a member of the American team in 1876, and in the "walk over" made scores of 210 on each of the two days.

The series of Irish-American matches has no connection with the Palma competitions which were started in 1876, and which settle the international long range team championship of the world. The series, of which the fourth has just been won by America, opened in 1874 by the visit of Major Leech and his team to this country. In July, 1875, the Irish team for the first time had captured the Elcho Shield, shooting against teams of Englishmen and Scotchmen, and with a score better than anything which had ever been made by Irish riflemen. A general challenge was sent out "to the Riflemen of America" and accepted by the Amateur Rifle Club of New York, of which not a single member at that time had ever won a long range match; nor was there an American-made rifle capable of coping with the fine Rigby muzzle-loaders. During the winter of 1873-4 the American factories supplied rifles, and by dint of hard practice a team was put into the field which, on Sept. 2, 1874, was successful. At that time the old square bullseye was used, counting four, and making the range total sixty, with the highest possible per man 180 in the day. The totals of that match stood:—

American Team.		Irish Team.	
G. W. Farrow.....	171	J. Rigby.....	163
H. P. Clark.....	158	J. W. Lamb.....	160
J. Bodine.....	158	J. B. Hamilton.....	159
H. A. Gildersleeve.....	155	J. K. Milner.....	154
L. F. Fenton.....	149	G. Fenton.....	149
T. S. Dakin.....	139	P. Walker.....	144

Total..... 934 Total..... 931

The teams were only three points apart at the finish and the Irish team had really carried the match, for Milner, by putting a bullseye on the wrong target, had sacrificed four points. In the year following Col. Gildersleeve led his team to Ireland, and after a most hospitable reception the second match took place on June 20, 1875. It was like an American summer day on which the match was fought. The cable was brought into play, and each shot as it was bulletined in New York. The Irish team had been strengthened as was supposed by new men, but they fired in an individual sort of way without team organization, while Col. Gildersleeve's men displayed the perfection of team discipline, and each man in firing took his cue as to windage allowance for lateral deflection and Vernier scale allowance for vertical variation from the man who had fired before him. Forty years ago the Irish team was the best in the world, and the defeat of the Irish team on their own range by a lead of thirty-nine points, the score standing:—

American Team.		Irish Team.	
T. S. Dakin.....	165	J. Wilson.....	163
H. A. Gildersleeve.....	164	E. Johnson.....	162
G. W. Farrow.....	161	J. B. Hamilton.....	161
H. P. Clark.....	161	J. K. Milner.....	160
H. A. Gildersleeve.....	156	J. K. Milner.....	151

Total..... 968 Total..... 929

In 1876 the Irish team were among those who came over to contest for the Palma, and were given a very pretty substitution of marksmanship in that match with eight on a side, securing for themselves the second place on the roll of teams, the Irish-American series of matches was taken up. The new target, such as is now in use, had then been introduced. In this target the bullseye is three feet in diameter, counting five; the center is another circle fifty-four inches in diameter, scoring four. The inner, counting three, is the square six by six feet, in the center of which the bullseye is painted. The outers are two wings two feet wide by six feet high, and the center of the inner. They count two points. This makes a slab six feet high and twelve feet long, but it looks small enough at the distance of over half a mile away. The size of the target itself has not been changed from former years, but only the divisions upon it. On Sept. 25, 1876, the third of the Irish-American matches was shot. This match saw the defeat of Col. Farrow, and he has never been seen on the ranges since. The score stood:—

American Team.		Irish Team.	
T. S. Dakin.....	203	J. K. Milner.....	206
R. Rathbone.....	203	H. Dyas.....	196
H. P. Clark.....	199	W. Rigby.....	197
L. F. Fenton.....	189	G. Fenton.....	189
H. A. Gildersleeve.....	181	E. Johnson.....	184
W. B. Farrow.....	165	H. Joynt.....	159

Total..... 1,165 Total..... 1,154

On Tuesday last six men on each side competed over the same range where in 1875 Col. Gildersleeve and his men won their victory. The Irish marksmen have improved greatly. Since the series began American breech-loading rifles have found their way into the hands of English sportsmen, and just now the best score made by any of the twenty-four contestants in the Elcho Shield match at Wimbledon was from an American breech-loader. The veteran John Rigby, after insisting that the muzzle-loader was superior to the breech-loader for the finest work, has since 1876 been busy perfecting a breech-loader, having the finest of the American pieces before him as models. This new Rigby rifle is now in the hands of the majority of the Irish marksmen. On Sept. 25, when the two teams were scoring their last match, side by side, the Americans seem to have repeated their old policy of putting up a high score on the last day and so striking dismay into the hearts of their opponents; 1,273 and 1,245 were the figures respectively of the American team and the best Irish six. This was the last and best shooting before the match, but it was left far behind in the actual figures of the battle.

RANGE AND GALLERY.

Boston, Mass., June 19th.—The weather to-day was all that could be desired by the riflemen of Walnut Hill. The wind was steady and from the west during the afternoon, and did not influence the result in either match. There was a large attendance of spectators. In the repeated contest at 200 yards there were sixty-two entries.

club book of the Beverly Y. C. that it must be conceded the largest number of sail enrolled in any club in America. The fleet is composed of ten schooners, seventeen sloops, two steamers, three cutters and forty-eight catboats, a total of eighty-three yachts. Of these, thirty are members of the club; the proportion of owners to members, the majority being yacht owners. There are 101 members all told, or one yacht to each member, which is a record for any sailing organization equalled by no other organization. The Beverly Y. C. sailed ten races last year, with 171 actual starters and 157-8ix prizes. In 1912 entries, ninety-nine starters, and eighty-one yachts actually finished the course. That is business; that is yacht racing in its true sense. It is also business, because the association apparently gives information about last year's racing is valuable to the racing community as a whole. It is business, especially as regards the details of yachts, build, their arrangement, etc., which is so important to the racing public. It is business, too, inasmuch as it is apparently giving information about last year's racing is valuable to the racing community as a whole. It is business, especially as regards the details of yachts, build, their arrangement, etc., which is so important to the racing public. It is business, too, inasmuch as it is

gathering such reliable data concerning the conditions of racing, and the equipment of the boats, as will be of great value. The officers of the club are: Commodore, Walter Lloyd Jeffries; Vice-Commodore, Geo. Lee; Secretary and Treasurer, J. B. Burgess; F. C. Lowell, Geo. P. Gardner, J. G. Minto and R. S. Sears. There is a notable absence of admirals, fleet surgeons, commodores, etc., which is a pity, as they would have been organized for sport and not for dishng out gold lace to all bands.

NICE REGATTA.—As suggested in these columns, the Nice Regatta Committee has changed its mind, and in future will adopt the sailing rules of the British Yacht Racing Association instead of trying to reform the world backward. The Yacht Club de France, which has been the chief antagonist and the Société des Régates du Havre have assimilated their rules to those of the British Association, the promoters of various regattas on the French, Italian and Spanish coasts have requested the Y. I. A. to assist them in drawing up their programmes. This is a step in the right direction, and it is to be hoped that in the future the Y. I. A. will make it worth while for Englishmen and Americans to send racing yachts to those waters.

THE LARGEST CLUB.—Although the New York Y. C. takes precedence, as to tonnage, over all others, we list from the new

TRADE "BEATS THE WORLD." MARK. **Old Judge Smoking Tobacco.** The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know. THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary fine paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown off by all burning paper, namely: The Oil of Creosote. CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Creosote are completely neutralized or destroyed, and the paper made safe proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Try them and you will use no others.

Manufactured by **GOODWIN & CO., 207 and 209 Water st., NEW YORK.**

THE AMES SPORTING CANNON,
MADE BY THE
Ames Manufacturing Company,
Chicopee, Mass.

THIS GUN is a small bronze breech-loading cannon, adapted to the use of campaign clubs, celebrations, yachting, signal and sporting purposes generally. The gun is made of U. S. Government standard bronze, is 12 inches long, 1 1/2 inches caliber, and weighs 20 lbs.; it is mounted on a solid cast iron carriage weighing 12 lbs. It can be readily carried in a procession by two men, and meets a want long felt for a small, convenient and safe gun. Metallic shot for cartridges are furnished, which can be reloaded and fired indefinitely, and by their use the possibility of fire being lost in the gun is entirely removed. The shells are filled with common coarse sporting powder, and fired by a U. S. service percussion cap. The gun is simple in construction, easy of operation; no exposure in loading and firing; and is the most complete breech-loading gun made for this purpose.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING and BLAST-
ING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN,
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING,
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE,
A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING,"
FFG and FFGG. The FG for long range rifle shooting, the FFG and FFGG for general use, burning slow and strong.

SPORTING, MINING, SHIPPING, and BLAST-
ING POWDERS of all sizes and descriptions. Special grades for export. Cartridges, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured on order of any required grain or proof, and is available in all cities and principal towns throughout the U. S. Represented by

E. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 3 (coarse). Une surpassed in point of strength and cleanliness. Packed in square casks of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 5 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns, and Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 5 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFGG is also packed in 1 and 5 lb. canisters. Burns strong and swift. The FFGG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder,
GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES of EXPLOSIVE OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers or the Company's Agents, in every prominent city, or wholesale at our office.

A Relic of Waterloo.

"Some Guns I Have Owned."—ST. CLAIR.

FOR the amusement of the readers of the FOREST AND STREAM each ought to contribute occasionally a song, a story, or a toast; something that will lead us back to our boyhood's thoughtless, happy days; to the times when a gun—no matter how ancient or ugly—was a gun, and we rejoiced in the ownership thereof; and I am fully satisfied that nearly every reader of your far-reaching paper can look back with a certain amount of pleasure to the time when he shouldered his first gun and went forth to frighten every cow-boy, bird and beast in the country side.

After reading St. Clair's experience with his pot-metal gun, and enjoying a good hearty laugh at the mishaps of the darkey and the ducks, I leaned back in my rocker and fell into a sweet reverie, retracing life's checkered pathway until I reached my boyhood—there I handled anew my first gun, climbed the heath-covered hills of my native land, scented the sweet perfume of the broom, the heatherbell and the hawthorn, heard the warbling notes of the lintey and the thrush as I wandered amidst the whins and the brackens, or watched for the rabbits and the hares amongst the bent hills; in fact found myself in the midst of the scenes of my youth, and the central figure around which all clustered was my first, my bent gun. It is the awakening of such memories as these that endear the FOREST AND STREAM to its thousands of readers in this and the mother country.

Born in the Highlands of Scotland, an only son, and the almost constant companion of a doting grandfather, who was chief forester, or, as the tenantry usually called him, "head gamekeeper," on the estates of Lord M—, in the North of Scotland, under whose guiding hand I drew my first inspiration and love for the gun and the field, how often I have watched the well-trained dogs, heads erect, quartering the ground, then to a stanch point, then the flush, and the old gentleman dropping brace after brace until Simms, the under keeper, would grun under the load. Then, returning to the castle at evening, grandfather would doff his flask and pouch, throw them across my shoulders, hand me his gun, and I would follow Simms to the gun-room as proud as if I had been the huntsman of the day. I had

often begged to be permitted to carry an old double-barrel flint-lock that stood at one end of the gun-rack unused, but without success, and I became impatient under the restraint. I must have a gun, must learn how to shoot; so I put my wits to work to accomplish that end. In the village lived an old pensioner, Sergt. Douglas, who had served in the Forty-second Highlanders through the Napoleonic wars, and was discharged on account of three wounds received at Waterloo. I was a great favorite with this old soldier, and, when not in the field or at school, I could be found stretched on the grass in front of his cottage, he, with an old musket across his lap, tell me thrilling stories, of the scenes he had passed through. Waterloo was the pride and glory of the old hero's life; there he would sit for hours, describing the battle, and the prominent part his regiment took in it, how the French horsemen would ride up within a few feet of the square, and by squadrons fire their pistols at the infantry, trying to make a gap through which they could spring to cut down the regiment, but with but little effect, as the men would close up the gaps as fast as made, knowing that their safety and existence depended on keeping a close front. Then the bugle would sound the retreat, and the regiment open up, fire one volley, when back the French would come in full charge to find the squares reformed to receive them. How at the end of one of those fierce charges the Duke of Wellington rode up to the Forty-second, and pulled the star from his breast, threw it in the square, telling them they deserved to wear it better than he. How the old veteran's eyes would sparkle, and his heart become erect as he would tell of the last charge of the "Old Guard," led by Marshal Ney, how the Iron Duke sat calmly on his horse behind the Highland Brigade which held the center, watching the approach to the flower of the French army, led by their bravest general, while the French cannon, concentrated on the devoted Highlanders, plowed broad furrows through every exposed part as they lay flat on their faces awaiting the dreaded encounter. And when the head of the column, led by Ney, began to climb the ridge behind which the allied lines lay, Wellington gave the never to be forgotten order "Up Guards, and at them." Then the old war-worn hero would spring from his chair, grasp the old musket, go through the motion of loading and firing, until when his strength was exhausted he would stop breathless and press his right side on the spot where the third French bullet had entered and prostrated him to the ground. How little did I think, while listening to the old soldier, that I, too, would pass through a fearful conflict, in a distant land, in defense of the flag of my then unknown, but now dear adopted country.

After one of these evenings, I proposed to purchase the old musket, offering all my wealth—five shillings. The old man shook his head; he would not sell. After a long silence he said: "My son, I am growing old and have no children. If you will promise me that you will never disgrace your flag, or bring discredit on your country, my old companion is yours as a gift." The promise was given, and, I trust, thus far faithfully kept, the musket placed in my hands: four feet and a half of it was an inch in length! fifteen pounds of it was an ounce in weight! sixty-two caliber of it was a hair breadth! and as to the lock, once a flint, now a percussion, it was the very embodiment of solidity and strength.

My eyes opened to their fullest extent; I was the owner of a gun, but such a gun! I could scarcely carry it. I stammered out a thanks and started off, the undisputed owner of a gun "to have and to hold" (St. Clair, is that quotation right?), but afraid to carry it home. After thinking it over, I resolved to take Simms into my confidence, and went to his lodge and handed him my prize. He, after inspection, said: "Why, also, this is 'Old Waterloo.'" After a parley she was placed in the gun-rack. I slept but little that night, thinking how I could lighten my gun. A happy thought struck me; I would cut her off, and with that purpose I was at the gun-room bright and early, just as Simms was started on his morning rounds. He left me in possession of the gun tools. I took the musket to pieces—a big job—measured twenty-eight inches and with a file cut the barrel off; cut two inches from the end of the stock, and shortened it to one foot in front. This had taken me the greatest portion of the day. I had forgotten all about dinner. Grandfather, who had been searching for me, dropped into the gun-room. He picked up the barrel, looked at it, then at me, while a dark frown gathered on his face. He then took up the stock; the frown grew deeper and darker. I moved toward the door. At length he placed the barrel in the stock, raised the piece to his shoulder several times, and slowly a pleasant smile took the place of the frown and I was safe. He said: "W-e-l-l, go on, you will have a gun after a while," then left me.

Next day Simms proposed to go to the blacksmith with me to have a thimble and a catch for the barrel put on, which he was doing, and the mainpring weakened and tumbled down to fit a common cap. I found an old ramrod, which took the place of the iron one, and after a week's rasping and scraping I brought the stock down to reasonable proportions, and finally ended by having a

short, heavy, compact gun, that fitted my shoulder to perfection. Simms was my instructor. I was an apt scholar, and was soon at liberty to enter the rookery, where I could shoot crows to my heart's content, but I was denied the fields under the plea that I would frighten off the partridges.

This was my first gun, and many were the hares, rabbits and birds that bit the dust before it. I have owned and do own some fine guns, but not one of them could or can throw the shot further, harder, or closer, and not all of them put together can awaken such pleasant memories as dear "Old Waterloo."

Toward Christmas I had to return home. Major Cummons Gordon owned a fine estate a few miles northwest from Elgin, known as Rosevalley, well stocked with small game. It was a custom of the Major to give his tenantry each year one week's hunt, between Christmas and New Year's day; a custom by the way that every landed proprietor in Great Britain would do well to adopt, as it would draw their tenants closer to them and make them their friends, and would be the means of preserving much game now destroyed; while the amount that they would shoot would be but small, as none of the farmers are expert shots. I had looked forward to this annual hunt with much anticipated pleasure. I was on the ground early. Mr. Finley, the local keeper, assigned me with George Hutchenson, John Laing, Eric Grag, John Hutchenson and James Forsyth. Westward from the bridge between the plantations at the outlet, thence through the whins to the Clarkly Knobs, thence east along the hills toward the "Old Granary," thence through the Charles-ton farm to the starting point; a circuit of about five miles.

We formed an open skirmish line, preceded by a lot of cur and colley dogs and followed by a "drop shot gang"—St. Clair must excuse me for drawing on him—bent on seeing the sport. Hares and rabbits were plenty, and my companions kept up a constant fusillade, bringing down no game however, I kept my place in line; Old Waterloo looked her best, but saying nothing. We had climbed half way up the face of the knobs, when a large hare started down to the left of the line, making straight for the hill, as hares always do, running the gauntlet of four guns, which were duly discharged at it without effect. As it passed in front of my stand, some forty yards distant, my eye caught the springing object; I raised Old Waterloo and fired; the hare doubled up and rolled like a wheel for twenty feet, when it fell dead; the dogs barked, the boys shouted and the men gathered to see the dead with as much interest as if it were a grizzly bear. They looked at me and at my gun in wonderment. Perhaps I was not the proudest being on that hill. It was the first thing killed by me on the run, and I was happy, and I think of it to this day with pleasure.

A new start was made. During the afternoon I got a fair shot at a partridge on the wing and dropped it. That made me the hero of the day. Toward evening we reached the bridge, the game was counted and I was the only person who had killed two. The grand hunt was wound up by a big supper and a dance at the "Old Granary," to which I had the pleasure of escorting Miss Annie B., a spruce little maid of some twelve summers, and the belle of the valley; this as a reward for success on my first grand field day. Can I ever forget it, or the clumsy old gun that I carried? Never while memory holds its sway.

Cape Girardeau, Mo.

CAPE ROCK.

THREE WEEKS IN THE WOODS.

THREE eventful weeks had Domas and I passed in the wilderness. Like boys we had roamed and revelled in the wild woods, gaining stores of strength and health from the clear balsamic air, the pure spring water and our close contact with nature primeval.

Comfortably domiciled at "Uncle Tom's Camp"—located near the shore of a beautiful forest-bound lake—we had taken it in an easy sort of way: exploring, collecting, hunting and fishing, as the mood sat, making daily excursions, whatever the weather, and nights we "slept the sleep of the weary."

Now a day devoted to botanizing, when numberless specimens of the charming boreal flora would be collected, followed by an evening's work in analyzing and in "putting to press" the rare species. The next a long tramp through the tangled forest, piloted by Edward, one of our guides, to a secluded mountain stream, inhabited by that always interesting animal, the beaver, finding astonishing evidences of their strength and sagacity in the extensive "cuttings," curious houses and succession of strongly-built dams, which met our view, a sight vouchsafed to but few sportsmen of the present day and soon to be a thing of the past.

Ornithology claimed a share of our time, as a list of over seventy species of birds seen and carefully identified will testify. Domas spent many anxious hours in perfecting this list, and many more in patiently preparing and preserving the skins of sundry strange looking fledglings, which will doubtless receive proper attention

at some future meeting of the "Nuttall Club," and the species be fully determined.

We had climbed Norton Hill, the highest in the immediate vicinity, and also the highest tree on top of it, and been richly repaid by glorious pictures of the grand forests, thousands of acres—hills, valleys, mountains, lakes and streams, mile upon mile of leafy billows, dotted here and there with gems of sparkling water, and, thank Heaven, unmarred as yet by the axe of the lumberman. An unobstructed view in every direction, a "vast panorama of nature" spread around us—Maine, New Hampshire, and the old Dominion of Virginia, would be a sight up to a ninety foot pyramid, with the absolute certainty of ruining his clothes and a fair prospect of breaking his neck, for such a reward?

We had occasional news from the outside world, for half a dozen hunters had straggled into camp during our stay, representing almost as many different cities, uttering strange, yet in a few days like old friends—such are the amenities of the woods. Pleasant, even, occasions one makes in this way, for only true sportsmen and lovers of nature care to penetrate its solitude, and such, wherever met, are always gentlemen.

Our evenings were spent much in the usual manner, rehearsing the events of the day, laying plans for the morrow, telling stories, smoking, discussing the habits of game and the merits and demerits of different makes of firearms.

Our presiding genius was "Uncle Tom," an ideal representative of that nearly extinct species, the "Northern Trapper." Well informed and not unfamiliar with the world, having served in the Union army under Gen. Banks in the late war and tasted the horrors of a Texas prison pen, after the disastrous Red River expedition, though the incident of a "bushy" beard, which he wears, though in his favorite pursuit. In winter he calls the life of a hermit, without even a dog for company. In summer the monotony is varied by the advent of a few sportsmen, but winter or summer, whatever befalls, unruffled, imperturbable, contented and happy. In fact he has dwelt here so long that he seems to have been assimilated by and to have become a necessary part of the wilderness, like the moose, deer and fur-bearing animals, whose habits he knows so well and with whom he seems to be on such intimate terms. Bluff, honest, thick-hearted "Uncle Tom" "may you live long and prosper."

The speckled trout had not been neglected, for we had tested their size and flavor from each inlet, stream and brook within range of trap, not forgetting an old beaver pond back among the hills where, in a deep, black pool, we had taken our largest string of all. Our trip to this pond Dumas will probably never forget, for he boldly and rashly attempted its navigation in a rude, half-finished dugout, and his breadth of beam exceeding that of the novel craft, he soon became fast wedged amidships, and when the inevitable capsize came the dugout seemed to have the life of it, and for a time was complete matter of the situation. Fortunately no serious results followed, and Dumas, though claiming to have seen strange visions while groping among the ancient canals and submerged dwellings of the original dam-builders, thinks on the whole that he does not care to try the inverted style of fishing again. What the trout thought when that benign countenance of an old beaver suddenly appeared so suddenly among them will never be known.

Did a lazy fit seize us? The lake was at hand and the "luuge,"—local for the *Salmo confinis*—were ever ready to be enticed from their quiet haunts in the deepest waters by the alluring trolling spoon; great fat fellows they were, of from two to six pounds weight, their yellow-speckled scales gleaming in the clear water like burnished gold. A little loggy for sport, but delicious when properly served.

Did "Uncle Tom" whisper that the larder was running low? A mysterious night out on the lake with Edward would set things to right, and venison steaks would be in order for breakfast, followed later in the day by famous roasts, savory stews and the not-to-be-despised "roast harpagon."

We had traversed and ransacked the depths and recesses of the primitive forest to our hearts' content, and felt that our vacation had been profitably spent. Another day and the curious little one-horse jumper would be due at camp, by agreement, to drag our worldly effects to the nearest house, and we should regretfully set our faces homeward. Our anticipations and carefully-planned hunt had been deferred for good reasons till the last night of our stay, the incidents of which I propose to relate.

FLOATING A MOOSE.

The sun was fast nearing the forest horizon when Edward and I left camp, prepared for our (to me) novel expedition. It had been one of those delicious dreamy days—reminiscent of the early forest—when in nature seemed in repose. Scarce a ripple disturbed the surface of the placid lake, nestling here among the dark green hills full 2,000 feet above the sea level. Even the bird music was hushed for the time, and silence reigned supreme.

The light boat—Adirondack model—was soon in readiness, and the "good fellows" of our friends follow us as we pull off from the little "float" where, at the landing and shoot out on the tranquil bosom of a—Lake, at this point about one and a half miles across.

The pale blue smoke curls in lazy wreaths from the smouldering camp fire behind. In front, on the opposite shore, the soft purple haze is beginning to shroud the sombre forest and creep up the sides of the nearest hills, finally engulfing all in a great sea of shadowy mystery.

A solitary kingfisher sits motionless on the dead top of a prostrate birch close in shore, and with head turned a little one side his keen eyes scan the depths below. A sudden swoop, a loud splash, and he silently resumes his perch and gulps down the finny morsel, fruit of his patience and skill.

A family of moose are plainly seen disporting far down the lake, near the outlet, the thin veil of mist rising from the water magnifying their bodies to unnatural size.

A pair of goshawks (*Astur atricapillus*) are wheeling and circling over yonder wooded point, their long sharp wings and bright gray plumage, as seen by the waning rays of sunlight, giving them much the appearance of sea gulls.

At an occasional "luuge" rises indolently to the surface, causing a frantic scattering of the schools of minnows which inhabit the shallows.

Suddenly, from a dark mossy ridge comes the liquid, silvery, flute-like notes of the hermit thrush; a song rarely heard, save in the very depths of the wilderness, and which, to me, never seemed to belong to earth at all, but rather to be the "voice of some spirit soaring in a heavenly sphere, it is so clear, so pure, so mysterious.

As we near the middle of the lake we are witnesses of the marvelous cloud effects sometimes seen in a "northern sunset," when, as the sun sinks in the West, the delicate rosy tints appear in the East, deepening into purple, gold and crimson splendors, till the whole sky is ablaze with a flood of swiftly changing color, reflected from cloud to cloud, from peak to peak, and mirrored in the glassy surface of the lake as well. When we reach the opposite shore all is changed, the sun has disappeared behind the dark line of tree tops and the gorgeous colors have faded and faded, and only a dull golden afterglow remains. The mountains reappear in their natural garb of blue, and the mist thickens over lake and stream.

The heavy drizzle and showers of Edward's shoulders his "pack basket" containing all things needed, and paddle in hand strikes into the seemingly "pathless woods"; but sharp eyes can detect the occasional "blazes," which indicate one of "Uncle Tom's saple lines," which we are to follow for a couple of miles to the head of the "quick water" on East Isle.

A typical preview of forest through which we pass, a vast boreal swamp, covered with a dense growth of majestic spruces, and carpeted and cushioned with velvet mosses and delicate vines, among which peep a few of the exquisite rose colored bells of the twin flower, the favorite flower of the great Linnaeus, and bearing his name (*Linnaea borealis*), though long past their usual season of flowering.

"In the richest moss of the lonely dells

Arcis rose petals found.

With the dark blue blades ever it spread,

And the lovely troch spread."

The long, low mounds, which lie blended like gigantic forest jack-straws in every direction, show where the huge monarchs have fallen, and are going the way of all things earthly; but nature has carefully and tenderly covered them all with a mantle of unbroken verdure, so that scarce a sign of decay appears. The partridge-berry (*Mitella*), the dainty oxalis (*O. acetosella*), the linnaea and snowberry (*Chiogenes hispida*) mingle their creeping tendrils and trailing vines, with soft, white, cottony mosses vie with each other in this kindly office of forest sepulcher. Great lichens, triple-leaved trilliums, bright clusters of the bunch-berry (*Cornus canadensis*) and masses of the dark, shining leaves and deep blue berries of the Clintonia (*C. borealis*) vary the scene.

As the trail approaches the stream the forest assumes almost a tropical appearance, from the profusion of ferns which grow here to almost a gigantic size, and at a time we are nearly lost to sight among the tall plume-like fronds of *Spinulosus* and *Osmunda*. The white-throated sparrows (Peabody) and the olive-backed thrushes are singing their vesper songs, and somber-robed snowbirds (*Junco hyemalis*) flit from our shadowy path.

A subdued tapping attracts our attention to a hollow crack close by, and we catch sight of a pair of banded three-toes (*T. americanus*) busily engaged in searching the decaying trunk, their movements plainly showing that the "early bird" is not the only one that "catches the worm."

We flush an occasional ruffed grouse, but the spruce partridges (*T. canadensis*)—by far more numerous—sit like chickens, with out-stretched necks, stupidly gazing, and if lost in wonder at the sight of the intruder, and visitors: a common habit of theirs, and one which leads to their sure extermination—for they are easily taken with a simple noose tied to the end of a short pole.

A brisk walk of an hour and we have passed the last "rips" and are near the foot of the "dead-water."

The stream we propose to float rises in a chain of low mountains which form the northeastern boundary line between Canada and the United States, and is defined by the "Ashburton Treaty" of 1842. From the foot of the mountains it flows sluggishly for about five miles, through a long stretch of cold, mossy bogs and tangled spruce thickets, to the head of the "quick-water," and then indulges in a mad, frolicsome race down the precipitous channel, gurgling and frothing round the smooth boulders and through the rocky gorges and naked talus which, through the rocky distance, skirted and overhung by almost impenetrable belts of alders and matted underbrush, and the shallow portions of the bed covered by a rank growth of coarse, succulent grass, on which the moose delight to feed, while the deep pools teem with greasy trout.

These cold, open bogs, known as "caribou bogs," deserve more than a passing notice. Lying at the base of a range of thickly wooded hills, and separated from the stream by a low ridge or "hog-back," they have every appearance of having once been a series of small lakes, which have, in course of time, become filled with an accumulation of leaves and vegetable debris, and are now covered with a dense, tough mat of the sponge-like sphagnum—still adrift in places—a quaking bog.

The clump-like, sunken, waxy leaves of the pitcher plant (*Sarracenia*), and the fringed leaves of the blood-thirsty little sundew (*Drosera*), and congenial homes; while spots of cotton grass and broad patches of short stunted bushes of the Labrador tea (*Ledum*), and the beautiful Andromeda (*A. polifolia*), find root in the firmer portions of the bog.

Little islands and clumps of dwarfed and venerable looking spruces are scattered through them, their gnarled and cone-topped tops heavily draped with flowing locks of the "old men's beards" (*Umea*), giving a strangely weird and desolate appearance to the scene, like funeral oases in a mossy desert. Late in the fall the caribou range through these bogs in search of their favorite moss, and the well-defined paths which cross them would indicate that they come not singly, but in droves. The moose are also said to frequent them at certain seasons, and probably a few stay in the vicinity the year round.

A previous visit to this locality on a trout expedition had demonstrated the fact that they occasionally "watered" in the stream, for the broad-pointed tracks in the soft bed were too fresh to pass unnoticed, and the indefatigable Edward had not only backed a light boat all the way from the lake, but had also, with a small hatchet and hunting knife, opened up a passage almost the entire length of the "still water" by lopping off branches,

cutting out narrow places and breaking through small drift-dams, which obstructed the channel, in anticipation of the present occasion.

Forcing our way through the alder belt, we emerge from under the leafy canopy and again get a view of the sky above—the full moon has risen, and the calm, cold darkness has settled upon the earth, and imperceptibly day has passed into night.

The light skirt is drawn from its place of concealment in the thick underbrush, a blanket is carefully spread inside, that no incautious blow of paddle or boot heel may awaken the echoes in the silent forest; even our conversation is kept sharp above, and in whispers, for this still air is a most wonderful conductor of sounds, and a slight indiscretion on our part might ruin our night.

Silently the frail bark glides, snake-like, into the vista of dark shadows, propelled by Edward's noiseless paddle, and we wind about between the black walls of foliage turning sharp elbows, piercing through little openings. Where the stream we turn out into grassy bars, now crouching low to escape a fallen log, and then fast in a sunken tree top; now in the full light of the moon, then passing suddenly into a dark tunnel of overhanging shrubbery, where the tortuous channel narrows to a few feet in width.

Scores of small birds flit from their roosts in the low bushes, and disappear in the deepening gloom. The water rats give one glance of surprise and make desperate plunges for their subterranean retreats in the river banks. With folded necks and outstretched legs a couple of herons (*Ardea herodias*) wing their heavy flight over us, bound for some favorite fishing pool far up the stream.

In a little meadow we catch the shadowy outlines of a deer, as he raises his head from drinking, and then bounds madly away, safe, for to-night our thoughts are on nobler game.

The distinct blows of an axe suddenly startle me. "Uncle Tom" is splitting his kindling-wood," whispers Edward. "The sound proceeds from camp, full five miles away," "as the crow flies," yet seemingly a dozen rods, so clear and still is this telephonic night air.

"This time our game was aloft. For nearly two hours we have been only waiting for the appearance of the noiseless stream, and are approaching a point opposite the main bog, where a moose path crosses. Hark! Edward's quick ear detects some disturbance in the water ahead; it may be the river heaver, it's too loud for the muskrats. Slowly the boat moves among the intervening bends; the noise grows more distinct: a constant sousing and splashing of the water; some large animal is in the stream. The pulse quickens, every sense is on the alert; a few more strokes of the paddle and I shall be able to see past a clump of tall rushes which hide the game from view. Alas! at the critical moment a treacherous root catches the bow of the boat and breaks short off with a loud snap, a sound which all the wild dajizens of the forest fully understand. A great grudge and "curse" in the water, a quick start, a long steep bank, followed by a prolonged crashing through the dense maze of brushwood, and the startled beast strikes the ridge beyond; a few moments of apparent uncertainty and then we hear the retreating footsteps as he steals away up stream. By his deliberate retreat, we know that he has not "winded" us, and there is a possibility of his again coming to water, higher up, though the chances are against it. The pulse quickens, every sense is on the alert; a few more strokes of the paddle and I shall be able to see past a clump of tall rushes which hide the game from view. Alas! at the critical moment a treacherous root catches the bow of the boat and breaks short off with a loud snap, a sound which all the wild dajizens of the forest fully understand. A great grudge and "curse" in the water, a quick start, a long steep bank, followed by a prolonged crashing through the dense maze of brushwood, and the startled beast strikes the ridge beyond; a few moments of apparent uncertainty and then we hear the retreating footsteps as he steals away up stream. By his deliberate retreat, we know that he has not "winded" us, and there is a possibility of his again coming to water, higher up, though the chances are against it. The pulse quickens, every sense is on the alert; a few more strokes of the paddle and I shall be able to see past a clump of tall rushes which hide the game from view. The pulse quickens, every sense is on the alert; a few more strokes of the paddle and I shall be able to see past a clump of tall rushes which hide the game from view. Alas! at the critical moment a treacherous root catches the bow of the boat and breaks short off with a loud

breach-loader and following a veritable will-o'-the-wisp light.

The unearthly stillness of the forest becomes after a time almost unbearable, and the inglorious hoot of a dreary old owl (*Bubo virginianus*) is welcomed as an agreeable change. "Too-loo-too-loo," a pause, as if overcome with sleep, then a long drawn out "too-whar," and he relapses into his normal condition.

The proximity of the lake is heralded long before we reach the shore by the hoarse croakings of the great green-headed frogs (*Rana fontinalis*).

The snug boat is again launched, and we are once more afloat. The repertory concert suddenly stops; the dip of our paddles has alarmed the chorists, but their fright is soon over, for before we are fairly through the fringe of aquatic plants that border the lake shore they are at it again, old and young, great and small, a regular "go-as-you-please" affair.

'Tis a beautiful night—not a cloud in the heavens. The great full orb moon sails gloriously toward the West, shedding a flood of light on all below. The rippling surface of the lake shimmers under the bright radiance like molten silver.

Conspicuous in the southern sky are Jupiter, Mars and Saturn, ranged in line near by the three glittering diamonds in Orion's slant-wise belt, pointing upward to the Pleiades and downward to the great brilliant Sirius, just risen above the mountain top. The blue vault overhead is bespangled with faintly twinkling stars, and all around us lies the black, silent, courteous forest. A dim light appears low down across the lake; "Uncle Tom" has hung out a lantern for our guidance. The loons have now discovered our presence and their intensely mournful, wailing cries rudely break the solemn silence of the stillly night.

For half an hour the paddles are vigorously plied, when we "die up" at the little wharf, and taking down the signal light make our way to camp. "Uncle Tom" rolls out of his bunk as we enter, his bulky form clad in but a single garment. "I thought you were a-comin', boys, for I heard the old loons a-poopin'-er-up on the lake. What did you fire at?" The situation is soon explained, our early breakfast ordered, and then we stretch ourselves for a short nap; but no sleep for me, the events of the night were too fresh in my mind for that.

By sunrise we were well on our way, accompanied by Donkey; another half follows later with the Provost, who was much interested in all that pertained to "moose-dom"—and his guide.

The little clearing about the camp is alive with birds—purple and pine finches, crossbills, flycatchers, sparrows, wagtails, snowbirds, and even that little winged gem, the ruby-throated hummer, has found his way here and is busily settling about among the bright blossoms of the broomed (*Geothlypis*).

The lake and the long carry are passed, and we are again winding our way up the crooked stream, no longer flowing through a deep narrow gorge, as appeared last night, but between hedges of green shrubbery and graceful vines, bright with starry blossoms of the galiums, and what then were buttresses of jagged rocks are now innocent rushes and branches of brown-tufted sedges. Numberless warblers frequent these river thickets—yellow-rumps, black-throated blues, black-polls, blue yellow-backs, redstarts, black-and-yellows, the bay-breasted and the gaudy blackburnians, all find here summer homes and unmolested breeding-places.

Here, for the first time, we see the bright magenta plumage and hear the mellow note of the pine grosbeak—the Canada jays (moose birds) scream their discontented welcome as it already evincing a bloody feud, but even Donkey loses his interest in the feathered tribe—for a time—as we approach the scene of last night's foray. The paddle is found sticking in the river-bank, and close by, the trampled, muddy grass and deep foot-prints show where the wounded animal left the stream.

Silently we step from the boat, and, with bated breath and rifles at the "ready," follow Edward, who, I imagine, is "working" the trail. We wade our way through the tangled alders we come upon an opening or bit of "swale." Here the circle of crushed sphagnum, with a dark pool of blood in the center, gives abundant evidence that the game is "hard hit," and cannot be far off. A few rods further, through another brush belt, and Edward cries out, "here he is." We press forward, and there, in a little mossy glade lies the quarry.

I confess to a thrill of pleasure as I viewed the glossy black coat, the long, clean limbs, the ugly, dove-brown head, mule-like ears, and immense "moufle" of my first moose—the *Cervus alces* of Linnaeus, largest of all the deer family, and the noblest game of the North American forest.

DO SNAKES HISS?

EVIDENCE THAT SOME DO.

CAMBRIDGE, Md., June 21st.

Editor Forest and Stream.

On the occasion of a paper for discussion two or three years ago before some literary or scientific club in Baltimore, Md., and at once attracted my attention. It seemed to me a curious fact that a belief so universal should not be established upon the evidence of observation so frequent, that in any company of persons familiar with the woods and fields, facts of this nature would recur to some one of them. And yet upon reflection, though quite positive that I had often heard this subtle sound from such a source, I could not fix upon the exact instance of the "time, place, and circumstance." A day or two subsequently, in walking to church on a Sunday morning, I was suddenly conscious of the presence of a viper, commonly known as the "putting adder," directly across my path. Stopping, I observed him contort his body to some degree, then dilated his head and neck until both lost all semblance of their former shape and proportions, dart out his tongue in quick and angry menace,

and then utter a hiss so loud and distinct that I had never heard it exceeded by parent geese in defending their young. In my astonishment and gratification at the incident I stood observing the creature for perhaps a minute, during which time the same sound became almost continuous, rising and falling in its force and distinctness, until finally I closed the interview in manner and form most customary. I at once wrote for publication in the *Baltimore American*, for the information of all interested, and for the special edification of the literati aforesaid, a brief account of the above occurrence. My recollection of the matter is that it was during the spring months, probably in May. At this season these snakes are most numerous in this locality—at least most often visible. A full grown one is about three feet long and perhaps one and a half inches at its largest diameter. They are marked across the back and sides with yellow and black bands or spots, greatly reminding one of some specimens of the rattlesnake. They should be entirely harmless, however, since they are destitute of fangs similar to those possessed by their venomous congeners—that is, of any fangs whatever.

Since writing the above I am enabled to add the following observations:—

Yesterday, my son and a young gentleman from Baltimore started out for a stroll, leaving me sitting on the porch. In a few moments I was startled by cries, and observed our visitor running toward the house. Soon as I came near enough to hear the conversation which he said, it was ascertained to be that his companion was then standing guard over a snake in the act of hissing. I hurried to the spot with commendable celerity, and found a viper which proved to be, on measurement, twenty-four inches long, exhibiting the phenomenal characteristics of his species. He was shooting out the tongue—not in ridicule or derision, but with true ophidian instinct, and hissing with a persistence and pertinacity that suggested his high estimation of the faculty, either as a weapon offensive and defensive, or as a valuable part of his business capital. Not in the least intimidated, we proceeded, with great care, to put him through his scientific paces, and held him under observation some ten or fifteen minutes. So soon as he discovered we were not frightened at anything he did, he seemed to be animated by the single purpose of withdrawing from our convention. This purpose, for the nonce, we resolutely thwarted, and had the satisfaction of noting that while in our company the reptile appeared to be in a chronic state of anger, not unmingled with fear. The flattening of the head and neck, the perpetual display of the tongue, the nearly constant hiss, all showed it. The hiss especially was its most intense act of intimidation. When the creature was held for the moment, he lay quiet, yet with the head and neck of twice their ordinary breadth, and protruding the tongue at intervals, stroking the head or neck with the point of a stick would instantly invite the threatening hiss. This act was accomplished during expiration. The creature would seem to inspire strongly, apparently inflating four-fifths the length of his body with air, and visibly increasing its diameter to twice its undilated size, and then forcing the air out, either through its mouth or nostrils, or through both, would produce audibly and distinctly the peculiar sound. It was very curious and entertaining to observe the dilation and contraction of its cylindrical body as the air was drawn in and expelled. The entire cellular tissue under the skin seemed to be the seat of the distension, as we sometimes see in emphysema, after perforating wounds of the chest, and the lungs, and the surface of the body, of its full length, seemed to have but little to do with the act. This, I speak of as the apparent condition, assuming, of course, that the act was palmonic throughout. Hoping that you and your readers may share with me some of the interest and amusement, no less than instruction, that this occurrence has caused, believe me, sincerely yours,

E. G. W.

SPRINGFIELD, Mass., June 19th.

Editor Forest and Stream.

In your last issue, "Enquirer" expresses his doubts that snakes ever hiss. I only wish that he had been with me a few days since, when he would have been a quick convert to the contrary belief. I was gathering strawberries, and as I was kneeling with me when engaged thus, was on my hands and knees, and in one I was startled out of all propriety by a loud hiss, almost in my ear. That it was a powerful hiss you will readily believe, when I tell you that it actually lifted me bodily more than ten feet, and I am no light weight either. I recovered my self-possession as soon as I struck on my feet, and knowing that it was a snake, for I had heard this same hiss before, I approached to see what manner of reptile he was, and found him to be a common black snake, and, as near as I could judge, about six feet long; two feet of his length was erect, which brought his head just above the top of the bushes; his eyes were twinkling, I imagined, with delight, at the exhibition of "ground and lofty tumbling" that he had witnessed, and as I came nearer he opened his mouth and repeated the hiss; this he did three or four times, and seemed disposed to stand on his ground, but seeing "blood in my eye" he evidently thought better of it, and lowering his crest, made off at speed that defied pursuit. Several times have I heard this same hiss, and have always found it to proceed from the black snake. I have been credibly informed that the water snake has the same habit, but have never been able to verify it by personal observation. SHADOW.

Editor Forest and Stream.

In your issue of June 17th, "Enquirer" asks the question: "Do snakes hiss?" In one instance from my experience I can answer it in the affirmative. While gathering wild flowers near Croton Lake a few summers ago, in a rocky field grown up with bushes, while I was stooping to pick some flowers, I heard a distinct hissing noise, and, looking in the direction of the sound, saw a flattened adder (*Lepidophora, polytrichus*). The noise was quite loud and called my attention to the snake.

Sing Sing, June 22d.

Mrs. A. K. F.

SOUTH FRAMINGHAM, Mass., June 19th.—Editor Forest and Stream.—Your Richmond correspondent, who signs himself "Enquirer," says he is by no means sure that serpents hiss, and is certain that rattles are never uttered. I have often seen a rattlesnake, when it was frightened, by pinning them to the earth with a forked stick, and they emit a hissing sound not unlike the spitting of

an angry cat, but more prolonged. Your correspondent has doubtless seen the snake referred to. As regards rattles, I am of the opinion that most of the first-class rattles at present in use are untrusty. It is not the fault of the rattle, but of the man that fires it, as may be proved by bolting a rattle to any immovable frame, and then firing at a mark.

L. R. L.

PUTNAM, June 20th.—Some forty years ago the hissing adder was frequently met with in Eastern Massachusetts. At one time Waldo Fuller, Foster Wiley and myself were on our way to Crossman's Pond. When near the four corners we heard our dog bark and heard a hissing sound. We hurried to the place and saw a large kind of a brown snake some three and one-half feet long, coiled up with head erect and somewhat flattened, and it was loudly hissing at the dog, which was barking at it. Waldo went back to the fence for a rail to kill the snake, while we remained near. The snake hissed loudly and continuously until it was killed. We saw one at Putnam, which reared and hissed at me and I killed it. I have frequently seen them and heard others speak of them, and they were quite common in and around Plymouth woods, say twenty years ago, but are not as often met with in late years. They were considered poisonous.

G. F. W.

MAN-EATING SHARKS.

IN view of the recent agitation of the question whether sharks really ever eat men, the cutting printed below, which appeared in the San Francisco (Cal.) *Chronicle* some time since was deemed worthy of investigation. The slip from the *Chronicle* is as follows:—

Dr. Swan, the surgeon of the Pacific Mail Steamship *Colima*, which arrived in this port a few days ago from the isthmus, reports an incident on the trip worthy of mention. He states that while the *Colima* was lying at Acapulco, on the trip up, she anchored one day close to the *China*. Some of the hands of the latter baited a shark and caught a shark of the man-eater variety about fifteen feet long. The shark was pulled up and cut open, and in the belly was found a human arm entire, just as it had been torn by the devouring monster from the shoulder. There was also found in the maw of the shark the heel and toes of a human foot. The remains had evidently been swallowed but a short time. The arm was the left, and upon it were plainly to be seen the initials, *W. C.* and a mark, "A. H. C." About ten days previous to the taking of the shark, a sailor from a British brig then lying in the harbor, while under the influence of liquor, fell overboard and was lost. It is supposed the shark had been feeding upon the body a short time before his capture. San Jose Joe, the monster shark of San Jose de Guatemala, was recently seen by the captain of the *China*. This shark has for many years been the terror of the coast from San Jose de Guatemala to Punta Arena. It has been so frequently seen that he is as familiar to the mariners of the coast as its most perilous headlands. He is said to be over forty feet in length, and is extremely ferocious, human kind being his favorite prey. Capt. Seabury, of the *China*, is ready to swear to forty-two feet and over, having once seen Joe passing behind his vessel, which is forty-two feet in the beam, and the head and tail of the shark extended past either side of the vessel. The captain of the *South Carolina* and Capt. Withberry bear testimony also to the shark's being over forty feet long. In the last few years "Joe," as he is known all along the coast, has devoured half a dozen men, and some years ago the Guatemalan government offered a reward of \$500 to any man who would kill the devourer. He has been shot a couple of times, and has been hooked thrice, but survived these assaults, and still remains his old haunts looking for his favorite morseau.

Through the kindness of Dr. J. O. Swan, of the steamship *Colima*, we are enabled to print the statements given below:—

SAN FRANCISCO, Cal., June 3d.

Editor Forest and Stream.

At request that I should give you the facts in reference to the shark story was received on arriving in this port from Panama on the 29th ult. I inclose a statement signed by Dr. Whittemore, Surgeon P. M. S. S. *China*, and by Mr. Wm. Wafer, purser of the same, and vouched for by myself. The statement is literally true, word for word. The *China* is now in this port, where she may remain a month.

The shark eaten was doubtless the one who was lost off the British ship of war *Triumph* March 11th, in Acapulco Bay. Respectfully,
JOHN O. SWAN, M.D.,
Surgeon P. M. S. S. *Colima*.

SAN FRANCISCO, Cal., June 3d.

While the Pacific Mail Steamships *China* and *Colima* were lying together off Acapulco, Mexico, on March 21st, a shark about fourteen feet in length was hooked by persons on board the *China*. The shark was hauled upon the ship's guards by means of a lead cable, and its neck and tail cut open. Its stomach was found to contain a human arm, a foot bitten off at the instep, and a portion of a heel. The ragged and torn condition of the muscles about the shoulder showed evidence of the exertion of tremendous force in separating the arm from the body. The arm was in a good state of preservation; the skin over the half-closed hand a little dark and wrinkled.

F. W. WATKINS, M.D.,
Surgeon P. M. S. S. *China*.

JOHN O. SWAN, M.D.,
Surgeon P. M. S. S. *Colima*.

WILLIAM WAFER,
Purser P. M. S. S. *China*.

In another letter Dr. Swan says:—

In reference to the newspaper statement regarding San Jose "Joe," I will say to you that I believe it to be correct in every particular. A letter to the American Consul, or to the agent of the P. M. S. S. Company at San Jose de Guatemala, will corroborate it.

I am aware that many people hold the opinion that sharks will not attack a human being, and that the water on the beach. You cannot, however, make the point on the living along the coast of Mexico or Central America believe that sharks won't devour "the form divine" they have learned by bitter experience that a shark

rather bankers for a healthy human. A case in point: About two years since, while a negro was carrying a white man ashore upon his back at Panama, he was attacked by a monster shark in less than five feet of water, and his leg was so badly torn before the shark could be forced away that he bled to death before a surgeon could be got.

J. O. SWAN, M. D.

WINTER PELAGE OF *LEPUS CAMPESTRIS*.—Ames, June 14th.—Editor Forest and Stream:—If I read Coues and Allen correctly, the jack rabbit is not *Lepus campestris*, but *L. californicus* is the great northern or prairie hare, and does turn white in winter. Its habitat is from the Saskatchewan southward as far as Kansas. A specimen was shot near this place last winter, which I identified by Coues' description. It was white. The jack rabbit, or more properly jackass hare (*L. californicus*), has a more southern range, but the two species overlap each other in the western territories. *L. californicus* does not turn white. A friend who was on a hunting excursion in Dakota late last fall says that he saw both species in abundance, *campestris* just beginning to assume its winter coat, while *californicus* was of the usual color. Dr. Coues says on page 299 of his Monograph: "From the other American long-tailed, long-eared and long-limbed hares (*L. californicus* and *L. californicus*) [it *L. campestris*] differs in general color in the white upper auricles of the tail, and in changing to white in winter." And again on page 351: "*L. campestris* differs from *L. californicus* in its shorter ears, in wanting the black on the tail, and in becoming white in winter."

The whole difficulty is explained by the fact that we have on our Western plains two species of hares nearly the same in size, one of which the great northern (*campestris*), turns white in winter, while the other, the jackass hare (*L. californicus*), does not.

F. E. L. BEAL.

The true jack rabbit is of course *L. californicus* as our correspondent suggests, but *L. campestris* is commonly called "jack rabbit" from Kansas to British America, and it was about this latter species that the dispute, happily set right by Prof. Allen, arose.

Editor Forest and Stream:—

I think you asked two or three weeks ago for opinions as to the change of color, with the season, of the jack rabbit. In nearly thirty years of quite intimate acquaintance with "John," I have never discovered that he wears a white winter overcoat. His color varies but little. In this latitude his tail is tipped with white—a veritable type of the "cotton tail"—two or three miles further south and beyond, the tail tuft of many is jet black.

The rabbit of the Rocky Mountains that becomes white in winter is the *Lepus bairdii*, commonly known as the "Snowshoe rabbit." It is short-legged as compared with the jack, but quite as heavy bodied, and often mistaken for the latter. Its color changes very rapidly in the autumn, and by the time it becomes general it is pure white.

Its flesh is about the best of the family.
Denver, Col., June 23th. Wm. N. BYERS.

The hare referred to by Mr. Byers as having the black tail is *L. californicus*.

This whole question was set at rest by Prof. Allen's article in our issue of June, 24th; and to that we refer "Sivad" and other correspondents who have written us on the subject.

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR THE WEEK ENDING JUNE 22th.—2 black-headed spider monkeys (*Atles bechtholdi*), mother and baby, presented by Mr. Joseph Jeffries, Brooklyn, 1 pinche monkey (*Alouatta palliata*), 1 gray-breasted parakeet (*Dolichorhynchus monachus*), 2 hab. Argentine Republic, 5 ring-necked parakeets (*Palaeornis torquatus*) all purchased, 2 banded buzzard hawks (*Asturina platyotos*), hab. Mexico, presented by Capt. W. Powis Gladwin, steamship Arran, 1 black hawk (*Coereba erythrura*), hab. Mexico, purchased, 1 mocking bird and 1 gold finch, presented by Mr. William Whalin. 1 horned toad, presented by Mrs. E. R. McCarthy.

W. A. CONKLIN, Director.

Fish Culture.

BERLIN INTERNATIONAL FISHERY EXHIBITION.

THE PRIZES AWARDED.

ON the 17th of June all was done in strict accordance, and at the exact time laid down in the printed programme, the directors, commissioners and exhibitors assembled in the rotunda, or "Grotto of Neptune," at 12, and the Crown Prince appeared at 1 P. M. Minister Lucius stated to the Prince the object of the gathering and requested him to sanction the awards as read, and then the Honorary President, Herr Marcard, read them as follows:—

I. ADDRESSES OF THANKS.

The united juries have determined not to award a prize of honor nor medal to the government of any nation for its collective exhibition, but, instead of this, an address of thanks, signed by his Imperial Highness, the Crown Prince, will be substituted. These addresses have been awarded to the following countries: Russia, Italy, Saxony, Denmark, Holland, Norway, Sweden, Switzerland, the United States of North America, China and Japan.

II. GRAND PRIZES OF HONOR.

1. First grand prize of honor given by His Majesty, the German Emperor and King of Prussia: To Professor Spencer F. Baird, Commissioner of Fisheries of the United States of North America, Washington, D. C.

2. Second grand prize of honor given by His Majesty the German Emperor and King of Prussia: To Herr C. Lindenberg, Berlin.

3. Third prize of honor of the Emperor, etc.: To Herr von dem Borne, Bernau, Prussia.

4. Prize of honor given by Her Majesty the German Empress and Queen of Prussia: To Cavaliere Guiseppe Mazza, Torro del Greco.

5. Prize of honor of their Highnesses the Crown Prince and Princess of Germany and Prussia: To Oberbürgermeister Carl Schuster, Freiburg (Baden).

6. Prize of honor of His Majesty the King of Wurtemberg: To Professor Arrhenius, Stockholm.

7. Prize of honor of the Grand Duke of Baden: To Conrad A. E. Mass, Scheveningen, Holland.

8. Prize of honor of the Grand Duke of Mecklenburg-Schwerin: To Prof. Dr. Dornh., of the Zoological Station, Naples.

9. Prize of honor of the Grand Duke of Oldenburg: To Herr A. Stortenbecker, Director of the Institution for the Promotion of Religion and Industry of Hollandshiem, Batavia.

10. Prize of honor of the Free City of Hamburg: To Herr Robert Eckardt, Lubbichsen.

11. Prize of honor of the Free City of Bremen: To Herr Harald W. Fiedler, Sterrede.

12. Prize of honor of the Agricultural Club of Berlin: To Selskabet for de Norske Fiskeriers Fremme in Bergen.

13. Prize of honor of the Teltower Agricultural Society: To Herr L. S. Michs, Berlin.

(These constitute the special prizes, and as the entire prize list is too long for publication it may be as well to give only the American prizes, first stating that the medals are not graded, but that all gold, silver, or bronze medals are of the same rank as others of the same material. The names are taken from the official list and are given alphabetically.)

III. GOLD MEDALS WITH SPECIAL DIPLOMA.

United States Department of Finance, Coast Survey.—For illustration of the apparatus used in the deep sea fisheries observations; coast charts of the Atlantic and Pacific oceans; publications and maps.

United States Commission of Fish and Fisheries, Washington.—For grand collective exhibit of implements of fish culture, fishways, charts, models of hatching houses and publications.

IV. CLASS I.

This class includes all water animals whether living, stuffed, in alcohol, or represented by pictures; foods, prepared or dried, salted, smoked, powdered, in tin boxes or in process of preparation; sponges, corals, oysters and their anatomy; mussels, pearls, mother-of-pearl, radiates, worms, insects and their larvae (as food for fish or destroyers of their eggs and young), crustaceans, fishes, amphibians, turtles and tortoises, tortoise-shell in different processes of preparation, salamanders, frogs and all the products of water animals living in water, and all the products of water animals.

GOLD MEDALS IN CLASS I.—Isinglass and Glue Company, Gloucester, Mass.—Fish bladders and fish glue, together with the different preparations therefrom.

United States Commission of Fish and Fisheries, Washington, D. C.—General exhibition of implements of pursuit and capture of fishes.

SILVER MEDALS IN CLASS I.—Alaska Commercial Company, San Francisco.—Pictures illustrating the seal rookeries of Alaska; specimens of skins of fur-seal from the raw, dried skin to the same when dyed and finished.

Capt. E. A. Atwood, Provincetown, Mass.—Oil of mammals, as harbor-seal, cowfish, porpoise, blackfish, jaw of porpoise, etc.

J. W. Beardsley's Sons, 179 West street, New York.—Dried salted preparations: "Beardsley's Shredded Codfish," "Beefie Brand Boneless Codfish," "smoked preparations: "Star Brand Boneless Herring."

E. G. Blackford, 72 to 80 Fulton Market, New York.—Specimens of fresh fish sent weekly, as brook trout, grayling, red snappers, pompano, striped bass; reptiles and batrachians: great American edible bullfrogs, hell-benders and salamanders.

A. Booth & Co., Chicago and San Francisco.—Canned salmon; entire salmon in tin fish-shaped box.

Potter and Wrightington, Boston.—Smoked preparation: halibut, boneless herring, salmon; cooked preparations, in cans: fresh mackerel, fresh lobster.

Portland Packing Company, Portland, Me.—Cooked preparations, in cans: "Fresh Seguin Mackerel, Star Brand," "The Farmers' Old Orchard Beach Clams" (Little Necks, star brand).

Russia Cement Company, Rockport, Mass.—Liquid fish glue (Le Page's).

Rosenstein Brothers, 332 Greenwich street, New York.—Preparations in spices or vinegar: sardines in mustard, "Sardines Royales Aromatiques" (in spices).

H. C. and R. E. Harlow & Co., New York.—Collection of prepared foods, in tin: "Genuine Georges Bank Codfish," whole fresh mackerel, "Deep Sea Mackerel," "One Pound Fancy Mackerel" selected boaters (mackerel), canned lobster (Emgmt Bay).

Prof. Henry A. Ward, Rochester, New York.—Collection of stuffed fishes and marine mammals, skeletons, reptiles, etc.

Hazeldorn, Hamburg and New York.—Fresh American oysters.

Bronze MEDALS IN CLASS I.—J. H. Bartlett & Son, New Bedford, Mass.—Mammal oils: whale oil "foots," bleached winter sperm.

J. B. McCarter, Fulton Market, New York, oysters and conserves—pickled oysters, pickled Little Neck clams, pickled soft clams, pickled scallops, pickled mussels, pickled oyster crabs.

Caleb Cook, Provincetown, Mass., mammal oils—oils from head of blackfish (sold as "porpoise jaw"), oil from the beluga (white whale), vatich oil, clock oil.

A. W. Dodd, Gloucester, Mass., mammal oils—black fish. Fish oils—oil from livers of codfish, medicinal oil.

Heick and Stoll, Hamburg, Germany, American oysters.

W. R. Lewis & Co., Boston, canned salmon.

Joseph Palmer, Taxidermist and Modeller to the Smithsonian Institution, Washington, D. C., zoological preparations—series of plaster casts of American food fishes, collection of stuffed aquatic mammals, collection of stuffed aquatic birds.

Jasper Pryor, New York, mammal oils—sea elephant, crude whale, natural whale, bleached whale, whale oil (foots). Oils used for lamps, lubrication or medicinal—crude sperm, natural sperm, spermaceti.

J. Schmidt, New York, food preparations—(not specified).

R. W. Smillie, Photographer to the Smithsonian Institution, Washington, D. C., series of photographs of American fishes.

William Underwood & Co., Boston, cooked preparations in cans—"fresh codfish," "fresh haddock," "canned mackerel, preserved fresh halibut.

W. H. Wesson & Co., Gloucester, Mass., smoked fish—"Grand Bank halibut," "Newfoundland halibut."

HONORABLE MENTION.—Max Amis & Co., 570 Greenwich street, New York, pickled or brine preparations—"American Caviare."

H. M. Anthony, 104 Reade street, New York, "Fresh Columbia River Salmon" (canned), "Star Brand," Eureka Packing Co., San Francisco.

A. Booth & Co., Baltimore, Chicago and San Francisco, canned salmon in large and small boxes—"Oregon Salmon."

Howe and French, Boston, materials used in the arts—fish isinglass made from the hake.

Kemp, Day & Co., 116 Wall street, New York, cooked preparations in cans—canned mackerel, canned lobster, canned oysters, Orchard Beach clams, Little Neck clams.

Marvin Brothers and Bartlett, Portsmouth, N. H.—oil of porpoise, oil from liver of sun-fish (*Mola rotunda*), "Pure Cod Liver Oil," steamed from cod liver oil.

Maryland Packing Co., Baltimore, Md.—canned hard crabs.

McMenamin & Co., Hampton, Va.—canned hard crabs, canned "devil's crabs."

Franklin, Snow & Co., Boston, dry salted preparations:—cod, Pickle, or brine salted preparations—haddock. Cooked, in cans—mackerel.

S. Schmidt, New York—pickled eels in jelly.

Livingston Stone, Charlestown, N. H.—specimens of salmon eggs (*Sal. quinnat*) in alcohol.

CLASS II.

Fishery apparatus of all sorts in original or in model. Boats for inland and sea fisheries in model or in picture. Material for apparatus in different stages of construction. Machines or implements for working the raw material.

GOLD MEDALS IN CLASS II.—H. L. Leonard, Bangor, Me.—rods of split bamboo for salmon, trout or bass fishing; pieces of bamboo showing splitting process.

SILVER MEDALS IN CLASS II.—James Everson, 459 Fish street, New York, E. D. N. Y.—"Shadow Canoe," with sails for fishing, hunting or cruising.

Wilcox, Crittenden & Co., Middletown, Conn.—general collection of accessories to the rigging of fishing vessels, as clews and hanks, choicks, boat-hooks, belaying pins, riggers, hooks, grommets, etc.

HONORABLE MENTION IN CLASS II.—Capt. J. W. Collins, assistant to the United States Fish Commission, Gloucester, Mass.—Collins' Adjustable Marine Drag; used by vessels when "laying-to" in a storm.

CLASS III.

The artificial culture of aquatic animals. Breeding apparatus in operation, collective exhibits of apparatus and implements used in the culture of fish, crustaceans and oysters, transporting apparatus for fry, eggs, or larvae, models of approved implements, models, or pictures of apparatus for fish protection, as fishways, etc. Aquaria. Development of aquatic animals, as oysters, fish, crabs, etc. Exhibition of the progress of fish culture.

GOLD MEDALS IN CLASS III.—C. G. Atkins, assistant to the United States Fish Commission, Bucksport, Me. Model of United States salmon-breeding house at Bucksport, Maine. Models of implements, trough, etc., used in American fish culture. Models of fishways.

T. B. Ferguson, assistant to the United States Fish Commission and Commissioner of Fisheries of the State of Maryland, Baltimore, Md. For improvement in fish cultural apparatus and invention of plunging baskets, worked by steam power, for shad hatching, as shown in models of United States fish-hatching steamer *Fish Hatch*, and also in original.

S. Green, Superintendent of Fisheries of the State of New York, Rochester, N. Y. Collective exhibition of implements in use by the New York Fish Commission for hatching salmonidae and shad, floating hatching box and "Holtan Box."

M. McDonald, Commissioner of Fisheries of the State of Virginia, Lexington, Va. Improvement in fishway.

F. Mather, assistant to the United States Fish Commission, Newark, N. J. Invention of conical apparatus for fish hatching (original shown). Apparatus for sending fish eggs across the ocean.

L. Stone, assistant to the United States Fish Commission, Charlestown, N. H. Models of fish cultural apparatus.

SILVER MEDALS IN CLASS III.—O. M. Chase, assistant to the Michigan Fish Commission, Detroit, Mich. "Self-picking" apparatus for whitefish (*Coregonus*) eggs, whereby the dead ones flow out.

Bronze MEDALS IN CLASS III.—B. F. Shaw, Commissioner of Fisheries of the State of Iowa, Anamosa, Iowa. Model of his patent spiral fishway.

HONORABLE MENTION IN CLASS III.—J. Annin, Jr., Caledonia, N. Y. Box for sending trout eggs to Europe. Successful sending of 5,000 eggs, which were presented to the Deutsche Fischerei Verein.

T. N. Clark, Northville, Mich. Improvement in fish cultural apparatus, "Clark's Hatching Box." "Self-picking" attachment to cone hatches.

CLASS IV.

Apparatus for transporting adult fish to market or for other purposes, in model or original. (No gold or silver medal for America in this class.)

Bronze MEDALS IN CLASS IV.—F. Mather, Assistant to the United States Fish Commission, Newark, N. J., improvement in transporting apparatus for use at sea, whereby the motion is utilized for aeration. (Nothing for America in class V.)

CLASS VI.

Models of fishermen's houses and costumes and such implements in use as have not been placed in other classes.

SILVER MEDALS IN CLASS VI.—C. S. Merriman, 241 Broadway, New York. The "Merriman Life Saving Suit," as in use by the United States Life Saving Service.

United States Commission of Fish and Fisheries, Washington, D. C., collection of fishermen's clothing, implements, and tools used in the commercial fisheries and in angling.

Bronze MEDALS IN CLASS VI.—H. D. Ostermeyer, New York, patent elastic felt mattress and life preserver. (Nothing for America in classes VII, and VIII.)

STONEHEHE tells us that, "although a class for this variety is often included in the prize list of shows, the exhibitors are generally of a most miscellaneous character, and I do not pretend to be able to settle the points of the breed with anything like accuracy or minuteness. The following description will probably serve to include all the variations: Head, long and narrow; eyes, small; ears, long and clothed with thick curls; body, moderately stout and barrel-like, but not so much so as the large spaniel; legs, rather long, straight and strong; feet, large and spreading; stern, bushy and curly coated; color, liver and white, varying in the proportion of these colors." While we quote above the description of the standard authority of what the water spaniel should be, it is very far from our intention to commend or decri any particular breed, or recommend any typical dog in this article, but rather call to the mind of our shooting friends that there is such an animal. Now that our wise legislators have decreed that damo woodcock shall be allowed a new span of life for the purpose of bringing up her chicks in the way they should go, and to give her time to don her new dress when her home duties are done—our pointers and setters have little else to do but keep cool and whisk away the flies. But the summer months are the happy holidays of both those who work and play, and lovers of the field must have their outing. Hence let us make a timely suggestion.

which if looked down upon by the old hands may afford the young ones, fresh from school and college, a chance to try their hands as trainers.

Dog-breaking like everything else, must have a beginning, and why should not our young friends begin to teach themselves and at the same time rear for their use a lovable field companion. In despite of the general opinion that spaniels are stubborn and hard to break—a notion which our experience has taught us is most fallacious—we cannot think of any breed better adapted to instruct the tyro than a close intimacy with one of these jolly little dogs. A spaniel can be put to a variety of uses that would utterly ruin a setter or a pointer; beside this, it is a sad mistake for any man to make of either a jack-of-all-trades. What comparative harm will it be if a spaniel or two are rendered worthless by the misdirected zeal of the beginner. None, we fancy; while it would be no joke to incapacitate for all future use a well bred, keen-nosed pointer or setter. These views are the foundation on which we wish to write.

It is during the long summer holiday, when the bay snipe are flying, that we would open our retriever school; nor is there any better place to have it held than by some salt meadow pond, or on some inlet shoal or sand bar. At the best, compared with field work, bay snipe shooting is but slow work, and at times it is oppressively tedious. The sport needs a fillip, and this perhaps can be given by the introduction of a four-legged friend. Whether the stools are set on the meadows contiguous to New Hampshire's Rye Beach, or by the best stand on Gull marsh, in Eastern Virginia, there will come days, in spite of both winds and tides, when no flight will be on. To those, therefore, who have followed this kind of shooting, it is well known how monotonous it is to watch for birds that never come. Far different from beating out a country in which there is a scarcity of game, for then one can walk away his troubles and have some change of scene; at all events there is something to occupy the mind. All holidays become a bore unless we have mental occupation, and partly on this account we suggest what old baymen would call "a four-legged innovation." Whistle, then, to your spaniel the next time you cross the bay; his size will admit of his being stowed away in the boat, and his weight will not pull you back. He will not be in your way, for he can be taught to charge and stay quietly in the blind or end of your sink box. Teach him to retrieve with a tender mouth, and circle the stools in going out for the birds in order to make him understand that you seriously object to his falling into the vulgar error of mistaking the decoys for the dead. Point out to him that he has sufficient nose to wind the hiding couple, and that it will save himself the trouble of many a long swim by devoting his attention to the winged birds first. Exact obedience, and make him stay at charge until ordered "to fetch." Instruct him to drop to land, no matter how far away, so that his movements may not sheer off a flock which is setting for the stools. Let him understand that he is to come in at once when he hears the whistle, the note of which, by the way, should be as far different as possible from "the calls" of the large army of the snipe family. If he is thoroughly broken in this respect you will be enabled at times to have him tole in a wide-flying flock, as we have often seen the marble willow allured to the gun in this way. In time his sharp eye will discern the birds long before they appear to the human vision, and he can with care be taught to give a timely warning. To dive for a crippled teal is but his instinct, and he can be worked to make the rail in the sedge take to wing. He will help you to bag many a bird you would otherwise have to go after in the boat, and probably then fail to pick up. He will save you time when birds are flying, and with him you will not be exposed to sight.

There are a score of ways in which our friend, the spaniel, can be made useful, and between the morning and evening flights you can amuse yourself in teaching him until he is perfect in "his tricks and his ways," as Jenny June would say. Of course you must expect to be unmercifully chaffed at first for being so absurd as to break into the old time custom of declining to be your own retriever, but before the day is out it is a hundred to one that some bayman will call out to you to "bring that ere dog over to help me find a bird."

MR. GODFREY'S ANSWER TO MR. DALZIEL'S LETTER. New York, July 1st.—Editor *Forest and Stream*—Mr. Dalziel's letter in *The Live Stock Journal and Farmer's Gazette*, republished in part by your paper, I would answer as follows: As to the protest in class 10, I think that nearly every one will agree with me that the whole matter was a mistake, and was rectified in the best manner possible. Mr. D. takes no notice of my protests in classes 16 and 33, but takes up the question of dew claws in the St. Bernard. I do not think that five points in 100 is a high value for the dew claws; at any rate, my simile was correct, for the value of "solid white in a bull terrier," though a most necessary point, is the same, viz., five points. Mr. D. refuses to submit to the "opinions" and "crochets" of "Stonehenge" and "Vero Shaw," as expressed in their books on the subject, and goes on to tell that "old champion Tell, Prince Selin's Courage" and other good dogs, were without dew claws. But in my opinion that proves only that these dogs were not perfect. Dalziel informs me that Darwin says that dew claws are "accidental monstrosities." That may be, but it has

nothing to do with the case, for in the St. Bernard the dew claw is not, as in most other breeds (when present), an elementary toe, but is a regular fifth toe, and has the advantage of giving them a firmer foothold in the snow. Any how, I believe Mr. Darwin is a much better judge of monkeys and tails than of dogs and dew claws. As to the demanded apology for the insult of presuming to doubt Mr. D.'s competency, if we doubt the correctness of a judgment we are not going to quietly submit. We express our doubts, and challenge the judge to prove their correctness. "Stonehenge" is our standard here, and we try and breed after it, and it was under this name that our dogs were to be judged according to "Stonehenge," not according to Dalziel or Darwin. As he takes up the question of St. Bernards, why does he not notice my other two protests in classes 16 and 33? Is it because he thinks I am right? Please read what the London *Field* says about the judging of class 16. I think it justifies my protest in that class pretty thoroughly. Then, for Mr. D.'s special comfort, let me ask this question: Why did my black setter Satan receive V. H. C. on Tuesday, when Chance was only C, and yet Chance received the special prize for the best black setter? In justice to Mr. D., however, we must remember that he did not judge the setters individually, but as he breaks a lance for his brother judges, and demands an apology, I cite the case. The only just ground for complaint is that some one offered to bet the judges that his dog was the best, and that they were wrong, but I am sure that this was the act of no true sportsman.

A. E. GODFREY.

ACCIDENT TO POINTER "SPORT."—*Atchison, Kansas, June 20th.*—The pride pointer in the West, "Sport," by Sensation, formerly from Bridgeport, Conn., owned by Mr. J. H. Garside, met with a sad mishap a few days ago, by accidentally breaking his hind leg in some machinery in an oil mill. The dog, I am happy to say, is doing well at present.

SALE OF MR. PRICE'S POINTERS.—In accordance with the determination of Mr. Price, the well known pointer breeder, to exhibit as little as possible in the future, but to breed largely, and to offer for sale by auction at Aldridge's, London, England, each year at the commencement of July, the dogs shot over in previous season by himself and friends, a sale of pointers from the Rhivlas Kennels, Bala, North Wales, will be held at Aldridge's on July 9th, when the following first-class draft from his kennel will be disposed of: *Mossy Face*, liver and white pointer bitch, whelped April, 1879, by Mr. Price's champion Vagg, out of Mr. Moss's *Trails*, liver and white dog, same litter as *Mossy Face*; by Vagg out of Moss's *Bastown*, bred by Mr. Leache, born November, 1875, *Peal O' Bells*, liver and white bitch, born January, 1878, by Mr. S. Price's Bang, out of Mr. Leache's *Bella*, *Merry Bells*, liver and white bitch, younger sister to *Bov Bells*, and *Yellow Drake*, liver and white dog, whelped April, 1875, by Drake, out of Nimble Ninepence.

IMPORTED LAYRACK ALDERSHOTT.—*Brooklyn, July 1st.*—I received June 29th, by the steamer *Roxburgh Castle*, the pure Laverack setter dog Aldershot. He comes direct to me from the kennel of John Ramford Robinson, Esq., of Sunderland. Aldershot's color is orange Belton, and he is about twenty-two months old. His pedigree is as follows: Aldershot, by Emperor Fred, 9,077, out of Blue Cora, 1,120; Emperor Fred, by Laverack's Blue Prince, 4,259, out of his Daisy, 6,181; Blue Cora, by Laverack's Blue Prince, out of Cora, 1,483. The numbers refer to the English Kennel Club Stud Book.

A BEAUTIFUL PHOTOGRAPH.—Mr. Charles H. Turner, of the St. Louis Kennel Club, has kindly sent us a photograph of Mr. Tracy's picture of the pointer, *Kewick* and *Jessamine*. It is an excellent copy of the finest picture we have ever seen. *Kewick* is shown in the foreground pointing, and *Jessamine* in the act of backing, while in the centre of the picture a sportsman stands awaiting "the rise." This photograph, as well as the one of the sister picture of *Faust* and *Bow*, can be had on application to Mr. J. M. Tracy, No. 1102 Olive street, St. Louis, Mo. Price, 75 cents each.

MR. LIVINGSTON'S KENNELS.—Mr. Henry W. Livingston, of this city, has closed his kennels at Flushing, L. I., and transferred his stock to the kennels of the Titus Brothers, at Centerport, L. I.

A NEW REMEDY FOR HYDROPHOBIA.—M. Lesserteur has just given publicity to a plant which has a great reputation as a cure for rabies in the kingdom of Annam. This plant, of which the name is hoangnan, is a kind of liana, closely akin to the false angostura; its effects are similar to those of strychnine and brucine. M. Bouley, in speaking of this new remedy, in the *Revue de Médecine Vétérinaire*, regrets that so few facts corroborative of its efficaciousness are given.—*Live Stock Journal*.

EXERCISE FOR DOGS.—Exercise is most essential to the well-being of a dog. To witness the way he enjoys a good scamper would tell any one this. Without exercise the wheels of the poor animal's life seem to clog, bad habits are not only contracted, but the dogs get morose, dull, and sometimes even irritable and unhappy. Liver troubles come on, then jaundice, and then death. A dog ought to have at least two hours' daily romping in the open air.—*Live Stock Journal*.

KENNEL NOTES.

SALES.—*Buon*—Mr. Geo. D. Macdonald, of New Brighton, Staten Island, has sold back the cocker dog *Bijou* (1st Montreal), late to Mr. James Cunningham, of Montreal, the dog's former owner.

NAMES CLAIMED.—*Flirt II*—Mr. Geo. D. Macdonald claims the name of *Flirt II* for his cocker bitch now in whelp to *Bljus*.

CORRECTION.—New York, July 2d, 1880.—In your last issue you say that my *Flirt* was bred June 24th. It was Mr. Godfrey's *Flirt* that whelped May 8th. To prevent mistakes occurring from the similarity of names, I shall call my bitch *Flirt II*, in future. GEO. D. MACDONALD.

WHIPPERS.—*Cleopatra*—Mr. H. W. Lee's (Boston, Mass.) mastiff bitch *Cleopatra* whelped June 24th, twelve puppies—seven dogs and five bitches.

NAMES CLAIMED.—*Lela*—Mr. H. W. Livingston, of this city, claims the name of *Lela* for his Llewellyn setter bitch puppy, whelped Jan. 27th, 1880, by *Lelaps* (No. 130, A. K. S. B.), out of *Starlight* (No. 615, A. K. S. B.). *Beautiful May*—Mr. H. W. Livingston claims the name of *Beautiful May* for his setter bitch puppy, by *Lelaps* out of *Starlight*. *Minta*—Mr. H. W. Livingston claims the name of *Minta* for his setter bitch puppy, by *Lelaps* out of *Starlight*. *Lady Collie*—Mr. H. W. Livingston claims the name of *Lady Collie* for his collie bitch puppy, by *Watt's* May out of *Downey's Lassie*. *Cork*—Mr. W. A. Johnson, of Clinton, N. C., claims the name of *Cork* for his red Irish setter puppy, whelped March 25th, 1880, by *Derg* out of *Cora* (Elcho-Slida).

SALE.—*Nellie*—*Deatham*, Mass., June 7th.—My advertisement in your paper has enabled me to sell my imported Gordon setter bitch *Nellie* (formerly T. T. Sawyer, Jr.), to Mr. C. F. Mann, of Worcester, Mass., she is whelp to Jerry. FRED. A. TAYL.

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

TOURNAMENT OF THE MICHIGAN STATE ARCHERY ASSOCIATION.

THE first grand annual meeting of the archers of the State of Michigan was held under the auspices of the association, upon the beautiful lawn of Recreation Park, in the city of Detroit, on the 23d and 24th day of June. The meeting was a success in every respect, and has done more for the promotion of archery in the State than even its most zealous friends anticipated.

The grounds chosen are peculiarly suited for such a meeting, and the preparations were of the most careful and comfortable character. The weather was beautiful, only a little too bright and hot for comfort; but all in all as fine as could have been expected. Thirteen ladies and thirty-one gentlemen competed for the medals of championship, and several visitors took part in the shooting who did not compete for these emblems. Among these visitors were Mr. Will H. Thompson, the present champion archer of the United States, Mr. C. S. Case, Mr. D. V. A. Manley, of Toledo, Ohio, and several other members of the Toledo Archers. The programme and prizelist were so arranged as to give general satisfaction, and the meeting went off without a jar or unpleasant incident.

The afternoon of the second day, the archers and spectators were called together in front of the grand tent, and the President, Mr. W. T. Brown, of Hastings, requested Mr. Will H. Thompson to present the champion and championship medals to Dr. W. R. Dorrance and Mrs. E. T. Church, who had made the highest score in the contest for the championship on the preceding day.

The presentation speeches were exceedingly happy and appropriate, and were met with hearty applause. Mrs. Church received the lady's medal with the same easy grace which marked her shooting, and Dr. Dorrance replied in a brief and very neat speech, in which he proved himself as skillful and brilliant in talking as in drawing the good yow-bow. The lady champion and Dr. Dorrance will each attend the National meeting, and will be found in the front rank of contestants. The ladies generally shoot better than the men, and Mrs. Church, Mrs. Caldwell, Mrs. Phillips and Miss Sil, being especially fortunate in their scoring. The championship medal of the United States was won at Chicago last year by Mrs. Spalding Brown, with a score of 541, and it is very flattering evidence of improvement that Mrs. E. T. Church should have taken this medal with a score only six points less, when at the whole the medal was won by Mrs. Church, who shot 535. She was actually able to score 310 points at the same round. While at Chicago, she only obtained 101 points with forty-eight arrows at forty yards, she here obtained 210 points at the forty yards range.

Mrs. Church shoots in perfect form, drawing her arrows slowly to a point just below the chin, taking careful aim over the point of the arrow at the point of aim, and looking at the whole the whole time. She made a score of 600 at the Double Round may be expected from her at Buffalo. The championess was closely followed by Mrs. Caldwell, of the Battle Creek archers, who scored only seven points less upon the round (528), leading at the end of the second range by three points, and was only passed at the very close of the thirty yards range. Miss Sil, of Detroit, made a fine score of 499 points, leading the field at the thirty yards range with the good record of 245 points. In the ladies' handicap of forty-eight arrows at thirty yards she again led with 261 points. Both Mrs. Caldwell and Mrs. Phillips shot below their average scores at practice, the latter having often scored nearly 700 points at the Double Round. The English National Round of forty-eight arrows at sixty yards and twenty-four arrows at fifty yards was shot by the ladies on the last day, and Mrs. Church stood eighty-nine to eighty-six. While the occasion seemed one of great pleasure to all, yet the ladies especially gave evidence of the rare "witchery of archery," for they seemed to be "merry as a marriageable belle" during the entire meeting. A hard task, indeed, was imposed upon Mr. Will H. Thompson by the President when he required that gentleman to award the prizes, and Mrs. E. T. Church & Co. to be the most graceful lady archer. The champion was equal to the emergency, however, and his presentation speech was received with the liveliest applause. He said:

"LADIES AND GENTLEMEN—
"Well knowing that no one with a home in your midst would dare attempt the decision which I am asked to make, a delegate from a distant city is called upon to bear away with him the emblems of all your fair archers, with only one exception.

"I might in a spirit of gallantry declare that all the ladies are perfectly graceful, and, therefore, tied for first

place for this prize, but no two ladies would agree with me. Even if I should so decide, the tie would have to be shot off, as all your ties are decided, and the prize would be the reward of skill instead of grace. I might declare that where all were so graceful it was impossible for me to name the most graceful, but every lady would think that she could decide in a moment, only she would not care to tell who she had chosen.

"Knowing of no better way than the most direct one, I have decided that the three ladies who have yielded their weapons most gracefully are Mrs. Church, Mrs. Phillips and Miss Sil. Mrs. Church seems to be tied with Mr. Church, Mrs. Phillips with Mr. Phillips, for other prizes; but which I trust may neither be "divided" or "shot off," but strengthen as the years go on. Therefore, to Miss Sil, who is tied with no one, I award this prize, having no doubt that the gentle gracefulness which has won her this reward will easily charm into the golden tie whoever may be so blessed as to find grace in her sight."

Every one admired the fine tactics of the speaker, and no one could have borne off the prize who more truly deserved it than the recipient.

The gentlemen with a team shoot at the American round by gentlemen, and a team shoot at the American round by three ladies from one society. In the ladies' contest the Battle Creek team won with a score of 692. The best individual score being made by Mrs. Church, of the Crescent Bowmen, 65-319. This we consider a rare score for a public match.

The Crescent Bowmen won the first team prize for the gentlemen with a score of 1,442. Mr. Parns S. DeGraff, of that society, obtaining the first individual score, 80-428, closely followed by Mr. E. T. Church with 416. Mr. Will H. Thompson, who shot the round at the same target with the Crescent Bowmen, scored 501.

The only instance of three goals being made at an end during the meeting was by Mr. Parns S. DeGraff, at the last end at fifty yards. Much of the pleasure of the meeting is due to the care and business tact of the President, Mr. W. T. Brown and Mr. E. T. Church, of the executive committee, and Dr. Dorrance the Corresponding Secretary. Mr. Church was so closely engaged, that he could not give any care to his own shooting, and consequently fell very far below his average work. Though the shooting only ceased at 7 o'clock on Thursday evening, yet the totals were all found, the intricate prize list made out and the prizes distributed early on the same evening. To any one not so well acquainted with the mysteries of an archery score sheet, this will appear wonder, particularly when the extremely varied programme of the meeting is considered. The happy result was due to the perfectly arranged blanks, arranged by Mr. E. T. Church, and to the skill and intelligence of Mr. W. H. Thompson of the house of Richmond, Backus & Co., of Detroit, who served the association in the capacity of chief scorer. No one but an accomplished book-keeper could have succeeded so well, and few would have exhibited the patience and industry to have accomplished the work. To him, as much as any one person, the pleasure of the meeting is due.

Below we give the complete record of the scoring:—

Ladies' contest for medal:—

DOUBLE COLUMBIA ROUND.				
Name.	50 Yards.	40 Yards.	30 Yards.	Totals.
Miss Sil.	18-12	16-12	4-24	48-48
Miss Hazard.	5-19	23-27	31-112	62-238
Mrs. Phillips.	18-12	20-102	38-181	63-335
Mrs. Church.	18-12	20-102	38-181	63-335
Mrs. Green.	17-55	29-100	39-195	86-350

Answers to Correspondents.

No notice taken of Anonymous Communications.

A. C. L., Madison, Ind.—Powder does not deteriorate with age.

SACO.—We have no Heershoff time tables to spare. Some of the Boston yacht clubs might supply.

A. J. M.—A 20ft. Sharpie should be from 5ft. to 6ft. wide, 2ft. deep forward and 1ft. midship. Area of sails 200 square feet. Sides 1 or 1 in. line.

CAPTAIN.—The articles on dog breaking appeared in the FOREST AND STREAM on the following dates: March 18th, April 18th, 15th and 29th, and May 13th.

G. H. G.—The sketch you send is that of a "barkentine," if supplied with regular foresail, the foremast and with a round sail on the foremast, and lower mast about as long as the main or mizzen, it would be a "topsal schooner."

G. H. E.—Size of boat for cruise to Florida depends upon what comforts you desire. Should recommend a Boston schooner of 45ft., although the voyage can be made by skillful sailors in smaller boats. Unless you propose sailing in the shallow waters of Florida, get a deep boat, keel preferred, with ballast stowed low and well secured. Snug rig only.

L. E. W., Hayts Corner, N. Y.—Dr. Alfred L. Loomis, Willard Parker, Austin Flint, are all standard authorities on diseases of the respiratory organs—heart and kidneys. The fee per visit is about \$10. In the out-door treatment of some of the medical colleges, treatment is free. We do not know anything about Dr. S. Fitch, except the fact of his having published the books to which you allude.

J. V. S., New York.—Have mailed you pedigree of dog Leo A puppy of seven months is too old to be spared. We refer you to articles named in answer to "Sportman," in this column June 17th. The weight of a three months old setter puppy will vary depending on breed, care. Keep which will give a large margin from about twelve to sixteen pounds.

ESSIGN.—The best books on spaniel breaking are Hutchinson's "Dog Breaking," and "Breaking and Training Dogs" by Pathfinder. To prevent your dog from shedding of his hair, apply the following lotion: Sub. acet. of lead, two drachms; pure glycerine, one and a half ounces; thee. arnica, half ounce; rain water, six ounces. Rub well into the skin every other day.

one and a half ounces; thee. arnica, half ounce; rain water, six ounces. Rub well into the skin every other day.

A. C. C.—The compromise cutter, built by Piegrass for Boston parties, is named *Hesper*. She is 51ft. on deck, 45ft. water line, 13ft. 3in. beam, 7ft. 3in. hold, mast deck to cap, 47ft. 6in.; topmast, 15ft. to head, 31ft.; boom 46ft., gaff 26ft., 6in., bowsprit on water line 45ft. The *Rooper* is 45ft. 6in. long on deck, 46ft. 8in. on water line, 17ft. 5in. beam, 5ft., 10in. deep, and 6ft. 1in. draft without board.

MOOSE.—Where is derived the word "Moose," the name given in America to *Alce americana*—identical, as we are told by Judge Caton, with the European elk. By some it has been supposed to be the Indian name of this species of deer, but Lady Morgan in her "Flore MacCarthy" says: "The moose deer is the crest of the MacCarthy family, of Ireland, and is sculptured in stone at their old castle in that country," and also mentions the fossil horns of the moose ornamenting an apartment there. S. C. C.

W. O. C., Boston, Mass.—Do not feed any meat, but mix plenty of vegetables with cooling diet. Continue the doses of sulphate of magnesia twice a week, and stop the carbolic acid wash. Clean out the dog's kennel and put in new bedding. If the dog continues to be troubled, dress him all over with the following: Two ounces of oil of tar, four ounces of flower of sulphur, and one pint of olive oil. Apply with friction. Give with food, twice a day, for ten days, five drops of Fowler's solution of arsenic. Write result.

S. R. B., Kinsman, O.—In shooting in a bird match with the rule, if a gun misfire or fail to discharge from any cause, it shall score as a lost bird, unless the referee finds upon examination that the gun was properly loaded, and the misfire unavoidable, in which case he shall be allowed another bird. 1. The gun snaps and is taken from the shoulder and immediately discharges, would be entitled to another bird or not? 2. In using Wilson measure No. 1,107 for shot, what is measure, struck or heaped? Ans. 1. Not entitled to another bird. 2. Struck measure.

PUBLISHERS' DEPARTMENT.

AN OLD MAN'S BLESSING.—The following letter has been addressed to a writer for this paper:—

HOLLY, N. Y., June, 1880.
DEAR SIR—I am an old man, seventy-seven years of age, and for three or four years I have had diabetes, which kept growing worse and worse. I suffered, I think, from the disease, and the quantity seeming to increase week after week, and my strength growing less and less, forced me to think that I must soon die, which I certainly should have done had I not taken Warner's Safe Diabetes Cure, which I was induced to try upon recommendation of a friend who had used Warner's Safe Diabetes and Liver Cure, and was cured by it. I have used the Safe Diabetes Cure, it has cured me, and I think it is the best thing in the world. Yours truly, M. N. STODOLAND.

TRAITS OF FLORIDA BIRDS.—Editor *Forest and Stream*.—Now and then I come across little items which I deem within the scope of your journal and interesting to your readers. The latest was a scene on one of our lakes—a flock of our beautiful birds. The roseate spoonbills are just coming in, and knowing a favorite feeding ground on the margin of Salt Lake I took down my gun and went out to secure a specimen. When within a hundred yards I tiptoed, and could see over the tall grass through an open space a number of our wading species—egrets, herons and spoonbills. I "lowered away," and on all four legs I stood around busily going through my traps. Beautiful, truly charming! On a turf, side to the large, snowy egret, his magnificent plumage flowing to windward and reflected in the water below, while on all sides the little egrets, with their little plumes curled up on their backs and the topknot flowing in the wind, skipped here and there after the minnows and crayfish, while the pink birds stood around busily going through their traps. Two of these, and the prettiest of the lot, were near the "old sentinel," and now and then, as they spread a wing, the beauty of the scene was at its best. I could not shoot; I wanted these three, but as I was either seen or smelled, away they went. Not satisfied with doing well, we often do worse.

Some weeks since I killed a great blue heron which had swallowed two mooseans snakes, one of which was over two feet long and fully an inch in diameter, while the smaller one was as large as a man's forefinger. This was a surprise to me, and enough to astonish any one. At another time I killed one, and I noticed that it was unusually heavy. In this bird I found a full grown mullet. The fish was some three inches longer than the body of the bird, and would weigh about half as much. I found one in the act of "getting away" with a eufish, which one might think the bird would not begin to tackle. I can but believe he would have swallowed the cat if he had not been disturbed, as I found the thorn or fin of one in the throat of a blue heron some time after. A gray pelican will probably eat more fish than a man, say in a week or month.

Wm. P. N.

Puella's Fla., May, 1880.

"ROCK" BASS.—North *Thetford*, Vt., June 21st.—My dear "Shadow":—There has been much research for the food on which the black bass subsists. The highest authority here says he never found a particle of food in the fish's stomach, although he has caught them with a hook for years. Since being here I have caught them daily and have solved the mystery—it is *stones*. The last one I caught in had a stone in its stomach as big as a walnut, and nothing else. This stone was evidently larger once than it is now, and had I not caught him would have lasted for some time to come. When I got to catching pounders later in the season I shall send you a stone as big as my fist, if I find one.

Springfield, Mass., June 23d.—My dear Professor:—I have just received your postal. I am glad to hear from you, although you give me nothing but a stone. I presume that you wish for my opinion upon it. Well, I think that it is a "whopper" for a stone of its size—and I should like it for my collection, for I don't believe that you will ever find another one in a bass. That they are voracious feeders I am well aware. That they ever dine off the granite boulders from the bed of the stream I am loath to believe, and after pondering over the phenomenon for a long time I have come to the conclusion that all bass that persist in the stone eating are not well balanced fish, and are obliged to take in ballast.

SHADOW.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AT-

NOS. 23 AND 45 PARK ROW (TIMES BUILDING), NEW YORK

[POST OFFICE BOX 823.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line outside page, 40 cents. Special rates for three, six and twelve months. Notices to editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 8, 1880.

TO Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to Forest and Stream Publishing Company. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

—The judges at Berlin have awarded to the FOREST AND STREAM a silver medal in recognition of the valuable literature pertaining to fish culture, angling, and natural history contained in its first thirteen volumes. Accepting the new honor with becoming modesty, we confess to a pardonable pride in attaining the distinction thus conferred upon us. The bound volumes of this journal contain a vast amount of valuable material in the departments which are its specialties, and from week to week it is constantly adding to the storehouse of knowledge and instruction. Deeds are always better than words, and therefore it may be unnecessary for us to add that we propose to make the next fourteen volumes of the FOREST AND STREAM just as rich, as instructive, and as entertaining as the first fourteen have been. The award at Berlin is to be accepted not simply as a token of past excellence, but also as an earnest of what is to come.

We publish elsewhere a full list of the American awards, and commend a careful reading of the suggestive details. The United States sent its exhibits to show to the European world the resources and vast industries of this Continent. It may be that the Berlin display will also open the eyes of Americans themselves to the riches of their own land.

INDIAN CURIOSITIES.—We have received from an Indianapolis correspondent a number of Indian curiosities, which the owner wishes to dispose of. The articles consist of a buckskin coat, ornamented with porcupine quills; a handsome tobacco sack; a fine redstone pipe or calumet; two Sioux arrows; a number of stone arrow heads, and a few human bones from the mounds of Indiana. Any one interested in these matters should apply to this office for price and particulars.

CONNECTICUT SHAD FISHING.—The close season for shad fishing in the Connecticut River begins Aug. 1st. Late reports from Holyoke, Mass., speak of very successful fly-fishing there.

—The latest phase of the "endurance" idiocy is the attempt of a "Dr." Tanner to fast forty days in a hall of this city. If the man dies, or becomes insane, as seems probable, we hope to see his assistants indicted and held for complicity in the affair.

SUMMER WOODCOCK SHOOTING.

THOUGH the progress which is made by game protection in this country is slow, and though its friends have to work against many discouragements, some steps in advance are being made each year.

One of the most encouraging signs of the times is the gradual spread of the sentiment in favor of abolishing the summer shooting of woodcock. The necessity for some protection of this species has naturally made itself felt first in the older and more thickly settled States, where game is least plentiful and gunners most numerous; and hence we have seen Connecticut, Massachusetts, New York and New Jersey amend their laws so that the woodcock should be protected, at least during the nesting season. There is to us something so repulsive in the idea of destroying a poor mother bird, which has under her charge a nest of eggs or a brood of tottering, downy young ones, that we cannot understand how any right feeling person can take the least pleasure in it. It has been pretty clearly demonstrated that woodcock rear at least two broods in the summer, if they are unmolested, and it would seem that the shortsightedness of interrupting the labor of reproduction, when it is but half completed, must be apparent to any one who would take the trouble to consider the matter. The woodcock lays ordinarily four eggs, and her first brood is hatched so early that we have seen, in advanced springs, young ones able to fly well by the 25th of April. As soon as the birds of the first hatching are able to shift for themselves, the old ones prepare their second nest, and the young of this brood are usually out of the shell by July 1st. We have more than once seen, in years gone by, the poor little things during the summer shooting, and been moved to pity by their grotesque helplessness.

That summer shooting is thoroughly wrong in principle is acknowledged by all the best class of sportsmen; but more than such an acknowledgment, and more than laws prohibiting the so-called sport, are required to protect the birds. Good laws are enough to protect woodcock from the respectable portion of the community during the close season; but what the birds require is protection from a portion of the community not so respectable. No self-respecting sportsman intentionally violates the game laws, but there are plenty of men calling themselves sportsmen who do not hesitate to kill birds out of season. We have the names of men in New York, Connecticut and New Jersey who call themselves, and perhaps think that they are, gentlemen, who have killed woodcock this summer.

It is a part of the business of the true sportsman to use every effort to educate this law-breaking class up to his own level. It will be slow and difficult work, but we believe that it can be done.

The farmers and land-owners will of course be on the side of the law in this case. They have grass and grain fields which they do not wish to have trodden down and ruined; and many of them know by experience what it is to have three or four men and as many dogs tramping through the high grass, looking for some unlucky bird that has been driven out of the swamp into the meadow.

Besides the salvation of the woodcock and their preservation till fall, the protection of the young ruffed grouse must be considered. The men who will shoot the brooding woodcock, warm from her nest, will not hesitate to knock over the chicken grouse, which will lie sometimes until the dog catches them in his mouth, and which, if they do fly are so easy to hit that a ten year old boy who could not kill three out of five ought to be soundly spanked.

The laws, as they stand in the four States above mentioned, are very well, and if they could be enforced would do a vast amount of good; but until the people generally have respect for a law it is hopeless to attempt to see its provisions carried out as they should be. We do not wish to be understood as saying that these laws are all that they should be, but they are vastly better than what we have had before, and if enforced would do no end of good.

People in America, misled by the abundance of its game, have until recently imagined that our game mammals, birds and fishes could never be exterminated. The consequence has been that where one article has been penned on the preservation of game, fifty have been written telling how to kill it. The wholesale destruction of our game within a few years past, the extermination of the buffalo, and the depletion of our trout and salmon streams, are slowly awakening the people of this country to the fact that some active steps must be taken if the next generation are to carry and use rods and guns. It is encouraging to see papers like the *Herald* take hold of a question of this kind, and we take pleasure in quoting a portion of a recent editorial, as follows:—

The ordinary sense of any man of sportsmanlike instinct should protest against shooting young birds and preventing the natural increase of the finest game bird of the Eastern States; but neither sense nor respect for the law, which in New Jersey forbids woodcock shooting in July and August, can prevent a mere stupid slaughterer from dragging his dog and his gun wherever anything to shoot can be found. There are two ways of discouraging the summer shooting of New Jersey's woodcock, most of which are taken by men from New York—one is for

leading sportsmen here to make the practice unpopular by "cutting" those who indulge in it, and the other is for Jerseymen to turn informers and have the offenders arrested and punished under the law.

This New Jersey bill, which was passed mainly through the efforts of Messrs. Geo. S. Duryea, of Essex County, and J. Gill, of Orange, N. J., would if enforced make New Jersey again what it once was—the paradise of fall woodcock shooters. We commend the *Herald's* suggestion to our readers.

YALE'S VICTORY.—The crew which Yale turned out this year was a great improvement upon her late representatives in point of weight and condition, and so once again victory perched upon her banners, the first time in four years. The course was well marked out, and the police kept it clear of boats, giving a fair opportunity for the universities to do their best. The race was rowed over the New London course, on the Thames, July 1st, to a fair crowd of spectators and the usual congregation of yachts and craft of all description. The Yale crew broke an outrigger just after starting, and the race threatened to come to naught but for the sensible provision which permits the umpire to recall the boats and start them over again. At the first mile Yale went ahead, and it soon became evident that Harvard was overmatched, the lead being rapidly spun out, Yale winning amid the frantic cheers of the spectators assembled in 24m. 27s., and her opponents some ten lengths astern. The day was unfortunately marred by the regrettable accident to Mr. Lincoln, President of the New London and Northern Railroad, and Mrs. Appleton, both of whom were killed by being thrown from one of the cars forming the "movable grand stand," which accompanied the racing boats over the tracks of the road running along the shore. The Yale crew is as follows:—

Bow—John B. Collins, St. Joseph, Mo., '81, 21 years, 170 pounds. No. 2—Philo C. Fuller, Grand Rapids, Mich., '81, 23 years, 167 pounds. No. 3—Frederick W. Rogers, Lexington, Mass., '83, 21 years, 176 pounds. No. 4—Nathaniel T. Guernsey, Dubuque, Iowa, '81, 23 years, 177 pounds. No. 5—Louis K. Hull, Lebanon, Conn., '83, 20 years, 180 pounds. No. 6—George B. Rogers, S. S. Lexington, Mass., '80, 23 years, 186 pounds. No. 7—Charles B. Storrs, New York City, '82, 20 years, 180 pounds. Stroke—Harry T. Folsom, Orange, N. J., '83, 20 years, 172 pounds. Average, 21½ years, 176 pounds. Coxswain, Mun Yew Chang, Han Shan, China, '83, 20 years, 90 pounds.

THE TEAM ABROAD.—Word comes that the team under Col. Bodine intend sailing for home on the 20th inst. They have done well; better than the most sanguine expected of them; and now everything is clear to the contest for the Palma next year. The Irishmen have shown themselves experts of no mean order, but they have been defeated by a team which was not considered as the most homogeneous and therefore the strongest that could have left our shores. Sir Henry Halford, if he will give up hobnobbing with irresponsible parties, who have not the right to contract for international matches on behalf of America, and devote himself to the organization of a team to visit America in 1881, will find himself fully engaged. He has the whole kingdom to pick from, and with such a high model as the recent winning average of over 215 set at Dollymount no second-rate marksmen can hope to find places on the team of either nation. If there should be any backing out on the part of Sir Henry or his men it can only be set down to fright after seeing the American scores made last week.

TEXAS JACK.—Our brief mention last week of the death of "Texas Jack," at Leadville, Col., June 27th, must have recalled to several of our readers their Rocky Mountain campaigns, spent in company with this noted guide and scout. In the summer of 1878 a party of New York gentlemen made an extended trip, under his leadership, and their very enjoyable experience were at the time detailed in our columns. "Texas Jack," whose real name was J. B. Omohundro, had long been noted for his frontier exploits, where the most of his life was passed. His nickname, by which he was better known than by his real name, was earned years ago by his exploit of conducting a cattle drive from Texas to Colorado.

In 1876 he was employed in Gen. Crook's campaign against the Sioux, and when the Indians were defeated he rode with the dispatches 325 miles in six days, displaying great pluck and endurance, eluding the hostile Indians on the way and sending the news through to the New York *Herald* twenty-four hours in advance of the military authorities.

In 1878 he came East, and while in this city frequently called at our office, always showing himself a gentleman in his bearing, and quite the reverse of the blustering plainsman, which he was depicted to be on the bill posters of his traveling theatrical company. "Texas Jack" was buried with military honors at Leadville.

—The *London World* thinks that the reason so many young men nowadays walk like crabs, is a consequence of their perpetual wobbling on the bicycle; and it says that the appearance is known as the "bicycle back." All this promises ill for the Boston bicyclers.

STUDIES IN ALASKAN NATURAL HISTORY.

SITKA, Alaska, May 25th.

AT last Sitka and its surroundings has done something toward redeeming its reputation with us as a country in which it was possible to obtain some little amusement with a gun. Months after month the good time coming has been postponed, until at length we gave up in despair and stowed away our Parkers; but for the last four weeks we have had as good shooting as any one could ask for, but within the last four days it has gone to "Hans Brideman's barly; where is dot barly now?"

First the ducks flocked, preparatory to their flight northward, and their numbers were beyond computation. And when a flock got up, from a shot among them, the noise of their wings could be heard a mile. We did not pay much attention to them; we were tired of ducks, and the flocks were very wary, and, beside, we had better business with the beach-birds, which came in immense quantities. While we were working at them the ducks disappeared. None of the sea fowl breed in this vicinity, but the Indians still bring in a few mallard, which is a pity, as they are now breeding in the lakes among the mountains. A few green-winged teal, too, have come. These birds winter further south; they were the first to come and to go last fall, and are now coming back after the others have left. The Canada goose also breeds here, and some of them, taken young, are in captivity ashore. I think that Barrow's golden eye also winters further south. I got some early last fall, none during the winter, and two during the last week. The mergansers, harlequins, surf ducks, oldwives, scoters, butter balls and scaups were plentiful all winter, but have gone probably to the valley of the Yukon. For two or three weeks, though, the beaches and marshes and flats have been alive with birds. One of our officers brought home one hundred and thirty snipe and plover from an afternoon's work on the flats, and bags of forty or fifty were common, among which would be, of plover, the semi-palmated, the ring neck, the surf bird, and another with four toes, which is neither the "beetle headed" or surf bird, as described by Coues, genus 189 and 193, as the only four-toed plover in the United States. I obtained from an Indian several of these, both male and female, but could not find out where they were shot. We got none on the beach that I know of. I will copy from my note book my description: Plovers, May 10th, male and female. *Male*—Length, 10½ inches; extent, 21½ inches; wing, 6½ inches; bill, ½ of an inch; gap, 2½ inches; tarsus, 1½ inches; toes, ¼, middle, with claw, 1½ inches; hind, with claw, 1½ inches; full tail, 2½ inches; 12 feathers; toes not lobate; legs yellowish green; tibia feathered two-thirds of length; colors: upper part, head, back and scapula, dark brown, mixed with lighter brown, the feathers on back having dark brown fields, fringed and tipped with yellowish white; rump, upper tail coverts and one inch of back adjoining, white; tail, dark plain brown; under parts, chin and throat white and brown mottled; belly and anal regions white, with a few black-tipped feathers; under wing, white. *Female*—Length, 8 inches; extension, 15 inches; bill, 1 inch; tarsus, ¾ of an inch; 4 toes, hind one little over ¼ of an inch; legs, olive green; colors: back, dark brown, fields edged with yellowish white; head the same, but lighter, and back of neck lighter still; upper wing coverts slaty brown, edged with white, the long outer feathers having white quills; under part mottled brown and white; rear of belly and anal regions white. At first I took this for the female of the surf bird, but there was one striking difference. In the bill of the surf bird there is on each side a V shaped groove, the apex toward the end of bill and nostril situated in lower posterior. With this plover—which certainly is not genus 189, as its belly was white—there were on the bill two short, longitudinal grooves, end to end, separated by a little partition, the nostril being in the rear of the hinder one. I have saved the skins, and shall send them to Prof. Baird.

From the marshes we have got a few golden plover. Of snipe I have identified as follows, using "Coues' Key": No. 203, Wilson's snipe. No. 204, gray snipe, of which, by the way, the cut of head and bill in "Key" is perfect, and the membrane between outer and middle toes very "evident." My bird is a large one; dimensions as follows: Length, 11 inches; extension, 19½ inches; wing, 8 inches; head, 1½ inches; bill, 2½ inches; tarsus, 1½ inches; middle toe and claw, 1½ inches, outer pair semi-palmated; legs, yellow-brown; tail, 12 feathers; colors about as described by Coues. No. 200, semi-palmated sandpiper. No. 207 to 209, least sandpiper, Baird's sandpiper, jack snipe. No. —, black-bellied sandpiper and jack curlew. The latter I didn't get, but feel quite sure I recognized.

For a few days we had flush times, but about the 20th the birds had about all gone from the immediate vicinity, and we had to search other fields. Hearing that at the head of a deep bay (Crab Bay, which penetrates the eastern side of Kinzoif Island, about twelve miles to the westward) there were extensive flats, which at low water were covered with birds, a party of us started on the 24th and explored the country. We found the flats, as de-

scribed, but instead of being covered with birds they were covered only with seaweed, stranded starfish and clam and scollop shells. Our day's work gave us but one black-bellied sandpiper, one shot at a goose, which, although hit, carried off the No. 8's, and one at a bald eagle. The day was, however, a splendid one, and as a picnic the affair was a success.

The starfish were wonderful as regards colors, which were purple, red and green, in different shades. One species resembled in shape the *Asterias vulgaris*, and another, with eight or ten short arms surrounding a wide body, resembled more nearly the *Ctenasteriscus crispatus*, so far as comparative length of body and legs went. All were of great size, some over a foot in diameter. In every direction the flat seemed to be filled out with fountains, for great spurts of water, three to four feet high, were constantly occurring, which of course we translated clams, and dug for them, and such clams! I brought some on board and weighed them, and they weighed one and a quarter pounds each, and were from six to seven inches long by four to five inches in length and breadth.

Desiring to preserve the shells, I sent them forward to be opened and cleaned, and my cook found in each a crab of light yellow hue, soft shelled, and with great quantities of eggs, almost ready for laying. The crabs were alive, and I would suppose had crept into the open shells for an asylum during their egg-laying season; but the man insists that they were inside the clam itself, and says that he first noticed the little claws projecting from the body of the fish, and that when he pulled them out a cavity remained. If this is so—and another Chinaman confirms him, only he says "Clab he inside that stomach"—may it not be that the crab was burrowing in the clam's flesh and thus obtaining food as well as lodging while "in the stomach"? Certainly they would not have been in the clam, and living, also; and these lived some time after extraction. Of course the man failed to give me a chance to look into this phenomena.

I believe if I shot a "phillaloo bird," and laid it aside for study, that cook would serve it up for my breakfast without a question, if not warned. He did serve me that way with an ousel. Well, I've got the crab in alcohol, and shall try to get a specimen intact of both.

Mount Edgecomb is on Kinzoif Island, and from a lake on its foot-hills flows through this Crab Bay flats a pretty little river, which I believe is the one from which the trout I sent you a description and drawing of in my last were obtained. I hardly believed the Indian who told me that these fish ran up into the lake in fall, lived there all winter and ran down in spring; but after a talk with Whitford, who, in his capacity of oldest inhabitant and trader, has more information about fish, game, etc., as obtained from the Indians, than any other man in Sitka, he fully confirms the story of the Indian, and says that every spring they are brought in not only from the lake on Kinzoif Island, but from the mountain lakes, in which, during winter, the Indians catch them through the ice. The Indian name for the fish is "quot."

During our flush times with the beach-birds every boy in town who could rig up a bow and arrows, or borrow a cheap shot gun, was busy with robins, which in countless numbers harried with us a few days and spent their time on the beaches feeding on herring spawn and small crustacea. They, too, have winged their way northward, and now the shore line and flats are devoid of life.

I learn that the question as to how many and what variety of crows exist in Alaska is now agitating ornithological circles. I will give my mite toward settling the question. During our year here three species have been more or less plentiful. I have not shot any, not banking particularly for "crow" as game, but shall soon do so now that they are "wanted" by science.

All summer, all winter, and until a month ago, ravens were very plentiful—living in the town itself, thronging the streets as plentifully and as impudently as does in our Eastern cities the pet (aversion) of Coues, the *Passer domesticus*. A month ago the cayote dogs killed a turkey on shore—I might almost say the turkey, for there were but two in town—and its body, well seasoned with strychnine, was hung up just high enough to enable the dogs to continue their repast. But the ravens got in ahead, and for weeks their dead bodies have been liberally sprinkled around the vicinity, and either nearly all were poisoned, which I do not consider probable, or those which escaped poison have been frightened away. I have not seen over half a dozen within the last month.

During the same season, and still continuing to be plentiful, a crow very similar to our ordinary crow, although, I think, somewhat smaller, and differing in its voice, lives among the islands and infests the flats at low tide, flying in immense flocks every morning to Indian River, where they all perform their ablutions and await the early ebbing tide to get their breakfast.

Last fall there were among the islands quantities of a small crow, not over twice the size of a blackbird, and with a note which, although very different from the ordinary crow's, was enough like it to stamp the bird as one of the family. It was my impression then that they were young crows, but since receiving "Coues' Key" I

am inclined to believe that they are identical with the fish crow, or the "crow, var. *carinus*, Baird." I shall look the matter up.

Besides the birds I have mentioned, those most common here now are bald eagles, ospreys and various hawks, and a few song birds, of which I have not as yet obtained specimens. The fact is my scientific turn isn't quite strong enough to completely overturn my sportsman's ideas, and I don't fancy crow and sparrow shooting.

I suppose my young friend, Prof. Merriam, who, when a boy, being hard up for a dog skeleton, killed and boiled his own mastiff in his mother's soup kettle, would not appreciate this sentimentality.

In the way of fish I have little to tell you. The salmon have not as yet come in to great extent. The first school came in, driven by a herd of porpoises, on the 13th inst., and a few were taken by the Indians; since then there have been three or four small schools, but the run cannot be considered as having begun. It is this late opening of the season which operates against the canning interests here. The Columbia River salmon are probably on the market at San Francisco by this time, and it is uphill work to establish a market for the Alaska salmon when it does not come to hand until the market is well supplied with a well-known article. The time for Alaska will come, when the fish, so scarce, get too dear to pay for further south. Here the cost of the fish is a bag-atelle.

I have been surprised at one thing. We arrived here June 15th last year, and it was well on toward September before the salmon began to run up the streams and change color. I don't think I saw a "dog" till late in August, but already this year numbers of them have been taken from Sawmill and other rivers; rose fully developed and colors changing.

The salmon trout have not as yet run into the streams, although they are hovering around in the bay, for they have been taken in nets, and arrivals from outside report salmon plentiful a few miles away. Can it be that the unusual quantity of snow water affects the salt water to such an extent that both classes of fish are waiting for a change? No more "quot" have been seen.

On the beach, where last fall the caplins and smelt came ashore in quantities, there has been captured during the last week quantities of sandlances, about five inches long, five eighths of an inch deep, half an inch broad, and long, sharp head. As soon as these creatures are left by the receding waves they burrow into the sand until but their tail is visible. As table fish they are excellent. Halibut are still plentiful and good, and a bass which resembles greatly the ordinary fresh water black bass is very plentiful, and is caught by trolling with any kind of a spoon; the Indians troll with a strip of halibut belly skin on a single hook. No *Foninalis* as yet, but expected daily.

I have quite a collection of fish in alcohol, and am impatiently awaiting Prof. Bean in the *Alcohol*, who will, I know, be glad to get them, and will be able to classify and describe them. The *Yukon* is expected daily, and by next steamer Prof. Dall will arrive (his chief assistant, Mr. Baker, having arrived by the last steamer), and the *Yukon* will go on surveying and other scientific work.

Pisteco.

GAME PROTECTION.

MIGRATORY QUAIL.

QUEBEC, June 30th.

Editor Forest and Stream:—

I read your number of the 24th of June in the expectation of getting some migratory quail news, especially with regard to the birds that were turned loose previous to this year, but I regret to find your correspondents are very shy about committing themselves to any statement on the subject. I must therefore report what I have noticed in the birds I have sent adrift. Eighty birds were placed in the county of Quebec, and fourteen were planted at the mouth of the Saguenay; one hundred went to Montreal. Of the birds (ten) I turned out on my own farm, one has been found broken up by hawks, who hunt the grass fields most carefully; but we find "dustings" of quail on the roads and paths, and we have seen one couple dusting. They appear to be as regular in this habit as chickens, seeking places not far from barns or buildings, evidently preferring the risk of the domestic cat to the danger of the chicken hawk. We have never heard any cry or call coming from the quail.

In the midst of my walkings I found a young partridge (*Perdix grisea*) just hatched. This was on the 14th of June, consequently any quail hatched in August will be very late broods, and very weak birds for a migratory experiment. Where there are no native quail the dustings are the surest sign of the old birds, as they will visit the same spot every day, and there can be no mistake about this sign, and the ground for quail is grass or grain land near a wood.

I hope some of your other correspondents will occasionally give you some news, as what is written in local papers is interesting outside the locality, and I know of no medium of communication for migratory quail news as good as the columns of a journal such as yours, having a continental circulation. W.M. RHODES.

DANVILLE, P. Q., June 28th.

Editor Forest and Stream:—

Your favor of the 18th inst. came during absence. The quail arrived in fine condition, on the 17th inst., and are now rejoicing in their freedom, except a dozen, which I am keeping over in confinement. Shall try to winter

The dimensions and scantling are as follows: 157ft. over all, 152ft. on deck, 146ft. water-line, 140ft. keel, 18ft. beam, and 10ft. hold. Draft of water, including shoe aft, 9ft.; draft of the body 7ft.; least freeboard 5ft. 6in.; overhanging aft 9ft., and forward 10ft. extreme. A short bowsprit projects beyond the stem head,

ever known to be in this country; in consequence, many scores will have to wait over until next week's issue.

LACHINE KENN. S.

I HAVE moved my kennel of cockers to the vicinity of New York. Will have no pups before October. Cocker, Pint, Mump, all to be bred to Bijou, this week, June 21st.

GEO. D. MACDONOUGH, P. O. Drawer 432, June 21st.

E. B. GOLDSMITH,

Custom House and Forwarding Agent,

58 WALL STREET, NEW YORK.

The Kennel.

FLEAS!

USE DR. AL. WATTS' FLEA SOAP, a safe and efficacious remedy and preventive for fleas and all eruptions of the skin produced by the insect, and which is free from all impurities, purges it of all disagreeable odor, and possesses the most thorough disinfecting properties. It is impossible to overpraise the use of this soap. Price, 25 cents per cake. For sale by all druggists. Wholesale depot, 161 Lincoln street, Boston. Dr. Watts offers for sale the largest assortment in America of dogs of all breeds. All diseases of dogs skillfully treated. Medicines which are impossible to procure elsewhere, on receipt of one dollar. The fact that Dr. Watts has for four consecutive years held by appointment the post of Special Officer of the City of Boston to have charge of unlicensed dogs, is sufficient guarantee of reliability. All communications, please to be sent to my address. Address DR. AL. WATTS, Mar 25th 184 Lincoln street, Boston, Mass.

A RARE CHANCE.—For sale, English setters: Don, a splendid large orange white ticked dog, brother to Champion France, but superior every way; \$30; Mollie, a very beautiful bitch, orange white, black points, two first prizes, \$75; Dick, a very fine dog, orange white ticked; \$25; Fanny, a very fine dog, orange white ticked; \$25; second prize: see with Dick, \$100; the best brace ever shot over. Three orange white ticked dogs, twelve months old, very fine, full of bone, \$20 each; also puppies ten months old, Gordon and Laverack combined. Bob, black, white and blue ticks; Jim, black white and blue ticks; Grace, black and white, well matched, \$25. A black white tan gyp, live months old, \$10. Two pups two months old, out of Lili & Don, orange white ticked, a brace for \$10 if taken by July 1st. They cannot be taken for look and natural field qualities. This is a chance you cannot afford to lose if you want fine stock for very little money. Address ALA. D. BIRCH, 1001 N. 12th St., Lancaster, Pa. June 4th.

ST. BERNARDS FOR SALE.—The undersigned, wishing to reduce his kennel, offers for sale several magnificent imported Mount St. Bernard dogs and bitches, carefully selected from the best European strains. To be sold for no fault. For prices, pedigrees, etc., address

LE ROY Z. COLLINS, Sept 18th

Lancaster, Mass., U. S. A.

CHAMPION LIGHT WEIGHT POINTER

"RUSH."

Rush is lemon and white, a winner at New York, Boston, Philadelphia, St. Louis and Louisville Shows. He is an excellent field dog; fine nose, fast, stylish and staunch. For full particulars, pedigrees and localities address

EDMUND ORGILL, 1008 Dean street, Brooklyn, N. Y. June 24th.

IRISH RED SETTER PUPS.—Capt. T. S. Trench, of Ireland, offers for sale three splendid pups, three months old, with liver and blue eyes. These pups took the first prize in Dublin, in May, 1889, and are considered to be second to none of their kind in the country. Address, apply to C. S. TRENCH, Child Depot, Va. July 1, 1890.

ANTI-RUST.

FOR THE PROTECTION OF Fire-arms, Cutlery, Skates, Surgical Instruments and all metal surfaces, from oxidation.
It is a strict hydro-carbon, containing no mercury or animal oil; is not injurious or offensive, and will never gum or become rancid in any climate. To sportsmen it is especially recommended for sea-coast shooting.

MUSCAPELLO.
A perfect protection from the attacks of black flies, mosquitoes, gnats, sand-flies, and other insects so annoying to sportsmen and tourists. Containing no tar or vegetable oils, it is free from disagreeable odors; will not soil the complexion; prevents tanning, sunburn and chapping of face and hands, and washes off readily.
Sold by Schoverling, Daly & Gales, and Hodgkins & Haigh, New York, and John P. Lovell & Sons, Wan. R. Schaeffer, Bradford & Anthony, Pope Manufacturing Co., and dealers in sportsmen's goods everywhere.

GUNPOWDER.

DUPONT'S
RIFLE, SPORTING AND BLASTING
POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN.
Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.
DUPONT'S EAGLE DUCKING,
Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.
DUPONT'S EAGLE RIFLE,
A quick, strong, and clean Powder, of very fine grain for pistol shooting.
DUPONT'S RIFLE, FG, "SEA SHOOTING,"
FFG and FFGG. The FG for long range rifle shooting, the FFG and FFGG for general use, burning strong and clean.
SPORTING, MINING, SHOOTING, AND BLASTING POWDERS of all sizes and descriptions. Special grades for export. Cartridges, Minnie, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agencies in all cities and principal towns throughout the U. S. Represented by

P. L. KNEELAND, 70 Wall Street, N. Y.
N. B.—Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric Powder."
Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting."
Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shotguns.
Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting. It ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.
Hazard's "Kentucky Rifle."

FFG, FFGG, and "Sea Shooting" FG in kegs of 55, 121, and 61 lbs. and cans of 5 lbs. FFGG is also packed in 1 and 1 1/2 lb. canisters. Burns strong and moist. The FFGG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.
GOVERNMENT CANNON AND MUSKET POWDER, also SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

Shot Gun and Rifle Powders Revolutionized.

DITTMAR POWDER.

Champion Shot Gun and Rifle

POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

All our cans have seals over the screw-cap, with C. Dittmar's signature, and none others are genuine.

Reminiscences of English Rivers.

ANGLING is the only one of the three principal field sports of England that is entirely free from the stain of what, for want of a better word, I shall call flunkysm. The stupid lad, with more money than brains, who yearns to be, or to be thought to be, a sportsman, finds in the showy and impressive externals of the chase, with the responsibility appertaining to its pursuit, an easier road, in the eyes of the gaping masses, to the coveted title than in the quiet, unostentatious and self-dependant science of Father Isaac. Hundreds again toil through shooting season after shooting season under the command of a keeper till their hair is gray, without an idea in their heads beyond blazing away at everything that rises within shot. But, unless it may be an occasional noodle who thinks it adds to his importance to be seen swinging a salmon rod, no one fishes "for effect." It would not pay at all. The gentle art has, to be sure, thousands of enthusiastic devotees of all classes, but each one of them goes to the river side, impelled thither solely by his own genuine love of the sport, and the most skillful performer commands no admiration outside his craft. There is no glitter and show about the business—not enough exclusiveness about it to dazzle the eyes of the vulgar. It is supposed to be slow by fancy youths, who might, with some difficulty, distinguish a pointer from a setter, but imagine they are "shooting men." It is voted unworthy of some wooden-headed, uncultivated plutocrats, who can sit on a horse just well enough to watch, at a very respectful distance, the handling of the pack they are proud to subscribe to, and who call themselves "fox hunters."

It is possible the comparative ease with which angling can be indulged in by the unprivileged classes may help to rob it of that peculiar prestige (inexplicable to any one who does not know England thoroughly) that hangs around the sister sports.

You will almost invariably find that the non-fisherman, unless he be a thorough sportsman, speaks of his aversion to, or his want of skill in, the art with a ludicrous kind of conscious pride, as much as to say, "You can't expect a dashing blade like me to care about such a slow business as that? No, indeed; give me a good day's hunting or grouse shooting." The fact that his angling friend has to

give him a lead at the one and wipe his eye at the other is quite forgotten in the conscious superiority of the moment. But this is a phase of English life more conducive to cynicism than description, and would, to most of my readers, be meaningless. Perhaps in the dim future—in the days of the "coming crown"—when time-killing as an art has become necessary on this side of the Atlantic, besides the army of men that sport as now for their own amusement and improvement, there will be another army entering the field bent, at whatever risk of discomfort to themselves, on doing the "correct thing." I hope so. It is infinitely better than the course of life pursued by the *jeunesse d'oree* of Continental Europe.

But enough. Let us take the map of Britain and glance over it with the eye of a trout fisherman.

Run a straight line from Berwick-upon-Tweed to the Isle of Wight, and the country left upon the east of that line, speaking generally, may be said to be the non-trout portion of the British Isles. By this I do not mean to say that it is entirely devoid of waters holding that most desirable of fish, but as it differs widely in its physical formation from the rest of the kingdom, the very features that form that difference are decidedly of an anti-trout order. Fens and level plains are, of course, with the sluggish winding rivers, ill-adapted for such a purpose, though there are occasional exceptions. Norfolk and Essex have one, I think, between them, while the group of counties that center around Cambridge are, as far as my personal knowledge and supposition go, entirely barren of this fish. There probably are some artificial, and possibly an occasional natural exception to these statements, but none in any way to affect the argument.

The Isle of Wight, with its beautiful hills and valleys, has only one miserable little ditch holding trout, while from the "dun wolds" of Lincolnshire all readers of Tennyson know at least one stream pours, where "Here and there a lusty trout, and here and there a grayling," is to be found. From my own knowledge of the stream in question, though I am bound to add it is a very cursory one, I should say the "Laureate's" phrase of "Here and there" was not an exact one. Admirers of Charles Kingsley might be apt to suppose that the chalk downs of England were very paradises for trout fishermen. I was going to say the very opposite is the case, but that would be too strong. A deep-rooted prejudice against that (to me) objectionable geological formation nearly betrayed me into an inaccuracy, which, considering I first learnt the art on one of Kingsley's immortalized chalk rivers, would have been, to say the least of it, ungracious. Americans, on reading so constantly of the English downs in prose and verse, often evince a natural curiosity to know what manner of hills they are that seem to leave such deep impress on the minds of so many writers. I will try and explain, though it makes me feel very thirsty. They are round and smooth; bare, with the exception of a clump of fir trees sometimes on their summits—nowhere high enough to be imposing (the highest chalk in England is only 900 feet above the sea), always steep enough to make traveling slow, parched up and brown as to their stunted grasses in dry weather, and dusty beyond compare as to their glaring highways. The white thirsty chalk cropping out every here and there upon their bony ridges, abounding in deep valleys down to which the stranger from other districts and other lands would hasten in vain as he journeyed on summer days to slake his thirst; but a continuation of unpleasant surprises would meet him peculiar to these unwatered uplands; valleys, down which on any other formation would leap clear and brawling streams, here are guiltless of even the course of one. Some few famous trout rivers manage, however, to struggle out of these thirsty ranges—famous rather for the size of their trout than for their grandness and edible qualities. Notably the Kennet, and the Itchen (Mr. Francis' favorite river), while old Father Thames himself ranks all along his course as a trout river, or rather he receives a good many small streams, all famous for the size of their fish, and a certain number of patriarchs of fabulous dimensions known as Thames trout find their way into the baskets of a few fortunate anglers yearly, and are generally considered by the brethren, in that part of England at any rate, as the very *déité* among their order of fishes. One is reported this week of seventeen pounds. Of these rivers I may have something to say another time, but must now, having dismissed all the non-trout counties of the Eastern Division, hasten northward, pass up the coast of Yorkshire, which is broken by the egress of no trout stream for note, unless it is the Duifield water, once famous for its size of its silver anglers, till I once may reach the most high table lands where Yorkshire and Dunham meet, and where with Scott's traveler in "Rokeby" he may quote as he looks down over the scenes of that romance—

"Nor Tees alone in dawning bright
Shall rush upon the ravished sight;
But many a tributary stream
Each from its own high dale shall gleam."

The Tees, which rises among the bleak, heathery moors where Yorkshire, Durham and Westmoreland comes, and

divides the two former counties from one another, has been, in the days of yore, a famous trout stream; but alas! we are in the black country of the North, and mining and trout fishing don't agree. Ten years ago Teesdale anglers were getting despondent; how things are now I can't say. For several years in succession visiting friends in the neighborhood—I made a two days' pilgrimage to the headwaters of that romantic stream—not so much on account of the attractions of the fishing; for, though everything to the eye bade fair for success, and artificial pollution had not reached so far up; though accompanied on each occasion by the best fly fisherman I ever knew, persistent failure attended my efforts. Yet there was a charm about the stern wildness of the surroundings; a solemn weirdness about the bleak, waste uplands, that carried the same party of us there summer after summer, to the cozy little thatched inn with its swinging signboard, that welcomed our steps at night as we returned with light baskets, and worn-out with floundering over the roughest and most slippery boulders that have ever been anathematized by anglers.

To realize that this bed of polished boulders, with peaty-colored water trickling down between them, was some river that reflected on its surface the lights and glare, the flames and furnaces of Middlesbrough and Stockton was, of itself, somewhat difficult. One had also the pleasure of casting a line upon the same day at the foot of two of the highest waterfalls in England, and our principal hopes used to be centered on the dark-colored, seething pools, which churned and boiled beneath each cataract, the one about forty, and the other about eighty feet high.

I must hasten in a northeasterly direction, however, over the wild stretch of moorland famous for its immense stock of grouse, that in the breeding season resounds with their clucking and crowing, and all through the summer with the plaintive cries of the curlews and peewits, till the valley of the Wear, or Weardale, lies beneath, noted for its stalwart men, its fat church endowments and its charming scenery. Mining villages are scattered at pretty regular intervals all the way from its headwaters to Bishop Auckland, where the massive walls and turrets of the palace of the bishops of Durham, with its mediæval memories, look down over that dirty, thriving town.

I don't think there is a river in the world that has so many and such skillful anglers in a given space as the upper waters of the Wear, with its scant supply of warty little trout. In the days of old, before the fatal lead "hush" discolored its then bright waters, when the bishops of Durham compounded their fluctuating mineral tithes for one hundred and fifty thousand dollars a year and thought themselves hardly used, or long even before that, when they ranked as princes, and the country was preserved for their hunting grounds, splendid trout darted in myriads through its long, shallow pools and gently rippling rapids, what fishing these reverend lordships might have had then! Now the miner, the schoolmaster, or the parson, with their home made rods, which they swear by (and they certainly surpass anything I have ever seen turned out by a tackle maker), with their single strands of horsehair and flies tied by themselves on horsehair, with hand handled and antique landing nets peculiar to the Wear, wade deep in the water, and throw yards of line, dropping their flies, like gossamer, in far off holes and under distant banks, carrying more art, more care and more perseverance into the craft than any class of anglers I have ever met, and with certainly less possibility of a corresponding reward; for a few small trout, running six or seven to the pound, are all that the most successful could hope for. But the glory of the capture is enough, and these most fish-day troutrangers are certainly possessed of a very different order of intellect to their cousins in a West Virginia brook. In the days when as a schoolboy and an undergraduate I used to haunt the banks of the Wear, I used to "fancy" myself on the strength of Southern and Western performances not a little, but my conceit used to get most effectually removed as every summer found me turning out my basket with my West friend and my card in a laurel wreath minor to theirs. Their heaviest catches were such as in more favored rivers would have been the work of an hour; but to make a basket at all on that water required a master workman. They were a terribly bigoted lot, though, those anglers of Upper Weardale. Nothing was good pertaining to fishing tackle that was made out of Weardale. A "Farlowe" or "Armstrong" rod they looked on with the most supreme contempt. The first visit I ever made to the Wear was to the house of an intimate friend, a great piscatorial light in the locality. On arranging tackle the next day for a fishing excursion he asked to see my rod, which he supposed, with contempt in his voice, "was one of those infernal cockney blooming affairs." Now I was rather proud, as a youngster, of my rod, which, outside of Weardale would have been called a good one. He put it together, mathematizing the females as ridiculous inventions, and having felt the play of it for a moment gave vent to a huge guffaw, took it to pieces, pulled out his knife and proceeded very deliberately to cut what looked like little

bits. However, after a series of cutting and splicing and waxing he pronounced it as good a job as could be made out of such poor material, and apologized for shortening it a foot by saying it was better to have a ten foot rod, though it be an indifferent one, than eleven feet of nothing at all. They used to make all their own rods in those days upon the Wear, and for feathery lightness, and for balance, and for that inexpressible connection between butt and tip that manufactured rods are so often wanting in, I have never since seen them equalled.

Then as for fishing with even the finest gut after May, no one but a blunderer or a tyro would dream of such a thing. The hair from a sorrel stallion's tail (and a North Country stallion at that) was tied in single strands for five or six lengths, doubling it higher up, and twisting the ends together to make a boat hook line. You must tie your own flies, of course, too, on single hair—y-bonder, a yellow bloa and a woodcock and orange. Wear trout were supposed to greet from their watery depths Southern flies with shouts of derision. A landing net, too, you must have, as wading is the order of the day, but, "an you love me," said the Wearable mentor, "not one of those unethically cabbage nets that they use in the South, that float up in your basket, with flimsy short handles that hook onto your reel strap." Shall I tell you, gentle reader, what a Wearable landing net was like in those days? In the distance it looked like a standard, on to which the angler, in mid stream, was proudly clinging, but on a close inspection it was found to be an instrument with a pole, to begin with, eight feet long, with a flimsy line to boat hook the end, the net itself fastened on a wooden ring would have landed Nishes Nahma, the king of fishes, himself, who scared Hiawatha so badly, if I remember rightly, or would, at a pinch, have made an excellent hammock for a moderately sized man; but no matter, to insure the respect of the blunt North countrymen, who met you at every bend of the river, it was necessary to attach yourself to one of these monsters. So much for the net, which was supposed to be a great help in wading. I can imagine it have been an excellent thing for a drowning man to get astride of and come out of a deep pool on, to be sure. But enough. It was the only article in their equipment that gave me a chance to pay them back in their own coin, and I never lost the chance. It was fortunate for my cardinals friends that I was a fisherman, and that they scorned to fish any river but their own, and their tributaries, for they spiced their rods together after the old Irish fashion, and these, in addition to the net apparatus, would have been startling additions to a crowded fishing carriage, and decidedly imposing on horseback.

I must not finish this sketch without allusion to the champion fisherman, not only of the Wear but of the whole of that country, as he was not only an "angler great," but a scholar, an author, and a poet.

Mr. W. was master of what was by courtesy called the "grammar school" of the little town of B—, upon the Wear; one of those old foundations of Edward VI., that collapsed like many others of its kind, between the pressure of higher education on the one side and lower education on the other. When I saw it in its prime, it was a toll over the town and notify the inhabitants of the incomings and outgoings of this solitary being. Methodically and punctually the great piscator used to seat himself at his spacious desk, and for twelve months is said to have supervised the slumbers of this isolated individual. The plash of the pen, the rattle of the penholder, the fessorial ears, and the juvenile obstacle alone prevented his exchanging the rod of birch for that of hickory. The endowed school commissioners had not then swept those old defunct institutions from the face of the earth, and his salary was secure anyhow. Human nature could stand it no more—this obstinate urchin still kept the bell ringing—so at last, when the school was about to close, a good round sum to absent himself for the summer, he left our learned friend at leisure to prosecute his favorite sport. He edited a volume of poems, which sing of the natural beauties of the neighborhood for fifteen miles round, and some years before, while his school was still in existence, he had published a book on angling, which, apart from its scientific pretensions, was considered by the angling world as an excellent addition to its literature.

The friend I alluded to some time back sat in his youth at the feet of this Galileo, and has told me many an amusing yarn about the old gentleman. One especially, I recollect: It was when he was deep in his book on angling, and the poor fellow was having a great time of it. He was especially occupied then with the plate, which he executed himself. The hour struck for the arithmetic lesson, and he moved to the blackboard, chalk in hand. The boys rubbed the slates with their coat sleeves, shuffled their feet, cleared their throats and went through the usual programme that, among the schoolboys, is the prelude to any hushed mental effort. They watched the chalk eagerly for the first message, as it began its movements over the blackboard, hoping the fraction sum would not be too complicated, when behold! as the bulky person of Mr. W. removed from that position, and with the usual last flourish of the chalk in the air, moved back to the desk—not a vulgar fraction sum, but the outline of an immense trout stretched its great length across the sacred, and was still stiller titillations that prelude the coming storm roused the attention of this great preceptor. Some latent consciousness caused him of this great down before the board and discover his mistake, when the sensitive risible organs, so uncontrollable in youth, gave way, and the whole school shrouded with laughter till the roof rang again. Like all petty schoolmasters of the golden days, in the pedagogue's mind the fraction was a second nature, and was so in the mind of the boys before verbal; so ruler, cane, dictionary, chalk and all the paraphernalia that were used in such educational establishments as missives and, on that occasion, I believe many more, flew like hail among the dodging and bobbing heads of the youths. It was never forgotten, and to this day our old friend, whose heart has long ceased to be a familiar one upon the banks of the Wear, is still called the "Big Fish" by that generation.

RINGWOOD.

—An English angler caught a trout which had in its mouth an old rusty hook, this hook caught in his wrist, poisoning his blood, and the man died in three weeks.

WOODCOCK CARRYING THEIR YOUNG.

WASHINGTON, June 12th.

Editor Forest and Stream:—

I notice with interest the statements in your issue of the 11th instant regarding the habits of woodcock, under various exigencies, carrying their young in their claws or between the thighs. The fact that woodcock have such a habit is, as you say, indisputable; too many reliable observers, both in this country and abroad have contributed information on the subject for it to be doubted. As regards the exact method in which this is done there appears to be a difference of opinion, or else, as is probable, the *modus operandi* differs with circumstances; and I agree with you that additional light in the matter is desirable. Especially interesting would it be to know if the male bird ever assists his partner in securing the young from danger, and if so, how, and how far he has never been accredited with this act of devotion.

Having had the pleasure this summer for the first time of verifying, with my own eyes, what before I had accepted on the testimony of others, I give the circumstances for the benefit of your readers. While watching some warblers in a small clump of pines near a little patch of ground, sufficiently moist to admit of "boring," I flushed four woodcock. Three of them, two males and a female, may be dismissed with the remark that their flight showed nothing peculiar: they went off unencumbered so far as I could see. But as the fourth bird rose, a female, I could plainly detect, tightly clasped between the thighs and close to the belly, a dark bunch of something, the effect of its weight being visible in the drooping of the wings. The bird, however, was of the old bird, which appeared almost perpendicular. Had I been in any doubt as to what that something was, the old bird's actions would have told the story. For, when a few feet away, she settled to the ground, but apparently without lighting on her feet, and with beating wings scuttled along the ground, using the old trick of the disabled bird, and all the while carrying the young in her claws, and followed her for some distance. She then rose, and after the use four or five times, when feeling doubtless, that she had decoyed me far enough away from her remaining young, she took a longer flight, and I lost sight of her. I take it for granted that she had more young near the spot where she first got up. Perhaps she had time to conceal all but one, as I approached but slowly. At all events, I did not succeed in finding them, closely as I searched. In this instance, then, her care was not one of them doubtless being her mate, showed no special interest in the fate of the young, but left the mother to take care of them as best she could.

Several of the accounts I have read state plainly enough that the young are carried in the claws. In fact, if I remember rightly, I have somewhere seen a woodcock of a female woodcock carrying a young one in her claws, and near her, the claws of either foot being so opposed to each other as to answer all the purpose of hands. It isn't easy to see how this is possible elsewhere than in a woodcock, inasmuch as the grasping power of the woodcock's claw must be next to nothing. However, such are the statements, and in some publication or other is the woodcock, where I can't recall, and both woodcock and statements may be all right, too; for most of us can recall theories which were sound enough until contradicted by facts; and so it may be in the present case.

Doubtless J. D. B. in the London *Field* is correct in suggesting that the female may, when in a hurry, grasp the young as she happens to get hold of them, and so they may appear between the tibiae, the tarsi, or possibly even between the toes. I should have added to my statement above, that I obtained not a glimpse of the legs and feet of my bird, and presume that the tarsi and claws were flexed upward so as to carry them quite out of sight. It will thus be seen how entirely different was the method adopted in this instance from that illustrated by the woodcock mentioned above, where, if my memory serves me right, the legs were represented as fully extended and at right angles with the body.

A woodcock such as our correspondent describes appeared in the *Scientific American*.

MOODUS, Conn., June 13th.

Editor Forest and Stream:—

Last April I had a young setter dog, and being anxious to train him in the way he should go, I one day took him to a young growth on the edge of a swamp, where I had in times past often shot woodcock. I was walking leisurely through the underbrush when my eye caught a dog, who was a little advanced in years, and who stopped, and with one forefoot uplifted made as pretty a point as I ever saw. I stood a minute, admiring the beautiful attitude he was in, and then stepped carefully toward him. He neither moved a muscle nor looked around. It was a stanch, good point. I hit the underbrush with my stick, and he came forward. I expected, up flew the dog, but he did not. He looked at me and peculiar flight caused me to look after her in wonder and astonishment. Her legs hung straight down from her body, and her flight was laborious and slow, but she had nothing in her feet. This I noticed particularly, as I have heard that woodcock, when surprised, will carry their young a short distance in their feet. She flew a few feet to the ground, and lit about two rods from me. I went to where she landed, and she came down, when my dog pointed and I flushed her, but this time she shot off with the whistling, zigzag flight that is a characteristic of the woodcock, and was soon out of sight over the tops of the saplings. I carefully examined the ground where she rose, and found hidden in the leaves a poor little half-fledged woodcock, hardly able to crawl. This set the matter in my mind that woodcock carry their young, though not in their feet, as some writers have said, but pressed between their legs and close to their body. I went back to the place where I first got up the woodcock, and after looking the ground over thoroughly I had the satisfaction of seeing two young woodcock running briskly along through the

underbrush. A few days after I went with a friend to this place, and the same performance was repeated. The old bird, as before, taking the weakest of her brood to protect. On this occasion we both distinctly saw the young bird between the old bird's legs as she flew. Now was it by chance that the mother woodcock selected the weakest of her offspring to protect when she saw enemies approaching, or did she reason, and thus leave the strongest to take care of themselves? F. C. FOWLER.

ORNITHOLOGICAL NOTES FROM MONROE COUNTY, N. Y., 1880.—April 23d.—Examined nest of great horned owl (*B. virginianus*), built in a hole in an immense basswood tree; it contained one young owl about two weeks old. The old birds must be excellent purveyors, for on the nest lay three fish, and fowl for the day's provision, viz., three very large barn rats, one young crow, one redwing blackbird and two large suckers. By way of postscript I may add that the juvenile owl is now (July 2d) in my possession—a very handsome and well-behaved pet, with an enormous appetite.

April 24th.—Hawks evidently destroy a great many snakes in this country, before the weather is warm enough to give full vigour to their reptiles. The crops of three broadwing buzzards shot to-day were crammed with the flesh of snakes; one female red-tailed hawk shot yesterday had just devoured a very large snake. All had carefully skinned their prey before eating it, but had also swallowed the pieces of skins.

May 18th.—As I was searching for marsh wrens near the Ontario to-day a large bitter root rose from the weeds. I shot and secured it, when another flew up a few rods from me, which I also shot. On going to pick up my birds I found their nest, containing one egg of a light grayish-drab color. The nest was on a low tussock of reeds, and roughly formed of dead reeds and coarse grass. On dissecting the female I found several eggs of various sizes, one just ready for hatching. During the past two years I have seen the white-crowned sparrow has occurred here in extraordinary abundance; the orchards, gardens, helges and outskirts of woods have literally swarmed with them. During a ride of fifteen miles to-day I must have seen many thousands. This is unusual, for this species is generally much scarcer here than the white-throated sparrow; this season the reverse is the case.

May 23d.—Heard a sparrow-like song that was new to me. Shot the bird from a large batch of white-crowned sparrows, and found it to be Lincoln's finch, a species I had never seen here before. During the day I found it not uncommon among straggling bushes near the lake.

May 21st.—Found quite a flock of the green black cap warblers (*M. pusillus*); they were busily engaged insect-hunting in the long narrow bay of a house skirting the marsh. They were very active and restless, and would occasionally dart into the air after a passing fly, as the redbird does. I saw this species in the same locality last year, and then secured six specimens in one day. This time I could easily have procured a hundred, as they stayed all day.

June 14th.—On visiting a sick friend to-day I was shocked to find the house wren (*T. adon*) in a singular situation. A tin watering pot had been hung inverted on the branch of a pear tree. The birds had nearly filled the can with their nest and safely reared their young. As it was close to the window of the invalid's room, much interest had been taken in the little creatures, and many weary half hours had been beguiled in watching their movements. The number of times the young were fed were specially noted with care. On the day of my visit the parent birds carried them food thirty times in one hour and forty-two times in another.

June 19th.—While watching a pair of mourning wrens feeding their young I noticed something peculiar in one of them. I therefore secured the pair and found the female bird to be of the variety called "*Maculivora*." During the past two years I have seen the mourning wren was a longer bird than the male, which was a very high colored specimen. The mourning warbler is common in most of the low, bushy woods in Monroe and Orleans counties, but it is extremely difficult to find its nest until the young are hatched. PEREGRINE.

INTELLIGENCE OF A SPANISH.—Lincoln, Me., June 12th. Editor Forest and Stream:—Mr. W. W. Parks of this town, while trout fishing a few weeks since, found a wood cock's nest containing ten eggs. He carefully packed eight of them in dry moss, brought them home, and placed them under a hen who in due time hatched six active ducklings, they taking to water immediately after breaking shell. The gentleman is the owner of a fine blooded, very intelligent spaniel bitch, and upon seeing the brood for the first time, obeyed her first impulse and attempted to destroy the lot. Being reprimanded, and observing her master take especial care of them, she became very zealous in protecting them during the day, and every night goes to their pen and hovers them with as much solicitude for their comfort as ever exhibited by a hen for her chickens. They take to her very contentedly, apparently enjoying the warmth afforded them by the strange foster mother. It is a peculiar sight, and we all look upon it as something quite marvellous, as the bitch is an excellent hunter, by birth and breeding an inveterate enemy of the feathered tribe. F. C. B.

MORE PEACEABLE SPARROWS.—The following clipping is taken from the Port Huron (Mich.) *Times*. The occasion was no doubt an interesting one to the "ground bird"—

An interesting spectacle took place on Water street this morning in the shape of a battle between a ground bird and two sparrows, in which the ground bird was killed within five minutes, the sparrows driving their beaks through its head.

MORE ALBINOES.—Tainesville, Ohio, June 1st.—Editor Forest and Stream:—I have seen a good deal in your Natural History column about albinos, so I send you a description of one I saw to-day. It was a chipmunk, or ground squirrel, perfectly white, with a few dark stripes on the back, which were a yellowish, dirty white. The man who had him took him from a nest containing thirteen, of which this was the only white one. While going across the fields the other night I saw a "partial albino" robin.

JAMES C. BEARDSLEE.

WHEN DO BEARS BRING FORTH?—I have just seen the man who caught the young bear cubs. They were taken the 20th of February last by two men, Smith and Philander Collins, of Montague, who were gathering sugar corn in the big woods ten miles west of Louisville, on the Hills. They heard the cubs crying in the den, under the roots of a large tree, sent a boy with them home for shovels, axe and a gun; then, cutting open the mouth of the den, the bear attempted to defend it, but they shot and killed her. They found two cubs in the den, and took them home and kept them for three days before they got their eyes open. From that they supposed them to be six days old when taken. They were very small then, have grown fast since, and on the 20th of May one weighed thirteen and one quarter pounds.

H. W. HAYT.

THE SUBILITY OF FAITH.—Lebanon, Mo., June, 1880. *Editor Forest and Stream*.—I noticed in your paper of Aug. 28th, 1879, a little article concerning horsehair snakes. Of course Dr. Evans must be correct as regards horsehair; but to my certain knowledge the human hair, under favorable circumstances, will verily transform into snakes. A circumstance I shall state took place more than twenty years ago with an aunt and uncle of mine. They had combed in the evening, wetting their hair from the same bowl of water, and letting it remain until morning, when to their surprise two hair snakes were meandering in the water—one black and the other light, corresponding to the heads from whence they came. You can easily test this matter.

Mrs. F. MCC.

PET SQUIRRELS.—In March, 1879, I caught a red squirrel, and April 18th I found four young ones in her nest which were born that day; two lived and grew finely until some two months old, when Dick was caught and killed by a cat. Dilley, when some three months old, was left alone as I let the mother go, when she disappeared and was seen no more until last winter, when I was chopping wood near the same trees where I caught her before. I reset the old trap and she was again a prisoner, and I took her from the box trap, with my hand ungloved, and placed her in with Dilley. She seemed to know her, as she did not hurt her, but would let her play around and with her. I gave her to a neighbor, and she kept her about two weeks and let her go. That was about as long as I kept her with Dilley. Dilley was gone some four days last March toward the close of the month, and came home, when I placed her in her cage. May 6th she had five young squirrels. As she had her liberty, she would go up stairs and all around the place. She had her young up stairs, when I took them and placed them in the cage. She did not like that, so I took them back several times and killed two through rough usage. I have now three nice ones, smart and lively, yet this year their eyes came open four days sooner than last year. Last year they were thirty-five days old, this year only thirty-one days, when they could see. I would be pleased to hear more from any one who has had experience with all other varieties of squirrels, black, fox and gray, etc.

L. E. W.

New York, June 7th.—*Editor Forest and Stream*.—Some few years ago, when quite a boy, I made the acquaintance of two young men just from New Hampshire. Until they came to this city they had lived in the backwoods, and it was my delight to listen to their descriptions of life in logging and maple sugar camps. Among other things I was told that in falling trees it was a common thing to find a squirrel's winter quarters stored with beechnuts, and shelled at that. This I cannot vouch for, but I believe it to be true, as the young men were and are still of good moral character.

FLY-FISHING FOR BLACK BASS.

FOURTH PAPER—FLY-BOOK.

AMONG the necessary adjuncts to the fly-fisher's outfit are the fly-book, landing-net and creel. The former is now made in many patterns and sizes, and of various grades of quality and material. Those with the "Hyde," or metal clip, for holding the flies at full length, are the best and most satisfactory.

There is nothing better, neater, or more substantial in this line than Abbey & Fabrie's "Southside" fly-book. It is made of Russia leather, with parchment leaves, provided with the metal clip, and two leaves of heavy, porous cloth for drying wet flies. It is also furnished with large pockets, and compartments for leaders. It has a capacity for a hundred flies, and is made of a uniform quality which is of the highest grade.

It is also a valuable fly-book, Bisset & Mallett is one similar in style and construction, and is a first-rate article. The price of this book depends upon the material used in its construction, and its capacity for a greater or less number of flies. One holding four dozen is large enough for all practical purposes.

A few small hooks should be carried in the fly-book, to use with such natural bait as grasshoppers, beetles or dragon-flies, in case an artificial fly does not prove successful. Sprout hooks are the best, either Harrison & Son's or T. Hemming & Son's, the latter firm, I omitted to state in my article on hooks, somehow, make hooks every way equal to those of Harrison.

LANDING NETS.

For fly-fishing, a short handled net is the best, and should be as light as possible. Those with wooden rims are as good as any, though the sliding ring, and metal frame, are more convenient. The net should be of good depth, and of rather coarse mesh. When the fishing is done from a boat, the long handled net is preferable, but when fishing a stream by wading, or from the bank, the short handled net is more easily carried, and answers every purpose better than the long one.

RIGGING THE CAST.

The beginner being now provided with all the tools, it is in order to put his rod together, attach reel, reel-line and cast, and proceed to business. In rigging the cast, if the leader is provided with a loop, and the dropper, proceed as follows: to the small end of the leader attach the stretcher or tail-fly by passing the loop of the leader through the loop of the snell and over the fly, then draw together. Three or four feet from the tail-fly attach the dropper or bob-fly in the same manner, that is, put the loop of the snell over the loop of the leader, and push the fly through the latter loop and draw tight; if the leader is not furnished with loops for this purpose, slip a knot of the leader (about three or four feet from the tail-fly) apart, and after making a round knot in the end of the snell of the fly, put it through the opened knot of the leader and draw together; this will hold firm, and the dropper fly will stand at right angles from the leader.

If, however, the gut lengths of the leader are tied by hard, close knots, instead of the slip knot or double water knot, then the snell of the dropper must be attached close to, and above a knot of the leader, by a single knot or half-hitch, a round knot having previously been made in the end of the snell, to prevent the half-hitch from working loose; this is probably as good and safe a way as any.

The cast is now ready, for I do not advise the use of more than two flies. If, however, the angler wishes to employ three, the third fly, or second dropper, must be attached three feet above the first dropper, and in this case the leader should be nine feet long. But the beginner will have all he can attend to with a six feet leader and two flies. The leader having been previously straightened by soaking in water, or rubbing with India-rubber (the former method is to be preferred), and attached to the reel-line, the angler is now armed and equipped as the law directs, and ready for

CASTING THE FLY.

Casting the artificial fly is performed by two principal motions, a backward and a forward one. The former is to throw the flies behind the angler, and the latter is to project them forward and beyond. That is all there is in it. These are the main principles involved, and the first or backward motion is merely preparatory to the second or forward one, the latter being the most important.

But the style and manner of making these two motions are all important, and upon the speed, skillful and, I might say, scientific performance of them, depends the success of the angler. The main objects of the two motions are, first, to get the line and cast behind the angler in a straight line, without lapping or kinking, and, second, to project the line forward without snapping off the tail-fly, casting it perfectly straight, without confusion, and causing the flies to alight first, without a splash, and as lightly as possible, without dropping into the water. This can only be done by the angler, with a short line, about the length of his rod, and he should not attempt a longer cast until he is perfect in this. When he can lay out his short line perfectly straight before him, without a splash every time, he can then venture further.

But we are getting along too fast; we must go back to first principles, the two motions.

The backward and forward movements are each made in about the same length of time, but while the former is a single movement, the latter is a double one; that is, it is divided into two motions, or parts; though these two forward motions are made in the same length of time as the backward movement.

I will now try to explain these movements more explicitly, but it is extremely difficult to convey the exact ideas without diagrams.

The prospective fly-fisher having his rod, reel and cast in readiness, stands near the bank of the stream, with a clear space of fifteen or twenty feet behind him. Having the line about the length of his rod, to begin with, he takes the hook of the tail-fly between his left thumb and forefinger, and stretches the line taut; then by waving the rod slightly backward over the left shoulder, and at the same time releasing his hold of the tail-fly, the line straightens out behind him, the right elbow meantime being held close to the body, as the backward movement is made with the wrist and forearm entirely. The position of the right hand during this portion of the cast is with said hand grasping the rod just above the reel (the reel being at the extreme butt, and on the under side of the rod), and with the reel and palm of the hand toward the angler, the thumb looking toward his right shoulder.

When the line and leader are on a straight line behind him, which the beginner must learn to judge and time exactly, without looking behind him, he brings the rod forward with a gradually increasing rate of speed, until the rod is slightly in advance of him, say at an angle of 15° of the perpendicular; then, for the first time, the right arm moves the body—and, at the same time, the rod is turned in the hand in the opposite direction, that is, with the back of the hand toward the angler, so that at the end of the cast the reel is below the rod, while the back of the hand is upward—and without stopping the motion of the rod, the right arm is projected forward to its full extent and on a line with the shoulder; this is the second part, or motion of the forward movement, and consists in following the direction of the flies with the tip of the rod, so as to cause the rapid flight and allow them to descend without confusion, and to settle upon the water noiselessly, and without a splash. Thus, we see that the backward movement is in one time and one motion, and the forward movement in one time and two motions, as the military have it, or according to the formula of time above given.

Sometimes these movements are made straight backward and forward, and the rod is kept in the hand, but the best way is to make the backward movement over the left shoulder, and the forward over the right shoulder, the line thus describing an oval or parabola; by

this method the flies are not so apt to be whipped off, and it is withal more graceful, more en regle.

But these various ways of casting all come into play at certain times, and under certain circumstances; as the rod will be held more or less to one side or the other, or more vertically, as particular circumstances or emergencies demand. For the novice must remember that there are trees and bushes and rocks and winds to contend with in fly-fishing, and, moreover, as he becomes proficient he will choose his own style of casting, for no two anglers cast the fly exactly alike. Then there is the sideways cast, where the line is not thrown behind the angler at all, but to one side of the other; but I have not space nor facilities here to enter fully into the merits and details of the various ways of casting; they must be learned by practical experience.

We will now presume that the tyro has perfected himself in casting a short line, and can throw his tail-fly into his hat nearly every time at a distance of fifteen feet—and right here let me say, however of the angling bug who declares that he can cast his tail-fly into a glass of water at fifty feet, every time! It can't be done. Also fight shy of the long-range fisher who insists that he can cast a hundred feet with ease. It can't be done. The longest cast, with a single handed rod, I ever saw, without "loaded" flies, was eighty-one feet, and I believe the longest on record is Seth Green's eighty-six feet, while at the last tournament held by the New York State Sportsman's Association seventy feet won the first prize.

When the beginner can cast his fly into his hat, eight times out of ten, at forty feet, he is a fly-fisher, and so far as casting is concerned, a good one.

But let us go back to our tyro, who has now become proficient with the short line, and it is time to lengthen his cast, which is done in this way: After casting, and roving his flies on the surface by zigzag, jerky motions, to the left or right, and without provoking a rise, he pulls off from the reel with the left hand three or four feet of line, and lifting his rod, slowly at first, by a gradually increasing motion lifts the leader and flies, and throws them backward over the left shoulder as before described. The resistance of the flies, before they leave the water, takes the extra length of line from the rod, and it is unfolded behind the angler into a straight line when he casts it forward over the right shoulder.

In this way the line is lengthened, every cast, if necessary, until the maximum or desired distance is reached. But the angler should never let his flies touch the ground behind him, but must so time the movement as to propel the line forward at exactly the right moment to prevent this.

Another caution: The angler should never attempt to cast his flies by main strength, for he will accomplish nothing but confusion and it takes but little force to retrieve or cast the flies, with a well-made, springy and pliant rod. The rod, moreover, must never be carried back over the shoulder to a distance exceeding an angle of 15° of the perpendicular, for the backward throw is really accomplished by the line the rod is in a vertical position, and this might be said, also, to a certain extent in regard to the forward movement or cast proper; for by the time the rod is 15° of the perpendicular in the other direction (in front) the main part of the cast is made, and the second part of the forward movement is only to follow the flies with the point of the rod, to ease their flight as above mentioned; this latter part of the forward cast can no more aid or extend the flight of the flies than "pushing" on the reins can increase the speed of our horse.

I have written in the fewest words possible, and in the simplest manner, endeavored to explain the "mystery" of casting the fly, and I trust the beginner will be able to understand it. It is almost impossible to describe the art clearly and satisfactorily by mere words. One hour with a good fly-fisher will teach the novice more than a hundred written pages. I have purposely omitted many little details of art and of nature, which would only tend to confuse, instead of enlightening the beginner in the noble art of fly-fishing.

Cynthia, Ky., July 2d.

J. A. HENSHALL.

BLACK BASS VS. TROUT.

LAWTONVILLE, Ga., June 22d.

"Stance such a difference there should be 'twixt two such fish."

FINDING in recent issues of *FOREST AND STREAM* the old controversy revived about black bass and trout, and finding also some rather peremptory and unpleasant doubts from Dr. Henshall and other gentlemen concerning former articles written by myself for your paper ("Black Bass" and "Black Bass Fishing"), I must ask you to hear me.

In one of those articles I stated that a black bass proper could not be found in any stream in the South. I now reiterate that statement, and say that I will stand or fall on the scientific evidence of the best informed ichthyologists in the United States, the two fish (*M. salmoides* and *C. araricus*) to be dissected together.

I want this vexed question set at rest. It shall be set at rest, forever. It is true that we have a fish at the South, that is, to trout, which is not a trout, and to those who are not to the "main-born" look like black bass, and bite at all things that his congener will, including, of course, the fly, but which are no more black bass than they are salmon. It is true that they exist side by side in some streams, but in no Southern stream. They can be found in Kentucky and Missouri together, and even in Tennessee, in waters that empty into the Ohio, but not in others. The manner you cross some roaring brook in your pursuit of speckled trout, and say bye to all black bass fishing. There never was a black bass in any stream that empties into the Atlantic south of Maryland. And there never will be.

Dr. Henshall speaks of the striped bass (*J. chrysops*) as never weighing over two pounds. Now this is untrue. I believe I find the largest, through the solicitation of Chas. Hallock, Esq., former editor of *FOREST AND STREAM*, of introducing the fresh water striped bass to the notice of the public. No notice was taken of it, of course, as the articles were written by an obscure man, who cares nothing for what he writes, but something for the interests of scientific ichthyological nomenclature. Something, indeed, for the truth, if it can be found, and for the captive, and for the wild. Nothing to triumph, for I am wrong I earnestly desire to be so.

right. But to our muttons, or, rather, *revenue les poissons*.

I stated in one of my articles that the striped bass (*R. clypeosus*) was often found of the weight of six pounds. I caught one in the Missouri River, twenty-five miles below St. Louis, that weighed nine pounds. I stated these facts in my article, and Dr. Henshall must have read it. They are caught in the Green River, in Kentucky, the Doctor's own State, weighing five pounds. I must infer from these data, that the Doctor, like Herbert, "who never saw a black bass," must have never seen a fresh water striped bass. Fish are amazingly deceitful creatures. I've seen a wary old trout come up to my roach, smell it, and back away gracefully; and, indeed, with a fine look of scorn on his upturned nose. No man shall ever say of me that I endeavored to mislead. I must infer from these data, that I made a mendacious statement wilfully and knowingly. I have tried to do my duty with all the light that is in me; if I have failed, the fault lies not in good intentions; though Byron says that a certain place, unmentionable to ears polite, is paved with bricks made out of good intentions. How that may be, no gentleman has ever yet disputed my bare word. In carrying out the purity of the river, the scent and foam cannot afford the general result.

Dr. Henshall writes with discriminating severity about mingling the names "rock bass," "grass bass," "calico bass," etc., etc., in one chaotic mass. He is right. A rock bass is the "red-eye" of Kentucky, the goggle-eye of the Western States and the rock bass of the North. He is a true bass, notwithstanding his thick, short snout. And he is not a fish of the fish. Under favorable conditions, I have caught them with a minnow, with three strands of C silk, a light bamboo rod and No. 9 salmon trout hook, when they would prove to be game and plucky to the last; those weighing two pounds giving fluky as much trouble to capture as black bass of the same weight. The "raw mouth" perch in Southern waters is his congener. They are purely of a pond, weighing four pounds. The greatest of all writers, Shakespeare, has said: "What's in a name? a rose by any other name would smell just as sweet." Doubtless, too, a fish by any other name would eat just as well. But doubts of a strong inclination toward the beautiful as well as true, incline us to the belief that if we can unite the *utile cum decore* it is our duty to do that, otherwise the hard medical view of the matter is a matter of little moment whether we call our southern fish *M. salmoides*, or *M. pallidus*, or trout; but, as the time has surely come in our natural history that we must be accurate in our nomenclature, we beg to state our belief that our fish ought to be called "green bass." Different in anatomical structure, different in fins, different in times and mode of feeding, our green bass are not black bass, but an entirely different species.

From close observation, I should say that we have at least four varieties of the Southern fish, while I never saw but two kinds of bass, the black and yellow. These, indeed, differ in different streams; being long, slender and elegant in form in some streams, as short, thick and inelegant in others. In some they will not touch rawfish, while in others they will. In some they will catch them. I know streams in which the common angle worm is most killing; again, in others, the fly is the most certain lure.

Hear the conclusion. Misled by a similarity of mouth, and, to some extent, form, many well meaning but mistaken persons call our green bass black bass. Many Southerners call them trout, and trout they will be with them until the end of time. Mark my words. We have no black bass in the South, and no rock bass. We have the green bass, the speckled perch, the true perch (red-fin), jack, raw mouth perch, and, I beg to retract, in one stream that empties into Flint River, the rock bass. This is the list of our game fish, and we positively have no more in fresh water. More anon. Yours fraternally,

ST. CLAIR.

Our correspondent refuses to be convinced against what he conceives to be the evidence of his senses, but we fear that the advocates of the "green bass" are championing a hopeless cause, for the ichthyological experts of the city are against them.

CANADIAN SALMON ANGLING.

NEW YORK, July 12th.

Editor Forest and Stream:—

For the information of any of your readers who may have contemplated a trip to the salmon rivers of Canada, I would say that a friend in St. John writes me that salmon anglers are having a tedious time waiting for the arrival of fish; that some of the lessees of the Nepisiguit have left that river tired out and unsuccessful, and that the New York club are having no better success on their new purchase of fishing grounds on the Metapedia and Resignouit.

The inclosed slip from the Albany *Evening Journal*, from Mr. Dawson, one of the disappointed, shows an equally disappointing experience for the anglers on the Upper St. Lawrence salmon streams, and goes to confirm what I have previously said, viz.: that while one man may one year leave home about the 5th of June, reach a salmon stream, and in the course of a week, make a good score, and be back at his occupation in two or three weeks at a cost of \$150 for traveling expenses, the chances are that in nine years out of ten he will either have to leave the river without killing salmon, or wait from two to five weeks at a cost of three or four times \$150, to say nothing of cost of rods, flies and other appurtenances. Many years' experience has shown me that nothing is more irregular than the arrival of the salmon in the rivers. On some parties waited on the Nepisiguit from the middle of June to the 1st of August. All fishing seasons for unadventurous fish are "unsartin."

I write on this subject because two or three friends of mine (with \$150 each, hardly gotten and scrimped out of small salaries) were crazy to have me lend them my salmon rods and gear in the beginning of this season, so that they might waste their money and scantly two weeks of vacation in a trip to Canada for salmon. They are now glad that I dissuaded them from going, unless they could get away for at least a month.

I have noticed that an early year for salmon is often followed by several late years. No woman is more fickle than salmon in some of their habits.

I was glad to see in the *Harvard* the other day an editorial remonstrating against and ridiculing the habit of some calling themselves anglers of taking trout only three to five inches long. I believe that a law limiting the size of trout, "had in possession dead," to let us say six inches, would be no more "impracticable" (as you call it) than are the game laws generally. Something must be done to stop this wholesale infanticide, or there will soon be no trout even for the present generation. Artificial culture will not make up for the slaughter; it will only stimulate the greed of these pot fishermen (if pot fishermen will please excuse my slandering their comparatively honorable designation) to greater boasts of catching 200 to 300 infant troutlings a day; and some of them printing their detestable exploits. Why in Vermont a man proudly showed me seven fish of these poor little frylings, which didn't weigh three pounds in all. I told him he ought to be tried for child murder. Put the hand of the law, as well as the scorn of all decent anglers, on such fellows.

Mr. Dawson's letter is as follows:—

"QUEBEC, July 8th.—The salmon drought continues. And this is saying that one of the most important factors in the trade of the Province is seriously affected. The salmon season (commercially) opens about the middle of May—the catch gradually increasing from that time on to the close of June, and then rapidly falling off to the 1st of August, when the netting season is practically over. Although there is a run of small fish (from half to two-thirds the average weight) during the last fortnight of August and the first week in September, but few are netted. This season has opened unusually. During the first fortnight, and down to the 15th of June, the catch did not reach one-twentieth of that of last year at any one of the most prolific stations. The count at Tadoussac, up to that time, was only twenty fish, against 500 last year, and very nearly this proportion was returned from Campbelltown, Dalhousie, Miramichi, etc., and from several of the most famous points on the north shore. But this early deficiency was expected to be made up later, and the fishermen continued to draw their seines hopefully, but to no improvement up to the 7th inst., when the nets at several points were taken up in despair.

"In conversing with dealers at Quebec to-day, I gathered a few facts which may be of interest, as showing the extent of the present scarcity of salmon. The last shipped more fish the first four days in June last year than during the entire month this year, and A. Fraser & Co., the largest dealers in the Province, report a like deficiency—their receipts and shipments falling off from millions of pounds to thousands. This firm have been in business for sixteen years, and really instituted a new era in the trade. Up to that time fresh salmon found their way to the city in large quantities, and were sent to almost every considerable town as far West as St. Louis and Chicago. During the season the amount of fish shipped to the States reaches into the millions of pounds, and is really one of the most important and profitable articles of Provincial traffic. Last year Messrs. Fraser & Co. sold their fish, packed in ice, for from five to eight cents a pound, and Quebec and Montreal. This year the price has not time been below twenty cents, and the quotation will be twenty-five cents hereafter. No single fact could show more conclusively the great deficiency of the season.

"In a long conversation with Mr. Fraser, I found him, like the rest of us, quite at sea in regard to the probable cause or causes of this unparalleled deficiency. With others, he thinks that the unusual quantity of ice in the Gulf may have had something to do with it. He believes, however, that the unusual number of sharks that have shown themselves in the vicinity of the best fishing grounds have had their influence. He thinks so from the fact that many of the fish taken in the seines appear to have been bitten. If the sharks do not destroy the salmon they may frighten them back into deep water, and thus prevent them from passing into the rivers. Porpoises have also shown themselves in unusually large numbers, and may also have had their influence in keeping the fish back from their natural haunts. But these are mere conjectures, and the mystery is rendered all the more mysterious from the fact that while the salmon are thus scarce codfish are more abundant than for many years. Why should not the same cause operate upon both fish alike is a question which will open a wide door for discussion. It is a serious problem how far this non-appearance of salmon on their usual spawning grounds will affect the future supply. It is barely possible that the late run will be larger than usual.

"Of course salmon anglers are quite as much disappointed as the net fishers. So far as I know they have had but very poor success thus far, with no cheerful prospect during the fortnight which yet remains of the season. All who are interested in the general subject of fish and fishing will be curious to watch the outcome of this unparalleled barrenness of the usually prolific waters of the famous Gulf."

CANADA—Montreal, July 9th.—At the present time there is good fly-fishing for bass in the Richelieu River near St. Johns, Quebec. The best grounds are in the rapid waters below the ice weirs. Some four pounders have lately been taken, and even one of about twenty. Peter Thuotte, or Duvalle, is a good guide for those waters.

All bull dogs young duck destroyers? Last evening my boatman, Thuotte, observed a young black duck struggling in the water among the reeds, and went to its assistance and found that a large bull frog had seized it by the head, and held on until Thuotte took them both out of the water and killed the frog. Among my catch last evening was a small black frog, who rose to the surface of the water and took the fly.

STANSTEAD.

✓ GOBOUT SALMON ANGLING.—Gobout River, Province Quebec, June 27th.—It may be interesting to some of your readers to know what sportsmen are doing in this locality in the way of salmon fishing. So far the result has been anything but satisfactory for a stream of such reputation as the "Gobout."

There seems to be a scarcity of salmon along the whole of the North shore of the St. Lawrence, as even the net-fishermen have not been doing much up to date. The season has also been much later than usual, and instead of getting salmon here about the 7th of June, as we generally do, the first fish killed was on the 16th, and for

more than a week after the fishing continued poor. With the last spring tides, however, they began to run in and prospects are brighter, and possibly I may have some good scores to send in July.

I give you below a statement of two weeks' fishing, by two rods, as also weight of heaviest fish caught by each. To make up for the want in number, the fish so far are larger than in former years and have averaged several pounds apiece.

Rod No. 1.—Mr. John Manual, of Ottawa. Number of fish, 45; total weight, 714 pounds; largest fish, 29 pounds; smallest fish, 8 pounds.

Rod No. 2.—Mr. David Law, Montreal. Number of fish, 29; total weight, 371 pounds; largest fish, 30 pounds; smallest fish, 8 pounds.

Total catch, 67 fish; weight, 1,085 pounds; average weight, 16 pounds.

NAP. A. COMEAU.

THUNDER BAY TROUT.—Prince Arthur's Landing, Ont., June 21st.—I inclose you a pencil outline of a genuine brook trout caught, unfortunately for sportsmen, in a net in Thunder Bay this A.M. Weight and size marked on paper.

G. T. M.

The fish measured 23½ in. length, 12½ in. girth, and weighed 4 lbs., 15½ oz.

VERMONT—Belvidere Corners, June 30th.—I have been here several days, trout-fishing in the streams running into the "Bog," and can report good success. This town is beautifully situated among the mountains, and a veritable paradise for bear hunters. Mr. Curtis Brown, one of the most prominent men here, is a successful hunter, and has scored his full four dozen black bears, and expects to add several more to that number soon.

STANSTEAD.

TIM POND.—Following is a note from Eustis, Maine, June 21st, addressed to Mr. J. Warren Tuck of this city, who first made known to our readers the attractions of Tim Pond. We fear that the fishing there will not last many seasons if 300 fish in five hours is to be the approved catch:—

I am having some company now; I have twelve men from Sabatis, near Lewiston. Dr. Hill has not yet arrived, but is coming as soon as he can leave his patients. A party of four—Dr. Hill's friends from Biddeford—left here a week ago. They caught on the 11th, in five hours, 300 good-sized trout. They went away feeling good. Evidently the *FOREST AND STREAM* is read by the right class of people, as shown by the result of my notice in that in many ways valuable paper. But my four cabins have not yet been crowded, and Tim Pond seems as full of trout as an English pudding is of plums, and they appear to bite better than they did last year. I have never known game in the woods so plenty. Every party has seen wild deer on their way from my house to Tim Pond. I have a backboard path from the house to the pond. I also have a nice saddle horse for those in ill health. M. W. Mead has recently repaired and refurbished the hotel at Kingfield, where you called last summer. He and his wife know how to keep a neat, clean, home-like hotel. The table is well-furnished with the fresh, sweet products of the country and the viands of the Boston market. It is a first-class place for you or any one to leave your family while at Tim Pond hunting and fishing. Clark's stage runs daily from Farmington to Kingfield on arrival of trains, and Clark will send parties of any size by private teams to my farm house.

KENNEDY SMITH.

WAS HE MIXED?—Camp Kenebago, Indian Rock, June 27th.—*Forest and Stream*.—I was very much surprised on reading my *FOREST AND STREAM* this morning to find the article dated Little Boys Falls, Magalloway River, and signed K. C. Now if K. C. has an idea of giving the Parmachenee Lake another "puff" I should advise him to take the trip he pretends to have taken, and see if he cannot get a better idea of the "Jay of the land," for it is plain to see by any one who acquires the least knowledge of the country, that K. C. never was there. I have been on the Magalloway River, between Lakes Umbagog and Parmachenee, quite a number of times—by boat, on snow shoes and on skates—and it is news to me that the Metallog ponds lay several miles to the east of the river. The first Metallog, as it is called, surely is on the west side, in full view of the river, and the upper end of the east side, ninety miles from the river, but instead of being seen from the river it is not over ten rods, hidden from sight by a high bank. When K. C. gets to Joe Danforth's carry, as he calls it, he gets entirely lost, as John Danforth's camp ("Camp Cariboo") is a strong live miles from this place; and if you have an idea of raising Johnny by shooting I should advise you not to trust to small arms, but to take a cannon along with you. This carry was formerly owned and run by one George Lewis, the Lindsey Pond Camp by Spofford Flint. This year Mr. George Lewis is the proprietor. The camp is half a mile from the river landing and two miles and a half from the lake. The carry team is still kept there, and I suppose the shooting arrangement brings it there just the same as it did before K. C. was there; though the magazine part of it is a sled. John Danforth may be a good fisherman, but he is not a good writer. When K. C. was here, and also Mr. Fickett, Danforth's cook, when my paper was received, and I read the article to them. They were very much surprised, and said they were very sure that they knew every man who had been to the lake this season, and they were sure that the guide (Amasa Ward) K. C. says was with him had not been there. George Lewis is within two miles of Little Boys Falls, and in going to them from the lake you have to pass within one-fourth of a mile of it. B. and F. report the travel to the lake light this spring, and the fishing good, and as for nets being used they say it is no such thing. If K. C. should have an idea of giving the Parmachenee region another "going over" about being overrun with fishermen and netters, he had better read the article in *Forest and Stream*, and published in *FOREST AND STREAM* last winter. He could get some ideas there that would be for his advantage.

F. C. BARKER.

✓ ST. LAWRENCE BASS FISHING.—New York, July 12th.—I have frequently been puzzled to know where to spend the summer, and, at the same time, have the pleasure of

good fishing. Through the influence of a friend I was induced to go to Clayton, N. Y., terminus of Ulster and Black River Railroad, last season, and, never having had the pleasure of good fishing before, I was surprised when my genial oarsman, Mr. "Sid" Griffin, informed me that one person could take in from 100 to 300 pounds of black bass in a day, from June 15th to Sept. 15th. I did not arrive until still-fishing season was over, so I devoted my time to trolling for pickerel, at which sport I passed many pleasant days, always coming back to the Hubbard House with a box full.

There are 1,800 islands in all, extending a distance of forty miles. Some of these islands are very beautiful, being nearly all wooded; and several in the vicinity of Clayton have an elevation of 200 feet to 800 feet above water level. A great many islands are owned by Eastern men of wealth, who have built elegant summer residences where they take their families the hot sultry weather. There is one island which can be bought for nominal sum, which contains the most natural fish pond imaginable, and, with a trifling expense, it could be so arranged that a portion of the St. Lawrence would flow directly through the pond. It is large enough for 10,000 bass, and one could stand on the rocks extending into the river and catch the fish and place them in the pond without any difficulty. I will join a party of five or six young gentlemen, who feel disposed, and purchase the island and fit it up to suit our pleasure and convenience. To prove more conclusively the sport one may enjoy, I give below a statement furnished me of fish caught by Ex-Speaker T. G. Alvord of New York.

From June 7th to Sept. 3d, 1878, sixty days' fishing:—
 Black Bass.....2,160 Rock Bass.....308
 Pickerel.....288 Eels.....12
 Porgies.....434 Bull-Heads.....5
 Total.....4,192
 One year's average, weighed 25 lbs.
 Year of 1879, T. G. Alvord and family:—
 Black Bass.....2,330 Pickerel.....373
 Rock Bass.....1,762 Chub.....179
 Porgies.....360 All other kinds.....35
 Total.....5,624
 Greatest day, July 17th, 1879. Fish with fly, 353.

ZEMTH.

ROCHESTER, N. Y., July 6th.—Black bass fishing at Nine Mile Point, in Lake Ontario, (a fourteen mile drive from the city), is unsurpassed just now. Two gentlemen were fly-fishing there a few days ago, and caught over a hundred good fish. The fishing is good only when the wind is blowing toward shore.

E. R.

BLACK BASS.—Tent "Hancock," Banks of the Delaware River, July 4th.—Will you confer a favor on the disciples of "Ike Walton" and more particularly to the lovers of black bass angling, and let them know that there is such a place as Narrowsburg, on the Erie Railroad, about one hundred and twenty miles from New York, on the Delaware River, where there is no finer fishing in the Northern States. Black bass are not only in abundance, but are perfection, both in regard to weight and flavor; none of the soft flabby kind that are in ponds. The river is only three hundred feet from the depot, with grassy slopes on both sides shaded by some of the most majestic sycamores in the country. Talk about sport! Just fly-joint Ruf, and you will be able to go with me for a day's fishing excursion, and I will guarantee that no more pleasant company, better fishing, nor finer bass, can be found anywhere. The village is one of the old fashioned kind. Pleasant and comfortable, with just enough of modern improvements of the outside world to leave one nothing to wish for but for it to continue. There is but one hostlerie of ye olden time, kept by Murray Brothers, where I can promise will give all one can desire, both of comfort and of sport. Take a day off and go up there, and if you are not satisfied, send your bill to me and I will settle.

WILLOUGHBY.

NEW JERSEY.—Riverside House, Forked River, July 9th.—We are now having fine weakfish, and during the past week quite a number of New York gentlemen have been enjoying the sport at this popular resort, among whom were Messrs. E. C. Fox, Thos. A. T. Knapp, A. G. Walker, G. Lewis King, F. W. Mead, S. T. Knapp, and a number of families. The average catch per boat has been from 25 to 40 fish, weighing from 1½ to 4 pounds each. The Riverside House being situated directly on the water, and in the immediate vicinity of the best fishing grounds of Barnegat Bay, offers superior inducements to families or gentlemen fond of the sports to be found in our bays. House open all the year.

A. B.

July 12th.—One of our yachts, the *Mattie*, with Mr. and Mrs. E. C. Fox, Mr. and Mrs. T. H. Spaulding and Mr. J. L. Kirkland, has just come in with eighty-nine fine weakfish, the largest catch of the season so far. They were caught in the bay near the Riverside House. The ladies in the party catching nearly half of them. We look for fine fishing from this time forward.

A. B.

FLY-CASTING.—Canton, N. Y., July 5th.—Reading your article on fly-casting in last week's FOREST AND STREAM reminded me of the interest taken in that part of the State shoot at Rochester, last season. I offered seat, fly and fixtures, worth about sixty dollars, as a prize for fly-casting, open only to those who had never won a first prize at any State contest. The prize committee wrote me, requesting me to allow them to place it where they pleased, saying they had already secured prizes for fly-casting. I consented, and the result was such that I do not care ever to give away another.

J. H. RUSHTON.

A RECOVERED HOOK.—Clinton, Conn., July 5th.—I went out fishing June 3d, using worms for bait, two hooks on a lead leader, hooks three feet apart. I was fishing in a deep pool when I snagged my hook, evidently catching on a submerged log. After trying to break it, I concluded to break it. I did so, breaking the leader. The second hook was joined on, leaving both hooks. Was out again the 22d, and happened at the same pool. At the first cast I took a nice pump trout, fully one pound in weight. Imagine my surprise on unhooking him to find a hook well down in his stomach and my three feet of broken leader hanging from his mouth. When I lost the hook it was a large stout wire, but when I took it from the fish the wire was not larger than a small fly

hook, and would easily powder up between thumb and finger like black lead. I forgot to say that there was but one hook on the recovered leader. The upper one is probably sticking in the log. It was put on with a loop, and a pull by the fish easily drew the leader through. The fish was plump and gamy, and appeared to be none the worse for having had a hook in his stomach nineteen days. From its appearance the hook would have been entirely consumed in ten more days.

THE INTERNATIONAL FISHERY EXHIBITION AT BERLIN.

NO. VIII.—THE SEX OF SEVERAL EELS.

TODAY, June 18th, there was a gathering of a few men, who came to the President's room, by invitation, to witness the dissection of several alleged male eels which had been on exhibition as such for some time, and to determine the fact if it were possible to distinguish the sexes with certainty while the fish were still alive and unopened, as asserted by Prof. S. Jacoby and Cattie. Dr. Hermes, Director of the Berlin Aquarium, furnished the eels from the stock which has before been alluded to in these columns, and which were sent him, as male eels, from Trieste by Jacoby himself, and the dissection was to be conducted by no less a person than Dr. Virchow, the celebrated naturalist and one of the first anatomists of the world. The spectators were Herr von Behr, President Deutschen Fischerei Verein; Dr. Hermes; Herr Haack, Director of the Imperial Fish-cultural Establishment at Hueningen; Mr. Fred Mather, of the United States Fish Commission; Prof. Torgioni Tozzetti, of Italy; Herr von dem Borne, of Bernauchen, and one or two others, Prof. Goode being absent in Dresden.

Dr. Hermes stated that he had received the eels, male and female, with full directions how to distinguish the sexes, but that it was very difficult, and he would try to select them to the best of his ability, and taking one from the glass tank, he said: "Here is a male." The eel was thirty-eight and one-half centimeters long, and was laid on its back, where it was held in position by an awl through its jaws, while Dr. Virchow opened its abdomen with the scissors, and all watched the verdict which proved that the diagnosis was correct, a verdict verified by all present who were familiar with the subject. No. 2 was pronounced to be a female, but, on opening, there was a doubt on account of the season and the smallness of the specimen, the eel spawning in the fall and winter months, and therefore the eggs, if there were any, were not well advanced by the middle of June, or it might be possible that if this was a female, the eggs would not be ready to fill in a year or two; anyhow it was evident that whatever it might be it was not a male. No. 3 was also called a female, and it proved to be one, while No. 4, and last, was a male of 43 centimeters.

Dr. Hermes stated that the head of the male had a greater vertical thickness, the eye was smaller and the snout narrower, but that although he had been successful in the four cases above cited he did not feel authorized in saying that the rule was infallible. The sperm cells were then placed under the microscope and showed, with a power of about 250, very like ordinary testicle when in mass, but when spread out it was plain that the cells were sperm cells, and not fatty ones, although no spermatozoa were visible. A portion of the tissue of the doubtful one, No. 2, showed nothing but fat cells, the irregular grouping of their angular forms differing widely from the regular arrangement of the eggs which were seen depending like long clusters from a central cord with an artery, or rather a capillary, beside it, and thus ended the examination. Dr. Hermes, of course, was more confident after his successes, while the skeptics intimated that to make it certain that the sexes could be distinguished without dissection would require 400 eels to be examined instead of four. The American representative in replying to a question as to the possibility of thus determining the sexes, said: "It may be so, or it may not; the alleged differences in outward appearance are not strong enough for me to separate them with any certainty, and it is often hard to distinguish the sexes of brook trout in the summer." Herr von Behr then asked Mr. Mather if he would accept a few male eels for Professor Baird, and an arrangement was made whereby some will be brought to America when Professor Goode and staff return.

In this connection the following translation from the *Zoologischer Anzeiger** of June 7th may prove interesting:—

THE GENITAL ORGANS OF THE MALE EEL AND SEXUAL DISTINCTIONS.

By S. Th. Cattie. Phil. Nat. Cand., Dozent an der Realschule zu Arnheim, (Holland.)

As is well known, Darwin¹ has confirmed the experience of Gunther that female fishes are larger than males.

*The *Zoologischer Anzeiger* herausgegeben von Prof. J. Victor Carus, in Leipzig.

¹Charles Darwin. Die Abstammung des Menschen, übersetzt von C. H. Thell, p. 6 u. f.

Perhaps it may be that Syrski, in the year 1874, has followed this rule in seeking the small eels in order to find the males, at which time he had the good fortune to find an organ which is now generally called the "Syrski organ," or the male organ of generation.³ Dareste afterward found this organ in a variety of eel known in France as *Anguilla pimperneau*, and Professor A. S. Packard has seen the living spermatozoa in the male *Anguilla borealis*.⁴ The male eel being only about 430 m. m. long (17 inches), we need not wonder that it is found so seldom, as the young eels go in the deep water where the organs of reproduction are soon developed (six to eight weeks), and then they are ready for the spawning season, when the old eels, male and female, go to the bottom. Failing then to find the spermatozoa we must rely upon the cells of the testicle and the general histological structure of the Syrski organs to bring us the evidence of the sex.

By an examination of small eels it may be found that some have a rather broad ribbon fastened by the edge by a small fold of the skin to the swimming bladder, while the other edge is free. This ribbon goes from the liver to beyond the anal opening, and is covered with thousands of fat cells. A lobe-shaped organ, which consists of fat cells, covers the posterior portion of the intestinal canal and the ovary.⁵ The eggs which I found in a specimen of twenty to fifty centimeters in length were of 0.75 millimeters. Treated with vinegar and ammoniated carmine there was a grand nucleus and also a nucleolus to be seen.

In other specimens fat-lobes were found, but not the broad ribbon; but in the same situation are to be found along the back part and also through folds of the inside webs, and joined to the swimming bladder a very thin transparent strip of the liver which extends behind the anal opening. This strip is furnished with bow-formed appendages, or cuts, which are 0.75 m. m. in length and 0.05 m. m. in depth, with the convex portion hanging downward into the abdominal cavity. By the side of these Syrski's, or lobe-formed organs, a fine canal is found, whose duty it is to pass the seed out (sperm duct), and this shows well with cells from their bases with carmine. The histological structure has been examined by Brend, who found a network of inside webs (Balken) similar to the structure of the uripre testicles of fishes; a similar view may be observed in my own preparations in cases where the smaller specimens have been examined.

Among the larger eels which I have observed with the lobe-organs (445 m. m.) I found tube-formed cords which were filled with cells from their bases to the tops of the bow-formed cuts, and, after treating with the many different reagents, I never succeeded in distinguishing with perfect clearness the nucleus. My observations were conducted with Obj. K. Imm. Zeiss, Oc. 2 and 3.

After Jacoby,⁷ von Siebold has seen such cell formations (Zellenstränge) in a specimen of an eel where the lobes were strongly defined. These cells showed a decided similarity to the sperm-cells in the testicle, and I am of the opinion that mine are the same. In no specimens which have come under my notice have there been any spermatozoa. Before I began my examinations on the histology of the testicle lobes, I considered the question whether beside the mentioned differences in the size and length there might not also be other outside signs whereby the sex might be distinguished. On this point Jacoby says:—

1. "One decisive point is the broader jaw of the females, in contradistinction to the narrow and tapering ones of the males, or ones with the 'lobe organ' present."
2. "The lighter color of the females, which is of a greenish tint on the back, shading to a yellow on the belly, while the others are of a dark green, often an intense black, always with more of a metallic luster on the sides, and which commonly show a white belly."
3. "An important outside sign is the difference in the length of the dorsal fin, the females having it decidedly higher and broader than the fish with the lobe organs."
4. "A sign not always certain is the larger eyes of the males, while those with particularly small eyes are most generally females. Eels, with 'Syrski's organs,' have very large eyes; but also there are large-eyed females to be found."

Jacoby gives a few measurements as illustrations of his statements, from the great number of eels measured by him from which the correctness of his conclusions can be seen; but, I am inclined to consider some of his signs overestimated, while others, not less important, have been overlooked by him. From a great number of eels, measured by myself, I am enabled to give the following:—

	Length of body.	Breadth of the snout between the nasal tubules.	Breadth of the eyes between the snout.	Length of the mouth from the eye to the end of the eye.	Thickness of the head through the eyes.	Length of head from the eye to the end of the eye.	Height of dorsal fin.

7. Dr. L. Jacoby. Der Fischfang in der Lagune von Commachio.

From this it may be seen that all females have a higher dorsal fin than the males of the same length of body, and probably with age this will not increase. The observation that eels with the lobe organs are large-eyed seems to me to be wanting in evidence, and not borne out by observation, but my examinations have led me to lay greater stress upon the broader mouth of the females as opposed to the small and tapering mouth of the male; not only is the mouth of the female broader, but it is even a great deal more flattened and has more projecting *(protruded)* eyes, a fact to which I had my attention particularly drawn, and which I did not find in the males. The mouth or upper jaw of the males is more convex. (See cut.)

If the width or narrowness of the dorsal fin, and particularly the broad flattened mouth of the females, with

their projecting eyes, together with the small convex mouth of the males be closely observed, then, with some practice, it enables one to distinguish the sexes with very little trouble.

On an average I have found among twenty eels, of from 300 to 450 millimeters in length, which I received from the fishermen, five eels with lobe organs, at least, twenty-five per cent, but when I began to notice the two before mentioned prominent marks as the dorsal fin and the mouth, and searched for male eels especially, then I found from eighty to ninety per cent. of the eels so chosen to be furnished with the "Sydney organ," but it has been impossible for me to find any rule whereby to distinguish the sexes by the color. All of those, both male and female, which I examined had a white belly shading into green, with metallic reflections upon the sides.

Arnhem, April 3d.

And thus stands the vexed question at present, your correspondent merely giving the facts and leaving your readers to draw their own inferences, and prove or disprove them by experiment and observation.

JACK.

"A GREAT, ugly, awkward, yellow dog—a yellow dog unmistakably," I said, with scorn, for I had somehow acquired the notion that a yellow dog was the embodiment of meanness.

"He is well-shaped, and has a handsome coat," said my brother.

I could but acknowledge that as I noticed his broad, full chest, litho back and supple limbs; but he was a yellow dog, though his skin was smooth and bright.

"part Newfoundland," and he spread the webbed toes for my inspection, while the dog modestly winked and blinked his big eyes and slowly withdrew the paw as if unwilling to assert claims to merit on that score.

"Good dog! good old Jack!" said my brother, stroking his ears. "See there—what do you say to those eyes?" he continued to me, as, with a hand under the dog's closed jaws, he brought his eyes full in view.

Large, soft and bright they were, as a gazelle's; and with such an appealing, intense, human look I might as well call it, that I was conquered. "Good—fine," I said, laughing. "He'll do. The eyes are all right. But he isn't Prince."

"And he's a yellow dog," was the rejoinder, coupled with a quizzical grimace as the dog laid himself at my feet.

"Yes, He's not Prince. Handsome is that handsome does, though," I returned, rather pleased at this attention of the animal. Now Prince was a beauty, a splendid St. Bernard, with shining, curly, black hair—and such lovely, drooping ears—such a graceful curve to his long, full tail. But following his predilections, he had wrought so much mischief—excavated, completely uprooting young trees, and finally nearly undermining the barn, that he had been banished to the mountains. So Jack reigned in his stead.

And Jack's office as a watch dog was to bark—to bark, merely. He understood this, and performed the duty faithfully; his honorous voice could be heard of a clear half a mile away. Knew was his scent and he held his ear—woe to the mercenary who came within his range; that bark sent terror through every fiber of his being. Yet a more gentle, affectionate creature never was. And his sagacity in discriminating between welcome and unwelcome visitors on the premises was remarkable. He seemed to know intuitively who were friends of the family, and who were his enemy. Indeed, and as if proud of the protection he could grant them.

Docile, respectful and obedient he was, except in one particular. Being especially fond of accompanying any of the family to town, where we frequently went, he was often allowed to trot alongside of Major, the old roan, as he drove the buggy or open wagon, and sometimes was indulged with a seat in the back of the vehicle. And there were times when his fondness for this reputation got the better of his principles, and his duty as the home guard was neglected. He would watch wistfully

all preparations for the jaunt to town, and, if not invited to follow, with drooping ears would sink off to his kennel and crouch in its doorway with his head between his paws till the buggy was out of sight. Then, with the instincts of a hound, he was on the track, keeping a respectful distance in the rear till the vehicle had nearly reached its destination, when he would come forward, with lolling tongue and panting sides, and look up with such a pitiful look in his great eyes we hadn't the heart to send him back. An "Oh, Jack! how could you?" would make him hang his head sheepishly for an instant, only to come it again with a gentle, suppressed bark, as much as to say, "Forgive me!"—the bark, increasing louder and louder as he circled round and round old Major and the buggy. Finding he was not ordered home he would file into place beside the horse and trot complacently all the rest of the way. One very warm day I was going to take tea with a friend in town. The buggy needed repairing; I must go in the open wagon. I took an umbrella to shield my head from the sun. Jack watched me so narrowly that when ready to start I said "Can't have you, Jack. Go to your house and be a good dog." He slunk away much disappointed, evidently. I had my fears, and looked round repeatedly, meaning to send him back on his first appearance; and it was no easy thing to turn my head, with the umbrella in one hand and the reins in the other. I began to think how easily and good he was to take his disappointment so quietly, when, all at once, he appeared beside Major. I instantly ordered him home—repeated the order before he obeyed; then drove on more rapidly—for a moment, perhaps, and Jack dashed by me like a flash and wheeled himself in front of the horse, an entirely new maneuver, but one which he afterward repeated, only in exactly reverse. Again I commanded him, return. He obeyed. Suspicious that it was only a feint, I again turned and saw the old fellow, only a few feet in the rear, seated demurely on the roadside, watching me. My command was sternly reiterated. He sped homeward, to all appearance, like lightning. But in less than a minute came a bounce in the back of the wagon, and before I could turn my head he was at my side, the sweep of his ears indicating that he was ready to start at once. A little squeal of joy, the lapping of his tongue on my rein-land, and the victory was won—he had his ride to town, and in front of the wagon—an honor never before attained. A few short, sharp barks, as if he were chuckling over his *finesse*, and a roguski pat of his paw upon my knee, showed that he thought it a good joke. It was vain to say, "Naughty dog! bad Jack!" He didn't believe it, he just winked in my face with the utmost gravity, gave a few complacent raps with his tail on the floor of the wagon, then drew himself up with the dignity of a judge, and so held himself the rest of the journey. A most amusing spectacle, a comical group, we were—this big yellow dog and red-faced damsel (the worry about Jack had sent every drop of blood into my face) under a blue cotton umbrella—judging from the nods and grins of everybody we met.

The next week I had an engagement about half a mile distant—must ride, but did not want Jack—felt determined he should not go, so chained him and made him comfortable, with food and drink, in his kennel. He uttered such cries of distress before I started that I unfashioned the chain and contented myself with talking seriously with him about staying in the house. He seemed to understand and very demurely settled himself for a nap.

A few choice plants, of which I was not a little proud, stood on the piazza near by. Jack, blinking his great eyes solemnly, often watched me as I watered and tended these plants morning and evening. An elegant cactus (*Cereus grandiflorus*) was in bloom. It was my pet, and Jack knew it, I firmly believe. Little did I think that I was seeing its beauty for the last time as I passed along to give Jack a farewell pat on his neck, and then with a "Good old doggie!" hurried into the buggy.

Jack followed the team with his eyes till it was out of sight, listened to the rumbling of the wheel till it was lost in the distance, and then deliberately walked up my case, and, taking its stalk in his great jaws, drew the plant from its pot, and, with a low growl, completed its destruction by stamping on both leaves and blossoms, the large crimson flowers receiving the most of his anger. This over, he returned quietly to his kennel and composed himself to sleep. My mother, at a window near, saw the whole, but could not prevent it, it was done so quickly.

When I returned, he hurried out of sight, and it was several days before he would answer my kindest call. I believe he was heartily ashamed, and regretted that he had ever given way to his anger, for he soon began to show me many little kind attentions—as if in reparation. This was the first and the only occasion on which he was ever known to express a bad temper to any of the family. And he was not a destructive dog—did not tear and break things like his predecessor; neither did he steal and hide—he was no thief.

After this sad affair he was very gallant toward me. If I went out of an evening, he was sure to follow, as my guard. If, as it sometimes happened, I was belated in town, and had a lonely walk home, I was sure to meet Jack coming to escort me. And it frequently happened that when I was in town of an evening, he would slip away from home, and go from one place to another till he found me.

At last, my father moved into town, and Jack accompanied us. The unusual stir and noise kept him continually barking, especially at night, when the lightest footfall or car wheel was enough to start him on a rondeau to the neighborhood, to say nothing of the discomfort it caused us. We soon came to the conclusion that the country was his proper place. A purchaser was readily found, for Jack bore a good character. The new owner was an excellent, kind-hearted man—no other should have a good old creature. Yet was hard to part with him, except on the small new ground, and the look in those limpid brown eyes, as his collar was taken off, and the leather strap adjusted by which his new master took him into possession, and the stoical silence in which he received our fearful good byes went to my heart; he seemed struck dumb with amazement—was it grief at our base ingratitude for his untiring fidelity?

But he took kindly to his new home—soon became very fond of his new master, with whom he led a useful and a happy life for over a year, making good friends by day among the customers of the grocery store, guarding by night the barn occupied by his master's horses and cattle.

One night Jack's master was roused from sleep by a furious bark. At first he supposed it to be his usual salute to a passing traveler. But the bark was repeated—continued—with increasing vehemence. The man arose and hastily dressed. Passing out of doors he saw nothing unusual. Still the barking went on. He unlocked the barn door—flames and smoke burst forth; the barn was on fire. He ran around to the rear door and set horses and cattle free. The faithful dog, confined to an inner room, kept up his hoarse bark amid stifling smoke. The neighborhood was quickly alarmed, a crowd gathered, but no one dared attempt the rescue of the dog through that scorching, blinding fire. The barking went on, but fainter and fainter, till at last it ceased—nothing could be heard save the crackling and hissing of the blaze. When the flames were subdued his remains were found just where his master had left him the previous evening. The faithful creature had yielded his life a sacrifice to duty.

Dear good old Jack! He was only a *yellow dog*, but in life he had many admiring friends, in death many sincere mourners. It is my faith that he has gone "where the good dogs go." Shall we presume to say that the feeling, the instinct, the reason—call it what we will or may—that prompted such honest, faithful service may not be as enduring as our own feelings, our own consciousness?

ANNE G. HALE.

IMPORTED ENGLISH FOX-HOUNDS.

WE visited the steamer *Nevala* on her arrival in this city on Friday last for the purpose of having a look at three English fox-hound emigrants that were on board, on their way to a new home in Kentucky. These hounds, a dog and two bitches, were consigned to the well-known forwarding agent, Mr. A. E. Goldsmith, of 58 Wall street, and were reshipped by him to their new owner, Mr. Henry Bishop, Louisville, Ky. This trio is the most typical one of its class that has yet been imported by an American us. The dogs were selected for Mr. Bishop by Mr. George Lowe, as the best to be had in England. No dog has for so long a time been carefully bred, reared and trained in large numbers as the English fox-hound, and in many fox-hound kennels careful records have been kept of the breeding of every litter for at least one hundred and fifty years. At present there are one hundred and sixty-eight fox-hound packs in the United Kingdom, one hundred and forty belonging to England, nineteen to Ireland and nine to Scotland. Two of the new arrivals, a dog and a bitch, are from the "Grove" pack, of which, Viscount Galway, M. P., is master, and the other bitch from the famous "Dartmoor" pack, Admiral G. Parker, master. The following are the sires and dams, with some brief particulars of these splendid animals:—

Gratitude, bitch from "The Dartmoor," by Lord Yarborough's Glider out of Sunbeam, who by Royal, Jr., a great winner and said to be the best looking fox-hound ever bred. Gratitude has been bred to Chorister, by the "Meynell" Cerberus. She is a superb young bitch.

Bauble, bitch from "The Grove," by the "Meynell" Linkboy out of Beauty, by the "Bounty" by the "Rallywood." Bounty is grand-daughter of Brucetel, the dam of the celebrated Barrister and Furrier. She is beautiful in every point, with great muscular development.

Fairplay, dog from "The Grove," by Plunder out of Florence. This young dog combines the blood of "The Belvoir" Grinder, Drake's Duster and Furrier, the three most celebrated dogs in the Fox Hound Stud Book. He is a wonderfully fine dog and can well stand as a model for all breeders.

These are by far the most perfect hounds we have ever seen in this country. In despite of a long and somewhat rough voyage, the dogs arrived in fine condition, although showing signs of having been in the care of a too generous cook. They were much admired during their brief stay in this city by a number of *philopetres*, and we congratulate Mr. Bishop upon the success of his timely purchase.

SETTERS as "SITTERS."—Mr. Jno. M. Tracy, of St. Louis, Mo., is engaged at present in painting a picture of Dr. J. B. C. Lucas red Irish setters, Erin and Biddy.

IMPORTED LAVERACK ALDERSHOTT.—In last week's issue we published a letter from Mr. Erdman A. Horzberg, of Brooklyn, N. Y. Through an error his name was omitted; we are now glad to rectify the mistake, and call attention to the fact that Mr. Herzberg is the happy possessor of Aldershott.

IMPORTED BLACK AND TAN SETTER.—Mr. William Stanley, of Englewood, N. J., has recently received from Lord Minto's Kennels, in Scotland, a magnificent two year old black and tan setter dog. The dog, "Victor," was sired by Douglas, the well known "Fallow gait-maker," and now is in the hands of Mr. Forry, of Palmer, Mass., being trained.

TORONTO DOG SHOW.—The rules and prize lists of this show can be had free on applying to Mr. A. D. Stewart, of Osage Hall, Toronto.

KENNEL NOTES.

BRED.—Ruth-Count Dan.—Mr. A. H. Moore's imported English setter bitch Ruth to his Count Dan. *Bosnia-Aldershott*, Mr. E. A. Herzberg's Boska (Kate II.-Prize of the Borden) to his pure Laverack Aldershott.

NAMES CLAIMED.—Earl.—Mr. T. Weaver, of Danville, Pa., claims the name of Earl for his liver and white setter dog, whelped Dec. 1879, out of M. Goldsmith's Polly, sired by Brooks' Bismarck, out of Chas. Launings Sherwood's Gyn, sired by J. Buckley's imported dog, Dudley, from Earl Dudley's kennels. *Stoughton and Endora*.—Mr. M. P. McKoon, of Franklin, Delaware County, N. Y., claims the names of Stoughton and Endora for cocker spaniel dog and bitch puppies reserved out of his beauty by his captain.

WHEELS.—*Rose Bradwardine.*—Mr. Fred. N. Hall's, of this city, red setter bitch Rose Bradwardine (Bitch-Bess) whelped, July 23, eight puppies, four dogs and four bitches, by Mr. A. R. Gendro's Bover 11. *Belle.*—Mr. Wm Stanley's (135 Broadway) champion black and tan setter bitch Belle whelped, June 29th, three puppies, all dogs, by Toledo Kennel Club's Grouse. *Gussie.*—Mr. W. H. Pierce's (Courtlandt Kennels, Peekskill, N. Y.) red Irish setter bitch Gussie (own sister to Lincoln and Hollar's Arlington), whelped July 9th, 1880, fourteen puppies, eleven dogs and three bitches, by champion lory O'Moro.

SALE.—*Berkley-Rhine, whelp.*—Mr. Thos. A. Addison, of Chelsea, Mass., has sold to Mr. Alfred H. Bartlett, of Boston, a bitch puppy out of Rhine by Berkley.

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

NEW YORK ARCHERY CLUB.—*New York, July 12th.*—This club has commenced to shoot again in the Central Park, and it is hoped the weather may be such as to allow them to continue regularly. A match will be shot with the Multnomah Archers, Portland, Oregon, Friday, July 16th, at the American and Columbia roads, the team consisting of four gentlemen and two ladies. The Multnomah Archers have already shot, and we will publish the score of both teams next week.

The club has accepted a challenge from the North Side Archery Club, of Chicago, to shoot the York Round with four gentlemen. The time is not decided upon, but due notice will be given.

At the last meeting, the New York Club issued a challenge to the Nottingham Club, of Elizabeth, and the Brooklyn Club, to shoot with teams of four gentlemen and two ladies at the American and Columbia roads. Notice of the matches will be given hereafter.

JAS. W. AUSTIN, Jr., Secretary.

NEW YORK ARCHERY CLUB.—At the last meeting of this club it received challenges from the North Side Club, of Chicago, and the Multnomah Archers, of Portland, Oregon. It is also issued a challenge to the Brooklyn Archery Club, and Nottingham Archers, of Elizabeth. These matches all depend upon the state of the weather and the will of the Park Commissioners, but the members are in hopes of being able to resume practice some time this week.

CONSECUTIVE YORK ROUNDS.—M. Granger Smith, of the North Side Archery Club, Chicago, made the following record of fine shooting:—

Date.	22 Arrows 100 Yards.		45 Arrows 80 Yards.		24 Arrows 60 Yards.		Total Hits.	Total Score.
	Hits.	Score.	Hits.	Score.	Hits.	Score.		
June 15.....	35	137	25	109	16	76	76	318
June 16.....	10	121	35	147	22	114	68	332
June 18.....	28	112	31	111	23	105	81	323
June 19.....	24	88	32	122	19	69	70	286
June 20.....	14	108	27	147	19	69	70	324
June 23.....	30	108	28	110	20	82	78	319
June 28.....	28	120	29	135	19	73	76	316
June 30.....	14	120	26	121	21	83	61	347
Totals.....	234	924	233	1,005	158	685	623	2,614

Average total shots, 78. Average total score, 337.

All of these were in private practice, with the exception of those of June 18th and 19th, which were the winning scores in club shoots, where to save time shooting was simultaneous, a great disadvantage at sixty yards. The first 100-yard score is Mr. Smith's at that distance, and the total score of 332 his best to date.

BRITISH ARCHERS.—*July 7th.*—Below please find score made yesterday, July 7th, in a match with the North Side Archery Club, of Chicago; single York Round, teams of four. This is the first time our team have shot the York Round together. Strong cross wind at one hundred yards no sighting shots.—

PUBLISHERS' DEPARTMENT.

HUNDREDS OF LADIES, who have been unable to attend their duties owing to periodical sicknesses, have found Warner's Safe Kidney and Liver Cure a real "friend in need." Being a purely vegetable compound, and containing all the elements of safety as well as those of power, it has become universally popular. During the summer, especially, it is a certain preventive for the numerous Kidney, Liver and Urinary troubles incident to the season. All druggists sell it, and none, except those in perfect health, can afford to be without it.

Answers to Correspondents.

No notice taken of Anonymous Communications.

F. G.—The guns are dangerous, and you will do well to let them alone.

CRICKETER. St. Louis, Mo.—The Hamilton C. C. defeated the Young Americas at Stenton, Philadelphia, last year, by ten wickets.

J. A. McC. Hudson, Wis.—The guns are of good grade. You may rely on the representations of Messrs. Wm. Head & Son. The note book is no longer in the market.

S. H. Portland, Me.—For trout fry for stocking purposes, apply to the Fish Commissioners of your State, E. M. Stillwell, of Bangor, or Everett Smith, of Portland.

C. F. P. Moodus, Conn.—Each of the two guns mentioned is a good arm. If you have occasion to use the rifle barrel get that one; if not, it is simply a matter of choice.

B. P. Philadelphia, Pa.—Good food for pigeons is screenings, which can be obtained at any grain store. If the birds are penned up let them have plenty of sand or fine gravel.

W. P. D. Lockport, N. Y.—The tar paper on your dog's kennel will not affect the health of your dog. Change the bedding frequently and wash your dog with Spratt's soap.

HAMPTON. West Hampton, L. I.—For the information you require, you had better write to headquarters. A letter addressed to Mr. C. H. Turner, St. Louis Kennel Club, St. Louis, Mo., will receive a prompt reply.

O. C. O. Brenham, Texas.—Wash your dog's eyes with lukewarm water, and dust into the eye, twice a day, the following fine eye powder: Calomel, one drachm; sugar, one and a half drachms. This will go far to remove the filmy whiteness over it.

A. R. W. New York.—A book containing the Eastern Field Trial Club rules is being published; it will send you a copy as soon as we receive one. In Stonehenge's "Dogs of the British Islands" there is a chapter devoted to judging at field trials, with a scale of points.

M. E. H. Hancock, N. Y.—I am going to the Thousand Islands; what tackle should I take with me? What is the principal fishing there? Ans. Bass and muskallunge fishing. See extended sketch in our issue of July 1st, page 429, of present volume. See our angling columns to-day.

LUTULUS. Fort Clarke, Texas.—1. The firm is not reliable. 2. We should not advise you to buy the gun. 3. The firms who advertise in the FOREST AND STREAM may be relied upon. You can safely deal with them. 4. The Shelton auxiliary rifle barrel used in our columns is satisfactory. 5. A choke bored gun shoots closer than one not choked, other things being equal. 6. This he should be true for you.

J. H. M. East Saginaw, Mich.—Give your dog a large tablespoon full of castor oil; fast him then for twenty-four hours. Administer twenty drops of oil of male-shield fern; half hour later repeat dose, and ten minutes after give large dose of oil. The dog should be kept on good sound cooked food, and have daily, for about a week, a pill containing five grains each of gentian, quassia and sulphate of iron made with treacle. Write result.

T. R. L. Abington, Mass.—The locality about Parsboro, Nova Scotia, is an excellent one for game. The open seasons for game in that Province are: Moose and caribou, Sept. 15th to Jan. 31st; hares or rabbits, Oct. 1st to March 15th; other and mink, Nov. 1st to May 1st; grouse and partridge, Oct. 1st to Jan. 1st; woodcock, snipe and teal, Aug. 1st to March 1st; blue-winged duck, Aug. 1st to April 1st. Non-residents must take out a license; fee \$40.

AP-WB-CUM-NA. Upper Marie, Montana.—I have two Antelope, a doe and buck, which I am raising for myself, but could get plenty more to raise if there is any market for them. What do you think I could realize on a pair in New York when they are six months old? I also have a male big horn sheep one year old; what do you think it worth? Ans. Antelope are worth \$75 a pair; Rocky Mountain sheep \$150 each females; delivered free of all expenses in good health and condition in New York.

C. L. L. Cincinnati, Ohio.—Your puppy is out of condition. Allow feeding any meat. We would advise you to give him at once small dose of sulphur, say once a day for four days, and twice during the week a small teaspoonful of sulphate of magnesia. Dress dog once a day with following mixture: Powdered bicarbonate of potash, half ounce; sub-sulphur, one ounce; large four ounces. Rub well into the skin. Mix vegetables with food. The dog should be kept in a clean kennel and his bedding changed daily. The disease is contagious. Write result of treatment after fair trial.

A. S. Bowling Green, O.—Can you inform me of some reliable manufacturers of first-class single barrel shot guns. If there are such I wonder that they do not advertise in the FOREST AND STREAM and let themselves be known through what I regard as the best advertising medium through which to reach sportsmen in this country. There is more demand for the single gun than most gun makers are willing to believe. For sporting piece, or for the occasional old-time hunter who does not care to be at the expense of one of the high priced double guns, and yet wants a good shooter, the single barrel fills the bill. Ans. The Shattuck gun, advertised elsewhere, is a good arm, as is also the Stevens gun.

Cricket.

FIXTURES.

July 17, at Prospect Park.—Manhattan (20) vs. Appleton.
July 17, at Frankford.—Glard vs. Oxford.
July 17, at Stenton.—Young America (20) vs. Workingmen's Club.
July 19-20, at Detroit.—Staten Island vs. Peninsula.
July 19-20, at Toronto.—Staten Island vs. Toronto.
July 21, at Prospect Park.—Manhattan vs. New York.
July 23-24, at Hamilton.—Staten Island vs. Hamilton.

—The Orange Cricket Club, of New Jersey, had an interesting scrub match on Monday afternoon.

—The Staten Island's first eleven leave on their Canadian tour on Saturday. The following is the eleven: Moore, Bance, Ronaldson, J. J. Eyre, M. C. Eyre, Allen, Manning, Filmer, Sprague, Lane and one other.

—An eleven called the United Eleven of New Jersey is being organized. All the players will be Americans and residents of the State. The following clubs will be represented: Newark, Paterson, Star, of Camden; Amerious, of Trenton, Orange and St. George.

THE GAME.—The Camden (N. J.) Cricket Club played a tie game with the Alert Cricket Club, of Frankford, Pa., both sides scoring 65 at the end of the first innings, the late hour preventing a continuance of the match.

—On July 10th, the Young America, second, defeated the Oxford at Stenton. Young America 54 and 43, Oxford 61 and 40 (four wickets). The Glard (second) and the Keystone met at Frankford, Pa., same date. The former scored 31, first innings, and the latter 30 for six wickets, when the game was brought to an abrupt conclusion by a disagreement as to boundaries.

GLARD VS. CHESTNUT HILL.—Played at Chestnut Hill, Philadelphia, July 10th. Glard, 133 (seven wickets); T. Hargreaves, 61; Brooks, 23; and Tomlin not out. 12. Chestnut Hill, 93; first innings, Borie, 43, and Butcher, 16.

CHICAGO VS. ST. LOUIS.—Played on the Grand Avenue Park grounds at St. Louis, Mo., on July 5th, and resulted in a victory for the Chicagoans for one innings and 22 runs. The visiting team was strong in every department, including Simmonds, late of Hamilton, Ont., and Powell, of Kansas City, who, with his two brothers, Grant and William, rank among the best cricketers in Canada. Mr. E. R. Ogden, who scored 63 in the above report, is an amateur of Upper Canada, at Niagara, Toronto. His hand has not evidently lost the cunning it acquired when he wielded the willow in the Queen City in former days. Score:—

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

-AT-

NOS. 37 AND 40 PARK ROW (TIMES BUILDING), NEW YORK

[POST OFFICE BOX 234.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted.

Nonadvertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 15, 1880.

TO Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to Forest and Stream Publishing Company. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

THE DITTMAR POWDER.—We publish this week a second letter from Dr. Nash, of Mississippi, an account of whose lamentable accident with what purported to be Dittmar powder appeared in our columns some weeks since. For the publication of this first account we were severely taken to task by the present manufacturers of this explosive, who avowed their disbelief in the statements of our correspondent, and intimated pretty plainly that they had strong doubts that any such accident occurred at all. These doubts will be set aside, we presume, by the evidence on the subject which we publish.

We have none but the kindest feelings toward the Dittmar Powder Manufacturing Company, and, if their powder is all that they claim for it, we shall be only too glad to give the widest publicity to the fact. Such a powder, provided it is safe, is just what we, in common with all other sportsmen, desire to use. It must be remembered, however, that the Dittmar powder is still on its trial, and has not yet come into common use or even into general favor, far less supplanted black powder. It is true that Bogardus and other professional pigeon shooters use it very generally and speak of it in very high terms, but among the great mass of shooting men it has not yet made its way into public favor.

We do not propose to advertise in the columns of FOREST AND STREAM any article that is in any way objectionable, and especially do we wish to shun the responsibility of bringing to the notice of our readers anything that is dangerous. As we have before stated, we refused the advertisement of the Chichester Rifle Company because we believed that no safe arm could be manufactured for the price at which those rifles were to be sold, and the event has proved the correctness of our decision.

We have taken great pains to learn all the details about Dr. Nash's accident, and we have the sincerest sympathy for him.

We think that the present company are bound to warn the public by every means in their power against the powder manufactured by the old company or companies, since it is evident that this old powder is, or may be, dangerous.

—Eight of the citizens of Lansing, Mich., have signed their names to a conspicuous poster offering a reward of \$35 for information which will convict any person of violating the game laws of the State.

A WORD ABOUT GUN MAKERS.

OUR remarks some weeks ago relative to speculators in human credulity who advertise to send guns worth \$50 for \$10, has had good effect in choking off a fraction at least of the revenue which would otherwise have found its way into the pockets of these fire-arm swindlers. We revert to the subject again because we are in receipt of frequent inquiries from distant correspondents, who send us the glowing advertisements of these fraudulent concerns and ask us what we think of them. Just now there is before us a letter from Fort Reno, Indian Territory, asking if the writer shall forward \$10 to a Boston firm for a \$50 gun.

There is one reply, and only one, to a question like this: Use common sense; exercise the same discretion in buying a gun or a rifle or a pistol that is employed in buying a watch, a horse or a suit of clothes. No sane man forwards \$10 to a city sharper with the expectation of receiving in return a \$100 watch. None but a veritable simpleton would think to purchase a good horse for a song; sensible persons avoid the mock auction rooms of the Chatham street clo.' dealers; nor is there any different principle governing the manufacture and sale of fire-arms. It is a recognized law in every branch of manufacture and trade that the manufacturer must receive a fair equivalent of value given, and those who advertise to give this value without receiving the equivalent in return are set down as dishonest swindlers. This rule is just as imperative in the gun trade as it is in any other.

A good gun commands a good price, and if he would be sure of a safe and serviceable weapon the purchaser must pay the price. The manufacture of sporting arms is not in the hands of a monopoly. There are enough firms engaged in it to make the competition so close that the prices are cut down as low as they can be legitimately. No reputable firm would dare to risk its good name by attempting to palm off cheap goods for costly ones, and hence all such advertisements come from irresponsible parties.

The various dealers whose names appear from week to week in the columns of the FOREST AND STREAM represent the legitimate and regular trade of the country. It has ever been our aim to keep the advertising pages of this journal free from misleading notices, and to make the paper the safe medium for dealer and patron. Time and again have we refused to insert the advertisements of firms which we believe to be irresponsible, and we shall continue our efforts to keep our columns equally clean in the future. In this we are actuated by simple business principles. The faith imposed by its constituency in the fair dealing of the FOREST AND STREAM is something that we cannot afford to lose, even for the large immediate returns the cheap fire-arm men would be only too glad to make for an opportunity to reach the mass of our readers. We cannot afford to risk our reputation by dealing with these firms; whether or not our correspondents can afford to risk their lives by tampering with the cheap guns, is a question for each individual to decide for himself, and he ought not to hesitate very long deciding about it, either.

THE NEW YORK DOG POUND.

WE paid a visit to the New York dog pound, on Saturday last, which is situated at the foot of Sixteenth street, East River, and through the kindness of the officials in charge had an opportunity of inspecting the building where the dogs are kennelled, and the machine of death in which they meet their doom. It is now three weeks since Mayor Cooper's order to seize all unmuzzled dogs went into effect, and from the 21st of June a determined raid upon the canines of the metropolis has been most persistently kept up. This is shown by the record of the receiving book, for no less than 2,280 dogs of all sizes and breeds, and no breed at all, have been received up to Saturday at the pound. Of this number twenty-three have been redeemed by their owners and three returned to their masters by the direction of the Mayor, on account of illegal capture.

The building in which the animals are housed is a long and narrow one, with plenty of windows, guarded by wire netting through which the air freely circulates. It is fitted up with stalls on the ground floor similar to those used recently at Madison Garden, in fact, it suggests to one the idea of a grand dog show of mongrels, free from the usual complement of disappointed exhibitors. Besides the apartment containing the long rows of pens, there are two large box stalls in which the most mangy and forlorn looking curs huddle together while awaiting their impending fate, occupying their time sitting on their haunches uttering the most piercing cries and enlivening their last moments and relieving their minds by munching each other's ears.

The sanitary arrangements are almost perfect, and the whole place is scrupulously clean and free from odor. Each animal is provided with an abundance of food, which consists of bread softened in water, and a pan of clean water is within each pen. Although there were 143 dogs in the pound, there were only two of any value—a

fine red setter and a moderately fair specimen of the black Newfoundland type. The Pomeranian or spitz dog seemed to predominate, and we were informed that there were two to one of this breed brought in to that of all the other varieties of dogs combined. The drowning days are Monday, Wednesday and Friday of each week, and the means employed to rid the city of homeless and dangerous pests is both simple and merciful. The dogs are confined in an iron cage which is rolled down to the edge of the river on a car running upon a track parallel to the building. When at the end of the wharf, the cage, by means of a swinging crane, is lifted off the car and lowered into the river. Death speedily ensues, and the bodies of the animals are heaped on the wharf, until removed by a boat which carries the carcasses to Barren Island. There they are skinned and the fat boiled out of them; in fact, almost every part is utilized.

DR. CARVER.—Dr. Wm. F. Carver, the famous rifle expert, ought to be satisfied with the reception given him in Europe. While in England he gave exhibitions of his skill before the Prince of Wales, and received as a token of the royal approval an elegant scarf pin and a valuable belt. From England the marksman extended the prowess of his arms to Paris, and from thence went on to Germany, where he appears to have been received with even greater eclat than elsewhere. Not only did he win all the prizes in several rifle contests, but, at the special request of the Emperor William, he gave an exhibition before the court and the royal family. The programmes were printed on white satin of lavish proportions, and the shooting of the American was so pleasing that an adjutant was dispatched the next day to convey to the Doctor an elegant diamond ring "From His Majesty, the Emperor of Germany," as the inscription read. Shortly afterward a special invitation came from the Crown Prince to the effect that Dr. Carver's exhibition seemed to interest the Crown Princess, who had been melancholy of late, and it was hoped that a second performance might be given. The Doctor was conveyed from the depot in the royal carriage, and the exhibition, which was given on a grassy lawn, consisted of shooting at moving and stationary objects with rifle and shot gun, on foot and on horseback; shooting with the bow and arrow, and throwing the lasso. Another scarf pin, bearing the monogram of Frederick and Victoria, was the royal token of approval.

—Farmers should bear in mind that the law prohibiting summer woodcock shooting will save much of their standing grain and grass, and that after their harvesting is over they will have leisure to start on even terms with the city sportsmen.

GAME PROTECTION.

RETURN OF MIGRATORY QUAIL.—Here is the first news this year of the return of migratory quail to their nesting grounds. We hope to add other notes of a similar nature, and urge our friends to give us the earliest information on the subject. Our correspondent writes from Boonsboro, Md., July 2d:—

I have the pleasure to inform you that the migratory quail turned out in the locality of Oakland, Md., in the spring of 1880, have returned to the same place, and are now hatching out their young. Some of them on the same farm upon which they were released.

WM. B. WHEELER.

BANGOR, Me., July 10th.—About the 1st of June I received my quota of the migratory quail, imported for Maine. They were loosed on a farm of a friend some five miles from the city. A week since I drove out to see how my proteges might appear. Found them in a pasture not twenty rods from the place where turned loose, as bright and cheerful as though never transported. That they have nests I feel sure, from the fact they hovered over and about me, and were continually sounding notes of alarm. The pasture is rather low ground, with long swale grass, suitable for concealing nests, with plenty of spring water. My friend reported excitedly about the buildings and quite tame.

H. A. FAIRBANKS.

FRANKLIN, N. Y., July 5th.—The 100 Messina quail which I procured through the kindness of Mr. Horace P. Tobey, arrived in most excellent condition, only four out of the 100 being dead. They were put out in three pair lots about our adjacent farms, mostly among bushes and briars, and heard every day by our farmers. One which I reserved for a cage bird and a curiosity has become very tame and quite musical in his style, besides being quite a comical little pet.

M. P. MCCOON.

ROCHESTER, N. Y., July 6th.—The first report I have heard from the European quail imported by the Monroe

County Sportsmen's Club is painful to relate. Five pair were liberated a few miles east of the city, and a friend on whose farm they were put out writes me that one pair nested in a meadow on a neighbor's farm, who in mowing came on the nest unexpectedly and cut the legs off one bird and the toes off its mate. There were fourteen eggs in the nest, and the farmer thought to save them by having a hen hatch them, but he can scarcely succeed. They appear to prefer meadows for nesting, and it is to be feared that the mowing machine will kill our stock and spoil our experiment. If there was any way of getting a supply a month earlier the young would probably be able to take care of themselves by the time haying begins, and if they should avoid this modern war chariot they might in time spread all over the land and justify the hopes of those who have tried the experiment.

E. R.

Game Bag and Gun.

JULY IS A CLOSE MONTH FOR GAME.

—Address all communications to "Forest and Stream Publishing Company, New York."

A NEW GUNPOWDER.

A NEW powder has been manufactured by the Dupont Powder Company which is specially adapted for choke bore guns. An interesting trial of this powder was made at the Brooklyn Driving Park, June 25th, the test being to shoot at one hundred wooden balls without intermission and without cleaning the gun; also making a target, 21 inches diameter, at the end of each twenty shots. The gun was a Parker, 10-bore choke, of ordinary pattern; cartridges loaded with 4drs. powder, 14oz. shot. Two targets were made at 35 yards, twenty shots fired, two more targets at same distance, and so on, until one hundred shots had been fired at 35 yards, and twelve shots at 45 and 50 yards. The balls were, with one exception, all well hit, showing the marks of from four to eighteen shots each.

The patterns of the 21-inch targets, made as above, were: First target, right barrel, No. 9 shot, 390; left barrel, No. 10 shot, 635; second target, right, No. 10, 620; left, No. 10, 578; third target, right, No. 9, 479; left, No. 10, 638; fourth target, right, No. 9, 504; left, No. 10, 606; fifth target, right, No. 9, 493; left, No. 9, 444; sixth target, right, No. 9, 483; left, No. 9, 485. A seventh target was made, after an interval of ten minutes to allow the gun to cool, showing for the right barrel No. 9 shot, 840 pellets; left barrel, No. 10 shot, 537 pellets.

As to the particular point for which the powder was tested, namely, comparative cleanliness and the moisture of the dirt in the barrel, it was found that the dirt had not caked in the barrels even after sufficient time had been allowed for it to cool. Simply wiping out the barrels with a rag restored them to their proper condition, and, so far as this point is concerned, the trial amply showed that the powder is what its manufacturers claim.

THAT DITTMAR POWDER ACCIDENT.

BELOW we publish several letters relative to the Dittmar powder accident, of which an account was given in the June 10th number of this journal. The most noteworthy of these letters is that of Dr. Nash himself, and of Sheriff Johnson, which, with the can of powder received by us, establish the main facts as detailed in Dr. Nash's original communication. We consider it now sufficiently proven that the accident did occur as at first stated; that the powder employed was the Dittmar brand FFF, manufactured and sold by the "Dittmar Powder Company," which preceded the present firm, and that the gun was loaded with the charge stated, namely, 3drs.

We may properly say that there having had former correspondence from Dr. S. P. Nash, and that correspondence having been of a nature to show that he was no novice with the gun, we were ourselves perfectly willing to accept his statements as first sent, and published them, believing them to be authentic and reliable. The event has proved that we were correct. If some of Dr. Nash's statements were incoherent, or, as claimed, the things he described impossible, so much the more evidence was offered of his sincerity; for of such an accident, it is a well recognized fact, no two men would give the same account; and on the other hand, if a person were deliberately to manufacture an account of the bursting of a gun he would take good care to make it a clear and thorough story. That Dr. Nash's recital was somewhat confused was the very best proof of its inherent truthfulness.

What this may show as to the character of the Dittmar powder, probably each of our readers will have an opinion of his own. Our duty toward our correspondent, the Dittmar Powder Manufacturing Company and our readers in this affair is done when we have given all an opportunity to know the truth.

PHILADELPHIA, Miss., June 29th.

Editor Forest and Stream:—

I have just received FOREST AND STREAM of June 17th, and in it I notice an article from the Dittmar Powder

Company in which they seem to be in a terrible fever about an article of mine, published in FOREST AND STREAM of June 10th, and, as you say, speaking nearly in the Louisville manner of the merchant who gave me the powder, and the name of the merchant from whom the Louisville merchant obtained the powder, also requesting you to have the original canister containing the rest of the powder from which the charge was taken which caused the accident sent to you, together with the small circular which accompanied the same, etc. I returned from Louisville this evening, where I had just been speaking nearly in the Louisville manner of just such things as the Dittmar Powder Company request you to have sent to you; and the result of this work I sent to Macon, Miss., to be expressed to the Forest and Stream Publishing Company.

The Louisville merchant who gave me the powder is Dr. E. Foster, physician, druggist, dealer in guns, ammunition, etc. I called on Dr. Foster for the bill of Dittmar powder, and I might give names and date of purchase. On examination of the bill, I find that I was mistaken about the powder being purchased in New York, but it was bought by Mr. Foster, of Louisville, Miss., from Crookes & Hilder, 604 North Fourth street, and 603 North Third street, St. Louis, Mo.

I obtained from Dr. Foster the canister, and a part of the powder, which he says is the original canister and powder that caused the explosion. Before sending the canister to the Forest and Stream Publishing Company, I waited three days for Dr. Foster to look up the circular that came with the powder. He at first told me that he thought that he had given the circular to some of his friends, and did not remember who, but on the third day he handed me the circular that I send with the powder, marked No. 3, and said that he thought that it was the one that came with the powder, but could not be certain of the fact, as I had given him some circulars that came with Dittmar powder that I received from Bogardus & Co., after the accident with the Dittmar powder ordered by Dr. Foster. So I am not certain that I sent you the original circular that came with the powder, but am of the opinion that it is not. It will be seen by referring to my article in FOREST AND STREAM, from the 35d to 38th lines, inclusive, that I relied on what Dr. Foster told me about the circular (some one else having the circular for examination at the time), and cannot be certain on this point. From the information that I could get about the circular, before I fired the charge that caused the explosion, it seemed that the circular only gave a description of the powder, and stated that it could be used in both shot gun and rifles by using the same amount by measure. The circular I sent you (No. 3) gives other instructions, and instructions that I did not send until I received the powder I ordered from Bogardus & Co. Hence my reason for giving it as my opinion that it is not the circular that came with the powder ordered by Dr. Foster.

I will state here that Dr. Foster stands very high in Louisville and vicinity as a physician, druggist and gentleman, and if he has made a mistake in sending the circular I do not think that it was intentional, for he lost considerable time, and worked very hard for some of his age (he seems to be nearly eighty years of age), in trying to get the circular.

I wish here to make a correction in regard to what I said about the label on the canister. I had been moved home from Louisville (twenty-four miles) before I wrote my last letter to the FOREST AND STREAM, and nearly a month had elapsed since I had examined this label. I had to write from memory of what I had seen, and as I had been examining circulars that came with other canisters, I had gotten somewhat mixed, and my memory, although correct on the main point, was not altogether correct on the whole. In my letter to the FOREST AND STREAM I said that the label on the face of the canister stated that it was one of the brands of rifle powder, and was marked FFF. This FFF mark was not on the label on the face of the canister, but pasted on one edge of the canister, and although it is not on the label as I believed it to be when I wrote the circulars which I forced me to believe that if it is a genuine article of Dittmar powder it must be rifle powder. For instance, the printed instructions pasted on the back of a canister that is now in my possession, of Dittmar's Diamond Grain C powder state that: "The shot gun powder is lettered B and C, the latter the finer. The shot gun powder is not to be used in rifles. The rifle powder, F, works very well, and is preferable to B and C in 14 and 16 bore. The FFF can be used in muzzle-loading shot guns."

The canister just referred to, with two others, was bought by me from Bogardus & Co., Chicago, Ill. These canisters were delivered to the express company at Chicago on the 24th of March, and before Dr. Foster bought his Dittmar powder, but owing to some carelessness of the express company my powder was not received until the 1st of May—after Dr. Foster had received his and after the explosion of my gun. These canisters were wrapped in white paper with the letter C printed upon the wrapper, and a diamond, drawn with pencil, around the C. These canisters were all sealed, and had printed instructions for using the powder pasted on the backs of the canisters, and the letter C stamped on these instructions. The face of these canisters have the addresses of the Dittmar Powder Manufacturing Company, and the words Dittmar's Diamond Grain upon them. So I am in the hands of the canisters, and the words Diamond Grain C powder. A quantity of loose circulars accompanied the canisters, two of which I sent you by express, with the powder I sent you, and marked No. 1 and No. 2. Other kinds may have been in the package, but several persons called to examine them while I was in my bed, and carried off such as suited them, and I have now left only two kinds, samples of which I sent you. I give a description of the powder and circulars that were sent to me by Bogardus & Co., because I have been requested to do so. In calling on you for certain evidence of the accident, the Dittmar Powder Manufacturing Company also said that "without this evidence we think you will also admit that there is no case made out against us" (them). In my other communication to the FOREST AND STREAM it is not my intention to make out a case against the Dittmar Powder Manufacturing Company, but against myself. At that time I believed the accident to have been caused from a wrong use of the powder, and I wished others to be more careful than I had been. It will be seen by referring to my article of May 13th that I there state that I had not written it through any prejudice that I had

against the Dittmar powder, for I was satisfied that if rightly used it was a valuable invention. The small amount of dirt and smoke that it seemed to create, when burned, caused me to believe it to be valuable. I brought only one charge against the company, and that was they did not give the public a sufficient chance to become acquainted with the various grades of their powder in their advertisements, etc.

Since making the charge I have been making a more careful examination of the circular I sent you marked No. 1, and find that the Dittmar Powder Company say that "FFF, a very fine grain specially made for all muzzle-loading arms, might also be used in breech-loading shot guns," recommending it to be used in the very way that I used it when the accident occurred, and making it unnecessary to change their advertisement. The statement just referred to in their circular makes it necessary for the Dittmar Powder Manufacturing Company to prove that this powder, labeled Dittmar powder, that caused the terrible explosion of my gun and loss of my thumb, was not manufactured by them, or that it has since been tampered with. Should they fail to do this there will be a case, and a strong one, made out against them. In their letter of June 11th they most emphatically declare their disbelief in ever having been manufactured by them, and in their own say they can furnish you a dozen affidavits that the single grain of powder was ever put up or sold by their company which was not sealed and did not show their printed directions on each can or keg.

In justice to the Dittmar Powder Manufacturing Company, I will say that the canisters which contained the powder that caused the explosion of my gun, and bought by Dr. Foster, for Dittmar powder, had neither seals or printed instructions upon them, and I am in hopes that I will be able to clear themselves of putting such a dangerous article in the market. Their threat to spare neither time nor expense to ferret this matter out to the bottom pleases me very much, and they will find no one more willing than myself to lend all possible aid in this matter, and should they clear themselves of having been the cause of the suffering and expense which have had to bear, I am not willing that the reputations of the guilty parties are found and made to suffer. I do not see why the Dittmar Powder Manufacturing Company should complain that my accident was published in your paper, if, as they affirm, they disbelieve in this powder ever having been manufactured by them. It seems that they should be glad to know that there is a dangerous powder being manufactured and sold as their powder, and perhaps for the purpose of injuring their powder.

In their communication to FOREST AND STREAM the Dittmar Powder Manufacturing Company declare their disbelief in the possibility of such results coming from so small a charge of any powder in the world, unless made to specially produce similar results. If this powder is not genuine Dittmar powder, but an article put in the market to injure their reputation, it is possible it was made to specially produce such results; and if it is genuine Dittmar powder it is not sealed, and it is possible that some wicked wretch removed the seal and introduced enough fulminating silver, fulminating gold, dynamite, nitroglycerine, anything that would produce an explosion, and the charge that I shot being the first used from the can, it might have contained a part or the whole of the explosive substance.

It is a beyond successful contradiction that the accident which I reported in FOREST AND STREAM did actually occur, and that, too, when I was shooting only 3drs. of the powder from an 8 1/2 lb. gun that I had been accustomed to shoot 4drs. black powder out of. As evidence of this fact I ask, and shall expect you to publish the letter I sent you from Sheriff Johnson, and the article in the copy of the Winston County Index that I sent at the same time, also the note from the editor at the bottom of the article.

If this is not sufficient evidence, I will give as reference, Drs. G. Y. and G. P. Woodward, Dr. Conwell, Dr. E. Foster, Dr. J. Fox, and Dr. A. S. Rick, of Louisville; also, Mr. Duncan Eatman, of the firm of Woodward, Metts & Co., J. B. Gage, Hugh Hathorn (clerk), C. J. Woodward, John G. Barnes, and others, who will give me affidavits, but if this is not sufficient to convince anyone let the doubter come and see my crippled hand, and the thumb which was torn from it with sufficient force to be thrown forty yards from where I was standing when I fired the gun. I have my thumb in alcohol, and expect to preserve it to show the manner in which it was torn from my hand. It has healed, and I can use my hand as usual, and I still have to carry my hand in a swing, and it seems as if it will be a long time yet before I can use it. Since some of the swelling has gone out of my hand some of the bones of my hand were found to be badly broken that were not noticed before, and it seems as if my hand will be drawn in a manner that will make it inconvenient or impossible for me to practice my profession from my hand being so injured.

Sheriff Johnson, who had kindly offered to give evidence, through your valuable paper, of the accident, is very popular in Louisville and Winston County. He has once been elected to the Legislature of Mississippi, and twice to the office of sheriff, and is considered by all who know him to be an upright, honest and truthful man. He helped me to put the identical label upon the shell that caused the explosion of my gun, and afterward drew one of the loads from a shell that had been previously loaded and measured it, to see what charge of black powder I had been shooting. Hear what he says,

S. F. NASH.

OFFICE OF W. B. JOHNSON,
Sheriff of Winston County,
Louisville, Miss., June 24th.

Editor Forest and Stream:—

My attention has been directed to an article in the FOREST AND STREAM in regard to an accident that occurred in our village on the 21st of April last, in which Dr. S. P. Nash was seriously wounded from the explosion of a double-barrel shot gun, charged with powder taken from a can labeled "Dittmar Powder, FFF." I was present and saw Dr. Nash load the shell, and there were 3drs. of this Dittmar powder put in the shell. After the accident I examined the shattered pieces of the gun, and am of the opinion that a double or treble charge of

BALTIMORE vs. STATEN ISLAND.—The fifth match of the Baltimore's tour was played at Tomkinsville, S. I., on July 5th, and on account of rain was declared a draw. The match was one of the most remarkable bowling games ever witnessed in the vicinity of New York. The island grounds have for a long time been considered as not favorable to large scoring, but still the small totals on Monday were "one of those things that no fellow can understand." We never saw Lane perform as well with the ball; his analysis was wonderfully good. Smith, of the visiting team (very fast round high delivery), also kept pegging away on the spot, and had good success in getting past the bats that were brought to oppose him. Oldham, too, was very straight, his first 4 balls yielding no runs. We were glad to see the gentlemanly visitors taking off to the Pavilion to lunch, for though, according to Dr. Tanner, we are fast approaching an area of chameleon diet, yet we don't believe in docking a man of his "grab" all at once. The Baltimoreans expressed themselves pleased with their courteous treatment, and everyone present, barring the Staten Island officials, took us aside, and with tears in their eyes thanked us for the good chance we had brought about. Score:—

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS
are perhaps not aware that the
smoking Cigarettes made of the in-
ordinary pure rice paper, they have been
issuing THE MOST DEADLY OF POI-
SONS, thrown off by all burning paper,
namely: THE OIL OF CREOSOTE. CHARLES
G. SMITH, of the firm of GOODWIN &
CO., manufacturers of "OLD JUDGE"
Cigarettes and Smoking Tobacco in-
vented and patented a process, March
5th, 1878, by which the Rice Paper used
as wrappers for "OLD JUDGE" Ciga-
rettes has been so prepared that the un-
pleasant ODOOR and the injurious effects
of the Oil of Creosote are completely
neutralized or destroyed, and the paper
made saliva proof to prevent its break-
ing or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Ciga-
rettes has been so prepared that the un-
pleasant ODOOR and the injurious effects
of the Oil of Creosote are completely
neutralized or destroyed, and the paper
made saliva proof to prevent its break-
ing or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Ciga-

CANCE AND CAMERA.

A photographic tour of two hundred miles of
of the Maine forests,
BY THOMAS SEDGWICK STEELE.
With SIXTY ILLUSTRATIONS. The most artistic
book of the season.

"It is one of the handsomest books of the season, fully illustrated by drawings from the author's own pencil, and from his photographs." *Chicago Herald*.

"The book is written in the best of temper, in a fresh and breezy style, and with a zest that marks a true sportsman."—*Boston Journal*.

"A highly elegant book, whose author needs no introduction to the lovers of literature generally."—*Hartford Times*.

"Written with a modesty which commends itself to the reader at once, and with an enthusiasm and intelligence that will doubtless serve to entice other lovers of the fishing rod into this beautiful region."—*Springfield Republican*.

"The word that describes this book by an Hartford author, is—charming."—*Christian Secretary*.

"No lover of out-of-door life will fail to appreciate it. It is issued in better style than any other such book which we have seen."—*The Congregationalist*.

"It makes one feel as if one must go over the same route."—*The Religious Herald.*
 "The publication of the book is most opportune."—*Bangor, Maine, Whig.*
 "It furnishes as delightful reading as any tourist can desire."—*Boston Herald.*
 "The author holds a facile pen. The pages are fresh from the heart of nature, and the pleasures are the pure and simple ones that never lose their charm for those who enjoy companionship."

SPORTSMAN'S LIBRARY.

List of Sportsman's Books:

[We will forward any of these Books by mail, post-paid, on receipt of the price.]

[illegible]

This engraving depicts a human ovary, likely from a medical or anatomical text. It shows the organ's internal structure, including the follicles and the network of blood vessels (arteries and veins) that supply it. The drawing is highly detailed, showing the texture of the organ and the branching of the vessels.

The most killing bait ever invented for either black bass, pickerel, or large trout; beautifully mounted with gaudy feathers. Silver plated, 6 cents; gold plated, 75 cents by mail, postpaid. Send for catalogue of fishing outfits and sportsmen's goods of every description. Postage stamp taken. R. SIMPSON, 132 Nassau street, New York City, N. Y. July.

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square caskets of one pound only.

Hazard's "American Shooting." Nos. 1 (fine) to 6 (coarse). In 1 lb. caskets and 5 lb. kegs. A train, and clean for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting." Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. caskets, and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shoot. It ranks any other brand, and it is equally serviceable for muzzle or breech-loading.

Hazard's "Kentucky Rifle." FFG, FFG, and "Sea Shooting." FG in kegs of 25, 12, and 6 lbs. and cans of 5 lbs. FFGG is also packed in 1 and 5 lb. caskets. Burns strong and quick. The FFG and FG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder. GOVERNMENT CANNON and MUSKET POWDER, also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, everywhere prominent city, or wholesale of our office.

88 WALL STREET, NEW YORK.

GOODS OIL TANNED
Moccasins.

The best thing in the market for hunting, fishing, canoeing, snow-shoeing, etc. They are easy to the feet, and very durable. Also to order in a variety of styles, and warranted the genuine article. ROCHESTER, NEW YORK.

COLT, WEBLEY and JAMES.

It is with especial satisfaction that we invite the attention of the sportsmen and the trade in general to the three names at the head of this notice, the greater part of whose guns will pass through our hands during the present season.

Colt's and Webley's guns require no mention here. The many thousands of them already in the hands of their delighted possessors are enough to insure their fame. Of the productions of James & Co. we would say that although comparatively unknown in this country, they are destined, from their excellence and cheapness, speedily to take and hold an honorable place.

Of the Webley's guns we have this year two classes. First, the celebrated

First Special or Treble Wedge Guns.

Every gun of this class has fine laminated steel barrels, bar rebounding locks, extended rib pistol grip, and patent fore end, and is cheaper this year than ever before. Second, a **LOT** of Webley's guns, with top and side lever actions, ranging from the very finest Exposition and First Premium guns, offered at about half the original price, down to the very lowest. Most of these guns are heavy, weighing from 6 to 10 pounds, and are specially adapted to killing large game, such as ducks and geese, at long range. They afford a rare opportunity to obtain a first-class gun at a low price, and it is proper to say that in thoroughness of workmanship and excellence in shooting they are in no way inferior to the treble wedge guns.

Of Colt's guns, while we keep all grades, we recommend specially

THE CLUB GUN.

These guns are manufactured exclusively for us in the New York and Eastern market, and all club guns advertised by others are a different article. The genuine Colt Club Gun has a rubber heel plate, in the middle of which, within a circle, the rampant colt, and around which circle the words "The Club Gun" are beautifully embossed. The Colt Club Gun is intended for glass ball or pigeon trap shooting where closeness and penetration are required.

James & Co., of Birmingham, will send out this year guns of every grade, from the very finest, including a HAMMERLESS, down to the cheapest. We have determined to import no guns not bearing the maker's name. The country has been flooded with worthless trash bearing the name of Wm. Moore & Co., etc., which means nobody. The Messrs. James have consented to make for us guns to sell as low as any guns are sold, and good enough to bear their name. These we now offer.

In addition to the foregoing we handle the Forehand & Wadsworth single breech-loaders with Scott pattern of top lever, and with either steel or twist barrels. They are just the thing for boys or men who cannot afford to own double guns, and cost but a mere trifle.

Reminiscences of English Rivers.

SECOND PAPER.

THE conclusion of our last paper left us wandering somewhat aimlessly by the banks of streams whose names as great trouting waters live only in the fading memories of a generation fast passing away, and whose discolored waters form a melancholy contrast to the wild and romantic scenery reflected on their surface.

If personal associations have caused me to linger too long among scenes where tales of big trout told by gray headed men round winter firesides are more plentiful than any more solid realities, I must hold out as my excuse that these hasty sketches are in no wise intended as a recapitulation of the best British trout waters, but are rather prompted by the feelings that many of our anglers would be glad to take a peep, even on paper and in the hands of an indifferent guide, at those streams whose names are indelibly bound up with the whole history of our craft, and from whose banks has sprung that hereditary enthusiasm that nerves the arm of every Anglo-Saxon fly-fisher in every clime; from the mahseer slayer of the Himalayas to the colonists who have turned the sparkling rivers of New Zealand and Tasmania into what promise to be the finest trout streams in the world; from the mighty salmon slayers of the Metapedia and the Restigouche to those happy beings whom fate permits to revel in the fresh piscatorial pastures of "foam fleck'd Oregon."

The towers and spires of Durham's lofty cathedral and university are left behind as the Edinburgh mail train dashes northward. Streams that have once been bright and clear flow down beneath lofty viaducts that span their now turbid floods. Mining villages teeming with industry in its grimmest form, alternate with stretches of silent moorland that for a few moments might deceive the stranger with the idea that he was approaching some sportsman's paradise, till he finds himself gliding slowly over the high level bridge, beneath which the Tyne, black with filth, but dear to the hearts of professional carpsmen, is dimly seen through the fog and smoke of Newcastle. Upward through the murky air floats the roar and din of that busy city, giving way in turn to the bustle and the clatter of the finest railway station in the North.

Here are always to be seen, during the fishing season, a good sprinkling of anglers in tweed suits, and hats encircled by casting lines and flies; some with rod and basket only, bound for the higher waters of the Tyne, which afford good trout fishing; to the Coquet or other streams that they can snatch a few hours upon between trains. Others again carrying valises or having portmanteaus labelled for more distant haunts—the rivers of Western Yorkshire, perhaps, or the Scottish border—joy depicted on their faces and elasticity in their steps at the anticipation of a week or a fortnight's oblivion from office stools and counting houses. The two hours' run through the well cultivated plains of East Northumberland presents more of agricultural than piscatorial interest to the traveler. The Wandbeck, it is true, crosses our course, and we catch a sight of the Coquet, famous for its bull trout, winding off toward the sea, at the mention of which river the mind of every well-informed British angler reverts to the name of Rothbury, a famous resort of anglers.

Talking of anglers' resorts, it is strange, strange that is according to the generally received British traditions, that the best trout fisherman in England, more often than not, hail from great cities. A town-bred man is in matter of sport generally rated, till he has proved himself otherwise, as a mull by the squire, the sporting parson, the gentleman farmer and by the booted and breeched doctor, lawyer, or land agent of rural England; but in my opinion, your wandering city angler who has fished from the Orkney island to the Lands End and is at home upon every kind of water and with every breed of trout, is by far the most formidable antagonist you could well choose to fill baskets against. Neither is this so strange when one comes to look into the matter. In the first place he rarely fishes preserved rivers and consequently has to deal with all the varied and most educated trout in the country, from his youth up. In the second place there is more gregariousness among this class of British fishermen, and consequently a constant element of competition enters into his sport. He probably belongs to a fishing club or association in his native town, which meets quarterly or annually and perpetuates the glories and immortal memory of Father Laak around groaning tables and with flowing bumpers. Then there are the actual competitions for prizes which the different clubs hold periodically, the bugbear of country fishers whose more contracted lines may be thrown on waters selected for such competition. These are perhaps more common in Scotland than south of the border, and many is the time I have retired disgusted from the river bank before the ominous announcement of some rustic: "The fushin club's oot the dees." However, all these kind of things tend to create a class of fishermen more generally skillful and more uniformly successful than the country squire, the parson, or the doctor, whose efforts are naturally concentrated upon their own local stream, which is probably preserved by the former, and consequently contains a less educated race of funny inhabitants, and more numerous, from their comparative immunity from persecution. These men, again, though they may be most skillful performers in their own particular class, are often from the narrowness of their experience unable to make much show under altered circumstances. The Devonshire local angler, for instance, who is an adept at wading up bushy streams and picking out quarter-pounders with a short line from the most (to outsiders) unlikely looking holes, would be almost a novice, when started on the banks of the Itchen or the Kennet or any other of the clear chalk streams, to drop a fly at the end of fifteen yards of line over the nose of wary three-pounders. The latter individual, again, would probably lose all the flies in his book and his temper besides, upon a well wooded west country brook, and on an American mountain stream would most likely break his neck into the bargain; but for casting a long line deftly and handling big fish he has no superior. Now you see, if I may apply such an odious term to a disciple of Laak, is a rule equally at home among the wary monsters that lie beneath the willows and the osiers that fringe the slow gliding tributaries of the Thames, and among the tangled thickets, the over-arching boughs and the slippery rocks that exasperate the tyro upon mountain brooks. His ideas on flies are more liberal if not nearly so orthodox as the local sportsman, who firmly believes that there are certain flies without which it is perfectly useless to rig up a rod beside his stream.

Enough of this, however, for the train is standing on Benwick bridge, and far beneath us the bright waters of historic Tweed are mingling themselves with those of the German ocean, and washing the walls of the ancient and independent commonwealth of the North. The many-arched and moss grown bridge that has borne a host to blood side from either side, still spans the stream which carries to the sea the waters of a hundred more whose names have been dear to the hearts of generations of anglers. As we enter Scotland and traverse the fifty miles that lie between Edinburgh and the border, every bend in the line reveals some object of interest. To the right the Northern Ocean thunders against the wild and gloomy headland of St. Abbs—the

southern entrance to the Frith of Forth—and the spray dashes in clouds over the lonely ruin of Fast castle—remembered historical by the tears, that three generations of Anglo-Saxons have shed for the woes and the untimely ends of Edgar Ravenswood and Lucy Ashton. We must not linger, much though we should wish it, in the ancient town of Dundas, with its solitary street and its storm beaten castle; we must pass it and the hills above it from which the Scots rushed down to their doom on Cromwell's pikes. We must leave behind us the Bass rock, raising its gigantic frowning out of the ocean, and the wide plain too, of East Lothian, waving with the heaviest crops that in all the world can be found. We must be content with a distant sight of Edinburgh, with its cloud of smoke hanging heavy against the crimson evening sky, and turn southward to where the long low line of the Lammermuir cuts the horizon from the Frith of Forth to the Tweed. One river only of angling notoriety and two or three small streams empty themselves into the German Ocean between Edinburgh and Berwick, for it is westward throughout the valley of the Tweed and its many famous tributaries that course down the valleys of the Lammermuir and the Peebleshire Mountains, that the footsteps of the tourist angler instinctively turn—and away again beyond them to the Clyde and its feeders, and southward to the many streams that have made Dumfries famous as a fishing county. That the trout producing capacities of this picturesque and rugged country are pretty strong may be surmised by the swarms of rods and basket carriers, that upon any of the "fast days" or holidays set apart by the Scottish people fill the trains running south and west of Edinburgh. Let the angler upon Northern waters, unless he wish to be hunted from pool to pool and to sleep upon the floor in the village inn, be careful to ascertain that none of these auspicious days are embraced within one of his trips. Let him fall back for a space upon any private water that he has the run of, and let the great host of piscators gather back again to their work in the cities, and two or three days besides elapse for the recovery of the female autocrats, who preside over the "Anglers' Rest" and the "silver trouts," from the clean sweep of their larders and cellars, before he venture out among the moors and mountains where the capabilities of these little old-fashioned hosteries will be his sole dependence.

Snug and comfortable retreats are these little inns, however, in ordinary times. The spirit of "Meg Dods" still presides over many of them. The lamb is fresh from the mountains, the trout from the stream that ripples past the door. The bottled beer from the famous breweries of Edinburgh makes amends for a lack of variety; and the flavor of the toddy makes one forgive the want of externals and conveniences, without which the ordinary modern hostelry would collapse. These, however, are peculiar institutions; they are not intended for, and are not patronized by, tourists in the strict sense of the word. Neither the English or the Americans who swarm over the Highlands in July, August and September—except for a peep at Abbotsford and Melrose, perhaps—ever penetrate the south of Scotland, and these little inns are kept up solely for the use of anglers, who are generally quiet, easy-going people, who have enough at home of modern improvement and advance, and consequently prefer the old-fashioned and somewhat primitive characteristics that mark the houses with which often their earliest recollections of relaxation and holiday are connected, and would be the first to cry out if instead of the little cramped, familiar cottage some magnificent hotel should rise in its place before their sight upon their next Easter vacation. Camp life is denied at home to English sportsmen; that is, neither climate nor the surroundings are suitable for it, even if it were necessary; and yet the support derived from the temporary sojourn of a few anglers every spring and summer at these little inns is so modest as not to take the business out of the hands of the lower class, and consequently to retain for it the double charm of inexpensiveness and rural simplicity.

There is a great deal of unpreserved trout fishing in Scotland, more especially, strange to say, in the southern districts, and those most accessible to the stranger; unpreserved, that is to say, as regards fair rod-fishing, for the right is by no means abandoned by the proprietors, and netting is strictly illegal. As far as my experience goes, there is no other part of Great Britain where the owners of fisheries have shown their sense and their liberality to such an extent. Upon some streams the right of the public to fish has become a tradition of old standing; it has never been abused, and, contrary to the general opinion on such matters, finds those same waters to-day as well stocked as many others which, for half a century have been merely produced trout at a heavy annual cost for the minimum of benefit even to their owner. That the preservation of shooting in a densely populated country is absolutely necessary is patent to the veriest dillard; but with fishing it is a totally different matter, and the amusing jealousy with which some riparian owners close up their fisheries (I say some, for it is not the rule), even making it a favor to their very friends, argues an ignorance in regard to piscicultural matters. That there is a wide difference between the liberality of these

fortunate beings may be well illustrated by the fact that I have frequently been given unlimited fishing privileges by including my card to total strangers, and on the other hand have upon many occasions been refused access to a number of days by the host of a country house at which I was then staying as an invited guest. I was considered fortunate even to get that, as the old gentleman, though he had never seen a trout caught, was a monomaniac upon the subject of game preservation for its own sake only. No well-worn track would along among the ferns and sedges and rushes that fringed the banks of the most sacred stream. The trout of generations, when aggregated and grown lazy and idle in the pools and riffles of those neglected waters. There were thousands of them, and I think they would have risen at your boots or your hat had you run through your fly-book. Generations of keepers had walked thousands of miles in the vain quest of daring intruders who might have the hardihood to cast a fly upon that precious stream, whose contents never benefited, even to the extent of one breakfast per annum, their jealous and distant owner. Well do I remember those four days that an important looking document intimated to the keeper I was to have for an attack upon those unsophisticated troutlings. I was a sad young dog in those days where a fish was coveted, and I am sure I had and used for the first time the observation of that worthy functionary, who considerably stretched, till I began to get fairly ashamed of myself; not for my stolen license, I am afraid, but for devoting so much time to the slaughter of innocents who did not know a March brown from a bumble bee.

Heaven preserve us from the average English game-keeper. It is the fashion, because he can shoot straight while his brother can only drive a wagon or turn a furrow, to regard him as a mighty fine fellow. So he may be, doubtless, among his equals in the village, and it is natural he should be a demi-god among that large portion of the "jeunesse d'ore" whose sole aim in life is to acquire the arts in which he and their grooms have long ago attained perfection—but he is certainly not seen to advantage when ordering his master's guests to their posts in a pleasant cover, with a shrewd eye to their "tippling" capacities as to hunting, with visions of possible sovereigns floating before his eyes, the quiet, strong and independent angler who wishes him at Jericho, and to whom, when merely trout fishing, he can render no possible service. Catching trout in an open water must have a zest for the true sportsman that is utterly wanting in a prolific river that is very closely preserved. It is the difference between knocking over a cantering hare before the sticks of the beaters in an English covert and catching down a January quail at full speed in Virginia wood. While speaking of fish preservation in Great Britain, I should mention that there is an immense quantity of trout water that would not bear, from its immediate proximity to great centers, being thrown indiscriminately open to the public, and is rightly preserved in a liberal manner by private individuals or clubs, and generally utilized to its utmost capacity.

One distinct feature of the border stream were lately discussing is the presence of the "bull trout," a species of salmon trout that is found, with scarcely any exception, in the northeastern rivers and tributaries, and nowhere else, I believe, in the kingdom. These fish, which a novice could not distinguish from a sea trout, spawn the Wear, the Coquet and the Tweed in order to spawn, on average, rising to the fly the following February when they make most excellent sport, running from one to ten pounds in weight. These fish, of food, however, they are useless for polite tables, being, of course, poor and out of condition. In April they go down again to the sea, so are never to be had in a season when they are fit for food, and are consequently not thought worthy of legislation. I have had fine sport with them on smelt trout in English coverts. When the weather has been too cold for the trout to rise, and the field has been left clear for the "bullies." An eight-pounder on a twelve-foot rod, and a fine cast, is about as excellent an imitation of salmon fishing as could be procured. Right sociable are the evenings, too, at the rustic inns that are scattered along the banks of the Tweed that are the best of the hills which look down upon the Whiteadder and the Blackadder, the Tyne and the Tyne, and the hundred little fountains that feed them. Through April and May the chances are some eight or ten lovers of the craft will smoke their pipes and sip their toddy round the blazing fire that, in those latitudes, is at that season so doubly welcome. Every hole that contains a trout, from Edinburgh to Caithness, is a place of resort to Berwick, is discussed with the accurate knowledge of old habits. What fish are caught, as the second tumbler begins to circulate! What monsters are extracted from the waters of "Still St. Mary's Loch." What magnificent fellows are still lying beneath Kelso Bridge, with whole casts in their jaws. What prodigies have been performed in the days of old upon the very stream whose music can be heard, even though the densest of the ferns and the moaning of the pine woods, before the dawn of its waters, which these veterans declare has long since placed. The hard-worked lawyer from Edinburgh is there. The mercantile interests of Glasgow are well represented. Canny Northumberland contributes a couple of grave-looking beings glad to escape from the black-belted fields, and the two or three young gentlemen from England, who are supposed to be studying agriculture in the Lothians hard by, have driven over in a tandem, while an angling parson, from a neighboring parish, and a medical student from Edinburgh, complete the variety. The stuffy little bedrooms, too. I can see them now, with Robert Burns and his Highland Mary looking down at me, and the rattled unconscious of the dormitory, and the monstrous choker decorates the other. The looking-glass was always cracked across the center; the work probably of some too hilarious angler in days gone by, and gave each consecutive occupant of the room the impression that he had caught the nympha, while the windows rattled incessantly in the constant breeze. Early hours, such as American anglers from the nature of the climate partly, and partly from the national propensity to being up betimes, were the exception. Nobody in England begins fishing till about 9 o'clock, though I have known anglers in the Scottish rivers fish all night long with a worm in summer, wading up stream, and

with wonderful results. The hills of Peebleshire and Berwickshire, and the still wilder moors of Lanark and Dumfriesshire, and these rustic inns, that still exist in much the same state as they are depicted by Scott in his "St. Roman's Well," while the austere but kind-hearted dames that usually preside over them, if they are not such viragoes as "Meg Duds," are generally very well capable of keeping order in their establishments.

RINGWOOD.

CAMP NOTES.

BY HOMINES.

WHEN one grows weary with office work, but labors on through the dreary winter, anticipating with joyful emotion the good restful time in store when June shall at last arrive and bring to him a season of recreation in the woods; when one longs for the time to come, planning for it months beforehand, setting the day for the start and inviting a coterie of congenial spirits to join in a camping-out excursion, no greater disappointment could likely occur than to have a delay or postponement become necessary.

The usual arrangements had been fully completed for an annual camping out expedition. Tents, cooking utensils, provisions, and all other camping conveniences had been carefully packed in two large, iron-bound camp chests, and the dray on the barn floor ready to carry them to the depot. George, the cook, was on hand early, his black face shining with pleasant recollections of the previous year's experience. All the campers had collected in and about my yard, with rods, guns and other paraphernalia and bundles strewn around. But an hour intervened to train time. I had awakened that very morning with an excruciating pain in the joint of my great toe. So persistent was the pain that I was constrained to resort to crutches to admit of my superintending the loading of my fixtures. The campers looked on sorrowfully; and, eager to go as myself, yet, all advised against a fellow going to camp on crutches. Many were the sallies of wit discharged at my condition and at my expense. The swelling continued in the toe-joint, however, and by the time the dray was ready to leave the yard, I was completely helpless, and the cook, with a little sympathy, it very soon became evident that I must yield to the solicitation of friends, if not to the pleadings of my great toe, and postpone the day for our departure. This thought was exasperating, and pained me almost as much as the confounded toe, inasmuch as friends were expected, from a distance, before the week would end; indeed, two friends had already left New York for the camping grounds, expecting to join us there on the very evening. There seemed to be no way of apprising them of my misfortune and arresting their journey, hence my great perplexity. In my dilemma a good friend came to my relief and volunteered to journey to the rendezvous and bring them to my house. Letters and telegrams were dispatched to the others, and then, to nurse my afflicted member, I went to bed, where I remained for nearly two weeks, with the most painful of all diseases—inflammatory rheumatism.

At last, I was able to hobble about by the aid of a cane, when I at once gave orders for our departure; and here I am, on the Lycoming, the same delightful spot upon which we have camped regularly for the past nine years. The natives had been praying for our coming for a month, as no rain had fallen in the valley for more than a year, and we always heretofore had also appeared as the rainy season.

We landed, therefore, as usual, in the midst of a thunder storm, and pitched our tents between showers. I took a position under a great beech, and, while the rain trickled down my spine, gave directions about the arrangement of the camp, for I was too lame to attempt a more active part.

My lameness is dispensable to farmers—they could not well do without it—but to campers, and rheumatic ones at that, it cannot be regarded as a necessity nor even desirable. But, having passed two weeks here, with an abundance of rain daily, I have come to the conclusion that rain and rheumatism are not incompatible. I have slept soundly and well between damp sheets, and have in my head upon my pillow a wet rag, and, as the rain falling rain upon the tent has sprayed my face, yet have awakened every morning feeling better, until, at this writing, I am able to take my rod and supply my quota of trout for the breakfast table. I have sat, with my inflamed foot upon a camp stool, under a sheltering canopy, where the wet and dripping trees sent great drops of water through the canvas to spatter my paper, and have watched the birds pump their backs and squirrels whisk their tails in an endeavor to prevent the rain from penetrating to their skins. I do not believe that birds enjoy rain any more than do we. I am led to this conclusion by observing them under the ordeal. Now, there is the catbird, for instance, perched on a limb just over my head. He's not happy. He even looks melancholy, and at times I think he can detect an expression of sympathy disagree with the dampness of his surroundings. An hour ago, he was as lively as a cricket, and seemingly very happy, warbling and whistling right merrily, as he hopped from limb to limb, watching with much interest the mysterious movements of the invaders of his domain. But, the moment he heard the thunder pealing among the mountain crags, he cocked one eye heavenward, and, with a look of alarm, he became motionless in his hitherto busy tail, and became motionless and silent as an oyster. Not another note has he uttered; and now there he sits with his back arched, his feathers drawn close to his body, his bill elevated and his tail bent at a right angle, from which the rain is pouring in little rivulets, while he shakes his head occasionally to free his eyes from the blinding moisture. Just once has he deigned to look down at me to see how I am getting along, with an expression of face plainly indicating that he is prepared to say, if he only could, "confound the rain!" Poor fellow! Wonder whether he ever has had rheumatism in his great toes, and what his opinion is of the advisability of such a sufferer sitting out in a rain storm, just for fun!

Yes, here I sit, watching nature in her different moods, and waiting for the appearance of fairer skies. I note the constantly varying colors of the foliage upon the steep mountain, at the foot of which our tents are pitched. In the foreground is a clear mountain stream,

rock-bound and musical as tinkling silver bells. Above the rocks, rhododendrons, profuse in their blossoms, that peep out from the overhanging foliage of the great trees beyond, as though nature had constructed a well-arranged and delightful bouquet upon a grand scale. As I linger here admiring the scene, constantly changing my position to keep the rhododendron portion of my person out of the wet, the thunder rolls overhead, and the great black clouds shut out the light, changing all the hues in my great bouquet. Now flashes of lightning illuminate it with a new and weird brilliancy, revealing the dark, moss-covered rocks, ferns and more delicate flowers that before were unobserved in the deep recesses of the tangled undergrowth. Soon the storm has spent its force, and passes over the hills to wash and drizzle other valleys beyond our own; the sun peeps coyly out from behind some lagging clouds as though ashamed for having abandoned us so long, and again lights up and warms our camp, at once restoring every one to good humor. The birds are the first to give evidence to their appreciation of the change, and the mountain and valley musical with their wild and ecstatic warblings. The catbird is in the advance in expressing his joy, and is now whistling as though in an endeavor to outdo all his feathered companions.

An hour has passed, and with it all traces of the storm. The wind has shaken the raindrops from the trees, and the warm sun has already dried the ground. The birds continue their merry warblings, the bees hum and buzz among the flowers and about your ears, and the butterflies flap in zigzag courses through the camp, avoiding limbs and bushes in a surprising manner when the awkwardness of their flight is observed. Our surroundings have become cheerful and delightful, dispelling all thoughts of storm.

For an arm chair, constructed of a barrel and piece of jute, in one of the boats, I paddle down to the other side in the pond and anchor there under the shade of a tree, bait a hook with a wriggling worm, and bob for suckers. A sucker is so slow in making up his mind to partake of any tempting morsel thrown in his way that I have provided myself with a novel, in the perusal of which I can kill time and wait for the sucker. I find exceedingly engaging amusement for contemplative, rheumatic mind; for your attention becomes almost evenly divided between the bobbing cork and the startling situations of the characters in the novel. While thus employed, the heroine of the novel was preparing to escape from a prison through a window by the aid of a rope, and an anxious loved one waited in prison cells; and my mind quickly outran the story, enabling me to foresee what a splendid time those two loving young people would have hugging each other as they slid down the rope together, and as I was dreamily speculating upon what they would do when they reached the friendly cover of the garden, down went my cork, followed by the novel, also by the heroine, to give me a better opportunity for what was waiting at the end of my line. A vigorous jerk upon the rod brought to the surface a monstrous and solemn-looking sucker, which persisted in extending his proboscis and squeaking in a peculiar manner, in derision or perhaps dismay at the situation. While disengaging the hook from his tough snout, the lovers slid down the rope unobserved, and got nicely away, and the anxious loved one was brought to them, and in broad daylight we and the sucker, and the novel, and the young man had his arm about the waist of the young woman, and was constructing the usual sweet sentences for her attentive ear. He was again declaring his undying love, and making preliminary preparations to seal it with the usual kiss, always provided for such contingencies, and my thoughts became fully wrought up to the situation. I imagined even that it was dark (although the sun was just then scorching my nose); my olfactory caught frequent wiffs of the magnolia blossoms; I saw the pretty, coy young maiden and her pouting, willing lips; indeed, the vertebrae and inevitable smack had almost saluted my ears, so in sympathy was I with the story and the two young people; when, suddenly, that contumacious cork again intruded, interrupting my reveries, and the novel brought me at once from the contemplation of fiction to fact. My cork was under-way under, and becoming more so every moment. I couldn't help it! I doubt whether I could have done otherwise had I been the young man—I dropped the girl once more, and pulled on the rod, and delivered into the boat a squinty, slippery sucker, which, in its efforts to escape, made such a tempting mingling of romance and reality, that I almost corks! I contemplated that slimy, restless creature as he attempted to tie himself into "true lover's knots" in the bottom of the boat, and tried to reconcile his untimely appearance with my story. But he wouldn't mix. I philosophized over the affair for some minutes, but could not revive in my memory a solitary instance where an occupant of a lover's woeing before, had I seen a snake, history would have offered a parallel, but never having encountered a young woman who would fraternize with an eel, and fearing that the young man might lose his kiss, I threw the luscious rascal overboard and regretted my hasty action, most sincerely, ten minutes later. For, would you believe it? notwithstanding the favorable condition of affairs—magnolia trees—in the dark—pretty girl—pouting lips—and all that, the blundered fish didn't kiss me! I thought "something alarmed them, and they fled while I was fussing with the eel. So, having lost the felicity of witnessing the lover's salute, and being cheated out of my prospective breakfast, too, I permitted the lovers to continue their flight, while I perched up my line and paddled back to camp, queer phantoms of a snake, eel, and pouting lips, painful toes, and fair maidens leading the way.

Arriving there, I found two of the campers had just returned from up the stream with trout and woodcock for the mid-day meal. While George prepared dinner, we all lay off in the large tent and smoked our pipes. I dried my back in the sun, rubbed my great toe, and then fastened down the tent flap preparatory to receiving the next shower, which was heralded in by a loud rumbling noises somewhere among the distant mountains.

The Newport society has received a sad disappointment in the "official announcement" that since Leopold will not be able to keep his finger in the pie, in consequence of having sprained his ankle while salmon-fishing in Canada,

hatching troughs, and to the tables in the octagonal extensions. These pipes are admirably arranged with stop-cocks, so that any portion of the apparatus can be operated without regard to the rest of the building.

In addition to the supply from the spring, there are pipes by means of which an unlimited amount of water can be thrown into the filtering tank or ponds from the high service reservoir which is on the hill to the west of the hatching house. The water from the reservoir being influenced by the temperature of the atmosphere, and that from the spring being invariably, by mixing different proportions the temperature of the water used can be either raised or diminished at will. The pipes which conduct the water to the tables on which the Ferguson jars are operated, are furnished with 3/4-of-an-inch spigots, over which rubber tubes are slipped for the purpose of introducing water into the jars.

On the floor of the house is arranged the following apparatus:—

- A. Ferguson jars.
 - B. Flights of Coste tray.
 - C. Troughs of Williamson's patent.
 - D. Troughs of N. W. Clarke's patent.
 - E. Green & Holton hatching box.
 - F. Aquarium.
 - G. Reservoir tank.
 - H. Porcelain-lined sinks.
- In this house have been hatched:—
2,497,140 California salmon.
89,881 land-locked salmon.
331,980 brook trout.

HATCHING TROUGH AND BOXES—STATIONARY.

Model of the first hatching-box used in America, by Dr. Theodorus Garlick, in the year 1853. Dr. T. Garlick, Bedford, Ohio.

No. 20. Model of salmon-hatching-troughs and trays in use at the United States salmon-breeding stations at Bucksport, Grand Lake Stream, Me. Scale, full size. C. G. Atkins. The eggs to be hatched are placed on the wire-cloth trays.

Model of Clark's hatching-box for all the salmonidae. The eggs are placed upon the screens and the water flows in from above and out below. Patented by N. W. Clark, F. N. Clark, Northville, Mich.

Model of the Holton hatching-box for all the salmonidae. The eggs are placed upon all the screens except the top one, and the water flows in from below and out at the top. Patented by Marcellus Holton. Seth Green, superintendent, New York.

Holton box (without the frames), which has been in use. S. Green, Rochester, N. Y.

Hatching-trough, used at the United States hatching-house at Grand Lake Stream, Me. C. G. Atkins.

A circular-shaped hatching-can of tin, designed by F. Mather, which led to the adoption of the following:—
Shad-hatching cone, with screen at the bottom, devised by Charles F. Bell and Fred Mather. United States Fish Commission.

Frame and screen used for hatching lake trout, *Cristivomer namayegush*. M. A. Green, New York Fish Commission.

Salmon-egg hatching-baskets. Devised by Livingston Stone for use in the McCloud River, California. The baskets do not rest on the bottom of the trough, and the water flows through them from the bottom and sides and out at the top. L. Stone, United States Fish Commission.

Box of Trays for hatching-trough, devised by Chas. G. Atkins, Bucksport, Maine. United States Fish Commission.

Model of hatching-frame in use at Grand Lake Stream, adapted to use in a trough or in an open stream. Devised by C. G. Atkins. Scale, full size. C. G. Atkins. The eggs are placed on all of the trays except the upper one. The water flows through the trough, and the frame is shut it confines the trays securely in place. United States Fish Commission.

Grand Lake hatching-frame. For use in a trough or in an open stream. Adapted only to large fish-eggs, like those of salmon. Designed by Charles G. Atkins, assistant to the United States Fish Commission of Fish and Fisheries in 1875, and used then in constant use in the Schoodic salmon-breeding establishment at Grand Lake Stream, Maine, U. S. A. When in use, the water flows through the frame horizontally. Not patented.

The capacity of this frame is 35,000 eggs of salmon. Hatching-jars of glass, with self-picking screen. Invention of Oren M. Chase, Detroit, Mich.

Ferguson jars, full size. O. M. Chase, Michigan Fish Commission.

The Ferguson hatching-jar. A glass jar with trays. The water flows in at the bottom and out at the top. T. B. Ferguson. United States Fish Commission.

Glass jar with screens for hatching trout. Devised by Thomas B. Ferguson. United States Fish Commission. Miniature hatching-box, for hatching trout or any fish requiring running water. Arranged to place in the dwelling-house, or wherever water can be supplied by a pipe. Charlestown, N. H. Livingston Stone.

Model of fish-nursery for raising young trout less than six months old. Half actual dimensions. Charlestown, N. H. Livingston Stone.

Ferguson's improved conical hatcher, with removable top, used to prevent washing. Also arrangement for removing bottom screen. Valve used when bottom screen is to be removed or eggs and young fish to be transferred. Furnished also with hook for lifting vessel from frame. T. B. Ferguson. United States Fish Commission.

Another form of same, furnished with Clark's self-picking gate attachment. T. B. Ferguson, Baltimore, Md., and A. Clark, Northville, Mich. United States Fish Commission.

Reversible plunging can, for hatching fish eggs, now in use on the United States steamer *Fish Hawk*—a part of the improvement in fish-hatching apparatus invented by T. B. Ferguson, Baltimore, Md. Patented. The ends are so arranged as to be easily removed, so that the can may be used as a hatcher or a transporting can by inserting either a wire-cloth or tin bottom. T. B. Ferguson. United States Fish Commission.

Another form of same, furnished with trunnions by means of which it is swung in the frame of the conical hatcher when used for transporting fish in rough seas. (The tops are interchangeable with those of the conical

hatchers.) T. B. Ferguson. United States Fish Commission.

Harvey's "Cam," and "Guides" for Ferguson's improvement in fish-hatching apparatus. In use on the United States steamer *Fish Hawk* for imparting a vertical motion to the hatching-cans. Designed by T. B. Ferguson. United States Fish Commission.

Ferguson hatching-jar. A glass jar, with trays. The water flows in at the bottom and out at the top. Provided with trays for hatching salmon. Designed by T. B. Ferguson. United States Fish Commission. (By the use of glass the growth of fungus is prevented, and every egg in the vessel can be seen at a glance.)

HATCHING-BOXES—FLOATING.

Shad-hatching box. Invention of Seth Green, Rochester, N. Y. Patented. S. Green, New York Fish Commission.

Model of the above. S. Green, New York Fish Commission.

Shad-hatching box. Invention of Isaac H. Wright, Baltimore, Md.

Shad-hatching box. Invention of E. A. Brackett, Winchester, Mass.

Patented. E. A. Brackett, Massachusetts Fish Commission.

Revolving shad hatcher, designed by Spencer F. Baird, United States Fish Commission.

Semi-rotating hatchers. Hatching-box for eggs of the codfish. Invention of H. C. Chester, Noank, Conn. United States Fish Commission.

Mechanical fish-hatching apparatus. Invention of Joel C. Parker, Grand Rapids, Mich.

ADHESIVE EGG APPARATUS.

Model of box for hatching the smelt, *Osmerus mordax*. Devised by George Riccio, Hackensack, N. J. One-half size. F. Mather, United States Fish Commission.

MODELS OF FLOATING-HATCHING HOUSES.

Model of the United States Fish Commission steamer *Fish Hawk*. Built by the Pusey & Jones Company, Wilmington, Del. Length on water line, 146 feet 6 inches; breadth of beam (molded), 27 feet; depth of hold (amidships), 10 feet 9 inches; draft of water, 7 feet 6 inches; tonnage, 485.

Model of the fish-hatching deck of the United States Fish Commission steamer *Fish Hawk*, built by the Pusey & Jones Company, Wilmington, Del. Scale, 2 inches to the foot.

ACCESSORIES TO THE HATCHING APPARATUS.

Wooden nippers for removing dead eggs. F. Mather. United States Fish Commission.

Wooden nippers with wire-loops, for removing dead eggs. M. A. Green. New York Fish Commission.

Cleaning net for removing dead shad eggs and dead fish from troughs. M. A. Green. New York Fish Commission.

Shad-hatching net for removing dead shad eggs and dead fish from troughs. T. B. Ferguson. United States Fish Commission.

Hand net for removing fish from troughs. T. B. Ferguson. United States Fish Commission.

Landing net for carp. United States Fish Commission.

Pans in use for taking and impregnating fish eggs. United States Fish Commission.

Tin dipper in use for supplying water, etc. United States Fish Commission.

Lamp or lantern. United States Fish Commission.

DEVICES FOR THE TRANSPORTATION OF FISH EGGS.

Box used in sending salmon eggs from America to Europe. Ice chamber on top and air space on sides. F. Mather. United States Fish Commission.

Box used in carrying fish eggs short distances. M. A. Green. New York Fish Commission.

Box used in sending eggs of brook trout to Europe. James Annin, Jr., Caledonia, N. Y.

APPARATUS USED IN THE TRANSPORTATION OF FISH.

Milk can. United States Fish Commission.

Tin water bucket. United States Fish Commission.

Rubber tube for siphon. United States Fish Commission.

Strainer-tube for end of siphon. United States Fish Commission.

Rubber tube for siphon. M. A. Green. New York Fish Commission.

Steamer-tube for end of siphon. M. A. Green. N. Y. Fish Commission.

Written bucket.

Ferguson's cylinder-can with adjustable top. T. B. Ferguson. United States Fish Commission.

Ferguson's aerating apparatus. T. B. Ferguson. United States Fish Commission.

This apparatus is screwed into the top of a carrying-can, and a small stream of water coming in from a tank or reservoir above draws air in through the side aperture and discharges it at the bottom of the tank, when it rises to the surface in a foam. Apparatus of this kind was used in the Boston carp ponds of W. E. Baker in 1874, and by the United States Fish Commission in 1875 in the aquaria of its Sea-coast Laboratory at Wood's Holl, Mass. It was applied to fish-carriers by T. B. Ferguson in 1877.

Conical tank. Stone & Hooper, Charlestown, N. H. Can for hatching shad eggs while in transit, by motion of the water caused by rolling of ship or railroad car. Designed by Fred Mather. United States Fish Commission.

Can, with sponges, for self-aerating water by means of motion of a ship. Fred Mather. United States Fish Commission.

Conical glass feeders which keep the food in motion. Presented to the city of Baltimore by Thomas Winaas.

PREPARED FOOD FOR ADULT FISH.

Packages of prepared food. W. Koehler, Hoboken, N. J.

Baird, Spencer F.—United States Commission of Fish and Fisheries. Part V. Report of the Commissioner for 1877. A.—Inquiry into the decrease of food fishes. B.—The propagation of food fishes in the waters of the United States. Washington: Government Printing Office. 1879. (Svo., pp. 43, 972.)

Map showing the operations of the United States Fish Commission from 1874 to 1879, and the location of all stations of the United States and State Fish Commissions, and the dates of establishment of the various State Commissions.

INSINGLASS FROM FISH SKINS.—Gloucester, Mass., July 19th.—*Editor Forest and Stream.*—I notice you have our company as manufacturers of insinglass and glue from fish bladders. That is a mistake. The stock we use is the skin of salt fish. The fish is put up for market, in boxes, with the skins taken off, also bones taken out. The skins were of very little value before my invention.

JOHN S. ROGERS.

Our report was taken from the official catalogue of awards, which designates the award as follows:—

"J. S. Insinglass & Glue Co., Gloucester. Hausenblase und Fisch-Lefeln nebst Fabrikanten darents."

As will be seen elsewhere, the medals will not be ready before October, and it would be well, therefore, for our correspondent to write to the Fischerei-Verein at Berlin, to have the report of the award corrected.

THE RANGELEYS.—Hartford, Conn., July 17th.—I found the Rangeley Lakes (the 1st) very quiet; most of the anglers gone and very little fishing, although I was told that the month of June was as good as any they had seen for many years, the fish being more numerous, but smaller. The water was very low, but I was surprised at the number of camps which had sprung up since I wrote the "Rangeley Lake Trout Tales" for the FOREST AND STREAM in 1874. I left Mt. Kinross House June 25th, and the fly-fishing was excellent. My wife took a trout of 24 pounds, and a lady from New York who was with me took one of 24 pounds. I saw snow in the White Mountains, and missed those sweltering days in June. If I can afford the time this autumn, I want to go to Maine and pass from Moosehead Lake over to Churchill Lake, and then by way of Spider and Mousungun lakes and river to the Aroostook River, coming out at Caribou, Maine, and thence into New Brunswick. My brother-in-law, Col. Coff, was the first person to "bore" through that region last year, and beaver, caribou and moose abound, the law on the latter being off Oct. 1st, the first time in three years.

THE LATE APPEARANCE OF CANADA SALMON.

NEWPORT, R. I., July 16th.

Editor Forest and Stream.—

An explanation has been asked of me by a number of persons of the tardy appearance of salmon in the rivers of Canada and Nova Scotia; and, not feeling able to answer satisfactorily, I referred the problem to Prof. H. V. Hind, Windsor, Nova Scotia, a gentleman who is perhaps the best fitted of any in America to write on the physical agencies affecting the movements of migratory fish in the North Atlantic Ocean.

I have much pleasure in inclosing herewith my reply, the publication of which in FOREST AND STREAM will, I think, be of much interest to its readers.

SPENCER F. BAIRD,
Commissioner.

WINDSOR, Nova Scotia, July 11th.

DEAR PROF. BAIRD:—

In reply to your letter of inquiry of the 29th of June, I send some brief notes I have made on the subject.

The question you have proposed respecting the cause of the late appearance of salmon in certain rivers emptying into the Gulf of St. Lawrence, this year, is one of great practical interest, not merely to anglers, but in the study of the artificial propagation of the salmon, and the probable causes which have led to but inconsiderable returns from very great outlay.

I shall give you a brief resumé of the ideas which have occurred to me on this subject, which is subordinate to the far more interesting inquiry respecting salmon propagation.

I do not think that the unusual abundance of Greenland ice, or of local ice, has had much to do with the late appearance of schools of salmon in our rivers. In 1875 the Gulf of St. Lawrence was so choked with ice in May that several small steamers bound to Quebec were caught and entangled in it for many days and even weeks. Yet that year was not a late year for salmon, although it was a poor year in some localities.

Every river appears to have its own schools of fish, which visit it in succession, some for breeding, others for sanitary purposes.

But they come at times which are determined by hereditary habit formed through ages of acclimatization and adaptation to the conditions of the river and the sea into which it empties. All the schools of mature fish which ascend the river or play about its mouth are not spawning schools, for there are good grounds for the belief that at a certain age and under certain conditions the salmon becomes a biennial spawner.

The spawning school which ascends in July or August to spawn in October or November, is probably destined in many cases to become the first spring school which enters the river the next succeeding spring for sanitary purposes, remains for a short time, and descends to the sea again without spawning, it being an off year to them.

Should anything happen to these spawning schools which come in July or August, so that they become greatly diminished, then the next year's spring schools, which they would have become, will be much diminished also, and a year must elapse before the early spring school returns to the river.

Such an event appears to have occurred during November and December 1879, apart from the destruction occasioned by the rod and the net. This was the unusual cold of those months in the fall of 1879, the mean temperature in some parts of the Maritime Provinces falling five degrees below the mean of the same months in the preceding year.

At Manitoba the difference amounted to 20° Fahr. At Fredericton, N. B., the mean of December, 1879, was 6° 90 below the mean of 1878. At St. John's, N. B., it was 5° 4 lower than December, 1878. At Sydney, N. S., it was 5° 35 lower in December, 1879, than during the same month in the preceding year. The consequence of this remarkable and sudden reduction of temperature was the early and sudden closing of the rivers. The spawning instinct, or desire, as heretofore explained, was retarded by the cold, and numbers of the fish became land-locked, descending to the sea as slinks or kelts in the early spring, but incapable of so far resuscitating themselves as to return for sanitary purposes, or, in some cases, for spawning purposes, as early spring schools, which they would have done had they descended in November or December instead of April, when the rivers broke up.

Now, with regard to those fish which have not arrived at the age, or been subjected to the conditions which compel them to produce fat instead of developing ova, and become biennial spawners, the cold of November and December, 1879, put back the desire or instinct in the fish to spawn, although their ova might be fully developed, and they retained their spawn perhaps a month or six weeks longer than usual in the manner heretofore described.

Those that escaped to the sea after this late spawning, and continued to develop ova instead of putting on fat, would not have their ova sufficiently matured early in June of the present year to induce them to leave the sea, and they migrated long after their usual time.

A very curious illustration of the effect of extreme and prolonged cold occurred in the early spring of 1879, in the well-known salmon river Tyne, in the north of England. The fish there, which usually spawn in December, and were never before known to spawn in February, were concealed from the 1st of December, 1878, to the 20th of February, 1879, by a snow storm and prolonged cold of unusual duration. When the river broke up, large numbers of salmon were observed spawning in the third week of February. Such an occurrence was never before known, and, indeed, it is quite uncommon for salmon to spawn even in January in the Tyne.

The hook on the lower jaw of the male salmon has much to do with the spawning of the female, and plays an important part in that operation; a description of which I have not seen published.

I think you will find that the ovaries in the salmon are separated from the oviduct by a delicate membrane: in fact, a hymen. The purpose of the hook on the lower jaw of the male is to break this hymen. When the female is ready to spawn, and not before, she suddenly turns on her side, and the male, always in attendance, and instantly seizes her just below the pectoral fins, and with a sharp grip and pressure of the blunt hook on his lower jaw he fractures the membrane which separates the ovaries from the oviduct. The female resumes her normal position, and the operation of spawning soon after commences. The effect of the pressure of the hook on the side of the female is like what would be produced on the conditions for extruding the ova are suitable, and yield at the weakest place. In the female salmon this weakest place is the membrane separating the ovaries from the oviduct. Pressure with the hand, or even through handling of the fish, necessarily produces the same result: the ovaries are distended. The presence of this membrane gives to the female the power to retain the ova as long as she chooses, or until her instincts show her that the conditions for extruding the ova are suitable; then she lies upon her side, and the hook of the lower jaw of the male serves the purpose it was designed to fulfill.

It follows from this that there is always a certain relation between the development of the hook on the lower jaw of the male and the period of the year during which the females spawn. Hence it would be incompatible to propagate salmon in a river by bringing a female from a distant river, where the salmon spawn in a different time, with a male born in a river where the fish spawn in December. The hook of the future male would not be sufficiently developed to serve its purpose, and the female would be ready to spawn before the male.

The difference between the spawning habits of salmon in rivers quite close to one another is so remarkable that the force of this adjustment of hereditary habit by a proper selection of fish is easily seen. The Severn, for instance, in the southwest of England, is one of the earliest spawning rivers known. September is by no means an uncommon date for spawning there; whereas, the river Wyre, flowing into the same estuary, is a late spawning river. In the Derwent, whose waters lie some fifty miles to the northeast of the Severn, the latest fish, according to Mr. Buckland, run up in September and October. Whereas the spawning fish come in from December to February. In the Sackville River, emptying into Bedford Basin near Halifax, Nova Scotia, the salmon come directly from the sea into the river to spawn in the fall of the year.

In the Medway, a hundred miles to the west, salmon may always be taken with a fly in February and March whenever the river is sufficiently open, even should much ice be in the river; and while the flow is ascending, it often happens that the spent fish of the previous year are descending in great numbers. They have remained in the lakes during the winter months.

The development of the hook in the male varies very materially in point of time in different rivers, hence it would not be acting in accordance with natural laws to attempt to propagate salmon by taking a male from an early spawning river, and pairing him with a late spawning river.

Until we know more about the conditions which govern the development of the hook, it is reasonable to assume that the male and female fish resulting from the cross would have different hereditary periods of development, which would be unfavorable to the continued production of the species. Again, if a river be naturally a late river, there must be some excellent reason why it is so, and it would not be proper regard for natural laws to attempt to people such a river with early salmon ova taken from fish whose home was originally an early river. Experience, acting through ages, has determined the relations of salmon to the rivers they inhabit, and in order to succeed artificially it seems to me that we must imitate, as closely as possible, the results of that experience. But I am not aware that this method of reasoning has been applied to the propagation of the salmon either in Canada or the United States.

So far the chief results in our salmon rivers have been obtained by protecting existing fish, clearing the rivers of windfalls and jams, protecting the natural spawning grounds and giving the fish in the estuaries a chance to ascend by regulating the area covered by nets. This is certainly the surest way to repeople our rivers. When the propagation of the salmon is to be attempted, it is reasonable to suppose that the experience of the native fish, which shows itself in the form of an hereditary habit, should be our guide in the selection of fish from which we seek to breed and repeople any particular stream. Where no such guides can be found, late spawning males and females, and early spawning males and females should be rigorously selected, and not taken promiscuously.

HENRY YOWLE HIND,
Prof. Baird, United States Commissioner of Fisheries.

CALIFORNIA TROUT.—Wellsville, N. Y., July 14th.—In June, 1879, we put into the Genesee River, in this vicinity, a few thousand California trout fry, given us by Seth Green, of the State Hatchery.

Last evening several of these Californians were caught in the river, while fishing for our native trout; three of them were badly hooked, and were saved, and are now "lying in state" on ice. The three measured, respectively, 7 7/8, 7 1/2 and 7 1/4 inches, the longest weighing three ounces. A larger one was caught and put back that measured 9 inches in length. The party catching these told me that they take a hook as "business like" as our native *Salmo fontinalis*.

BLUEFISHING AT LONG BRANCH.

Editor Forest and Stream:—

You like to hear of your subscribers having a day of real genuine sport, so occurred to me your readers would like as well to know where they can find just such a place and have just such a time as I have mentioned, within fifty miles of New York.

On last Friday I received a note from my old friend, Arthur L. S., stating: "Buy a bass rod, reel and line, and come with me to Long Branch. I can give you the best sport you ever had." Proceeding so well that Arthur Knapp, who is now at the Abbey, and I, with a party of five, on Maiden Lane, procured what he had written me, and at 3:30 P.M. I was on the train bound for Long Branch with Arthur. Thence we drove to Seabright, engaged Jack, "the best fisherman on the water," bought a bushel of moss bunkers of doubtful odor, and with the thermometer at 90 degs., we went over to the beach. Our boat was safely launched through the breakers, sail was raised, and a light breeze carried us out five miles from shore. Our anchor was out, and then the work commenced. Jack began to chop our odoriferous moss bunkers and to throw the pieces overboard, first on one side of the boat and then on the other, a process which is called "charming." We sat under the boiling sun for five minutes, with twenty yards of line floating away with the tide, and at the end of the line, to which was attached a foot or so of wire, a large hook baited with a piece of moss bunker. I saw Arthur's rod bent almost to the water. Turning to me he said, "John, I believe I have got a whale." The fish ran straight away, reached the end of the line up in the air, and jumped and shook his head, but his efforts failed; and as he was being reeled in to the boat with the line, which was struggling in almost every conceivable way. I had forgotten all about my hook, but just then my rod commenced to leave me as though I had thrown the line looped over the smokestack of an engine. Having braced the end of my rod under my seat, I tugged away, when Arthur said, "Give him line or he will break your rod." He pulled the line and away he went, until at last he was checked, and as he was being reeled in slowly to the side of the boat, I could see him swimming around and around in the water. After he was landed, I realized how very tired I was. The fellow weighed ten pounds.

When we had caught about twenty-five, all over six pounds, Jack said, "You will catch no more to-day; the line sharks are around us." Sure enough, those big fish, eight, ten and twelve pounds, began to swim about our boat, and occasionally they would make a dive for one of our large pieces of moss bunkers. It was not a pleasant sight, and because I stated that no non-eaters came in these waters, my companions attacked me with great ferocity and suggested that I jump overboard and try it; not, however, caring to prove my statement, I expressed my disgust. The fish did bite, and we landed forty-two, or, as Jack said, "about three hundred weight." Arthur caught an eight pound bonito, and at last hooked a shark. The struggle was terrible to me. Again it seemed as though his rod must go. Perspiration and blank dismay commingled were on his face, and after twenty minutes the fish was dragged to the side of the boat, his head was chopped half off, and he disappeared beneath our feet. This was not the large yellow-bellied shark, but a huge one of the dog fish order. To make it worse, I had a large fish on at the time, and our lines were in great danger of being mixed up and broken, but both were landed. It was just half past twelve then, and being thoroughly broken down, we concluded to stop for the day, and pulled for the shore. On my way Jack asked leave to sell our surplus fish, which we granted. We sold thirty to the pickers on the "Fletcher," who, no doubt took them home and talked long about the great sport they had had.

Arriving on shore we jumped into our wagon, gave some of our large ones to Mr. Hugh Hastings, of the Commercial, and to Mr. John McKesson, and then wended our way home with the balance, having had the best day's sport for a long time with the mutual determination to go soon again.

The fish were bluefish.

New York, July 16th.

J. L. L.

BLUEFISHING AT MARTHA'S VINEYARD.—Reports from the famous fishing grounds of Martha's Vineyard give glowing accounts of the sport to be had there with the bluefish and other varieties. See the advertisement elsewhere of the Norton House.

TROUTING.—Hornellsville, July 11th.—As Mr. Van Dyke suggests a "Blood Sufferers" corner, the following will be an appropriate item for it:—

A party of four gentlemen of the place lately returned from Pine Creek, Pa., with 1,000 brook trout; the lot weighed less than forty pounds. A little calculation will show that the fish weighed less than three-quarters of an ounce apiece. Do you not think an eight inch jaw or a lunatic asylum would be good for such "Blood Sufferers?"

JOHN.

NEW JERSEY.—Riverside House, Forked River, July 17th.—Large quantities of bluefish now in the bay, running from one to two pounds. Weakfish also continues good, thirty-five to seventy-five being the average catch per boat. Were it not for the net-fishing, which is openly carried on regardless of all law, we would have fine sheephead fishing, as it is not unusual for the net men to take fifty or more at a haul, and what they do not catch are frightened off.

Late arrivals at the Riverside House include Mr. and Mrs. W. Lee, Mr. and Mrs. A. M. Mayer, South Orange, N. J., Mr. and Mrs. D. D. Ackers, Jr., Mr. and Mrs. Henry Thompson and family, Messrs. R. H. Sauer, Jas. M. Edgar, Jr., N. L. Tunis, Chas. S. Farley, Chas. C. Jaclard, all of New York, who spend most of their time on the bay fishing, etc., the ladies enjoying the sport and catching as many fish as the gentlemen.

A. B.

WISCONSIN BLACK BASS.—Janesville, Wis., July 12th.—I have been reading the articles from J. A. Henshall on black bass, and I must say he knows what he is writing about. I think the black bass has got more game in him than any other fish that swims in Western waters. I don't know anything about the East.

Rock River has her share of black bass, also wall-eyed pike and pickerel. On July 10th, a small boy fourteen years old caught with a fly a black bass weighing four pounds; he had a hard fight as the water was very rapid and the bank very steep, but the little fellow was game like the fish, and finally landed him.

Last week, Wednesday, a party of nine gentlemen went up the river about ten miles in the little steamer *Bowser City Bell* and caught a large washub full of black bass, pike and pickerel. They had a splendid time. C. C.

BETTER THAN DOCTOR'S BILLS.—New York, July 15th.—I have made a clear cash profit this summer of \$113, and I don't mind imparting the secret to your readers. Last July (1879) I was taken sick, probably from overwork, with this result:—

Twelve visits from doctor.....	\$ 21.00
Medicines.....	5.50
Three weeks' loss of time.....	150.00
Total.....	\$182.50

Result: Felt weak and nervous for several months. This year I "grabbed" time by the forelock, and in June went fishing to the Rangeley Lakes (Umbagog) at this expense:—

Railroad and buggy fare—both ways.....	\$60.00
Two weeks' expenses in the woods.....	40.50
Total.....	\$99.50

Figuring thus:—

Sick man's expenses.....	\$182.50
Healthy man's expenses.....	60.50
Net profit.....	\$122.00

Result: Lots of fun, immense appetite, splendid health, and ready for oceans of business.

Moral: Get your medicines at the fountain head.

K. C.

ST. CLAIR FLATS BASS FISHING.—Detroit, Mich., July 12th.—My first visit this year to St. Clair Flats was made last week, Thursday and Friday. Found fishing just fair started. A friend from Ohio, Mr. E. J. Fairfield, and myself set out fifteen baits, running from one pound to five and a quarter pounds in weight, some six or eight pike, from two and a half to nine pounds, a half a dozen pickerel, or "wall-eyed pike" as they call them here, and five or six perch, the latter as large as I ever saw, certainly not less than a pound each. In all we got about seventy pounds. Friday's sport was cut short by a fearful storm, which commenced before 4 o'clock. Some very fine maskalagos have been taken in Baltimore Bay, in the flats, this year, but we were not lucky enough to strike any. The best time for bass will now soon be here, say from the middle or latter part of August to the close of the season, and there is room for a thousand rods. Mr. T. P. Wallace, one of your old subscribers by the way, of Marion, Ohio, paid the flats a first visit and expressed himself satisfied with his success. Next time I am able to go out, I hope to send you an account of such fishing as shall make you wish you were "thar."

UO.

RICE LAKE.—Port Hope, Ont., July 9th.—Maskalago and bass fishing, which ordinarily commences on July 10th, did not begin at Rice Lake until May 24th. Trolling for maskalago was good up to a couple of weeks ago, since when very few have been caught. Although a great many yellow or mud bass were caught in the early part of the season, the black bass did not begin to bite well until about June 20th. There has been good fishing since. Although very few ever try fly-fishing for maskalago on this lake, still when attempted it is generally successful. One gentleman caught twenty-eight one afternoon, using a bright red fly; another caught fourteen, going the short distance of three miles, four weighing over four pounds each. There is a good hotel at Gore's Landing, three miles from Harwood, kept by T. Harris, board \$1, boats 50 cents per day. It is the best place on the lake for fishing, well kept, clean and tidy. There is a good hotel at Harwood, kept by W. Garnet; terms reasonable, I believe. Route, *Northern* from Charlotte to Cobourg, train to Harwood. F. C. G.

The Kennel.

—Address all communications to "Forest and Stream Publishing Company, New York."

—Dr. H. B. Wygant informs us that the pointer bitch advertised by him last week was taken suddenly with distemper and died last Saturday night. He wishes in this way to reply to the numerous letters received by him in response to his advertisement.

POINTERS IN THE FIELD.—Photographs of Mr. Tracy's paintings of the St. Louis Kennel Club's pointers, Faust and Bow, and Keswick and Jessamine, can be had at the sportsman's warehouse of Messrs. Schuyler & Dunne, 189 Broadway.

DEATH OF DIDO.—We are extremely sorry to announce the death of Dido, the setter bitch owned by Mr. J. O. Bonner, of this city, and recently purchased by him from the sportsman's warehouse of Messrs. Schuyler & Dunne, 189 Broadway.

CANADIAN KENNEL CLUB.—A meeting will be held in the Rossin House, at 8 o'clock on the evening of Wednesday, Sept. 8th, with a view of establishing a "Canadian Kennel Club" to act in harmony with the National American Kennel Club, and with the same objects in view.

BAUBLE.—Louisville, Ky., July 18th.—Editor Forest and Stream:—I thank you for notice of the bounds, which was incorrect in one particular, through a neglect of mine to inform you that Bauble will not be shipped until she is bred. Abigail was the bitch you saw, and the one I saw at the Grove Revereer was the Grove Revereer, running back on this side to Mr. Meynell's farm, 1780, and through dam to Mr. Meynell's Guzman, 1780. The present importation is for "The Crystal Spring Jack," Waverly, Tenn., Mr. A. M. Wadell, master.

HARRY BISHOP.

TICKS ON DOGS.—Annapolis, Md., July 12th.—Editor Forest and Stream:—In your issue of June 24th I noticed an article on "Conditioning dogs for summer woodcock shooting," in which you state that the spot from which a tick has been taken should be dressed "with some mercurial preparation." I have had my dogs out for exercise daily, and for the last two months have every day taken ticks from them. I have used no dressing of any kind on the spots from which they have been taken, and no dressing has been needed. Ticks should be removed gently by twisting them around. What is the object of the mercurial ointment? If the tick is removed the same day on which it fastens to the dog I do not believe it can deposit any eggs. I have seen neglected hounds with sores containing ticks or grubs of some kind, but they were not well cared for animals.

R. W. H.

The object of the mercurial ointment is to effectually destroy any ova that may have been deposited. Your negative experience does not destroy the positive experience of others; of course, the more immediate the removal the less danger and the less need of any application as an antidote. We have simply given you a good antidote when required.

IRISH SETTERS.—New York, July 20th.—Editor Forest and Stream:—I suppose there never was a dog show—in this country, at least—where some of the exhibitors were not disappointed. The fact is, there are a great many who, having read "Stonehenge," think they are not only able to judge, but that they own the best dog. If the judge's opinion don't coincide with theirs, the judge must be at fault. We have had the best of English judges here, gentlemen who know as much, if not more, about dogs (especially setters and pointers) than "Stonehenge." With this class of judges he is not an "authority."

According to Mr. Dalziel's letter to the *Live Stock Journal*, the protest in class 40 was made simply because Mr. Davidson's dog had white on. I venture to say that no Irish judge would have considered that a bar to his winning. I have a letter from an Irish gentleman, who was in England several years last year, and who is a large breeder of Irish dogs himself, in which he says: "White is not considered a fault in Ireland, whatever it may be in America. The handsomest, best and purest Irish dogs I ever saw had white on; sometimes a stripe on face, spot on chest, or white on toes." Champion Palmerston is a rich cherry red, with white on face, which his owner says is the true type of the "Irish setter." Why, at the show I had the man tell me that my dog had English blood in him because he had white on his chest; there was no doubt about it. When I assured him that the dog was as pure Irish as any in the world, he looked as if he pitied my ignorance. This is the idea that some people get from the "protest"—that a dog to be pure Irish must be all red. Any candid man will admit that Irish breeders ought to know something of Irish dogs. The Irish classes here are always large. At the next show let us have an Irish judge, unhampered by rules laid down by one who perhaps never bred an Irish setter in his life.

Lo.

TORONTO DOG SHOW.—This bench show will be held Wednesday, Thursday and Friday, Sept. 8th, 9th and 10th, during the annual exhibition of the International Exhibition Association of Toronto, at the new Exhibition Park, Toronto, Canada, and judging from the prominent and well-known names connected with the management, promises to be a well conducted affair. The following is the list of officers: President, F. W. Jarvis Esq., Sheriffs, County of York, Vice-President, His Worship, the Mayor of Toronto, and Christopher Robinson, Esq.; Q. C. Committee: Messrs. A. R. Boswell, C. A. Brough, W. H. Doel, F. C. Draper (Chief of Police), Geo. Gooderham, J. F. Hellmuth, Stephen Llewellyn, J. Maughan, Jr., John Massey, R. Timming, Jr., James Watson and Lieut. Col. Otter. Honorary Secretary, A. D. Stewart Esq. Officers Industrial Exhibition: Vice-President, W. F. McMaster Esq.; Second Vice-President, Wm. Rennie; Treasurer, James McGee Esq.; Secretary, H. J. Hill Esq.

Premium List of Thirty-two Classes.—Classes 1 to 4, mastiffs, St. Bernards, Newfoundland and greyhounds, for best dog or bitch, \$10. For second best dog or bitch, \$5, each class. Classes 5 and 6, pointers, dogs and bitches; for best dog or bitch, \$10; for second best, \$5. Class 7, pointer puppies; for best dog or bitch, \$7; for second best, \$4. Classes 8, 9 and 10, Irish setters, same as pointers. Classes 11, 12 and 13, black and tan setters, same as pointers. Classes 14, 15 and 16, English setters, same as pointers. Classes 17 to 31, Clumber and Sussex spaniels, water spaniels, spaniels (other breeds), retrievers, foxhounds, fox terriers, dogs, collies, bull terriers, pug dogs, Bedlington and Dandie Dinmont terriers, rough coated terriers, other than Yorkshire; pugs, black and tan terriers, (any breed, five pounds and under); for best dog or bitch, \$7; for second best, \$4. Class 32, miscellaneous; for best dog or bitch, \$7; for second best, \$5; for third class, \$3. Special prizes: For best dog or bitch (sporting class) in show, silver medal, value \$20; same for non-sporting class.

The Great Western, Grand Trunk, Northern, Credit Valley, Midland, Canada Southern, Erie, New York Central and other railways will carry dogs free, if accompanied by a care-taker.

Entries close on Aug. 21st, 1880. Forms sent on application to H. J. Hill Esq., Toronto, Canada.

A WHOLESALE LITTER.—Joseph Meyer's lively stable at 62 George street, Cincinnati, Ohio, was the scene a few days ago of a canine phenomenon, unequalled in the annals of doggy matters. Here is what the Cincinnati *Enquirer* man has to say about it:—

Arriving at Mr. Meyer's, a crowd of curious, gaping men and boys was found surrounding a handsome brown and white English pointer which lay upon a pile of straw and shavings in the rear of the building. Clambering over the gentle animal were as quivering lot of little pups, all extremely anxious to get the first chance at supper, for there were entirely too many of them for all to get in at the first table. There were pups as black as the ace of spades; pups with white-tipped ears; spotted pups and

white pups; pups with black tails and pups with white tails. Twenty of them, at the score, on actual count. It was a sight worth seeing, although the mother seemed to think that she had more little ones to look after than she had bargained for. The first one made his debut into the light of the "Paris of America" at 9 o'clock in the morning, and the way the reinforcements began to come was a caution to the natives thereabout. The majority of them were of the female persuasion, but there were just enough boys in the lot to keep the other giddy things under control. The mother who gave birth to such a wonderful family is an English pointer of pure stock, and her present owner, Mr. Meyer, bought her only a few weeks ago from Joe Todd, a peddler, who resides in Avondale. She is as gentle a brute as can be imagined, and she allowed the bystanders to freely examine the diminutive beasts without interference. The present case is without parallel, we believe, in the annals of natural history, although it is a common thing for a sow to have a litter of young numbering quite as many. An English pointer is generally proud if his spouse presents him with a family of six or seven, but when the old gentleman who is responsible for this, learns the fact, it is probable that he will hardly associate with his fellows on terms of equality hereafter. The dam who thus has made herself famous answers to the name of "Rose," and every member of her family remains alive and exceedingly active. They are all of the usual size, and are as cute as little pups always are. "Rose" showed wonderful sagacity during the day, and when one small specimen was ushered into existence in a seemingly dead state she at once made endeavors at resuscitation, in which she was finally successful, and that little brute was just about as lively as the rest of the gang last evening. At last accounts the twenty were still on hand, none of them having got away, while there were no more additions to chronicle.

A PENSIONED DOG.—In the Territory of New Mexico the legislature, by joint action, recently pensioned a dog for noble services. In that country there are many sheep farms, and shepherd dogs are so well trained in guarding the flocks of their masters that it is their daily practice to take out the flocks to the pastures, and guard them all day and at night return them to the fold or corral. This work of the Mexican dogs is so common and so faithfully performed that it is looked upon as a matter of course and nothing more than should be expected from a well-trained dog. This being the case, it would appear that the dog worthy of a pension in that Territory must have performed some very marvelous feat, and, something out of the common line of canine achievement, and he did. He did not save his mistress's life from the murderous fury of the savage, nor her child from being brained against a door-post or being choked by a huge blacksnake, for his master was not married, and had no wife or babe, but led a solitary life in his solitary ranch in a very solitary part of New Mexico. It chanced that the dog in question, on returning one evening with his sheep to the fold, discovered that his master was not stirring about, but remained inside the shanty and kept very quiet. The next evening it was the same. The dog, when he penned up the sheep, repaired to the shanty, smelled through the crack in the door his master's presence, but the man was still quiet and did not breathe. The dog scratched, barked, and even howled, but no response came from within. The door remained closed, and the dog never from the chimney to find the early morn. But the dog, true to his appointed duty, went out with the sheep on the third day and cared for them while they cropped the herbage on the hillsides. But he was getting hungry, and that night when he drove the sheep into their pen the last one to attempt to get in became the victim of his appetite. This method of providing for his own wants became a portion of his faithful duty, and he kept on evening after evening the last sheep to try to enter the fold was seized by him and served for supper and breakfast and for dinner the following day. As stated before, the ranch to which the dog belonged was in a solitary part of the Territory and out of the track of travel and social intercourse or visitation. For two years from the time of the master's death—as ascertained by data left by the latter—the faithful dog kept the flock committed to his charge, and had no need of food for supper every night. The flock was not decimated by his steady drain upon its resources. On the contrary, it increased in numbers, and when, at the end of two years from the time of the death of the proprietor, the ranch was visited, and the remains of the poor fellow found, the dog was still at his post of duty, jealously guarding his flock, and driving them to the best pastures every day, and to the fold at night, before which he slept, to keep the wild sheep-eaters of the plains at a civil distance. Such fidelity excited admiration wherever the story was told, and the Arcadian legislators of the Territory, in a fit of generosity and enthusiasm, at their session two years ago (they have biennial sessions in that happy country), granted a pension for life to that dog, to be paid from the State treasury, as a reward for his fidelity, and no doubt as an encouragement to all other shepherd dogs in that Territory to be good dogs and faithful.—*Boston Globe.*

KENNEL NOTES.

WHEELS.—*Daisy.*—Mr. John White's (Bridgeport, Conn.) white and orange setter bitch, Daisy, by Calhoun's Sam out of Mallard's Belle, whelped eleven pups, all white, excepting three, which had orange spots, by Ranger II.

DEATH.—*Dido.*—Mr. J. O. Donner's English setter bitch Dido.

BRED.—*Alfreda Dash III.*—Mr. Walter H. Beebe's (New York City) Champion Miss (Leicester-Dart) to Champion Dash III.

NAMES CLAIMED.—*Grouse and Dash.*—Mr. Titus J. Hodges, of Greenport, L. I., claims the names of Grouse and Dash for his two setter pups, the former lemon and white and the latter red, out of Dutchman's Dash I.—McLaughlin's Dutchman's Dash I. (Chippawan's Van-Governor's Lionheart). Both pups are being broken by Mr. C. H. Souvens, Hoekland County, N. Y. *Eudora.*—*Mr. M. P. McKoon, of Franklin, Delaware County, N. Y.,* desires us to state that the name of his spaniel bitch pup is Eudora, not Endora, as published in last week's issue.

Answers to Correspondents.

No notice taken of Anonymous Communications.

E. A. P., Madison Barracks, N. Y.—The guns you inquire about are good and safe.

L. C. W.—Douglas Frazar's "Practical Boat Sailing," \$1. Can forward.

St. Louis.—According to the rule, we should have given the man two more birds.

E. H.—No copies of Y. I. A. rules on hand. Order through book house, or Leavenworth Field.

T. J. H.—Silver City, New Mexico. We have forwarded your request to the manufacturers.

G. M. T. Kisko, N. Y.—The law on woodcock in New York is up Aug. 1st; quail, Nov. 1st; ruffed grouse, Sept. 1st.

E. C.—Falk's store, Idaho. We do not know the name of fur dealers at Fort Benton, Montana. Write to the postmaster there.

G. E. C.—Duke Center, Pa.—For an inspirometer for testing lung capacity, write to Giuseppe Tagliabue, 332 Pearl street, New York.

D. W. Albion, N. Y.—We can send you Stoddard's Map of the Adirondack Wilderness, which will probably answer your purpose. Noticed elsewhere.

J. M. G.—Washington, D. C.—Dogs with distemper should be kept as quiet as possible. It depends entirely upon the symptoms of each case how to regulate the feed.

H. G. D.—Upperville, Va.—For pinnated grouse (prairie chicken) shooting, go to Wichita, or Salina, Kansas. You cannot miss them after you get into that country.

G. M. S.—Accidental spilling of ballast, bag and spilling of immaterial amount of sand is not enough ground for protest. The judges ruled right in not allowing same.

A. B.—Best book on yacht and boat building is Dixon Kemp's, new edition, price \$12. For boat sailing, see also Douglas Frazar's "Practical Boat Sailing," \$1, Lee & Sheppard, Boston.

L. M. M.—Yonkers, N. Y.—The close time for moose in Maine expires Oct. 1st next. The season for deer and caribou there is from Oct. 1st to Jan. 1st. No chasing with dogs allowed.

S.—New York.—For striped bass fishing in the immediate vicinity of New York, you may go to the boat house at Fort of Eighty-Fourth street, East River, and there secure directions.

H. N. L.—Book on boat building not yet published. Doubt whether any book will exactly fill your wants. Possibly Kemp's "Yacht and Boat Sailing," which contains much upon the subject.

HARRIS, Austin, Texas.—1. Tom Stang, of Chicago, can furnish you with wild pigeons. 2. You can ascertain express charges at your home office. 3. Yes, send us the summaries and other items.

F. H. L.—Rock Hill, S. C.—In a glass ball match, if a cartridge fails to fire, is the party entitled to another shot, or must it be scored a miss. Ans. The shooter is entitled to another shot if his cartridge was properly loaded.

J. N. C.—Newburyport, Mass.—There is no danger of the shell expanding if it enters the chamber with such difficulty. The proper thing is to have the chamber slightly enlarged. Put your gun into the hands of a first-class workman.

J. W.—Cincinnati, Ohio.—The dog, from your description, has a case of mange. Adopt same treatment as recommended to C. L. L. in last week's issue, and, in addition, give four drops of Fowler's solution of arsenic, twice a day, in his food.

C. S. W.—New York.—An abstract of preceding the best publication teaching the training of setters. Ans. See the five articles in this paper on dog breaking, March 18th, April 8th, 15th, 22nd, and May 13th. Hutchison's book on breaking is the best work on training. Price, \$3.50. We can furnish it.

CARRIS, Philadelphia.—Will you please inform me the best baits for catfish. Ans. Large angle-worms, minnows, pieces of beef, liver, insect larvæ, and almost anything of a fresh animal nature will do for catfish bait in the Mississippi. Raw salt pork is the approved bait for the larger species. They feed best just after a storm.

E. J.—New York.—1. Is Spratt's biscuit good food for four months old puppies? 2. How much is a meal for a grown fox terrier dog? 3. Do not dogs fed on it require other food for a change, such as boiled liver, etc.? Ans. 1. No. 2. Half a biscuit is ample. 3. Yes, by all means. You can get the biscuit of Chas. Richmond, No. 913 Broadway, New York City.

P. W. P.—Please inform me through your paper regarding the rules of the National Rifle Association as to shooting from under a cover. Can they shoot from a house only open on the front, or must the cover be overhead only? Ans. It is entirely allowable to shoot from a house constructed in any way. The only restriction is that no artificial support be given the rifle.

J. P. A.—Sails for 14ft. canoe: Leg of mutton or sharpie style mainmast, 10ft. deck to head; mizen, 7ft. deck to head; main boom, 6ft. 10in.; mizen boom, 4ft. 10in. Step the mainmast 3ft. from bow and the other 3ft. from stern. The sails will be 6in. shorter on the luff than the mast, and 4in. shorter on the foot than the booms. Masts of spruce, 2in. and 4in. thick at deck; booms 1 and 2 in. in center.

A. A. R.—South Norwalk, Conn.—We know of no special laws for Dutchess and Putnam counties. The general New York State law provides the following open seasons: deer, Aug. 1st to Dec. 1st; no open season for moose; wild fowl, Sept. 1st to May 1st; quail, Nov. 1st to Jan. 1st; woodcock, Sept. 1st to Jan. 1st; grouse, Aug. 1st to Feb. 1st; ruffed grouse (or partridge), Sept. 1st to Jan. 1st.

TRAP.—Peake's Island, Me.—I believe the "cruelty" folks are going to make a strong effort to stop our shoot next fall. Do you suppose they can accomplish it without a special statute? They have been obliged to wait for such statute in other States before they could stop pigeon shooting from a trap, and one would think it would be so in Maine. Ans. Unless a law is passed making pigeon shooting illegal your tournament cannot be stopped.

T. M. O.—Washington, D. C.—Please prescribe for my pointer, which is just thirteen months old. His eyes are very much inflamed, little or no appetite, nose quite warm and a kind of twitching when he stands still. He has moderate exercise and is fed with table scraps. Ans. The probability is that the dog has had distemper, and in the present stage will be benefited by quinine, say two grains three times a day; also give a small dose of sulphur occasionally.

TRAP.—Newburyport.—Where can I obtain the game laws of the different States? I have a pointer dog about three years old

who has been lame for over a month; only a slight limp most of the time, but sometimes he limps a good deal. There is a swelling of some kind on the side just to the right of the jaw; the lump is hard and pains the dog on slight pressure. Ans. 1. Send to Orango Judd Co., Broadway, N. Y. 2. Avoid giving the dog exercise, and paint the part afflicted with tincture of iodine daily. Write more definitely after fair trial of treatment.

E. K.—New Haven.—When is the woodcock law off on Long Island this year? How much of Fowler's solution of arsenic would you give a Scotch terrier, about nineteen pounds weight, four and a half years old? He's got the mange. Ans. 1. Aug. 1st. 2. Three drops twice a day. It should always be given on a full stomach, and it must be withheld for a week or so if it produces redness of the eyes, running of watery fluid from the nose and a loathing of food. To prevent last result, give a tonic of one teaspoonful of Peruvian bark immediately after a meal.

A. & Co.—Boston, Mass.—For internal cancer of the ear the following is suggested: Take Goulard's extract of lead, one ounce; glycerine and carbolic acid, one-quarter of an ounce; finest olive oil, four and a half ounces. Mix the two first named, and add the oil, gently rubbing together in a mortar. The bottle must be well shaken before the liniment is used. Avoid giving meat, and feed vegetables with the wash. Give twice a week a teaspoonful of sulphate of magnesia in water one hour before feeding in the morning. Dress the dog's legs with the following: Powdered bicarbonate of potash, half ounce; sub-sulphur, one ounce; lard, four ounces; rub well into the skin.

A. D. E.—Ans. 1. In case of diarrhoea, when the bitch is suckling, the diet must be changed and carefully regulated all through the disease. Light and easily digested food, as well-broiled oatmeal, rice, Indian corn meal, or arrowroot, should be given with a little milk or beef tea. When the dog is very weak, a little should be poured down her throat every few hours, and a little port wine be added to the food. An injection should be given: A quarter of a pint of gruel with two drachms of tincture of catechu and one drachm of laudanum. A dose of castor oil should be given at once. Write result of treatment, and if the injection does not check the diarrhoea, we will mail you a prescription that will not fail. 2. The open season for woodcock in this State begins Aug. 1st; deer, Aug. 1st.

A. D. N.—Monson, Mass.—It is supposed that the old Southern hound was used by the ancient Britons in the chase of the larger kinds of game. Its distinguishing characters are its size and general heavy appearance; its great length of body, deep chest, and ears remarkably large and pendulous. It was the slowness of the breed which occasioned its disuse. Several of the breed are still to be seen in Devonshire, England. See "Stonehenge on the Dog," a lengthy account. The rough-haired greyhound is now rarely met with, except on some show benches in England, mix with his larger brethren, the deerhounds, and assuming their name. He still exists in out-of-the-way places. The shape of the rough greyhound corresponds closely with that of the deerhound, but he is not so large or powerful, averaging about 26in. at shoulder against 23in. or 30in. in the deerhound.

F. H.—New York.—Mange is the most troublesome, and, in some forms, the most loathsome disease which we meet with in a dog. There are several varieties, the most common being virulent mange, mange with thickening of the skin, red mange, and eruption without thickening of the skin, and, finally, ringworm. The disease, under certain conditions, is contagious. A too stimulating diet, insufficient exercise, etc., are among the principal causes. In chronic cases, Fowler's solution of arsenic is often of great benefit. The doses from two to eight drops, given twice a day in food. The dressings used are very numerous, and depend upon the condition of the dog. The most simple is ointment of flower of sulphur and lard, one part of the former to four of the latter. The dog's bedding should be changed at least every other day; and the proper use of disinfectants is all about the kennel are of great use. Write more fully symptoms of dog, and we will mail you receipt.

H. W.—Newark, N. J.—To brown gun barrels: Thet. of muriatic iron, one ounce; nitric ether one ounce; sulphate of copper, four scruples; rain water, one pint. First, securely plug up both ends of barrels, leaving one plug in each end of sufficient length to be used as handles, then thoroughly clean with soap and water, after which cover with a thick coat of lime, slacked in water, and when that has become dry remove it with an iron wire scratch brush; this is to remove all dirt and grease from the barrels. Then apply a coat of the fluid with a rag, and let it stand for twenty-four hours, when a slight rust will have appeared; then take barrels and immerse them in a trough containing boiling hot water, after which scratch them well with the scratch brush. Repeat this until the color suits, which will be after three or four applications. When completed, let the barrels remain in limo water a short time to neutralize any acid which may have penetrated. Take great care not to handle the barrels during the operation, for the least particle of grease will make bad spots.

PUBLISHERS' DEPARTMENT.

—Address all communications to "Forest and Stream Publishing Company, New York."

—"O'Rourke's Guide to Coney Island and Rockaway" is a neat, handy and comprehensive handbook to the attractions of these popular New York pleasure resorts. Full details of routes, etc., etc., will be found in this little text-book. For sale by all news-dealers.

NERVE POWER.—Few people suffer so much from nervous exhaustion as newspaper editors. The wear and tear of getting out a good paper tell fearfully, and readers seldom know how much vital force a single item may have cost the one who wrote it. Editors have often been driven to drink in order to stimulate their exhausted faculties, but of late are using Warner's Safe Nerve instead. This valuable preparation acts as a soothing power, quelling the nerves and producing sleep with all the refreshment that it brings.—*Advt.*

TO THE WHITE MOUNTAINS.—The summer travel over the Consolidated is heavier than ever this year, and the palace cars which run through to the White Mountains are particularly well patronized, the two cars this morning having seventy-seven passengers. The conductors on the through palace cars are ex-Conductor McKenney, of the Suffield branch, and Conductor Raymond, formerly of the New York and New England road.

—The skull and horns of an uncommonly large mountain ram were found embedded in a pine tree in Idaho. It is supposed that the beast was caught and starved in the tree when it was a sapling, leaving his head to be overgrown by the wood.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLTATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND SPORTS.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

—AT—

NOS. 39 AND 40, PARK ROW (TIMES BUILDING), NEW YORK

[Post Office Box 323.]

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements must be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted. No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one time, with brief editorial notice calling attention thereto, and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 23, 1880.

TO Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guaranty of good faith, and be addressed to Forest and Stream Publishing Company. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

ADVERTISEMENTS.—All advertisements should reach us on or before Tuesday morning of each week. An observance of this rule will insure satisfaction to all concerned.

MR. FRED MATHER with the FOREST AND STREAM.—It affords us the most sincere satisfaction to announce what our readers and friends will with equal pleasure learn, that the FOREST AND STREAM has added Mr. Fred Mather to its staff. That gentleman will in the future conduct those departments of the journal which are devoted to Fish Culture and Sea and River Fishing.

Mr. Mather is so well known, both in this country and in Europe, as a practical fish culturist, an accomplished angler and a well-informed student of ichthyology and the related branches of natural history, that it would be out of place here to rehearse his qualifications for the discharge of his new duties. We are content to congratulate our subscribers on this accession to the staff of the paper. It is the right man in the right place.

We may add that Mr. Mather's very wide personal acquaintance among anglers, fish culturists and ichthyologists gives him unlimited facilities and resources for making the FOREST AND STREAM now more than ever the ablest, freshest and best journal of its kind in the world.

Mr. Mather will assume his active duties here with the new volume, the first number of which will be published Aug. 5th.

THE BERLIN MEDALS.—The prize medals awarded at the Berlin International Fishery Exhibition will not be ready for distribution before next October, and possibly November. Those coming to the American exhibitors will be received by Prof. Baird, the United States Fish Commissioner, who will deliver them to the Secretary of State for distribution to those to whom they have been awarded.

—The American representatives have returned from Berlin. Prof. G. Brown Goode, Mr. Fred Mather and Capt. J. W. Collins arrived on the *Neckar* last week. Mr. Rockwell was left in London seriously sick with typhoid fever. Messrs. True and Palmer remained behind to pack up the exhibits.

—Mr. Chas. Hallock has severed his brief connection with the "Sea World."

—Brooklyn will be specially favored next year. The New York State Association will meet there in June, and in July will follow the convention of the National Archery Association.

A SOCIETY ORGANIZED FOR WORK.

AN association has been organized at Utica, N. Y., which promises to confine itself very strictly, and, from the high character of its membership, very effectually, too, we should judge, to the work of game protection. The call for the initiatory meeting was signed by the following prominent sportsmen and citizens: C. W. Hutchinson, W. T. Dunmore, Fred B. Divine, I. C. McIntosh, Geo. D. Pomeroy, B. A. Wilson, R. B. Jones, Edwin Richardson, J. A. Erlhauer, Thos. McCorkle, Wm. Warring, Geo. Booth, W. G. Hubbard, David H. Gaffin, C. W. Keeler, C. T. Mould, J. A. Maben, Oscar A. Wheeler, W. I. Martin, J. Bailey, T. F. Budlong, Gain L. Fay, W. K. Gilmore, E. Z. Wright, A. H. Ballou, James G. Hunt, W. E. Lewis, Wm. Townsend, T. V. Leroy, W. Dimbleby, John Peattie, James Roberts, M. H. Griffith, W. Jerome Green, J. N. Hays, Fred A. Westcott, J. G. Cessford, H. C. Macy, John Gissible, Geo. H. Scranton, John D. Kernan, Wm. M. Storrs, John G. Brown, Chas. H. Childs, F. E. Hutchinson, E. T. Manning, Wm. B. Sutton, O. F. Golden, J. Gomph, J. J. Flanagan, W. F. Boynton, Geo. Westcott, M. J. Brayton, W. C. Harris, C. W. Shapley, D. Sabine, W. J. Dickinson, James G. French, H. W. Dunlap, E. H. Divine, John Gomph, R. O. Jones, I. J. Gray, Chas. H. Carr, F. H. Lowery, Geo. A. Reynolds, Hon. J. Thos. Spriggs and H. D. Pixley.

These gentlemen, with many others, were present at the gathering at Bragg's Hotel, Utica, and at the very outset of the new organization stamped its character.

Mr. W. T. Dunmore said that the need had long been felt of a society which should look to the strict enforcement of the law, and which should take enough interest in the cause to employ its own officers in the detection and prosecution of offenders. The Secretary of the meeting, Mr. Fred B. Divine, said that the old State organization was in disgrace, as conducted the past few years. Mr. J. J. Flanagan followed with the statement that local clubs could find no encouragement from the State Association to persevere in their efforts, and that if a society meant business it must withdraw entirely from any connection with that body. Chairman Hutchinson suggested that the Long Island sportsmen, under whose auspices the State Association tournament was to be held, had it in their power to effect a reform in these matters; and Mr. Flanagan added that, from his knowledge of the tastes and character of the Eastern gentlemen, he believed that they would effectually modify the character of the annual meeting.

Several practical and definite plans of action were discussed and acted upon, and after an informal discussion the meeting adjourned.

This action of our Utica friends is a direct and natural outgrowth of the dissatisfaction—long felt and recently culminated—at the lack of any concerted action in protecting the game and fish of the State of New York. Besides their good intentions in this work, the members of the new association possess abundant good sense and determination to insure success in their undertaking.

Just what attitude the new society proposes to sustain toward the New York State Association for the Protection of Fish and Game, we are not at the present moment clearly informed. Two courses are open to it. One of these is to conduct its own affairs entirely independent of the State Association, thereby withdrawing from the latter all the local support of sportsmen who are earnest in their endeavors to fulfill the work implied in its name. The other course is to cooperate with the State Association—to infuse into that body its own spirit, and by uniting with the other right-feeling sportsmen of the State, who are numerous and powerful, to determine the future character of the State Association. Whichever of these two courses the Utica society may adopt, the support of the FOREST AND STREAM will be given to its right protective measures cordially, fully and unflinchingly. But for the good of the sportsmen throughout the State, we should much prefer to see the gentlemen, whose names have been mentioned in this article, present at Brooklyn next year, adding their forces to the ranks of those who will be gathered there then. We need local societies; they can do, and do so, what a State society cannot accomplish; but we should not give up the general State Association, nor withdraw from it the support of the local clubs.

We are not of those who would seek to organize a general protective society in New York independent of or in opposition to the already existing Association. This latter, reformed and restored to its original character, would be stronger than any new society could hope to be. If it be found practicable then, let the friends of game protection hold to the present society; if this be not practicable, by all means let the other action be taken.

Abel Crook, Esq., the President of the State Association, is at present engaged in a codification of the game laws, and, with other members of the Society, is putting into action a comprehensive and well-defined plan of systematic effort to perfect the law and the agencies for its enforcement. We shall shortly lay before the sportsmen of the State the details of the work now in progress.

THE AMERICANS AT WIMBLEDON.

THE team men under Col. Bodine are doing good general work at the great English range, and showing the British riflemen that in individual shooting, as well as in team work, our men are able to hold their own. At long and short ranges in all the matches into which, by the conditions, they could gain admission, the names of the American riflemen are to be met, and generally about the head of the column. There is now quite a camp of the American riflemen on the common, and rifle factories here cannot complain that their goods are not liberally advertised.

The event of the meeting, however, so far as the Americans are concerned, is the Halford-Hyde match, to be shot on the 24th inst. It is to be a match with eight men on aside, and the Americans engaged on various teams to go into the match are Farrow, Brown, Scott, Hyde, Rockwell, Dudley, Laird, Gerrish, Clark, and Jackson. This list includes two who will drop into the reserve. It will be a very strong team if it is properly handled, and with any approach to team discipline ought to make a strong fight.

The only fault to be found with the Halford-Hyde match is that it has all along been sailing under false pretenses. It is nothing more than a match shot for the personal gratification and personal aggrandizement of Messrs. Halford and Hyde. Wittingly, or otherwise, it has been forced into prominence as an international match when it has none of the characteristics of such a contest. The men represent nobody but those by whom they are engaged and employed, and all pretensions to a representative capacity on their part are entirely false. No body or organization on this side the water sent them out. They are under no form of authority, and should defeat visit them it will not form a break in the line of American successes. If, as Sir Henry Halford says, the shooting of the present match will help him in his task of securing a team of British shots for a Palma contest in America in 1881, then by all means let the match go on. Let it go on in any event. There cannot be too many friendly meetings of riflemen to shoot out their little differences of opinion before the butts, but we do protest against the fly but shallow covering of gun peddlers twisting what should be the most gentlemanly of sports into a means of forcing themselves into public notice. Let the riflemen shoot freely, fairly and frequently, but let drummers take their place behind their counters and stay there.

TEAM DISCIPLINE.—There has been no end of ill feeling toward Col. Bodine, shown in Boston circles, over his rejection of Capt. Jackson as a member of the actual shooting six on Dollymount Range. It certainly does appear curious that one who stood in the front rank of American riflemen, and who could claim, by his sustained record, the title of the best all-round shot in America, should have wasted his strength as a reserve. There is no disguising the fact that the team was the best disorganized team that ever engaged for our side in an international match. So far as correspondence throws any light upon the matter, there was not much more harmony when Ireland was reached, and Col. Bodine is credited with being very much of a Sir Joseph Porter, K. C. B., in the opinion of many of his men. It certainly was a great disappointment to Boston to have Capt. Jackson so unceremoniously left out to cold oblivion and but a mere spectator of the fray in which he could have played so strong and important a part. Col. Bodine may expect to hear no end of caviling upon his return here, but he has but to point to the record of his team to silence all the grumblers. This is a case, above all others, where the end justifies the means, and that the judgment of the captain of the team was not very far wrong, no better verification than the figures of June 29th need be adduced.

MR. OBER'S EXPLORATIONS.—We have received and shall shortly publish the initial letter of a series from Mr. Frederick A. Ober, who it will be remembered is prosecuting scientific explorations in the Lesser Antilles. In a note written at the Island of Nevis, June 17th, our correspondent gives us some hints of the busy life he is leading, and of the very satisfactory results of his trip. He says:—

"Since reaching St. Thomas I have been on a continual jump, or rather a series of jumps, and have hardly settled in one place long enough to collect my thoughts. The fact is, I have undertaken to do in four months what six would hardly suffice for. Thus far, have been tolerably successful; have found one new bird, at least, and have carried out my programme to the letter. I am accumulating a lot of material that will keep me busy grubbing for the next six or eight months. I have climbed six mountains, and investigated four craters, and have done more walking since March 5th than I did all last summer and winter.

"Thermometer slides up and down between eighty and ninety-five, and does this regularly every day.

"To-morrow I go to St. Kitts, thence to Montserrat, thence to Dominica—the scene of very old exploits—

thence to Trinidad, then turn about for America. You see I have not yet done half my distance, though I have finished more than half my work."

THE VELOCITY OF SHOT.—Prof. Alfred M. Mayer, of the Stevens Institute, Hoboken, N. J., has been for some time past engaged in an elaborate series of experiments to determine the velocity of shot. The scene of his experiments has been the deck of the famous "Stevens Battery," a man-of-war hulk which was never launched, and which has been lying for twenty years where she was first constructed. Prof. Mayer's experiments consist, briefly, in determining the time, as marked by the vibrations of the tuning fork, elapsing between the start of the shot and its striking the target, the interval being noted by the opening and closing of an electric circuit. To make the tests thorough and complete, a number of shots have been fired with different sized shot, different charges of powder, and at different distances, aggregating several hundred discharges. It would take a man of Bogardus' build to stand all this without flinching. Prof. Mayer deserves great credit for his pluck in carrying through the difficult task. We have not attempted to describe the experiments, because they are to form the subject-matter of a paper to be read before the American Association of Science at Boston, next month, an abstract of which the experimenter has kindly promised to furnish for the readers of the *FOREST AND STREAM*. It will be a valuable and important contribution to our knowledge of the subject. We may add that Prof. Mayer is a practical sportsman, a first-rate shot and a pleasant companion.

HOW DOES A DOG SCRATCH?—We are constantly receiving the best of evidence that the advertising columns of *FOREST AND STREAM* are very carefully read. Of course our advertisers all know this; they find it out in the regular way of plenty of returns for the notices they insert; but we are sometimes informed of the fact in a curious manner. For instance, among the cuts now in our advertising columns is that which accompanies the notice of "Cathery's Dog Soap," and represents a dog scratching himself. Now, we had not looked at this picture from an art point of view, nor even had we scanned it for its fidelity to or divergence from strictly correct canine portraiture. To us the picture represented so many inches of advertising space, for which we had received so much cash in return; and if we had any further thought about the matter it was that the picture of the flea-stricken dog would probably accomplish the aim of its author by attracting attention to the advertisement setting forth the merits of this approved brand of soap.

But it appears that this cut is not perfect, and its imperfection has already been noted. A friend of ours out in Wisconsin, who is the editor of a bright paper, and, as this incident shows, a lover of dogs also, prompted either by love of the true in art, or by jealousy, perhaps, because he has not the cut in his advertising columns, clips out the picture and sends it to us with this note:—

BELLEVILLE, WIS., July 10th.

Editor *Forest and Stream*:—

Pray ask Cathery if he ever saw a dog scratch himself standing up?

J. A. T.

We have hardly time to consult the authority requested, but we are very sure that we have seen a dog scratch himself while standing up. Like one of our correspondents, who said the other day that he had heard a snake hiss, but he could not give time and place, we find it difficult to fix the exact dog and the exact occasion, and we must leave the query for some of our friends to answer. Who ever saw a dog scratch himself while standing up?

WATER SKATES.—The bare enumeration of the devices and accoutrements designed to assist the modern sportsman in his pursuit of game and fish would furnish a striking catalogue of the fruits of human ingenuity. The latest addition to this stock is the invention of Mr. W. C. Soule, who has succeeded in constructing a pair of shoes with which it is possible to walk on the surface of the water. It seems that Mr. Soule had been seriously annoyed, as thousands of men had been before him, by the loss of numerous snipe and ducks which fell into the water in places which were too deep for wading and too muddy for boat navigation. He set himself to work to provide some mechanical aid out of his dilemma, and the result is a pair of sheet zinc shoes, soldered air and watertight, each about five feet long, ten inches wide and five inches deep, and pointed at each end. In the top is sunk a well for the foot, and on the bottom are two propellers, or gauge paddles, one at each end. These open and shut by the motion through the water as the walker pushes his feet forward.

The inventor recently gave an exhibition of the "water skates" on the Harlem River, demonstrating their practicability in smooth water.

CAPT. E. W. PAUL.—Capt. Edmund W. Paul, who recently died in St. Louis, Mo., was in his day a noted pistol shot, whose feats will be recalled by many of our older readers. Unlike the fictitious titles assumed by modern knights of the gun, Capt. Paul's was well earned in the Mexican War, where he commanded a

Missouri company. His fame as an expert with fire-arms was at its height in 1854, in which year he was accustomed to send out challenges containing proposals "to fit a dollar to the end of a twig two inches long, and while a second person will hold the other end in his mouth, so as to bring the coin within an inch and a half of his face. I engage to strike the dollar three times out of five at the distance of ten paces, or thirty feet. I will hit a dollar tossed in the air, or any object of the same size, three times out of five, or a knife blade, placed at the distance of thirty feet. I will wager that no person in the United States can be produced who will hit a quarter of a dollar at a distance of thirty feet oftener than I can on a wheel and fire."

Since the notice of Capt. Paul's death appeared, we have written to several persons, seeking to learn something of his exploits; and having been so far unsuccessful, we shall hope that this brief notice may be the means of eliciting from others some further account of a man who so outlived his fame.

A WATER CURE.—The most confirmed believer in the efficacy of the water-cure treatment would hardly send a patient afflicted with inflammatory rheumatism into the woods to live in a tent beside a stream and undergo diurnal showers. Damp sheets and rheumatism would be an unheard of combination outside of a fishing camp. Those who know "Bodines," a skillful physician of the regular school, may well be apprehensive that he has gone over to the water-cure people with a fatal simplicity; but we take this Lymington experience to be a merely temporary freak, incidental to the life of every devoted angler, governed in its periodicity by the condition of the waters and the biting of the fish.

We are promised a further account of "Bodines' camp life."

THE VIRGINIA CAMPING TRIP.—We again call attention to a projected tour through the mountains of Virginia. As stated in our issue of June 24th, a party of gentlemen, or possibly of gentlemen and ladies, propose to start from Lynchburg Sept. 10th and to spend a month in angling, shooting and sight-seeing among the mountains, returning to Lynchburg Sept. 29th. The opportunity here offered is one in a lifetime, and we urge upon those who would enjoy a trip of this kind to avail themselves of the offer of our friends, as already detailed in these columns. Communications should be addressed to Maj. R. C. Saunders, Careyswood, Evinston, Campbell County, Va.

ADIRONDACK MAP.—Mr. S. R. Stoddard, of Glen's Falls, N. Y., has just issued a map of the Adirondack wilderness, which has been compiled from all the latest and most reliable sources of information. Access has been had by the author to important State and private surveys not hitherto given to the public. The map shows wild trails, carries, ponds, streams, etc., the location of hotels and camps, distances, and many other details which the Adirondack visitor could not have. For sale at this office, price \$1; mounted on muslin and roller, \$1.50.

ENGLISH ANGLING STREAMS.—The second paper of "Ringwood's Reminiscences of English Rivers" concludes this author's chat on this entertaining topic; but we hope at no very distant day to supplement them with sketches of angling abroad by the same pen. The writer shows himself not only a thorough angler, but a close observer and a good story teller.

OLD GUNS.—We intended, at the time we published "Cape Rock's" description of his Waterloo gun, to invite others of our readers, who might have stories of similar interest about various old fire-arms, to narrate them in our columns. There were certainly enough Revolutionary muskets converted into the arms of peace to furnish material for reminiscences of this character.

THE RANGELEY LAKES.—The article published in our issue of Feb. 26th, 1890, entitled "A pamphlet and the Rangeley Circuit," is a complete guide to the Rangeley Lakes.

WILD RICE.—The water in Rice Lake was very high the last spring, and consequently the rice did not come to the surface as early as usual. The prospects are, however, that a goodly harvest will be gathered.

—Brooklyn has 10,232 dogs, or 2,617 more than last year. The license fee there is \$2, with a penalty of \$10 for non-compliance. Brooklyn pays, therefore, \$20,460 per annum for her canines.

—The numerous friends of Mr. Jacob M. Witmer, of Niagara Falls, will join us in congratulations upon his marriage on the 15th inst.

NEW YORK WOODCOCK SEASON.—The open season for woodcock shooting begins in New York State Aug. 1st, except in Oneida and Herkimer counties, where it does not begin until Sept. 1st.

GAME PROTECTION.

SUMMER WOODCOCK SHOOTING.—Pennsylvania should now follow the example of her sister States, New York, New Jersey and Connecticut, and protect the woodcock during the nesting season.

CONNECTICUT WOODCOCK SHOOTING.—The law in Connecticut prescribes a close season for woodcock until Oct. 1st. Last year the season was observed very generally by the better class of sportsmen through the State, but it was found that the pot-hunters took all the birds, and when October came there were no birds to shoot. This year everybody shoots, sportsmen and pot-hunters alike, and the effect has been that even earlier shooting has been practical than when the law was up July 1st. Then the season was generally observed; now all hands began to shoot in the latter part of June.

DELAWARE WOODCOCK SHOOTING.—Dover, Del., July 1st.—Editor *Forest and Stream*.—Since summer woodcock shooting is in order, perhaps you will allow a Delawarean to say a word on the subject, particularly as Maryland and Delaware have had to shoulder the charge of allowing their half-hedged long bills to be slaughtered. We have been shooting woodcock since the 1st of this month (as provided by the State association), and have yet to see the first half-hedged cock or the one to be caught by putting salt on its tail. Is it not rational to suppose that sportsmen would prefer hunting in the bracing and invigorating fall, to the hot, sweltering tramp through sawgrass and briar and along branches where millions of mosquitoes and sheep flies hold high carnival, raising innumerable welts on the reeking neck and torn hands of the intruder, and where the ever ready and faithful animal is often forced to seek a shady spot for a moment's rest, and will open his mouth to receive a few drops from your precious flask of water or tea to quench his thirst? But this cannot be; we must shoot in the season provided by our State laws or be content to find a few stragglers in the fall. Many have written on this subject, but none of them criticise a Southern law from a Northern standpoint. Our seasons are earlier than those of Northern New York, Massachusetts, Connecticut, etc. Our children mature earlier, and so do our birds.

Has the Delaware Game Protection Association nothing to say, *pro or con*, on the subject?

EVERETT VON CULIN.

A NEW CANADIAN PRESERVE.—Hay Bay, Ontario, once a famous ducking ground, but of late years overrun and ruined by game-baggers, is to be preserved like Long Point, Lake Erie. A company, composed of the owners of lands bordering on the bay, some residents of Napanee and one or two denizens of Belleville, has been formed, and the shooting ground will be carefully protected, wild rice planted, and other means taken to induce the ducks to frequent the bay again.

MIGRATORY QUAIL IN MISSOURI.—The Jefferson City Sportsmen's Club have received an importation from Messina, and have turned them loose in the vicinity of that city, some at the farm of Dr. McWorkman, eight miles west of Jefferson City; some near Castle Rock, some near Osage City, on the Ewing farm, and some in Callaway County. Sportsmen in Missouri and Kansas are urged to look out for the birds, and to secure their protection so far as may be possible.

Game Bag and Gun.

JULY IS A CLOSE MONTH FOR GAME.

—Address all communications to "Forest and Stream Publishing Company, New York."

GAME PROSPECTS.—We shall thank our friends to send us notes on the game prospects of their respective localities. The very open winter would seem to warrant the hope of a large supply of birds next fall. A Washington friend tells us that birds have not been plentier in that region for many years, and the brief notes we have received from other parts of the country point to the same conditions elsewhere.

NEW JERSEY.—Hammon, July 3d.—The last heavy rains have damaged the quail crop mightily, and the prospect for good shooting in this neighborhood is poor.

L. W. S.

SNIPE AT GOOD GROUND.—Good Ground, L. I., July 18th.—Bay snipe are flying fairly now, and some big bags have been made. Mr. C. E. Perkins, of Hartford, Conn., killed forty-seven large snipe on the 17th, and it looks very much like a good season here, as more snipe went North this spring than usual.

WILLIAM N. LANE.

FERNANDINA GUN CLUB.—Fernandina, Fla., July 15th.—The Fernandina Gun Club was organized on the 7th inst., with the following officers: President, F. B. Papp; Vice-President, Dr. A. C. Ford; Secretary, Dr. J. D. Palmer; Treasurer, H. E. Dotterer; Attorney, H. J. Baker.

CONNECTICUT.—Tolland County, July 15th.—The country about New England and the Middle States has been, according to reports, very dry this season. The highlands of Connecticut, in this section, have been favored with abundant showers for the past two months, and the growing crops were never in better condition. Woodcock are very plenty, coming here from all the dry sections north of us, and the law is well kept. The shooting here in October will be better than for many years past. This is always a favorite locality; no better, I doubt, can be found in the country.

MARS.

This statement conflicts with the reports we have received as to the supply of birds in other parts of Connecticut this year.

MICHIGAN DEER HUNTING.—Escanaba, Mich., June 15th.—Deer unusually plenty on northern peninsula;

they are in season here from Aug. 15th to Nov. 15th. Sporting men will find good deer shooting here in September. No other game to mention.

Always pleased to help hunters who come in my way. Went into the woods in 1873 with a bad lung. Health improved, and I threw up my business and live in timber most of the time.

MAINE.—The game and fish laws of the State of Maine are published in pamphlet form for gratuitous distribution. The Commissioners of Fisheries and Game are E. M. Stillwell, Bangor, and Everett Smith, Portland. They request that any criticism of the laws be reported to them.

The close seasons in Maine are—Salmon, July 15th to April 1st, following; trout, togo and land-locked salmon, Oct. 1st to May 1st, excepting on the St. Croix River and its tributaries, and all the waters in Kennebec County, in which the close season is Sept. 15th to May 1st; black bass, Oswego bass and white perch, April 1st to July 1st; moose, Jan. 1st to Oct. 1st; caribou and deer, Jan. 1st to Oct. 1st, use of dogs always prohibited; heavier otter and sable, May 1st to Oct. 1st; ruffed grouse, commonly called partridge, and woodcock, Dec. 1st to Sept. 1st, following; quail and pinnated grouse, Jan. 1st to Sept. 1st, and quail are protected until Sept. 1st, 1883; wood duck, dusky duck, commonly called black duck, May 1st to Sept. 1st—does not apply to sea-coast shooting; plover, May 1st to Aug. 1st; insectivorous birds are always protected.

NEBRASKA GAME NOTES.—Omaha, July 10th.—The prospects for a fine shooting season are good—quail and chickens are plentiful all through the surrounding country—indeed, quail are to be found in large numbers, as far as the city limits. With Omaha, the center of the sportsman will be able to find good sport in almost any direction he may wish to travel. Conveyances can be hired at reasonable rates, and as the roads are good, a twenty or thirty mile drive is nothing. Good water can be found almost everywhere, as the bottoms are but a few miles apart. A trip up the Elkhorn valley will give plenty of sport, and the country itself is the finest section of country to be found in the West. The center of bass fishing (said to be) in the Elkhorn, but other streams will not give much satisfaction. Omaha boasts of two sportsmen's clubs, the workmen's having the most vitality and largest membership. Pigeon and glass ball matches are frequent, the last occurring on the 6th, when nearly 1,000 birds were put up. The bird trap used is a new one, the invention of Mr. Hathaway, a gamester, and is without doubt the simplest and best made. Sportsmen here uniformly overload their guns, and consequently do not make the best possible scores their guns are capable of doing. This fault, however, is a common one all over the country. I have seen good guns condemned simply because they were overloaded.

NAUTICUS.

CARSON, Nev., May 26th.—I notice that some of your correspondents are telling wonderful (?) stories about killing two snipe when but two birds took one barrel. I will relate my experience. In the fall of 1878 I was hunting jack snipe on a favorite ground when one bird rose, flying directly from me, keeping within a few feet of the ground. I pulled on him at about twenty-five yards, and he fell dead. As my dog—a retriever only—went to pick up the bird, my eyes lit upon another, a few yards off, and in a direct line with the one I had just brought down. Upon my dog bringing his second snipe, I found it to be badly hit. My theory for this singular double is that the second bird, flying in direct line with the one on the wing, the former came in for his share of the charge as the shot struck the ground. In the same field last fall I bagged two snipe with one barrel as they crossed—only two birds in the air at that moment. Only last week, while on duck shooting, I killed two birds with one barrel as they took flight; and the same day a friend who accompanied me flushed three doves, killing one with the first and two with the second shot. Doves are the only birds the law permits us to shoot at present; they are quite abundant. Messrs. Crawford, De Neuff, Rose and myself bagged 37 one day last week.

AN ECHO OF THE BIG SHOTS.—Editor Forest and Stream.—In your last issue I notice the announcement "California Ahead"—a reply from the Pacific coast, in which it is claimed that my score of eighteen snipe in thirteen consecutive shots is really beaten. To beat my score he quotes an account of Mr. Hathaway, a gamester, seven dozen snipe, also states that four were killed in one shot. I cannot see how or upon what grounds the gentleman from California can claim an offset to my score, for the reason that I only claimed to have killed more snipe in a given number of consecutive shots than any one that I had yet heard of. I made three double shots under one trip, and bagged three birds together only once, and I killed them. The gentleman from California mentions, also, that his friend also made a double shot, one bird on the ground unseen, the other on the wing. I have frequently done this and seen it done by others.

I claim that my double and triple shots were not "scratches." At the time this shooting was done, although a youth, I was as near perfection in the handling of a gun as I ever expect to be, and as an illustration of it, I will mention that I have called my shot and knocked the tail-feathers out of a dove flying to roost (and they fly faster than any bird in the world, especially at this time), without hurting him. To do this I used No. 10 shot, and I have done it often.

Seven dozen snipe in six hours is wonderfully good shooting, but I will give the bag made by two gentlemen in this county some years ago. This we told me when I quoted the exploit of the friend of the gentleman from California, which I also explained as an offset to my score previously given you, and which even they acknowledged to be the best on record. These two gentlemen killed over two hundred and eighty snipe in one day, and have frequently killed from one hundred to one hundred and fifty after 1 o'clock P.M. They killed sometimes five, six and seven birds at one shot.

Every sportsman here knows that it is the habit of snipe to flock in immense numbers just prior to their migration northward, and although they are wild, it is not an unfrequent occurrence to hear of several being killed at one shot. I have heard of sixteen being killed at one shot on the "Teche." I am almost positive that I can obtain a score from the so-considered best snipe

shot in Louisiana, of over one hundred birds scored in a day, and in a manner that will eclipse the bag mentioned by the gentleman from California. I have heard it from his own lips, but have forgotten it.

I am ready to yield the palm to any sportsman who will exceed my score—"honest Injun"—all things considered. I forgot to mention that I used, at that time, a muzzle-loader, made by J. P. Murray, of Columbus, Ga., 18-hore, with 24 lbs. powder for No. 7 shot.

Until you, Messrs. Editors, can supplant my record more substantially, I must claim my score still in

AD. VANCE.

SNIPE SHOOTING.—Hammon, N. J., July 8d.—In your last issue you published a communication written by "H. C." of San Francisco, and headed "California Ahead," in which he claims that the score of P. S. Mullin, killing in six hours seven dozen English snipe, as the best shooting yet heard of. I will and do agree with "H. C." that it was big shooting; but nothing very extra, considering the time and birds plenty. I will now give you, not in a spirit of bragadocio, the best snipe shot on record. In the spring of 1861 I was in Illinois, shooting in Menard County. On the 3d of April I went from Bee Grove to Middletown, Logan County, a distance of about five miles, of course taking my gun, and accompanied by my pointer dog Jack. On the Middletown prairie is a snipe ground of about sixty acres. On reaching it, I found it alive with English snipe. I never saw so many birds on the same ground. I had only four pounds of shot with me (had I had a bag of shot, I could have used it all). In a little less than two hours I killed sixty-six English snipe and five green-winged teal, killed once, three snipe with one barrel; and several times killed two birds crossing. I had to shoot very small loads, as I wished to see how many birds I could kill with four pounds of shot. I measured each load of shot in my hand, and can truthfully say that, toward the last of the shooting, the shot would not more than cover a twenty-five-cent piece. The birds were very tame, and jumped close to me—the smallest load killing them clear. In my arrival at Middletown, I counted out my birds in the country. I had killed 100 birds, the work of Hon. Colby Knapp, Drs. T. B. Perry and Hill, and Mr. M. Reed, all of whom will confirm my statement. On another occasion I left the house (situated on Bee Grove, Menard County, Ill.) to shoot a few snipe on Salt Creek bottom, not going off the place or out of sight of the house. Col. Wm. R. Roberts, of the Twenty-eighth Illinois Regiment, was on the front steps. He remarked to me as I passed that he would count the shot, and on my return told me how many snipe I killed. I laughed, and told him I would bet him a glass of tea that he could not. I was not gone very long, got a good mess and on my return the Colonel said: "Boy, you have twenty-five snipe." I replied I did not know how many I had (but I did know I had not missed a shot and that I had killed two snipe with one barrel). I asked him why he thought I had killed twenty-five birds. He said he had counted the shots and saw my dog bring me a bird after each shot. I said: Colonel, you have lost your bet; we had better go in the house and take that tea, explaining to him, as I counted out twenty-six birds, how I had been lucky in killing two with one barrel. Capt. A. H. Bogardus knows of this shooting, for Col. Roberts told him of it a few weeks since.

I have seen snipe in thousands in Illinois, and many and many a time have I seen more than a hundred jump at once. I would like much for Capt. Bogardus to state through your paper the greatest number of birds ever killed by him in one day's shooting. For those who have never shot snipe in Indiana and Illinois I would say they have no idea of good snipe grounds are, or how easy it is to kill (provided you know how to do it) your dozens of snipe a day.

L. W. SHARP.

POWDER MEASURES.—Manchester, N. H., July 9th.—During the last year I have become somewhat interested in glass ball shooting, and after skimming a few rounds in the days of the number of the club I asked him what the matter was with my shells. I told him I did not know, and that I loaded them myself and used the same grade of powder as other members of the club, and my score was as good as the average. I began to think of the matter and thought I would test my shot and powder measure. The measure I use is one of James Dixon & Sons, of New York, and is marked on its 18 lbs. for powder, which by actual arithmetical weight is 1 lb. and 20 grs., and the weight of the largest charge marked on the measure, as the full capacity, is 54 grs. and the actual weight is 34 grs. On trying it for shot I find it practically correct, according to the same scales and weights. Now the question with me is, why should there be this discrepancy between the quantity as marked on the powder side of the measure and the actual weight? while on the shot side it is practically correct? I have spoken with a number of our club in regard to this, and no one seems able to give any reason for it, and only say that "the Dixon measure is the standard measure and they all go by it." If you could give some explanation of this subject through your very interesting and valuable paper it would be a great gratification, not only to me but to other members of the club, who have become interested in it.

MEMBER MANCHESTER SHOOTING CLUB.

The powder measure is arbitrary, and does not agree with the avoirdupois weight. Dixon's measure is the standard.

SHOOTING MATCHES.

NORWICH, N. Y., July 8th.—Friendly match between the Haghampton Gun Club and the Norwich Gun Club, on the grounds of the latter. Card's rotary trap; 18 yards rise; 20 balls each. The Norwich Gun Club won the match by the following score:—

NORWICH CLUB.		NORWICH CLUB.	
M. E. Ross	20	W. K. Loomis	17
Levin	18	E. Eastman	16
Norman Waldron	18	R. E. Kiedge	16
S. Moran	18	J. R. Brooks	14
G. B. Wilson	13	C. H. Jones	14
A. C. Dittmar	13	H. J. Daniels	12
P. H. Cutler	13	G. B. Smith	12
W. A. Platt	13	C. Rippe	12
Chas. Stoue	11	Frank Shibley	12
		T. D. Miller	11
Total	117	Total	151

MANCHESTER, N. H., July 14th.—Regular shoot of the Manchester Shooting Club; Card rotary trap, 18 yards rise, ten balls each; score:—

	Single.	Double.	Total.
F. J. Drake	57 3 8	6	32
K. M. Reed	57 3 8	6	29
E. A. Durgin	57 3 8	2	29
A. L. Walker	57 3 8	4	27
C. L. Hartman	57 3 8	4	27
C. J. Darrah	57 3 8	3	24
G. B. Wilson	57 3 8	1	23
C. B. French	57 3 8	6	21
A. Foster	57 3 8	5	21
D. Wheeler	57 3 8	2	21
O. Greeley	57 3 8	2	21

W. E. Smith	57 3 8	1	20
C. O. Clark	57 3 8	3	17
G. Cross	57 3 8	1	17
A. Robinson	57 3 8	1	11
G. B. Morrill	57 3 8	1	11
L. Hutton	57 3 8	2	1

J. B. W.

NASDAQ, N. H., July 11th.—The ride and gun clubs had a meet on Monday, the 5th, and celebrated the 4th by breaking glass and punching bullecks. The following is a summary:—

Fairmount Range, July 5th—Match open to all; 18 yards rise; Card trap; prize, silver cup; three scores, 10 balls each:—

Hodgett	5 6 9-20	Young	4 5 4-13
Chase	10 5 10-25	Lowrey	6 7 4-17
Wesley	4 8 16	McClennan	8 9 2-16
Payne	4 7 7-18	Davis	7 4 W.
Small	8 8 8-24	Sargent	8 8 9-25

In the afternoon the members of the club shot torn and good badge. Rules, centres, Bogardus rules, 18 yards rise; traps, Card's and Chas.

Bixby	8 7 8-23	Whitmarsh	5 5 7-17
Towns	10 5 7-23	Lakomian	8 6 6-20
Brigham	6 6 8-20	Laton	5 6 8-20
Wesley	4 8 16	Burnham	1 1 3-22

Ride match at afternoon at the Stark Range. First match for silver cup; 200 yards:—

Bixby	40 39 43-122	Greeley	33 42 39-119
Dunlap	38 40 39-115		
Second match for bronze medal; thermometer:—			
Cutter	37 38 41-112	Fisher	31 30 33-70
Hunt	35 31 32-98	Puck	21 26 23-70
Dunlap	23 23 25-71		

WENN.

WESTBORO, S. NATICK.—This match took place at Westboro July 17th. Westboro Team—G. N. Smalley, Jr., G. B. Clark, S. W. B. Rice, H. K. Taft, C. H. Gates, J. B. Morse, J. J. Jackson, G. C. A. Harrington, G. C. P. Winslow; 8 total, 63. Natick Team—Dr. J. H. Wright, G. H. Bigelow, M. Brigham, S. W. J. Loker, C. O. Wilson, T. W. W. Clark, E. B. Bigelow, G. Ralph Bent, S. G. W. Gile; 7 total, 62.

MALDEN, Mass., July 10th.—An interesting glass-ball contest took place on the grounds of the Malden Gun Club, of Wyoming, Mr. Dutton, of the Malden Club, and Mr. King, of the Dorchester Club, shooting a match at 100 balls a side. Card trap, 18 yards rise. Bogardus rules. The match resulted in a draw, each man breaking 81 balls. It had previously been shot on the grounds of the Malden Club, the contestants tying on 73 balls each, and a third meeting, to decide superiority, will be had. Mr. Dutton's largest run was 20, Mr. King's 18. Mr. Goodale, of the Dorchester Club, acted as judge for Mr. Dutton, and Mr. Dean, of the same club, for Mr. King. Mr. Noble, of the Malden Club, referee, and Mr. Jones, of the Malden Club, scorer.

THE FALCON GUN CLUB.—Dexter Park, Jamaica, L. I., July 15th.—The prizes were a gold badge and a Westley Richards breech-loader, which, when won by Mr. King, was the third time that the trophy it will belong to him. Ten birds (six) each, New York State Association rules, plunger traps, and Falcon Gun Club handicapped rise, 60 yards boundary:—

Doscher.....	21 yards.....	1	1	0	0	0	1	0	0	0-4
Hadin.....	25 yards.....	1	1	1	0	0	1	1	1	0-9
Van Snuden.....	23 yards.....	1	1	0	1	0	1	0	0	1-8
Kelly.....	21 yards.....	1	0	1	0	1	0	1	0	1-6
Ofermann.....	21 yards.....	1	0	1	0	1	0	1	0	1-6
Levin.....	21 yards.....	1	0	1	0	1	0	1	0	1-6

Bolling.....	25 yards.....	1	0	0	1	0	1	0	1	1-5
Hadin and Vogt shot off at the three birds each—won by Vogt.										
Radin.....	25 yards.....	0	0	1	1	Vogts.....	21 yards.....	1	1	1

BUFFALO, New York.—In the Buffalo Plains annual pigeon tournament the attendance was more numerous than for several years. In the match at 15, 21, 27 yards, there were 60 contestants, and in the ties of 15, at 25 yards, 5 birds, for the first and second prizes, the contestants were J. Snell, Geo. Smith and Chas. Weiss. Mr. Weiss was the victor, winning the first prize, a silver stem-winding watch, and Mr. Smith the second prize, six solid silverpoons. Mr. Weiss is a member of the Queen City Club, and Mr. Smith of the Foresters.

At 25 yards, there were 14 contestants, Mr. Chas. P. Tabor, of Meister, of the Audubon Club, winning the first prize, a silver stem-winding watch, and Mr. Robt. P. Hankin, of the Queen City Club, the second prize, a Roman gold scarf pin.

There were 12 contestants in the ties of 13, Mr. H. M. Strong being the winner of the first prize, a solid silver gold lined cup, and Mr. J. Rafferty the second prize, a half dozen silver spoons.

In the ties of 12 there were 10 contestants, Mr. Chas. P. Tabor, a member of the Audubon Club, winning the first prize, a solid silver watch, and Mr. T. B. Lodge the second prize, one 25 pound keg of Lullin & Land's powder, donated by E. J. Butler, agent.

In the ties of 11 there were 13 contestants, Mr. E. Taylor, a member of the Audubon Club, being the winner of the first prize, a handsome trout rod and reel, donated by Messrs. S. O. Barum, Son & Co., and Mr. H. C. French the second prize, a handsome case of trolling spoons.

In the ties of 10 there were 8 contestants, Mr. J. A. Seymour, a member of the Audubon Club, winning the first prize, 25 pound cans Falcon ducking powder, donated by the Oriental Powder Company.

ROME, Ga.—The Cherokee Gun Club held its weekly practice Tuesday, 6th inst.; Card trap, 18 yards rise:—

Name	Killed.	Ties.
Albin Omer	11011111111111111111	111-1
S. W. Wright	01101111111111111111	111-4
H. H. Harris	01101111111111111111	111-4
T. H. Elliott	11111111111111111111	111-4
D. E. Veal	11111111111111111111	111-4
P. B. Robinson	11111111111111111111	111-4

Balls and ammunition gave out without being able to break the tie on 25.

HAL, HAVERT.

—The first annual tournament of the Hawkeye Shooting Club, of Oelmaoos, Iowa, began yesterday and continues through tomorrow.

CAPITAL CITY GUN CLUB.—Washington, D. C., July 13th.—The shooting in Saturday's match, for two gold medals, resulted as

CHEBOYGAN TEAM.												
B. Mullen.....	4	4	3	4	3	4	4	3	4	3-36		
Chas. Kitchin.....	4	3	4	4	3	4	4	4	5	4-39		
T. A. Perrin.....	4	5	3	4	5	3	4	4	4	4-40		
W. S. Humphrey.....	4	4	4	5	4	4	3	4	3	5-40		

The teams shot in the order of their names. Barney Mullen, of the Cheboyan club, and Christain, of the fort team, leading off. It will be noticed that when three men on each side had shot it stood a tie, leaving Sergeant Downey and W. S. Humphrey to decide the match. With only two shots remaining to each side it was a tie, on next to the last shot Mackinnac led one, but Mr. Humphrey's bullexe to the three for Sergeant Downey settled it.

The representatives of the gun club shot under a disadvantage in both contests, owing to the fact that in all their practicing they had used peep sights at the breech, with globe, wind gauge sights at the muzzle, and in the matches they were discarded, they using only the plain, open sight. Then the fort team used the hip rest in shooting, while the Cheboygan team shot with arm extended. Under these circumstances we think the result highly creditable to the representatives of the gun club.

DETAILS WANTED.--In yours of May 6th I see John W. Oakden challenges any man in the world to shoot 40 shots 500 yards with him. How does he want to shoot--off hand, at rest, or under the rules of the N. R. A., at 4 foot target, 8 inch bulls-eye?

JAS. H. PITNEY Charlton, Saratoga County, N. Y.

Archery.

THE GAND NATIONAL TOURNAMENT.

The second annual tournament of the National Archery Association was held at Buffalo, N. Y., July 12th to 15th inclusive. The regular delegates present were: Wabash Merry Bowman, of Crawfordville, Ind.; Jonn A. Booe, Des Moines Toxophilites, of Des Moines, Iowa, Taz Hussey, Highland Park Archers, of Highland Park, Ill.; E. L. Westou, North Side Archery Club, of Chicago, Walter Burnham, Hastings Archery Club, of Hastings,

Mich., W. T. Bryn. Buffalo Toxicophiles, John H. Sage, Brooklyn Archery Club, E. D. Horsman. Arden Archers of Marietta, Ohio, L. D. Peddinghaus. Toledo Archery Club, H. M. Smith. Crescent Bowmen of Charlotte, Mich., E. T. Church. Commodus Archers of Lawrence, Kas., E. P. Chester. Saratoga Bowmen, of Saratoga, N. Y., Frank H. Walworth. The following archers participated in the tournament: G. Frank E. Peursall, Brooklyn; J. Howard Jr., Williamsport; J. A. Brice, Buffalo; J. W. Devol, Jr., Marietta; E. C. Devol, Saratoga; Charles Mich., E. W. Devol, Jr., G. Devol, L. B. Devol, Marietta, Ohio; John K. Hoyt, Major A. G. Conable, Brooklyn, N. Y.; L. V. H. N. Menck, Tolyva; Will H.

Thompson, Mrs. J. Lee, Crawfordsville, Ind.; Harry L. Wright of Cincinnati, President of the Ohio State Archery Association; Theodore McMechan, Crawfordsville; Granger Smith, Jr., Wilkison, Chicago; A. S. Brownell, Boston; Ford P. Hall, C. Granville, Hammond, Ohio; W. Kyle, Highland Park, Ill. The convention assembled in the parlors of the Pierce Palace Hotel. Mr. Frank Sidway, of the Buffalo Toxophilites, the first Vice-President, being in the chair, Mr. D. V. R. Manley, of Toledo Secretary.

An interesting letter from the President of the Association Mr. Henry C. Carver, of Chicago, was read by the Secretary.

Chicago, July 10th.

Franklin Sidway, Esq., Chairman and Delegate of the National Archery Association, Buffalo, N. Y.:—

Dear Sir: Regretting my inability to participate with you in the good cheer and friendly emulation which shall characterize the second assembly of the archers of the United States, in the beautiful city of Buffalo, to do honor to the long bow and war-

The Rifle.
—♦—
RANGE AND GALLERY.

ward shaft. I beg to extend herewith to your body, to the officers of the Association, and all resident and visiting archers, my heartiest greeting and best wishes for that full measure of interest and pleasure which must always attend these national gatherings of lady and gentlemen archers. The future grand meetings of our Association shall indicate a steady and permanent growth in

Interest and harmony, until they shall become the acknowledged social events of each midsummer season; and I venture the prediction that no future gathering of the archers of our National Society will surpass in genuine enjoyment and hearty good cheer in geniality and aristocratic success the meeting which is appointed for the 13th, 14th and 15th insts.

The novel feature introduced of giving a choice of prizes to the successive and successful winners seems to me both admirable and just.

Personally I rejoice that your committee decided to abolish cash prizes. In my judgment the wisdom of this policy, if perpetuated, will be felt in the years to come, in that you will always secure the attendance and active co-operation of the ladies of our American society, whose presence is indispensable to the

your American friends; and the success of a pastime so wholesome, exhilarating and health-giving as archery. My own observation convinces me that the introduction of money prizes would be fatal to the healthy growth and elevation and perpetuity of this delightful recreation, that the ladies, generally, raise their voices in protest against such a policy, and I earnestly recommend that in your deliberations, provisions and instructions for the grand annual meetings of 1881 you give due consideration to the views of our lady members; in other words, should the question of money prizes come before your body on the evening of the 12th inst., that you submit such question to a vote of the individual membership of the

Association in order that such a provision may not be incorporated into the constitution without a majority concurrence of individual members.

With reference to admitting individual archers to the privileges of our Association, I should deprecate such a system as being prejudicial to the basis upon which archery is building and growing. The tendency of the custom, if adopted, would be to discourage the formation of new clubs throughout the country and to disintegrate old ones in many cases. I commend this subject, in its many bearings, to your careful consideration.

I would further suggest the advisability of so amending Article

for the constitution as that it shall read, "the champion medals shall be awarded to the individual member making the greatest number of points in the Double York Round," to be computed as follows:—

Greatest gross score, 2 points; greatest gross hits, 2 points; greatest score, 40 yards, 1 point; greatest hits, 40 yards, 1 point; greatest score, 80 yards, 1 point; greatest hits, 80 yards, 1 point; greatest score, 60 yards, 1 point; greatest hits, 60 yards, 1 point; total, 10 points.

In case of a tie in most or greatest score at any range, such point or points shall be equally divided.

In case of a tie in points at score, the medal to be awarded to the archer who shall have made the greatest number of hits.

In case of a tie in points, the medal to be awarded the archer who shall have made the greatest number of hits.

The champion medal shall be awarded to the individual lady member making the greatest number of points at the "Double National Round," consisting of 98 arrows at 60 yards, and 48 arrows at 50 yards, said points to be computed as follows:—

Greatest gross score, 3 points; greatest gross hits, 2 points; greatest score, 90 yards, 1 point; greatest hits, 90 yards, 1 point; total, 8.

Ties to be decided same as in the contest for the champion medal. I should consider that by this method every archer would receive full measure of credit for meritorious skill in his or her score at some one or more, or all, of the ranges of the round, even having lost the honor of winning the medal. With reference to a location for the Third Grand Annual Meeting to take place in 1891, I would respectfully submit that the National Association is yet young, and will require patient nursing at the hands of strong, ardent archers and patrons; hence I would recommend you to select a point that shall be central, and that thrives and abounds in archery.

In retiring from the Presidency of the National Archery Association I feel it to have been a great honor to have held the office. I trust sincere thanks to the officers and members of the Association for many courtesies received. In conclusion, I shall always consider it a special privilege to render such substantial aid as lies in my power toward strengthening and perpetuating a pastime whose "fascinations" shall keep hold on the hearts of men so long as the new moon returns in heaven a bent, beautiful bow." Very respectfully, HENRY C. CARVER.

The proposed change in the plan of giving championship medals was adopted by the convention.

After various measures relating to the business details of the meeting, it was moved and seconded, after some discussion, to bar out Mr. Burnham from the Association. From this meeting sincere thanks to the officers and members of the Association for many courtesies received. In conclusion, I shall always consider it a special privilege to render such substantial aid as lies in my power toward strengthening and perpetuating a pastime whose "fascinations" shall keep hold on the hearts of men so long as the new moon returns in heaven a bent, beautiful bow." Very respectfully, HENRY C. CARVER.

The shooting began Tuesday morning, on the parade ground, where twenty-six targets and five white tents had been prepared in the best possible manner. The weather was at first threatening, but sunshine succeeded the clouds, and the day proved to be a delightful one.

From 10:30 o'clock until 4 the arrows sped to their marks, the gentlemen contesting in the double York Rounds and the ladies in the double Columbia Round. Wednesday the weather was intensely hot, with a variable wind. The shooting, as on the previous day, being at the double York and Columbia Rounds. Thursday, came the team shoot, one of the most interesting events of the meeting. Following are the complete scores of the tournament:—

SINGLE YORK ROUND.

The fleet was larger than heretofore. There was generally plenty of wind, and all hands bough well together under the flag or com-
mander's orders. The following got away as follows: according to orders July 18th.
The following got away as follows:
7:20. "Hawkeye," 1st Lt. J. M. Schuchman,
"Wanderer," 1st Lt. J. A. Sullivan, and "Clyde," 1st Lt. J. M. Sticks;
Sticks; "Magna," 42 tons, Commodore W. A. W. Stewart;
"Plover," 42 tons, Lieutenant J. M. Schuchman;
B. Dawson; "Wave," 19 tons, C. T. Barrow, M.D.; "Vulture," 24
tons, F. B. Hitchcock; "Petrel," cutter, 7 tons, John Hylant; "Venture."
The start was made in light airs, "Corsair" setting away first, fol-
lowed by "Hawkeye," "Wanderer," "Clyde," and "Magna," forming
the "Afterguard" in the doubtful wind. For several hours it was more or less of a drift, the order of sailing changing
frequently. At 10:30 a. m., however, a steady breeze sprang up, and P.M. welcome signs of a lively southeast wind appeared to the re-

At a meeting of the Committee appointed by the Yachting Convention held at the Denys Hotel, for the purpose of continuing the formation of the National Yachting Association of the United States, the ballots from the clubs now interested, numbered in order, received for the selection of an Executive Committee, were counted with the following unanimous election: For one year—A. J. Prime, Yonkers Yacht Club; R. V. Freeman, Hudson River Yacht Club; Henry Woods, New York Yacht Club; For two years—J. H. W. Hildworth, Columbia Yacht Club; A. J. Beach, Empire Yacht Club; John Price, Columbia Yacht Club; C. P. Kunhardt, Buffalo Yacht Club; G. W. Burdell, Oshkosh Yacht Club. For three years—W. H. Hildworth, New York Yacht Club; J. H. W. Hildworth, Columbia Yacht Club; Robert Austin, Quaker City Yacht Club; H. F. Griswold, Chicago

water, gave him a quart of beer, which he lapped up with satisfaction and demanded more. He was given a pint more. Considerably refreshed, the hunt was resumed; but Monte behaved strangely. He dashed about in a reckless manner, and tumbled headlong over fences. He barked in a maudlin, incoherent way, and quarreled without cause with Smith's dog. He seemed to have lost the control of his nose, and would run over a covey of grouse, and a moment after come to a dead point on a field mouse or a grasshopper. It was painfully evident that Monte was drunk—drunk as a fiddler.

The next morning Monte got up with a raging headache. He felt bad. His hair pulled. But he seems to have heard of the drunkard's axiom, "The hair of the dog is good for the bite," and he accordingly followed Ballard down town, and "rung in" on him while he was taking his medicinal whiskey and tanny. Ballard stood treat, and Monte "histed in" a glass of old stock ale. Several loafers thought it was funny to see a dog making a beast of himself, so they invited poor Monte to take another and another, until the upshot of it was he went home that night drunker than ever. It got noised around town that Monte liked beer, and everybody began to invite him. The consequence was that he became a sot.

Monte made frequent efforts to reform, but dog-flesh is weak. His good master, becoming alarmed, served

notice on all the whiskey shops not to let Monte have anything; but all to no purpose. He found means to get drunk every day. Beer got too weak for him, and he took to whiskey. Finally the end came. After an unusually protracted debauch, Monte began to see things. He would bristle up at the imaginary dogs, and then shrink in the most abject terror from some imaginary assailant. Then he would come to a dead point on nothing, and again he would hustle imaginary cats about the yard, and getting them in a corner, bark for hours at vacancy. He couldn't sleep; he couldn't eat; he couldn't do anything sensibly, and finally died as the fool dieth—of jim-jams. We buried him under an apple tree, with a headboard bearing the following inscription:—

SACRED TO THE MEMORY OF
"MONTE,"
Only Dog of A. C. Ballard,
Who, (the Dog) Died Dec. 12th, 1858,
OF TYPHOID PNEUMONIA.
Superinduced by Overwork and Mental Anxiety.
"GONE, BUT NOT FORGOTTEN."
We couldn't find it in our hearts to say that so good a dog had died of delirium tremens.

HUNTING THE WILD GOAT.—The residents in the

neighborhood of Lexington avenue and Sixty-ninth street within the last few days complained to Capt. Gunner, of the Twenty-eighth precinct, that enormous numbers of goats rendered that region unsavory, especially in the hot weather. Every circus bill in the district had been devoured, and a legion of fierce-bearded, frisky capricornians were devastating the garbage bins and gutters. In their petition to the police the suppliant taxpayers declared that even the paving stones were in danger and asphalt pavement was a luxury. Capt. Gunner, thus appealed to, fitted up a large truck, which he yesterday put in charge of Roundsmen Chun and Dalbec with ten patrolmen in uniform. They were sent out at 3 o'clock in the morning with instructions to capture all the lilly goats which roamed among the rocks and sported in back alleys. For ten hours the hunters continued their work, followed about by a crowd of scolding women, who every now and then rushed from the surrounding shanties to protect their ill-smelling pets. By 13 o'clock forty-one goats had been captured, two patrolmen had received black eyes, four had their coats torn, one was relieved from any desire to be seated for a week or so, and the entire neighborhood had been turned upside down. The noisy, odorous and rebellious band was taken to the city pound and there placed beyond the reach of fence bills and ash barrels. It is proposed to continue the raid when volunteers can be procured.

NEW CHAMPION
Single Breech-Loading
SHOT GUN.

Retall Price.—Plain Dorells, 12 bore, \$14.00; Plain Dorells, 10 bore, \$15.00; Twin Dorells, 12 bore, \$17.00; Twin Dorells, 10 bore, \$18.00. The frame and workings of all these guns are Nickel Plated. This gun possesses many advantages over any single breech-loading gun yet produced in this country. It has a patent side-snap action with a safety device, and is made so simple that it can be operated by the gun at all angles, thus insuring perfect safety in loading. The extraordinary advantages of this gun are so thoroughly apparent, that we are allowed to leave the factory until it has been thoroughly inspected. We take great pleasure in directing this gun to the public, and feel free to say it is the best American Single Breech-Loader yet produced. Send stamp for illustrated Catalogue of Guns, Rifles, Revolvers, and Pistols. Address JOHN F. LOVELL & SONS, Gun Dealers, Boston, Mass.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, thrown out by all burning paper, namely: The Oil of Crocote, CHARLES G. EMERY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 5th, 1878, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasent ODOR and the injurious effects of the Oil of Crocote are completely neutralized or destroyed, and the paper made saliva proof to prevent its breaking or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers and its truth is demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st *

J. Stevens & Co.'s Celebrated Arms.

NEW YORK, Oct. 18th, 1879.
DEAR SIR:—I send one of your make of guns, single barrel, which needs a new catch. It has been hard use, but it cannot be beat as a shooter. I had it this summer down in Virginia, and used it in preference to my double gun, and I don't want anything better as to shooting qualities. It has been shot in the past two years over 2,000 times and has required no repairs since I bought it. Yours truly, ROBERT GORDON.

CANOE AND CAMERA.
A photographic tour of two hundred miles of the Maine forests.
BY THOMAS SEDGWICK STEELE.
With SIXTY ILLUSTRATIONS. The most artistic book of the season.
EDITORIAL NOTICES.
"It is one of the handsomest books of the season, fully illustrated by drawings from the author's own pencil, and from his photographs."—*Charles Dudley Warner.*
"The book is written in the best of temper, in a fresh and breezy style, and with a zest that marks a true sportsman."—*Boston Journal.*
"A highly elegant book, whose author needs no introduction to the lovers of literature generally."—*Hartford Times.*
"Written with a modesty which commends itself to the reader at once, and with an enthusiasm and intelligence that will doubtless serve to entice other lovers of the fishing rod into this beautiful region."—*Springfield Republican.*
"The word that describes this book by an Hartford author, is—charming."—*Christian Secretary.*
"No lover of out-of-door life will fail to appreciate it. It is issued in better style than any other book which we have seen."—*The Congregationalist.*
"It makes one feel as if one must go over the same route."—*The Religious Herald.*
"The publication of the book is most opportune."—*Danvers, Maine, Whig.*
"It furnishes as delightful reading as any tourist can desire."—*Boston Herald.*
"The author holds a facile pen. The pages are fresh from the heart of nature, and the pleasure are the pure and simple ones that never lose their charm for those who enjoy companionship with natural beauty."—*Providence Journal.*
"It opens a new and attractive region and deserves a place in every gentleman's library."—*Hartford Evening Post.*

GUNPOWDER.

DUPONT'S

RIFLE, SPORTING and BLASTING POWDER.

The Most Popular Powder in Use.

DUPONT'S GUNPOWDER MILLS, established in 1825, have maintained their great reputation for over thirty years. Manufacture the following celebrated brands of Powder:

DUPONT'S DIAMOND GRAIN, Nos. 1 (coarse) to 4 (fine), unequalled in strength, quickness, and cleanliness; adapted for Glass Ball and Pigeon Shooting.

DUPONT'S EAGLE DUCKING, Nos. 1 (coarse) to 3 (fine), burning slowly, strong, and clean; great penetration; adapted for Glass Ball, Pigeon, Duck, and other shooting.

DUPONT'S EAGLE RIFLE, A quick, strong, and clean Powder, of very fine grain for pistol shooting.

DUPONT'S RIFLE, FG, "SEA SHOOTING," FG and FFG. The FG for long range rifle shooting, the FFG and FFFG for general use, burning strong and moist.

SPORTING, MINING, SHIP-PIING, and ELASTIC POWDERS of all sizes and descriptions. Special grades for export. Cartridge, Musket, Cannon, Mortar, and Mammoth Powder, U. S. Government standard. Powder manufactured to order of any required grain or proof. Agents in all cities and principal towns throughout U. S. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y. U. S. Use none but DUPONT'S FG or FFG Powder for long range rifle shooting.

THE HAZARD POWDER COMPANY

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder." Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound only.

Hazard's "American Sporting,"

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6 lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting,"

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 and 12 lb. kegs. Burns slowly and very clean, shooting remarkably close and with great penetration. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle,"

FFFG, FFG, and "Sea Shooting" FG in kegs of 25, 12, and 6 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle Powder of the country.

Superior Mining and Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF.

MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

DITTMAR POWDER.

Champion Shot Gun and Rifle

POWDER OF THE WORLD!

IS UNEQUALLED BY GUNPOWDER

for strength, accuracy, cleanliness, and gives little smoke, recoil, or noise. It is absolutely safer than gunpowder, as it cannot explode when not confined, and does not strain the gun or heat the barrels as much in rapid firing. Captain Bogardus, champion wing-shot of the world; Dr. Carver, champion rifle-shot of the world; and all the leading shots, use DITTMAR POWDER in their matches. Our challenge to shoot a long range rifle match, as published in our circulars, was never accepted, and is yet open to the world. Address

All our cans have seals over the screw-cap, with C. Dittmar's signature, and none others are genuine.

Sailing Southward.

EN ROUTE TO TRINIDAD, July 3d.

THE promise made four months ago, that I would write a letter for FOREST AND STREAM every month, has haunted me like a nightmare; yet such has been the nature of my occupation—one day on board some coasting vessel, another in town, the next in the country, and again in the depths of the forest, that I have gladly procrastinated. The pledge was unexpectedly brought to mind some three weeks ago, and in this manner: It was in the island of Nevis, latitude 17°, while I was the guest of a large land proprietor there, Sir Graham Briggs. The library of Sir Graham is well stocked with English books, and among them I found one bearing the title, "Wild Life in Florida." Glancing it through I found my own *nom de plume*, and investigating further discovered that the author of the book above mentioned had copied entire one of my letters to FOREST AND STREAM, written six or seven years ago. He mentions having met "Prof. Fred Beverly," and then gobbles entire a letter of mine, filling ten pages of this purloined volume. I say purloined, for even the very title to his book was taken from the general one given to the letters I was writing for your paper in the times when we were young. This was enough to cause me at once to dip my pen and indit upon you a letter then and there; but other matters claimed attention, and it was postponed. Since then I have winged my way still further south, by way of Montserrat and Dominica, Martinique and St. Lucia, and last evening we left Barbados, and are now speeding toward Trinidad. As I write in the pleasant smoking room of the *Flamboyant*, one of the delightful steamers of the Q. and G. P. S. line, we are steaming past the island of Tobago. A host of memories rush upon me now, for I am right in sight of my old hunting ground of two years ago, Tobago! an island all alone, forsaken, half-abandoned, yet containing in its dark forests and behind the lines of cocoa palms that fringe its shores, such birds as belong only to the great southern continent, and such shooting as few other islands, except Trinidad, will give. Like a great wave these memories of my past wandering crowd tumultuously upon me, and the scenes of my former wild adventures invite me again and again,

But we will not go back so far as that, but confine our

attention to the opening of the present voyage. The first week in March I left New York on the steamer *Hadji*, commanded by that prince of true and gallant seamen, so long and so well known to Southern travelers, Capt. Faircloth. We were bound for St. Thomas by way of Porto Rico, and if I were to say that we arrived eventually in safety, I should but give utterance to a foregone conclusion. We sailed southward, crossed the gulf stream in due time, and successfully passed through the strong passage between Haiti and the Bermudas. The second day we could venture on deck without overcoats, and the fourth found us sighing for a touch of winter. And so the days passed on, and the North Star sank lower and lower, and the gales blew milder and balmy, as the *Hadji* plowed her way onward, with her prow pointed toward the Caribbean sea. There were but three passengers, and at least one-third of the number was sick. For the fortieth time I lay in my berth and resolved never again to venture on the sea. I always do this when I go to sea—decide that I do not mean to repeat it. But then, what's the use? Just as soon as my foot touches land the old longing for new scenes comes over me; I am just as much refreshed by a touch of earth as that old giant of mythology. But what a horrible thing is seasickness! I shudder at the bare thought of what I have endured when suffering from that affliction. And the worst of it is, one cannot overcome it. For seven years I have been a victim, and seven times seven is the number of my attacks. I have tried everything, but without avail; the nearest approach to a cure is to seek a shady spot and lie down as quietly as you can. You lie at full length in your bunk, and groan in misery, and there comes up out of the water a vague and watery shape, taking the form of a devil fish, and it squats upon your stomach and envelops you in its slimy arms, and squeezes out of you all life and all desire to live. The remedies prescribed for seasickness are as many and as various as those in vogue for a cold in the head.

OUTFIT FOR CAMPING IN THE WEST INDIES.

Every time I start out for the Southern forests the question arises: What shall I take with me? And every time I return, no matter how much I have taken, but a small portion of my original outfit returns with me. It is, of course, desirable to travel as lightly equipped as possible; it is equally desirable to carry one weapon; this axiom is thrown in gratuitously. Combining in myself the two occupations of collector of birds and the photographer, I am obliged to carry, in addition to what would answer the wants of tourists in general, special apparatus and equipments; yet I am not very heavily weighted with my trunks, having learned, from a bitter experience with porter and boatman, how to dispense with what we don't need.

Now, there is the matter of clothing; take nothing but what is light and loose and easy fitting—in a word, take all the old clothing you can collect. You will never find a people more grateful for old clothes than the negroes you will meet in the woods and in the country. A "Yankee coat" or shirt, is more preferred by them than great riches, and for a pair of trousers they will call down upon you the richest blessings of Heaven. I can almost trace my line of travel by the line of garments I have left behind me—"Here," I might say, "I gave away a coat, here a vest," etc.—it is such a pleasure to give away to a grateful recipient that for which you have no further use. The best material for clothing in this country is linen, duck, or drill; and though it is universally worn here, and the tailors here have made garments of it from time immemorial, yet it would be better to have them made in the States than out here. Most of the tailors here are either black or colored men. Now though there are some trades for which the negro is especially adapted, and in which he fairly shines, while the white man appears mean and despicable—such for instance, as that of the barber or waiter—it was very evident that he was not created for a tailor. That profession requires art and calculation, neither of which is possessed by the son of Ham. A "ready-made" suit from the States, even of the lowest price, will far surpass an ordered one here. Take, then, a fair supply of cool clothing, such as you would wear North in the months of July and August.

For the rough climbing in the mountains and the riding over rude trails, one needs an especial outfit. Fortunately for me, just previous to my departure I bought myself by the son of Ham. A "ready-made" suit from the States, even of the lowest price, will far surpass an ordered one here. Take, then, a fair supply of cool clothing, such as you would wear North in the months of July and August.

For the rough climbing in the mountains and the riding over rude trails, one needs an especial outfit. Fortunately for me, just previous to my departure I bought myself by the son of Ham. A "ready-made" suit from the States, even of the lowest price, will far surpass an ordered one here. Take, then, a fair supply of cool clothing, such as you would wear North in the months of July and August.

head, etc., the spines of which wound one terribly. Several times I have had my knee-pan stuck full of these spines and have been made so lame that I could hardly walk. Threading the tortuous cork-tracks among rocks covered with these cacti, I have felt it a comfort and consolation to have on the canvas leggings; and as for the shoes—I can't render them justice. They were broad-soled, armed with hob nails well riveted in, and made of leather so well dressed that three months of almost constant wear finds them as soft and pliable as at the beginning. I have climbed hills and mountains, walked mile after mile over rough stony paths, and have waded for hours in shallow salt-ponds, and those shoes have not abraded the least particle of skin from my feet. Encased in these shoes and leggings I could bid defiance to thorns and rocks, and could leap down the steep mountain trails so rapidly that my negro attendants were always left in the rear. If there was one thing I congratulated myself in bringing out, it was that pair of shoes, for they gave me a feeling of real security every time I put them on; against dogs and snakes they were a perfect protection; with them on one could even kick at fate itself.

For a hat, wear anything but a black one; by all odds the best hat for a tropical climate is the "pith helmet" of the East Indies, which can be obtained in St. Kitts, Antigua, Martinique, Barbados and Trinidad; in fact, in nearly every island of importance. It is the only hat that is actually sun proof, though, from the porous nature of the material composing it, it will not do for rainy weather. It is sold at various prices, eight to twelve shillings (English) being the average. It is extremely light, helmet-shaped, protects the eyes and back of the neck; the rim is lined with green, to protect the eyes, and it is well ventilated. No nearer approach to a perfect hat has ever been manufactured. Imitations are much worn here of cork and caoutchouc; but, though a trifle more shapely, these latter are heavier and hotter.

As it is necessary, in a tour for the collecting of birds, to have a gun that will be useful in shooting humming-birds and the like, I had long looked in vain for the right article. Just before leaving, a friend showed me a small gun with a pistol handle—a sort of compromise between a gun and a pistol—which was breech-loading, with a barrel about two feet in length. There was no name to indicate the maker, but upon the breech was stamped the somewhat equivocal motto, "never miss." This prejudiced me against the gun, for it reminded me of that man who ordered his tombstone in advance of his death, and had inscribed upon it what the papers at that time called a "rather premature statement"—"none knew him but to love him."

It was a convenient weapon, however, and, riding or walking, I generally carried it in my hand, as one would a stick. For some time I did not even fire it; but one day (it was in the island of St. Johns), I went out with it to a frangipani tree that was full of blossoms and of birds. The first bird fired at was a large thrush, which fell dead, leaving me astonished at the performance of the spiritual little pistol. I then shot a humming-bird, with like result. Before I left the tree I had secured nine birds in nine consecutive shots. This, taking into consideration the small size of the charge fired, the few shot, and the minuteness of the body of a humming-bird, ought not to be considered bad for the gun. In all, I have fired about four hundred shots with it, and have had occasion to use it more than my larger gun.

Though but few of the island shot the Lesser Antilles contain animals large enough to be classed as game, yet one must have a gun suitable for shooting sea-birds, man-o-war birds, pelicans, pigeons, etc., as well as the monkeys and deer that abound in some islands. Such a gun, of 13 bore, 33 inch barrel, weighing seven and one-half pounds, I have always had with me as a mainstay. For the last eight years I have used a genuine American gun, and have never had reason to prefer any other; in fact, the "Fox" gun, made by the American Arms Company, of Boston, suits me better than any other I have ever used.

This preference I maintained several years ago, before the gun had arrived at the perfection of the present arm. But now, with all its improvements, I am only strengthened in my opinion that it is the best gun for the money, American or foreign, that the market affords. The one I now own, though a comparatively cheap gun, has every advantage that any gun can possess—pistol grip, rebounding locks, etc.—and has attracted attention everywhere I have been. The guns most in use out here are of two kinds—the cheap French, and the higher-priced English. The former are mostly pin-fires, varnished stocks, and with stiff, clumsy action, with a profuseness of showy engraving, and having a tawdry effect generally. The English guns are much inferior to equal priced guns of American make. In finish, action, symmetry and beauty, my American gun surpasses them all, and several gentlemen declared their intentions of ordering a similar one before the shooting season came round. Powder and shot may be bought at any of the sea-ports, and in Barbados, shells, cartridges, and all the requirements for a breech-loader,

The gun is the only arm one is likely to have use for, though a revolver or rifle may be of use in whiling away the time at target practice. So far as necessity for the revolver goes, there is none. Mine had no chain in my trunk since I left, and is rusty for want of use.

A hammock, a pair of blankets, a rubber blanket, and the various simple articles of use in camping out in the North—all these should be taken. Books should be taken sparingly, and then only such as you would wish to leave among the people, for the various and varied use to which one may put his time will permit of little time for reading. Paper, ink, pencils, note-books, &c., of course; and, if one is artistically inclined, he should by all means attempt to sketch the wondrous mountains and the scenery of hill and coast. Not being gifted myself, I long ago sought aid in preserving by photography these wonderful pictures that each day unfolds. A camera is an indispensable part of my outfit; formerly I worked the old-fashioned "wet process," and it took two large trunks to hold camera and chemicals; but now, all this is changed; my camera occupies but about a square foot of space, and plates for one hundred pictures are packed among my clothing in my trunk. The instrument to which I am indebted for all this saving of space and luggage is called the "Tourophagor," and is the invention of a young photographer of Boston, Mr. Blair. At first sight it appears only a square box, but by removing a slide the lens appears, and by drawing another an inner box is disclosed, which contains a dozen prepared "gelatine plates." These plates are contained in grooves, each in a separate groove, and held in place by screws, each one numbered. Each number corresponds with another on the focusing slide, so that, by an ingenious arrangement, all one has to do to expose a plate is to focus for distance, then, turning the focusing slide, slide the number of the plate wanted is in the right place, loose the screw, holding the plate in position, thus letting it drop into a rack below, by means of which it is carried into focus. The lens is then uncapped, and the exposure made; after which the lens is again covered, the rack carried into position by a thumb-screw, and the plate elevated to the dark and held in position by its thumb-screw. Mr. Blair has adapted a tripod upon which to mount the camera, so compact that, when closed, it presents the appearance of a large walking-stick; it makes a very good alpenstock, in fact, with a brass-capped head and sharp-shod point. Upon this tripod the camera can be mounted, by a few turns of the screw the plate exposed, replaced, and the camera compactly packed in a very few minutes. If this invention develops all it promises to, there is no reason why every tourist should not carry his own "Tourophagor" and take his own pictures. Thus far, I have exposed for about sixty pictures; but, as I have not yet seen one of them, I can not report upon the merits of the instrument. This may seem, to the uninitiated, very strange; that a person in his senses should go about over mountains, and in and out of craters and valleys, then, turning the focusing slide, and squinting through it at a certain angle, and then, after turning a few screws and making sundry motions, pack up his camera and depart, satisfied that he has obtained a duplicate of the picture seen on the ground glass. It does require a great deal of faith, especially when I transfer the plates, upon which I fondly hope are the images of beautiful objects, from the dark-box to the boxes in which they must be prepared, and which are only to be developed by a peculiar light, in the night shining through ruby glass or prepared paper. To the eye, every plate looks alike, whether it contains the undeveloped reflection of tropical vegetation, or whether it remains in a state of virgin purity.

It would be an easy matter to develop a few, as I have the chemicals for the purpose, but, but I prefer to remain in a state of delightful suspense, and defer this operation till my return to the States. But if—ah! if all this labor has been in vain! I have too much faith in the perfection of my "dry plates," and in the honesty of Mr. Blair and his work, to entertain any doubt; at least, I'll not cross the bridge before I come to it.

The preceding are, in the main, the articles comprising my outfit, but there are a few others which I deem that I may take, which will suggest themselves. By all means, if you come down this way, bring out fresh books and papers to give to the people. Though there is now direct communication between New York and Trinidad, still the inhabitants of these islands do not receive half the reading matter they could devour. English papers and magazines three weeks old are their staple supplies. Now, by introducing a few of our newspapers, there may be paving the way for the annexation of these islands by bringing about a change of sentiment.

This again brings me around to my starting-point—the facility with which we may now reach the larger islands. A direct line, started two years ago, is now running from New York, the Quebec and Gulf Ports Steamship Line, and tickets may be procured for any island between Porto Rico and Trinidad. As these steamers carry cargo, and consequently make a stay of a day or two in each port, a round-trip excursion ticket to Trinidad would enable one to see the best of all the islands, and at the same time make his home aboard.

This, the *Flamboyant*, the second steamer of the line, upon which I have taken passage, during this cruise, is as comfortable and pleasant an abiding place as one could desire, even with the thermometer at ninety or thereabout.

The Bocas are now in sight, those gateways to the Bay of Paria and Trinidad, and I must bring this roundabout ramble to a close. To-morrow is the Fourth, which, being Sunday, will be celebrated on the fifth. To-morrow and the day after I shall be in Port of Spain, and I'll wager I don't smell the smoke of a cracker. In refreshing contrast comes the memory of a fourth in Martinique two years ago. There were no crackers, no fireworks and no speeches, except one by our Consul. "Take another glass, my friend, in honor of the great American eagle." In my mind's eye I see him yet, beaming upon a half circle of chairs, said chairs ranged about a two-gallon jar of punch, each chair containing a patriotic American, for the time being. It was only a week ago that I heard him give orders to Sam, his servant, for the brewing of a multiplier punch, that of two years ago, when I was a child, I, three hundred miles away, with not even a brother American to grasp my hand and exclaim, "Long may she wave!" Here's to the flag, all the same, though.

Natural History.

—Address all communications to "Forest and Stream Publishing Company, New York."

BRIGHT FEATHERS.—Mr. Frank R. Rathbun, who is well known to many of our readers by his valuable ornithological papers, has commenced the publication of a beautiful work on birds, entitled "Bright Feathers." The author's purpose is to furnish, in cheap form, a series of illustrated biographies of ten or twelve of the more highly colored birds of the Northeastern States.

Judging from the initial number, the work will be one that all should have. It is a well printed folio on heavy tinted paper, with wide margins, and is illustrated by an excellent colored plate and a number of beautiful wood-cut vignettes.

The purple finch is excellently portrayed in the plate; the coloring is good and the attitudes natural and life-like. Figures are given of the male and the female, and of the egg—all natural size. The text is bright and interesting, and contains quotations from many of the best authorities. The present work will have a great value in arousing an interest in ornithology among many who, without such a volume to bring it to their notice, would never realize the beauty of the science. Mr. Rathbun's volume will, we trust, be as successful from a pecuniary point of view as it promises to be from an artistic standpoint; and we do not hesitate to recommend it to our readers. The price per part is \$1.

COUNT L. F. DE POURTALES.—We regret to notice the death of L. F. de Pourtales, long an associate of the elder Agassiz. He came to this country twenty years ago, and has devoted much of his time to the study of the *Radiata*. He has been engaged in deep-sea dredging, and was for some years an assistant on the Coast Survey.

Count de Pourtales was a Swiss by birth, and recently came into possession of estates in Switzerland. He was the author of many valuable scientific papers, prominent among which are his writings on corals.

THE SENSES OF ANIMALS.—A correspondent writing from Savannah, Tenn., gives an interesting account of the acuteness of the senses of certain birds and insects in perceiving the approach of an earthquake long before it was observable to human feeling. He says:—

"On the evening of the 18th inst., a few minutes before 8 o'clock, I was sitting on the front porch trying to get cool and listening to the katydids that were keeping up a racket all around. A large colony of martins have established themselves in the upper part of the porch and were quietly sleeping. All of a sudden the katydids stopped short, and the martins came flying out in a breakneck fashion, as if a snake had invaded the quiet of their home. In a few seconds afterwards we felt a distinct shock of an earthquake, which lasted about a minute, shook the house and rattled the windows. The shock was felt by every one in town, and extended for miles around. The wave seemed to travel from the southwest to northeast. What I want to know is why and how did the birds and the katydids feel the shock before the rest of us?"

A SNAKE STORY.—A correspondent has sent us an excerpt from the *York Pennsylvanian*, which gives the details of a remarkable circumstance, deserving to go on record. No one can cavil at this story or pretend to disbelieve it, for we have the most convincing proof of its truth. Our correspondent states most emphatically that he knows Locust Run well, and that it is a great place for pheasants (local for ruffed grouse), for he has killed them there; he does not, it is true, say that it is a good place for black snakes, but, on the other hand, he does not say that there are none there. What could be more convincing! We have Locust Run, the pheasants and an inherent probability that black snakes exist. No one but an extremely cautious person will be disposed to doubt the veracity of the *York Pennsylvanian's* little tale. Here it is:—

Several weeks ago, while clearing new land at the foot of Locust Run, in Lower Windsor township, there was discovered a pheasant's nest with twelve eggs. Thursday afternoon, last week, John and Peter Emenheiser, sixteen and nineteen years old, on looking at the nest, espied seven young pheasants, about two days old—five eggs remaining unhatched. At the edge of the nest lay a black snake, five feet ten inches long, the serpent having charmed the chirping birds. The youths killed the snake, and throwing it into the road a few feet from the nest, the seven rescued pheasants manifested astonishing excitement, and creaked with agony hastened to the serpent, some creeping under it, at a short distance the old bird, realizing the perilous situation of the brood, screeching and flapping her wings.

A PROLIFIC MOTHER.—Early in April last, a three year old short horn heifer belonging to Mr. Wm. Myers, of Pittsford, Monroe County, N. Y., died during the period of gestation. On examination, after death, it was found that she was about to become the mother of no less than six well developed calves. The sire was a Durham yearling sixteen months old. The remarkable litter, if such a term may be employed, are said to be now in the possession of Mr. C. K. Howlett, of Rochester, N. Y.

WHITE HARES.—*Corpus Christi, Texas.*—Editor *Forest and Stream.*—I have seen a dozen white rabbits in this State many times in the spring, but they were always the good ways off and I always had the sun at my back in

looking at them. On several occasions I have killed these apparently white jacks, and found, when I got to them, that they were ash colored, or simply dingy old fellows, which had not yet shed their long winter hair, which, like the hair of all animals exposed to the weather, gets dingy or faded, just as every black horse loses his gloss and is a dirty brown in color just before shedding in the spring.

The sun shining on this dingy, faded hair from the proper angle makes it look white, but the color green, red or yellow, would be as nearly correct as white for any specimen of jack rabbit it has fallen to my lot to observe. I have seen deer identically the same color, white at a distance apparently, but never white when killed. As to my opportunity of observation, you will be satisfied when I state that I have lived in Western Texas over thirty years and am fond of my gun. Of one thing you may be assured: In Western Texas jack rabbits do not turn white in winter.

The hare referred to by our correspondent is no doubt *Lepus collotis*, which is not known ever to turn white in winter. It is not probable that *L. campestris* would do so either, as far South as Texas.

HISSING SNAKES.—*Washington, July 3d.*—Editor *Forest and Stream.*—"Enquirer" asked, on page 389 of your issue of June 17th, "Do snakes hiss?" Our observations on the collection of snakes in the Smithsonian institution enable us to assert that snakes do hiss. This is especially the case with the *Heterodon*, the gopher, or indigo snake (*Spizelos eremicus*), and with the pine, or bull snake (*Pityophis melanoleucus*). The sound produced by them, apparently in anger, is a loud and distinct hiss. A sound closely resembling a hiss, but produced by rapid motions of the tail, is noticeable in snakes of the species *Basiscium constrictor*.

OBSERVER.

Manchester, N. H., June 25th.—Editor *Forest and Stream.*—One summer's day in 1870 I was hoeing in a garden, when my attention was attracted by a peculiar hissing—almost singing—note, different from any I had ever heard. I followed up the sound, and found that it came from a common striped black and yellow snake. He was coiled up under a projecting stone of the wall, and, with mouth partly open, was singing his little song. His voice was sharp, pretty high pitched, and with a harsh, grating quality. I am no naturalist. Was it *Heterodon platyrhynchos*?

Probably not *Heterodon*.

State School of Mines, Golden, Col., June 30th.—Editor *Forest and Stream.*—I had often doubted the same fact as "Enquirer" and two or three years ago, on the month of May I turned up a flat stone along the flanks of the Rocky Mountains and removed a pair of large bull snakes (a harmless species, sometimes attaining four or five feet, and marked not unlike a rattlesnake). They greeted me with a storm of hissing, that put at skepticism on this matter to flight; and their formidable attitude of defense and noise made me start back for a moment ere I attempted to capture the pair. This is the only instance of hissing I have met with in my intercourse with the snakes of this region, of which the bull snake, rattlesnake and blue racer are the commonest. I never heard a rattlesnake hiss. These snakes had him there all winter, and were probably hibernating.

A. LAKES.

Augusta, Maine, July 10th.—Editor *Forest and Stream.*—Some fifteen years ago, then residing in Wiscasset, Mass., I was preparing to go down the river to fish for sharks, when I was suddenly astonished by hearing our large mastiff dog, Barnum, violently barking. I had my shark spear in my hand, and went to the hedge and was startled to hear a loud hiss. Upon investigation, I discovered a large adder holding my dog at bay. His attitude of defense and noise made me start back for a moment ere I attempted to capture the pair. This is the only instance of hissing I have met with in my intercourse with the snakes of this region, of which the bull snake, rattlesnake and blue racer are the commonest. I never heard a rattlesnake hiss. These snakes had him there all winter, and were probably hibernating.

GEO. O. TOBEY.

Editor Forest and Stream.—On July 5th the remarks on "Do snakes hiss?" I am induced to relate the following incident: A few days ago I was fishing in a creek in Sullivan County (this State). Passing along down stream, I arrived at a point where the water, after tumbling over some rocks, formed itself into a small eddy. Here I was surprised to see lying on the bank of the stream twenty or thirty water-snakes—large and small and of a variety of colors. Most of the snakes disappeared into the water as I approached. Those that remained on shore coiled themselves up and raising their heads darted back and forth with remarkable rapidity their forked tongues, making at the same time a distinct hissing noise. The "hissing" was, in fact, so loud that it surprised me and I stood for a moment observing the different snakes, all of which coiled in a state of frenzied excitement. One in particular—about two feet in length and of a greyish white color—darted at me several times as if to drive me away, uttering the while this hissing noise. It was dispatched in the usual manner. Perhaps this will convince "Shadow" that water snakes as well as land snakes do hiss.

Another incident: Not long ago I was on the Hudson Poles with a friend. We were seated upon a rock, leisurely puffing our cigars, when suddenly we were startled by a loud hiss (similar to that sometimes made by parent geese), close to our heads. Springing to our feet, we found ourselves confronted by a red viper or copperhead (*Trigonophthalmus contortrix*) about three and one-half feet in length and one and one-half inches in diameter at the thickest part. Its head was almost flat, and would probably measure two inches across. The animal did not appear to be in its pleasantest mood, and had we not beat a retreat we would probably have felt the force of its wrath. We returned shortly, however, with a noose made of twine and attached to the end of a stick, and captured Mr. Copperhead as he was about to spring at one of us.

I have seen a snake the New York alive, but the porter into whose charge it was given tightened the cord, thereby strangling it.

OZIAS S. FREEMAN.

NORTHERN RANGE OF THE BLUE GROSBEAK.—In your issue of June 24th, a paragraph states that this species was shot in Massachusetts in May last. In order to give its most northern range, I may say that I secured a fine male specimen some years ago on the north shore of the St. Lawrence, opposite Bic. I think I published this fact in the *Canadian Naturalist* at that time.

Fish Culture.

—Address all communications to "Forest and Stream Publishing Company, New York."

HATCHING THE SPANISH MACKEREL.

THIS valuable fish, *Cybinus maculatum*, the first hatching of whose eggs by the United States Fish Commission we noticed last week, was first discovered to be spawning in Chesapeake Bay by Mr. R. E. Earle, of the Commission, who hatched the first fish on the 20th of June of this year. It seems that his attention was attracted to it by finding one with ripe eggs while he was gathering fishery statistics for the census in Mobjack Bay, an arm of the Chesapeake, and on going over to the east side of the latter he found the fish in much greater numbers in the vicinity of Crisfield, where it has been caught by the local fishermen for many years, but its movements and spawning habits were not at all known. Here Mr. Earle found that the fish were just beginning to spawn, and he immediately started for Washington to report his discovery to Prof. Baird, whose delight at the announcement far exceeded that with which he had just received a telegram from Germany telling him that the first prize, the Emperor's Cup, had been awarded to him at the International Fishery Exhibition in Berlin for the best collection illustrating the fishery resources and fish culture of America. Mr. Earle was immediately sent back to the spawning grounds with instructions to make a full investigation, hatch some if possible, and report. This he did, and with such hatching apparatus as he could gather he made the trial with perfectly satisfactory results, hatching about a half million of fish in three or four different lots. His first lot was washed out of the boxes by a storm; he then covered them and hatched some which went through the wire-cloth and escaped, although this was of thirty-two wires to the inch, a fact which gives an idea of the smallness of the young fish. He then fastened a covering of coarse cotton on the top of the wire-cloth and had the pleasure of seeing the fry remain after hatching. The water was 84° Fahr., and the fry hatched in eighteen hours after impregnation, but swam belly up on the first day on account of the large oil globule which prevents them from going below. The next day they righted and in two days they were enabled to go to the bottom. They are reported as being unusually hardy, forty of them having been kept for two days in a glass globe without change of water.

The subsequent experiments of Major Ferguson have confirmed the observation of Mr. Earle, and the next season there will no doubt be many millions of this toothsome fish hatched by the Fish Commission, for most fortunately its season begins after that of the shad has closed and at a time when the *Fish Hawk* has little else to do. It will be entirely feasible to transport the fry of this fish by steamer to Delaware Bay and other parts wherever they may be desired, and so to increase the stock in many places. Their great numbers of eggs, from 200,000 to 500,000 in an individual, and short period of hatching, render it possible to turn out immense quantities during their extended spawning season.

Another fact was established in these experiments; that is, the ability of the fry of the Spanish mackerel to live in brackish water, it being believed heretofore that this fish could only survive in very salt water. Mr. Earle certainly has reason to feel proud of his discovery, which is a most important one to the fish culturist, the epicure and the fisherman, for this dainty fish is very irregular in its appearance in our markets, and consequently varies in price greatly, being ranked by many as the best of all fishes for broiling, and when plenty seldom selling for less than twenty-five cents a pound, but when scarce often bringing a dollar.

McCLOUD RIVER SALMON.—United States Fishery, Baird, Shasta County, Cal., July 1st.—The salmon in the McCloud River seem to be more plentiful than ever this season. We caught with a small piece of net, about one-sixth the size of an ordinary seine, one evening last week, 150 salmon at one haul. This, of course, would be nothing to speak of over our bridge and rack for obstructing the salmon are in, but the river is now entirely free from obstructions.

The character of the river fishing is well shown by the fact that Master James Maynard, Jr., of San Francisco, caught opposite our house, with a bamboo rod, ten salmon before 9 o'clock last Thursday morning, the largest three of which weighed respectively 14 pounds, 12½ pounds and 10 pounds.

The trout ponds of the United States Fish Commission here are a superb sight, probably not equalled in the world. We have in all nearly a thousand trout, a large proportion of which weigh over four pounds. We are adding to the number every day as rapidly as we can, and hope to have nearly two thousand by this time next year. The subsistence question in this department prom-

ises to assume appalling proportions; as a whole deer now only lasts the trout two days. Luckily we have salmon to feed them on in the summer. Those that want McCloud River trout (*Salmo trutta*) for public distribution can probably get all they wish for this year by making reasonable application to Prof. Baird, United States Commissioner of Fish and Fisheries. Although a beautiful and delicious fish, the *Salmo trutta* will live and thrive in warmer and muddier waters than the *Salmo fontinalis*, and consequently particularly commends itself to the inhabitants of the States lying south of the natural habitat of the *fontinalis*. LIVINGSTON STONE.

IMPORTED SAIBLING AND WHITEFISH.—United States Fishery, Baird, Shasta County, Cal., July 11th.—Editor *Forest and Stream*:—I had the good fortune to receive last winter from the German Government, through the kindness of Herr von dem Borne, of the Deutsche Fischerei Verein, a present of several thousand eggs each of two varieties of the whitefish of Lake Constance, Switzerland, and twenty thousand eggs of the variety of German trout known as saibling (*Salmo salvelinus*).

Most of the eggs arrived in good order. The whitefish, soon after being hatched, were turned loose, and the young sailblings I left with Mr. Gilbert, of Plymouth, Mass., to be reared in his ponds. I am happy to inform your readers that Mr. Gilbert gives the following favorable report of them: "The sailblings are doing finely. None have died, and they grow much faster than trout (*Salmo fontinalis*). As they grow they resemble a trout (*fontinalis*) very much; in fact, if they were together it would be impossible to pick out the trout (*fontinalis*) from the sailblings. Their habits, however, are different from those of the trout. I think they feed more off the bottom, picking up the insects. They do not seem to eat one another, as trout do. I think they are a hardy, rapid growing and easily raised fish."

From Mr. Gilbert's description of the young sailblings, it would appear that they might be quite a desirable fish to introduce into this country. LIVINGSTON STONE.

Sea and River Fishing.

FISH IN SEASON IN AUGUST.

FRESH WATER.

Trout, *Salmo fontinalis*. Muskellunge, *Esox nubilus*.
Salmon, *Salmo gairdneri*. Pike or Pickerel, *Esox lucius*.

Weakfish, *Cynoscion regalis*. Kingfish, *Menticoccus nebulosus*.

MORE AMERICAN ENTERPRISE.—The quantity of silk-worm gut at present in New York City is far greater than ever before, but the quality is, as a rule, very bad. As anglers, we must see this fact and mourn over it, for without good gut, good fishing tackle is an impossibility. What is comparatively a small matter to us is a great matter to manufacturers. Our friends, Abbey & Imbrie (who consume rather more than half of the entire importation of Spanish gut), found each year that the grades were lower than the preceding year, and that each year there was more and more rough and worthless gut admitted in every hundred. Last spring, therefore, Mr. Imbrie went over to Spain to see what could be done. He found that all the best gut was produced in Murcia; that made elsewhere being entirely unfit for use. After a long and careful investigation, he concluded to establish a factory there for his firm, as otherwise it would not be possible to guarantee quality or be certain of a regular supply. This necessitated a great deal of trouble and the outlay of a large amount of money. But success has crowned his efforts, and his firm are recently in receipt of the "first fruits" of their factory. They have restored the old grades, and the gut is the smoothest and roundest we ever saw. We know that all anglers and all makers of fishing tackle will rejoice in the possibility of obtaining good gut from this time forward, and we congratulate this firm on this still further evidence of their undaunted pluck and perseverance. We know that they do not go into anything heedlessly, and we are sure that they will make money out of their venture, though it does almost take one's breath away to find an American firm establishing the largest factory of its kind about 4,000 miles away from home.

ARE THERE TROUT IN THE FRENCH BROAD?—Will you kindly tell me whether there is any good trout fishing to be had in that part of North Carolina called the "French Broad," the western part, I believe. I am anxious to take a trip through there on account of the beautiful scenery, but do not particularly care to unless I can throw a fly most of the time. A. F. J.

Can any of our readers give us definite information about the fishing in the stream named and about the distribution of trout in North Carolina; in what counties and streams they are found? There seems to be no reliable information at hand upon this point.

SALMON IN THE PENOBSCOT.—A dispatch from Bangor, Maine, July 27th, says: "Just returned from a day's salmon fishing on East Branch Penobscot. Hooked two salmon. They are plenty and readily take a fly."

H. L. LEONARD.

A HINT TO TACKLE DEALERS.—New York fishing tackle dealers would find it very profitable to exhibit their fine fishing tackle at the coming Cincinnati Industrial Exposition, which is now advertising for space allotments. Cincinnati sportsmen are almost altogether dependent on New York dealers for fine fishing tackle.

TROUTING IN NEW BRUNSWICK.

THE rounds to my bear traps usually took three days, but to gain a day for a visit to the "Kilburn" I made it two days, finishing up at noon by bringing in a fine bear.

Section boss Wm. Glew, with whom I was camping at Sugar Brook, on the line of N. B. & C. R. R., kindly permitted his sons, George and Bob, and their cousin, Tommy Tuck, to accompany me. At 3:30 p.m. the last train passed north, leaving the track clear. A sack was stowed with bread, salt pork, salt, tea, sugar, frying pan, tin pail for boiling tea, and two drinking cups; my top-coat and blanket tied compactly for a seat in the birch, case of rods, landing net, rifle and gun, and a couple of the luggage. The hand-car was rolled on to the track to receive us, and "all aboard!" and we were off for a four miles run, as fast as three pairs of muscular arms, incited by anticipated sport, could propel it.

Arriving at 56 Carry, the car was put off on a turnout in a jiffy, and the one and a quarter trail entered. This brought us, in due time, to the head of dead water on the lesser inlet. In a few moments George and Bob produced their birch from its resting place in the woods, and while it was being launched and trimmed, I thung up my rod with a black palmer and black may for a bait. The distance to the lake is about a mile, as the crow flies, but its sinuous windings double the distance. It is a lovely stream, and the lower half discloses deep, broad reaches of water at every bend, where the trout most congregate. At each of these pools we made a brief tarry, and by the time we reach the lake a dozen or more fine trout are taken. It is then decided to cross the lake, one mile, to "Camp Stewart," have an early supper, so as to enjoy the best fishing between sunset and dark.

Arriving at the landing George proceeds to dress some trout, while Bob and Tom go up to camp and start the fire. The essays the roll of cook by virtue of having once served in the capacity of steward on a coaster, and while the culinary affairs are progressing I light my briar-wood and lie down on what was once a luxurious couch of cedar boughs, and muse upon the past.

Here, in the hunter's camp, built by old Pete Sebatiss, four of us met annually, and spent a season of unalloyed happiness, which again passes in review. Again Neal, Will and Jack surround me, recounting the sports of the day, and mapping out the future. Now, it is near midnight; the wood is piled on for the night, and the nights here are cool, howbeit the days are warm; the light flashes upon strings of duck, partridge and trout suspended around, and Jack's rich, deep voice wakes the echoes of the wooded hill with "Three Black Crows" and "Paddy O'Doyle," by way of benediction, as we turn in, Ah! dear old camp! Thy pleasures will be ever green in memory.

But supper is ready, and the deacon seat serves for table, slices of bread for plates, which absorb the drippings of the luscious trout, which are dissected thereon by fingers and hunting knife. Trout and plate disappear together.

I would here digress to say that to fry trout evenly they should be scored across slightly in several places on the sides; it prevents curling. The meal ended, pipes are lighted, the remaining food hung up out of the way of vermin and "varmints," and we again launch the birch, this time for the upper or main inlet, where we arrive in time to find the water fairly boiling with jumping trout. The same cast of dark flies (No. 8 hook) are taken soon as they touch the water. Singles and pairs are killed and landed till "you can't rest." No time now for light flies, which settle down upon one as a cloud, though ever and anon the eyes are gathered there to the extent of blinding, when they must be brushed out. As twilight deepens, the jumps suddenly cease, and no efforts can get another rise. The sport was brief, but grandly exciting. But pen of mine cannot portray it in detail; besides, the theme is hackneyed, and those who have been there know all about it. When we return to the lake, the boys decide to have their sport (3). Drift-wood is piled on a flat rock and fired. Sticks, poles and cod hooks, attached to improvised poles of alder, and with chunks of pork for bait, each takes position on a rock and enjoy themselves lifting out the beautiful fish attracted there by the light. This is kept up till Tom slips from his rock and fetches up waist-deep in water. This is a damper, surely, and necessitates a fire at the camp, and as the sky is now dark, the boys build by the lumbermen last fall a few rods above the one described, where the boughs are comparatively fresh, we lie on to it, and soon Tom is seen with simply vest and hat on, drying his other garments by a fire built against a large birch stump in front of camp. While this is going on, the lads amuse themselves with a greasy pack of cards, playing the game of forty-fives. At 11 o'clock we turn in, and the work is passed to turn out at daylight for a brief trip up the main inlet. Four o'clock finds us there. The sport is just as good as the previous evening; but, in the cool of the morning and absence of flies, quite enjoyable. We are back to camp, cook breakfast; string of trout some thirty pounds, running from half a pound to one and three-fourths, and start on our return before 8 o'clock. The rod is tried in lute returning, but not a rise is obtained. The sky is again clear, and the rays of the sun are too scorching. The birch is again laid away to rest. The next week, the trail taken, and in due time the car is reached, and we return to Sugar Brook after an absence of less than twenty hours, every moment of which was rife with supreme enjoyment, and another red letter added to the calendar of life. CORPORAL LOT WARFIELD.

Hillsboro Bridge, N. H., July 15th.

NEW JERSEY.—Riverside House, Forked River, July 24th.—Wet-fishing continues to be very good, and all hands are enjoying the sport, including the ladies and children. The *Bella*, Capt. John East, with Prof. A. M. Mayer and Mr. D. W. Lee, in two days took 143 weakfish, some of which would turn the scales at three pounds. The Professor uses a light fly-rod, which he handles with great dexterity, and has no end of sport when he hooks a big one. The *Mattie*, with Messrs. D. A. Acker, Jr., and H. Thompson, of New York, on the 20th caught seventy, and on the 21st, forty. These were all large fish, some of which weighed as much as four pounds. They had fine sport; nearly half of the fish were caught by the boys and children of the gentlemen, who generally go with them. Our other yacht, the *Idle Hours* has also

had a party, consisting of Dr. and Mrs. Everett Herrick, and Mr. Jas. Ford, of New York. They have made an average of fifty fish during the past three days. I could report much larger scores if the weather had been pleasant. We have had rain and no wind for the past few days, and it has been difficult to get bait, and we are longer getting on the grounds. The old patrons of the Riverdale are beginning to arrive daily, among whom are Mr. W. C. Rogers and family, who will remain with us till late in the season. Also D. W. Lee and wife, Prof. A. M. Mayer and family, Everett Herrick and wife. I would also wish to inform others of our patrons who have not as yet been here that Mr. A. H. Corwin, who was proprietor of the house last season, is now in no way connected with it, but that it is under the direct supervision of the owner, Chas. A. Smith, which is a sufficient guarantee to those who know him, that the house will be better kept than ever before.

A. B.

BLACK BASS VS. GREEN BASS.

Editor Forest and Stream:—

It is at a sacrifice of time, taste and inclination that I notice the communication, "St. Clair," on "Black Bass," in FOREST AND STREAM, of July 15th. I feel constrained to do so, however, in justice to myself, inasmuch as he, indirectly, by implication and innuendo, charges me with mendacity and misrepresentation.

"St. Clair" begins his article by saying: "Finding in recent issues of FOREST AND STREAM the old controversy revived about black bass and trout, and finding also some rather pungent and unpleasant doubts from Dr. Jordan and other gentlemen concerning former articles written by myself for your paper ('Black Bass' and 'Black Bass Fishing'), I must ask you to hear me."

Now the fact is, I have never given "St. Clair" or his articles a second thought since I read them on their appearance, two years ago. I have never alluded to them in any shape or manner, or expressed any doubts—"pecuniary," "unpleasant," or otherwise—in regard to them.

A reference to his articles, at this writing, confirms the impression made upon my mind at the time of their first perusal, viz.: that they were indisputably *outré*, and contained statements in regard to the black bass that were unmistakably rash, inconsistent and erroneous, and which stamp upon the communications of "St. Clair" the opinionated. I remember he was quite eager for a war of words with some one or any one in defense of his unique views, and "threw down the gage of battle," and offered to "break lances" with any gentleman upon the subject.

To my mind he seemed firmly entrenched in a "rut" on the question of the identity of the black bass, out of which it would have been a very simple matter for him to have tried to extricate him by arguments; for my impression, based upon his dogmatic style, was that though convinced, he would be "of his own opinion still." No doubt my impressions were shared by others, for so far as I know, no one took up the offered gage of battle. That it would have been futile to have done so has since been proven, and my recollections have thus been confirmed; for several of our ablest practical ichthyologists subsequently published in FOREST AND STREAM forcible and convincing articles on the identity and nomenclature of the black bass, notably those of Profs. Teche, Gill and D. S. Jordan. Prof. Jordan's paper, especially, covered the whole ground, reviewing the matter from the first description of the black bass by Lacépède down to the present time.

But all in vain. "St. Clair's" faith in his own opinions on the subject remain unshaken; for in his last article he seems to be only willing that the mountain shall come to him, for he expresses no inclination to go to the mountain. He is apparently as firmly rooted to his previous convictions as Rhoderick Duth to his rock, and states positively that he alone is right in the matter, and that all others of a contrary opinion are wrong, in the following plain language:

"I want this vexed question set at rest. It shall be set at rest, forever. It is true that we have a fish at the South called trout, which is superior to this and to the black bass. It is not the black bass or trout, but which is the black bass? The black bass and trout are salmon. There never was a black bass or trout in the South. Any Southern ichthyologist who says so is a liar. I am a fisherman, and I know the difference. And there never will be. Misled by a similarity of mouth and to some extent, form, many well meaning, but mistaken persons call our great black bass, *Micropterus dolomieu*, a trout, and trout they will be with them until the end of time. Mark my words: we have no black bass in the south, and no trout."

Could any assertions be stronger? Now if it is really essential that this question should be set at rest by one to the "manor born," then for the sake of science let him be born quickly; or if he be already born, let him be "born again." If necessary, for it seems that the efforts of all others have been unavailing, in the estimation of "St. Clair," let us see what such "superior" observations and "well meaning" but mistaken persons, as Prof. Agassiz, Gill, Jordan and Cope (who have been "misled by a similarity of mouth, and, to some extent, form"), have to say about the matter.

I will, however, premise by stating the fact, that the first scientific description of the black bass was made by Lacépède, a celebrated French naturalist, in 1800. His description was based upon a brown and black description of the "Southern fresh water trout" sent to him by Mr. Boss from South Carolina, labelled "trout perch"; this he called *Labrus salmoides*, or the "trout-like bass," which specific name (*salmoides*) is retained to this day for one species of the black bass. Lacépède afterwards received a specimen of this same "Carolina trout," but which had a deformed dorsal fin, its latter portion being separated by an injury from the balance of the fin. On account of this peculiarity (the little fin), he named it *Micropterus dolomieu*—"Dolomieu's small fin," in honor of his friend Dolomieu; and this generic name (*Micropterus*) is retained to the present day for the genus black bass. Cuvier subsequently identified the latter specimen as belonging to the genus *Grysetes*, and to be identical with *Labrus salmoides*. He then named this species *Grysetes salmoides*, but the older name of *Labrus salmoides* has been restored, and this species—the small-mouthed bass—is now known as *Micropterus salmoides*. Prof. D. F. Jordan, when in Europe, a year or two ago, examined the original specimen sent to Lacépède, which is still preserved in the Muséum d'Histoire Naturelle at Paris, and fully identified it as a small-mouthed black bass. He also fully identified the specimens sent to Cuvier and

Valenciennes by Milbert, from New York, and Le Sueur, from the Wabash River, Indiana.

Thus we see that the genus *Micropterus* (black bass) was founded upon the Southern "trout," and, moreover, upon that particular species of "trout" or black bass (the small-mouthed) which is held by many, both North and South, to be the only true, real, Simon-pure, clear-cut, Jacobite black bass;—they regarding the large-mouthed black bass (*M. pallidus*) as the "off-ox," or "least-handed" black bass.

Yet "St. Clair" denies that either species of Southern "trout" is the black bass, and furthermore declares that the black bass does not exist in Southern waters. Now let us see what this denial amounts to:—

In 1873, Prof. Teche, Gill at the request of Prof. S. F. Baird, United States Fish Commission, thoroughly investigated the genus *Micropterus* to determine the number of species. After examining specimens from the Great Lakes (Champlain to Michigan), the States of New York, Pennsylvania, Ohio, Michigan, Illinois, Iowa, Kentucky, Missouri, Tennessee, Alabama, Texas, Wisconsin, West Virginia, Virginia, North and South Carolina and Georgia, and after a thorough investigation of the specimens regarding their morphological and anatomical features, he says: "No differences could be found much, if any, greater than such as could be detected among numerous individuals from any given locality." And further: "No deviations have been found, from the ordinary standard, of such a character as at all to compare, for example, with the differences between the large mouthed and small-mouthed forms, or to indicate that there are any specific differences among the small-mouthed or large-mouthed forms." Prof. Gill's monograph, embodying these results, is published in the "Proceedings of the American Association for the Advancement of Science," Vol. XXII, 1874, pp. 55-72.

Prof. Agassiz, in 1854, identified the "trout" from the Tennessee River in Alabama, as a black bass, which he named, provisionally, *Grysetes nobilis*. This was a large-mouthed bass.

Prior to 1870, Prof. E. D. Cope took and identified the large-mouthed black bass in the Catawba, Neuse, Great Pedee and Santee rivers in North Carolina; these streams all flowing into the Atlantic.

In 1877, Prof. Jordan and his assistants, A. W. Brayton and C. H. Gilbert, fished the streams of the Allegheny region of South Carolina, Georgia and Tennessee, most of which were the headwaters of rivers emptying into the Atlantic. Prof. Jordan published the results of these investigations in his "Contributions to N. A. Ichthyology" No. 3, in "Bulletin of U. S. National Museum," XII, 1878, from which I select the following quotations:—

"Prof. Cope obtained this species (*M. pallidus*) in the Catawba. We collected none in the Santee or Enoree, but were told that 'trout,' as the species of *Micropterus* are universally called in the South, are frequently taken there." Page 15.

"This species (*M. salmoides*) is abundant in the tributaries of the Savannah, where it is known as the 'trout.'"

Page 31.

"Abundant (*M. salmoides*) in the Oconee and Ocmulgee."

Page 35.

"Not very abundant" (*M. pallidus*), Chattoahoeche River. Page 40.

"Very common" (*M. salmoides*), Chattoahoeche River. Page 40.

"Abundant" (*M. pallidus*), in Etowah, Coosa and Oostanaula rivers. Page 46.

"*M. salmoides*," in Etowah, Coosa and Oostanaula.

"Abundant; but less so than the preceding (*M. pallidus*)."

"The two species are known indiscriminately as 'trout.'"

Page 46.

"The 'white trout,' as this species (*M. pallidus*) is often called, is common in the Cumberland."

"The 'black trout' (*M. salmoides*) occurs with the preceding (*M. pallidus*), and is still more abundant."

Prof. Jordan, in his "Contributions to N. A. Ichthyology," in the "Annals of the New York Lyceum of Natural History," vol. xi., 1877, page 314, he says of *M. pallidus*:—

"Abundant in the Etowah, Oostanaula and Coosa Rivers, rather more so than the next species (*M. salmoides*), and everywhere confounded with it under the name of trout."

Now, if this evidence is not conclusive and convincing to "St. Clair," that the "trout" is the black bass, and exists in the streams of his own and other Southern States, he is not open to conviction.

"St. Clair" further says:—

"As the time has surely come in our natural history that we must be accurate in our nomenclature, we beg to state our belief that our fish ought to be called 'green bass.' Different in anatomical structure, different in habits, different in times and modes of feeding, our green bass are not black bass, but an entirely different fish."

To which I reply that there is no essential difference, anatomically or physiologically, between the black bass and what he calls "green bass" (trout). He proposes to call the Southern "trout" "green bass" and to call the black bass, to him, the distinguishing characteristic, for he speaks of black, green and yellow bass. But this will not answer. Color is of very little importance in the differentiation of the species of *Micropterus*, for they are of all colors, black, green, yellow and white; and it is this very confusing system of nomenclature that needs to be abandoned.

The term "green" is called "black bass" because it is the most universal common name for it, and, therefore, the one to be adopted; without reference, however, to the term "black" as a distinguishing color.

In the same way that a blackberry is a blackberry, though it is green when it is red—this, although seemingly paradoxical, is a fact which we all understand.

Some of the "blackest" bass I ever saw were in Southern waters, and were of course called "trout."

Then again both species of *Micropterus* are indiscriminately called "trout" in the South, when they should be distinguished as the large-mouthed and small-mouthed black bass. It must be evident to any one, even to "St. Clair," that this is the only practical and sensible plan of nomenclature; for the term "trout," as applied to a person, is applied to the large-mouthed bass in the Northwest in contradistinction to the small-mouthed bass, which is there known as the black bass. Now, if the term "green bass" was applied indiscriminately to either or both species of Southern "trout" what inextricable confusion would ensue,

"St. Clair" has repeatedly stated what the black bass is not, but has neglected to tell us what the black bass is, unless he does so in the second paragraph of his last article, when he says:—

In one of those articles I stated that a black bass proper could not be found in any stream in the South. I now reiterate that statement, and say that I will stand or fall on the scientific evidence of the best informed ichthyologists in the United States, the two fish (*M. salmoides* and *C. atrarius*) to be dissected together.

Now, as "St. Clair" tacitly admits in this same article that the "Southern trout" is *M. salmoides* or *M. pallidus*, we must conclude that by *C. atrarius* he means the "black bass," for what in the world *Centropomus atrarius* has to do with the matter I can't imagine, unless we take this view of it. If he really holds the view of *C. atrarius* to be the "black bass," then the whole matter is explained. It is simply another case of mistaken identity, and he has, for the first time, furnished the key to his peculiar views. But the *Centropomus atrarius* really has no more to do with the black bass (*Micropterus*) than the black snapper or the black grouper. The *C. atrarius* is a true marine fish of the Atlantic coast, generally known as the "black snapper" or "black grouper," and the coast is locally known as black sea bass, black will, black perch and black fish, and it was formerly called, on a portion of the Jersey coast, "black bass," though this name has fallen into disuse since the introduction of the black bass proper into the inland waters of that State.

But upon reading the third paragraph of "St. Clair's" article we take the same ground all over again. He adds nothing, for he tells us there that they exist side by side in streams, but in no Southern stream. They can be found in Kentucky and Missouri together, and even in Tennessee, in waters that empty into the Ohio, but in no others. No, he cannot mean *C. atrarius*, the sea bass, for it exists in no inland streams, and—what can he mean? I give it up.

If "St. Clair" really wishes to be set right in this matter there is a royal road open to him. Let him send specimens of "Southern trout," or, as he calls them, "green bass," in alcohol to Profs. Baird, Gill or Goode, of the Smithsonian Institution, or to Prof. E. D. Cope, of the Academy of Natural Sciences, Philadelphia, or to any other naturalists whom he considers the "best informed ichthyologists in the United States," with the request to identify and name the fish, and if they pronounce them black bass (*Micropterus*) will admit that "St. Clair" is the "best informed ichthyologist in the world," so far as the black bass is concerned. So much for the "black bass."

And now let us see how reliable "St. Clair" is upon other Southern game fishes. In the last paragraph of his article he states that there are no rock bass in the South, except in one tributary of the Flint River. In a former article he said it existed in three streams emptying into Flint River (perhaps he has caught them all out of the other two). Now what are the facts? Prof. Jordan and his assistants took and identified the rock bass (*Ambloplites rupestris*) in tributaries of the Chattoahoeche, Alabama, Tennessee, and Cumberland rivers, where they were "abundant."

"St. Clair" further says: "Dr. Henshall speaks of the striped bass (*Roccus chrysops*) as never weighing over two pounds." He does not give me even the benefit of the saving clause, Pinaforically speaking, of "hardly ever," but, having set up this man of straw, he proceeds to belabor it, and infers, from these *data*, that I never saw a trout (or a striped bass) that weighed over two pounds, the kindest cut of all, to use a garbled quotation for such an inference. What I really did say, and, like Jack Bunbury, "what I says I sticks to," was that the weight of *Roccus chrysops* "seldom exceeds two or three pounds." If I had placed the maximum weight at three pounds it would have been entirely correct, for it is the fact. I have caught thousands of these pan fish in the lakes of the Northwest, and I have seen to my great disgust and annoyance when angling for black bass. I have also taken them in "Green River," Kentucky, but they "seldom exceeded two or three pounds," never reaching five pounds in weight.

While I do not doubt that "St. Clair" caught one weighing nine pounds (in a former article he placed it at seven pounds; perhaps by next year he will grow up to seven, for it is evident from these various statements that it is weighed in its own scales), the mere statement of the fact amounts to nothing in science; even if he had preserved the specimen—as any naturalist would have done—it would still amount to nothing as establishing the maximum weight of the species. It was simply a monstrosity, an exception to the general rule, as is, indeed, a white trout, a white bass, a white pickerel, a white perch, upwards of 5,000 pounds, a mule nineteen and a half hands high; a hog that weighed 1,200 pounds; a man seven and a half feet tall; a woman balance the scales at 700 pounds; a six-legged calf; the Siamese twins; and a double headed girl; but what do they all prove? Nothing. They are simply exceptions to a general rule—monstrosities.

In place of conducting a case, by presenting the argument of the opposing side in a distorted, incomplete, or garbled form, and then, Quixotically, booted and spurred, with lance in poise, making a terrific onslaught on the windmill of his own creation, is one much practiced by the average village lawyer, and is styled "pottfogging." I take it that "St. Clair" is a lawyer, for he put words into my mouth that I never used, and misquoted my printed statements. I therefore excuse him upon the ground of force of habit, and cheerfully exonerate him from all seemingly sinister motives.

Perhaps he thought I was making light of the fresh water striped bass, for he seems to feel a fatherly and proprietary interest in this fish, as he says:—

"I believe I first had the honor, through the solicitation of Mr. Henshall, Esq., former editor of FOREST AND STREAM, of introducing the fresh water striped bass to the notice of the public."

Oh, no, "St. Clair," it was first described and "introduced to the public" by Rafinesque, in 1820, probably before you were born; and it still retains the specific name (*Chrysops*) which he bestowed upon it. He caught his specimen in Kentucky waters, too. It has been a well-known fish ever since, being very abundant in the great lakes and lakellets of the Northwest, but has never been considered much of a fish, except by juvenile anglers. Its praises are yet to be sung.

Finally, as examples of "St. Clair's" system of an "accurate nomenclature," he enumerates the Southern game

fishes as green bass, speckled perch, true perch (red fin), jack, and raw mouth perch; names that mean anything or nothing outside of his own immediate neighborhood. While I have none but the kindest feelings toward "St. Clair"—or any other brother angler, for that matter—I do not desire to again allude to these matters. Life is too short and art too long to indulge in profitless discussions. When "St. Clair" has forwarded his specimens of "black bass" and "green bass" to competent ichthyologists of his own choosing, for dissection and identification, I will be much pleased to learn the result. In the meantime, he can ventilate his "green bass" ideas without any interference on my part, in the future as in the past, so long as he does not misrepresent me.

J. A. HENSHALL.

Cynthiana, Ky., July 22d.

MR. DIPSY CATCHES TROUT.

MR. DIPSY found himself in the pleasant Island of Prince Edward, which, as all readers of FOREST AND STREAM know, is a hundred-and-forty-mile-long bank of red sandy loam in the Gulf of St. Lawrence, in shape like the crescent moon with the high point to the north. No hills break its surface, and consequently there are no brawling streams tumbling from rock to rock with a pleasant murmur; with the exception of three or four, all the "rivers," so called, run but a short course through badly cultivated fields and patches of second-growth woods, until they debouch in narrow creeks or estuaries, sometimes of two or three miles in length, up which the sea-comes which have been eroded and eaten out by the ever-encroaching action of the ebb and flow on the level and friable soil. These small rivers are fed by numerous springs, and are filled with a cold, translucent water, so pure that it is really spoiled by the admixture of whiskey. Once Prince Edward Island was an angler's Eden, but alas! its streams have been fished out—not legitimately, but by systematic poaching. Hon. J. C. Pope, the present Canadian Minister of Marine and Fisheries, himself a native of the island and a skillful angler, has, during his one year's tenure of office, done a good deal with the aid of a zealous staff of subordinates to protect the small restige of fishing that remains; but it takes a long time to restore a plundered stream. There are still a few cozy nooks where fair catches of trout may be had if you know where to look for them. Which reminds me that the writer is authorized to mention that Col. Dwyer, Dominion Inspector of Fisheries, whose post office address is Alberton, will do all in his power to direct any legitimate angler to the best places wherein to try fisherman's luck.

Nobody knew to what nationality Mr. Dipsy belonged. When questioned on the subject he would wink with one of his funny little eyes, pat his paunch—for he had a paunch—and remark that he was a citizen of the world. This was doubtless true, for he must have been born somewhere. And as he stood about five feet two in his fishing boots, had very spindly legs to support his "fair round belly" (see Shakespeare), and moreover as he wore reddish side whiskers on a round face with a salmon-colored nose in the center of it, and as he frequently aspired at a *la* in the wrong place and sometimes left off aspirating it altogether, there were reasons to believe he was a native of England.

It was on the pleasant 1st. of May the writer was woke up from a not very comfortable bed, consisting of a pine board and a Scotch plaid on the floor of a cottage, by a voice singing out "lillo" "lillo" "hillo yourself!" was the reply. "Wake up! rouse out! hevery thing is lovely for fishing."

The dewdrops hung on the grass in the gray morning like little pearls. Also on Mr. Dipsy's whiskers. We trudged on to what is called Lot Ten River, Prince County, and set up our rod just as the sun rose and we seen through the trees like a great ball of fire. Mr. Dipsy in a high state of excitement made a cast and caught—a trout.

Next time he was more successful; hardly had his two flies touched the water when two trout appended themselves and were whisked out far into an adjoining field. Mr. Dipsy ran after them with his short legs, once baskotted them with every appearance of satisfaction, then back to the river and commenced thrashing again; more trout. The finny beauties seemed determined to be taken that morning—two, one, one, two, one and at length a one-pounder. Dipsy hauled him out by main strength, sat down on the bank, applied his mouth to a green bottle and then broke forth in a stentorian voice in the angler's song—

"A birr! a whirr! a salmon's on,
A goodly fish! a thaupor!—that's so."

Not wishing to have his eyes lashed out by Dipsy's flying flies the writer proceeded up stream to a sheltered bend he wot of, and where he speedily extracted two dozen of fair sized fish in what he flatters himself was rather a neat manner. His companion was concealed from view by a little headland, clothed with low spruce trees, now green and golden in the rising sun. Suddenly from behind the clump arose a tremendous yell, as of a man in mortal agony, accompanied by what seemed a roar of thunder. Casting down his rod and making his way through the copse, the writer found that this time Mr. Dipsy had caught a bull of the obnoxious kind, with wide-spreading horns and a shaggy, buffalo mane. The animal was fairly hooked in the eye, and was wildly shaking his head and tearing over the plain, Dipsy following him with loud shrieks of dismay, but keeping his butt well forward, as recommended by the best scientific anglers. The writer followed in much alarm of mind until Taurus leaped a mud ditch, and with his thirty point of view disappeared. When Mr. Dipsy's water-proof boots, sticking up, were almost the only part of him to be seen. A good scraping down and another application to the little green bottle partially restored him, and we resumed our fishing. By this time the sun was too high for the fly, so Dipsy tried bait.

It would take too long to enter into details of the sport. Suffice it to say that when your correspondent had made out, as nearly as he could, the weight of his companion. What was his astonishment to see four domestic ducks, with their necks wrung, neatly arranged on the grass and Dipsy himself in the act of bawling in a drake that quacked and flashed and flittered and made a gallant defense for his life!

Expatriation and remonstrance were alike thrown away on the "citizen of the world." Having landed his drake and killed him, Dipsy took another suck of his pocket companion, and producing a small game-ledger he then and there entered his day's work, thus:—

"Mr. Dipsy, Lot Ten River, Prince Edward Island, Canada, Trout, 14; bulls, 1; ducks, 5."

This is the last time I mean to go fishing with Mr. Dipsy.

HURO.

A BLACK BLACK BASS.—Clinton, Ark., July 1st.—Some time ago—a year, perhaps—I wrote a short account of a very black bass I had observed in some of the waters of this region. The other day, while angling in Archery's Fork with a trolling spool, I caught, among others, one of the identical fellows. He was a true *M. salmoides* in all save color, and more than true in that. The inkly blackness extended to every part, covered the belly as well as the back, and even went so far as the inside of his mouth. I saw several other specimens following my spoon, but failed to hook them. I had no means of preserving this one. The appearance was certainly unique. The fish seemed in perfect health, and was "game" to the last.

SALMON ROE.

THE RUSHTON BOAT PRIZE.—Rochester, N. Y., July 21st. *Editor Forest and Stream*.—Your paper of the 15th inst. contained a letter from Mr. J. H. Rushton, which I think calls for an answer, as it seems to convey an implied censure on the managers of the Sportsman's State Convention in 1879.

It is true that Mr. Rushton offered his boat as a prize for fly-casting, but when the Prize Committee requested him to let them put it up as a prize in a shooting match, he gave no unwilling consent, and his boat (which was a fine one) was made second prize in the second shooting contest—the first being a \$253 Baker gun. For the purpose of attracting attention and as an advertisement, it was in far the best place by the change, for scores of people took interest in the shooting where individuals did in the fly-casting, and if I remember right there was a sharp contest in "shooting" for the boat. It was owned by a sportsman in Danville, and has probably brought its maker's name to the attention of more men who shoot on water and require boats than if won by some trout angler who does most of his fishing from shore.

EDMOND REDMOND (Ex Secretary).

THE ELK HORN VALLEY.—West Point, Cumming County, Nebraska, July 20th.—As I have never seen anything in the FOREST AND STREAM in regard to the Elk Horn Valley and its numerous ponds and rivers, I take it upon myself to give a short description of its attractions for sportsmen. It is not exactly a wild country, nor is it so thickly populated but that there is plenty of game and fish to be had in their season. The Elkhorn River rises in the Northwestern part of the State and flows in a general southeast direction and empties in the famous Platt River. It abounds in catfish, suckers, whitefish, pickerel and salmon trout, and a few eels, but the greatest sport we have is in the ponds along the side of the river, which are well stocked with both black and rock bass; they weigh from one to five pounds; also pickerel, which run from one to eighteen pounds. They are mostly taken with spoon hooks. Last year I tried to take the bass with a fly, but met with very little success, owing, probably, to my inexperience in fly-fishing.

Sportsmen come from Omaha to fish in these ponds, and claim they are the best in the State.

WHO CAN BEAT THIS?—Elm Green, Ind., July 20th.—On the morning of the 18th inst. I went out on one of the small lakes near this place—a lake about four miles in circumference—and in running once around I landed in the boat forty-five black bass, and probably lost half as many more in trying to get them in. I used Mann's No. 20 spoon, on line with rod, which proved too small to hold well on large bass.

COCKERS FOR COVER SHOOTING.

IT is now quite time for those sportsmen who have not already done so, to fix their kennels for the coming season. The first consideration for each individual, before providing himself with dogs, should be, What sort of ground am I going to hunt over? For open ground, a pointer or setter is undoubtedly the proper dog, and the only point then to be determined is as to the individual animal best adapted to that ground. Where heat is considerable and water scarce, the pointer is likely to be the most serviceable; where wet and cold is expected the setter will be found to do the best work. Where the hunting grounds are partly open and partly cover, the pointer or setter is still the best sort of dog; but when it is all, or nearly all, cover and swamp, the well-trained spaniel will be found to be by far the most satisfactory animal you can find, especially if ducks may be expected in addition to woodcock, ruffed grouse and snipe. To those whose shooting grounds are to be of the latter nature, I would suggest that care should be taken to select spaniels of the most suitable strain, as there are a good many to choose out of, some adapted to one kind of country and some to another. In the North a field spaniel, such as the one that was awarded the first prize at the last New York Bench Show, would be, judging of his appearance, a fair specimen of what is most useful for this service. His water spaniel blood being suggestive of superior pluck, hardness and retrieving qualities.

In other parts of America, where a very hardy dog is unnecessary, I should recommend a Sussex or a cocker, according to the fancy of the sportsman. I am sure that there is ground in the Eastern and Southern States, as well as in the Northern, where a price of good spaniels would secure to the sportsman as live water spaniel sport as he could possibly wish for; but the whole pleasure will be spoiled if the dogs do not know their work. They should hunt close, keep within range, drop to shot, wing, or hand, and retrieve handomely. Plenty of ad-

vices has now been given in the columns of FOREST AND STREAM as to how all these things can be taught, and there are very few places in the country where it cannot be done.

Setters can, of course, be made to do the work of spaniels, but in thick cover their size is against them; and also, it can only be done at the expense of spoiling their style and ranging qualities. If setters are not allowed to range out of sight they cannot be better than spaniels, and if they do range out of sight one must be forever bothered by having to look for them when they are on a point. I know that some setters will flush game in cover and be quite steady in the open, but these are exceptional spaniels, and not the rule.

Another thing in favor of spaniels is that, being small and handsome, they make nice house dogs, and a pointer of them does not cost more to keep than one setter or border.

TAEX.

For woodcock shooting in the tall corn there is no dog like the well-broken cocker spaniel. When either pointers or setters are used the birds, nine times out of ten, will not "top," but flit off diagonally across the rows and consequently present no shot. But behind a well-broken brace of cockers there is music in the air, and a drifting lot of feathers besides.

IRISH WOLFHOUNDS AS DEER AND BEAR DOGS.

EAST SAGINAW, MICH., July 9th.

Editor Forest and Stream.—

Take pleasure in complying with your request to give a description of my pair of imported Irish wolfhounds. I had for a long time desired a breed of dogs for deer hunting, which were larger, faster and more savage and courageous than those in use, which are largely of foxhound blood in all degrees of purity, or rather impurity. The same breed I also designed to use in bear hunting, for which purpose the above-mentioned qualities would be very essential.

After reading descriptions of the supposed to be extinct breed of Irish wolfhounds, I became convinced they would fill the bill, with the exception of running by scent, and upon this subject I could obtain no reliable information. Noticing in the advertisements in FOREST AND STREAM that Mr. Frank Adcock, of Shevington Hall, W. Wigan, England, made a specialty of breeding large and powerful dogs for attacking and pulling down large game, I wrote a letter of inquiry, and learned that he had some fine specimens, which he was breeding, and the result of this little advertisement in FOREST AND STREAM was that I purchased a pair of puppies (dog and bitch) by his celebrated "Ranger," out of his "Atalanta," both prize winners, Ranger having taken first prize at the Dublin show in April, 1879. They were admitted duty free by the custom house authorities at New York, being imported for breeding purposes, but I doubt if the privilege is worth the bother and red tape necessary to secure it.

They arrived last December, and are now about nine months of age, and tough and hearty as one could desire. In general appearance the male, though but about half grown, is tall (twenty-six inches at the shoulder) and majestic looking, head of good size and well shaped, jaw strong, with dangerous looking fangs, ears erect, with nervous tips, neck long but strong, body of great length and tail nearly touching the ground; legs large, long and muscular, with feet which make a track as large as a full grown wolf. No dew-claws. Coat rough, long and wiry, especially under jaws and on the breast, with tufts of long hair over the eyes and hanging from the under flanks. Color gray, blotched with black and fawn-colored spots.

The bitch is somewhat smaller and more slender, quite like a greyhound in build, and very active and wiry. Color and markings exactly like the dog, but the coat is short and soft, a characteristic of the bitches of this breed, I am told.

In disposition they are gentle, obedient and affectionate to a remarkable degree; in fact they surpass, in this respect, any spaniel or foxhound I ever saw.

Their crowning glory is their speed, which is something marvelous, their jumps averaging ten or twelve feet while running at play. What they would stretch it to in an exciting chase after a deer nobody knows. Though I have not tested their speed with greyhounds in this city, I should say they were fully as fast, with four times their endurance. I could not give a better description of my pup, "Dragon," than to refer you to the description of the champion Irish wolfhound, "June," a list of the Irish Sportsman, and reprinted in the FOREST AND STREAM of March 18th, 1879, page 115, to which description he seems to constantly grow nearer.

The importation of the breed for deer hunting purposes was largely an experiment, as it is a matter of doubt whether they will by nature or training run by scent. If not, I shall cross "Dragon" with my tan-colored, imported Irish wolfhound, "June," a list of the Irish Sportsman, and reprinted in the FOREST AND STREAM of March 18th, 1879, page 115, to which description he seems to constantly grow nearer. "June" is a beauty; tall and of good size, deep voice, extraordinary scent, gentle and affectionate disposition, and one of the fastest hounds in the State. Of the results of the cross I have great expectations, and hope to produce a new race of dogs for deer and bear hunting, which will combine the keen scent, tongue, sagacity and tenacity of the bloodhound with the immense speed, size, intelligence, muscular power and courage of the Irish wolfhound. I am in hopes, however, to be able to use them in their pure state for tracking deer, without the necessity of crossing with the bloodhound to get the necessary quality of running by scent.

Recommendations in this direction are based on their unmistakable intelligence and quickness to learn, and their naturally good scent, which is evinced in a dozen ways. I will keep you duly informed of the success of the experiment, which will be tested in the coming fall. As far as my information extends, this is the only pair of Irish wolfhounds in this country. Should there be any others I shall be glad to know it. The difficulty of the nature of the animal which American gentlemen have in sending cash remittances to breeders in England who are entire strangers, and to whose honor must necessarily be left the selection of dogs, I do them a favor and myself a pleasure in testifying to Mr. Frank

Adcock's reliability and fairness, and to whose extensive kennels and stables I would recommend all who desire to import rare dogs and blooded horses. H. B. ROSEY.

FATAL DISEASE AMONG DOGS IN THE SOUTH.—*Savannah, Ga., July 20th.*—*Editor Forest and Stream:*—I send you a slip from one of our daily papers concerning a very strange disease, that has been advancing southward for the past eighteen months. As far as I can learn, no such disease was ever known before. I lost five hounds with it a year ago, and several of my friends have lost dogs this year. If anyone can give any light on the subject through your paper it will be gratefully received. I know of hogs and cats that were bitten; they took the disease, and died. GEO. L. APPLETON.

The following is the cutting referred to in Mr. A.'s letter:—

"We learn from gentlemen living in South Carolina, along Black River and the vicinity, that a disease of a malignant character has for some weeks been prevalent among the dogs in that neighborhood, and many valuable animals have been sacrificed. The symptoms are similar to rabies, and the disease affects man, but a disposition to avoid people, but are very savage toward animals. Several planters have lost live horses and cows which were bitten by dogs affected with this madness. Strange to say, a few people who have been bitten have not apparently been affected in the least, whilst the horses and cows that were attacked suffered greatly and died. The exact character of the disease is not known, though from the symptoms it would seem to be akin to hydrophobia; the animals affected rushed at once for water. A youth, who was bitten by one of these "mad" dogs a week or two ago, was brought to Savannah for medical treatment, and speedily recovered, and has exhibited no evil effects of the bite.

We learn that the mortality among the canines has been very great, and several gentlemen have lost entire kennels of fine dogs. The dogs affected with the disease have been killed in many instances before they had time to spread the infection by biting. The disease still prevails, though for lack of material not to the same extent."

We know of no such disease, unless it be "rabies," which we are inclined to think this must be.

COURSING DEER IN A TWO-ACRE LOT.—Since the days when Barnum conducted his "Greatest Show on Earth" in the Madison Square garden, coursing deer has not been carried on to any great extent in the cities of the United States. But in Cincinnati the exciting sport seems to have revived within the last few weeks, and that was fortunate enough to witness the impromptu circus on Major Morgan's property, declare that "there's nothing like it." Col. Thos. B. Paxton of the Porkopolis, owns an Irish greyhound of the female persuasion, who is believed to be of the purest origin. She is of a creamy white color, with finely pointed black nose and black eyelids, symmetrical in build, with a thin, gracefully sweeping tail. A greyhound of tip-top condition should be all fire, animation and sprightliness, gaiety expressed in the sparkle of the eyes and the bounding elasticity of the limbs. Should be also so refreshing to the beholder as to produce the idea that the excellencies of the animal could be carried on further. This is all claimed for Lady, Col. Paxton's bitch. It is said she can run like the wind, and, in fact, go so fast when the spirit strikes her as to resemble a long streak of dancing moonshine, making it an even bet as to which end is her ladyship. Major Morgan owns a herd of six deer, which he keeps on his lawn, a plot of ground of about two acres in extent. A few evenings ago a party of gentlemen visited the Major, to see the greyhound and the doggy stock, which he takes much pleasure in showing to his friends, when, somehow, a greyhound of the "Lady" speed on the deer. The newspaper report is as follows:—

"The latter stood in a group near the north wall of the ground, observing evidently with some interest the movement of the visitors. Lady was started after them, and the whole herd scampered off to get out of her way. As she pressed too closely the bucks turned at bay and drove her off, sometimes leaping in and in a narrow space, giving out sport of this kind, and, possibly from lack of training, was a little slow in warning up to it, or the deer, being indisposed to active exertion, were unwilling to take part in a chase they had not sought. Lady persisted, however, and finally started them, and an interesting chase followed. The rear grounds cover probably about two and a half acres, two of which are in lawn, divided by a broad broken stone wall, and the remainder occupied by large buildings, the longest of which, on the east, was separated from the high wall by a narrow roadway. The buildings, of course, shut out much of the view. As the chase advanced, the whole herd at times came leaping over the lawn past the group of spectators, one with great, graceful leaps of twelve or fifteen feet at a stretch, of course leaving a greyhound in its rear. Some running out on one of the deer, however, Lady directed her energies to that one alone, and the others discovering it, quietly dropped out of the chase, and took position near the south wall merely as spectators and watched the subsequent proceedings with apparently as much interest as that felt by the group of human spectators, except that their sympathy was entirely in favor of Lady, and she pursued her ladyship with the chase became quite exciting, both pursued and pursuer straining every nerve as they almost flew over the ground. As the deer increased the distance from the pursuer it slackened its speed until the hound came within eight or ten feet, and at that distance between them half a dozen circuits of the ground were made. At this time the deer was in a narrow space, looking out on the big gate on the west side, and here the spectators feared the two animals would come in contact. It was with some relief that they saw the deer bounding out again into the lawn with the hound no nearer than when they entered.

"An amusing incident connected with this period of the chase was the fact that the latter, in a single, and surprising little dog that a few would think of looking at twice. He had been an interested spectator of the sport for some time, and had made frequent essays to take part in it. Unable longer to restrain himself, he gave himself up to it fully, and joined in the chase with as

great a show of vim as the greyhound. Whilst unable to keep up with his fleet-footed rival, his tact enabled him to make a good showing by cutting across the circles, while the hound followed every curve and turn of the deer.

"Fearing that the deer was being too closely pressed, Major Morgan attempted to call off the hound, but without success. Half a dozen times as the animals passed him closely he stepped between them and tried to frighten Lady away, but without avail. Both, after a chase of fifteen minutes, showed such evidence of fatigue that he determined to stop it, and the spectators quickly formed a line as the animals passed on the next round, and succeeded in separating them.

"Deer and hound were both thoroughly tired and nearly out of wind. Their mouths were wide open, their tongues lolled out, and each panted unaccountably for breath. The chase showed the blood of Lady, and that unless interrupted, as it was, the chase might have continued until one or the other had fallen from exhaustion."

MEASUREMENT OF BEAGLES.—*Essex County Hunt, Montclair, N. J., July 27th.*—*Editor Forest and Stream:*—At your request I have carefully weighed and measured some of our champions, and would say that a good beagle in thorough working condition should weigh one pound and one ounce (avoidpound) to every inch at shoulder and ears from tip to tip same as height; more the better.

HARRY HOWARD, Huntsman.

"We call attention to the notice of Mr. E. Z. Miley, of Lancaster, Pa., who advertises for a man to take charge of his kennel.

TORONTO DOG SHOW.—In another column we publish the notice of the Grand International Bench Show of Dogs to be held in Toronto, Sept. 8th, 9th and 10th. This promises to be an excellent exhibition and worthy of the attention of all dog men.

PHOTOGRAPHS OF DOGS.—Messrs. Notman & Sandham, the well-known photographers of Montreal, have sent us two excellent prints of two groups of dogs. They are wonderfully clever, and portray with life-like accuracy many of the various breeds.

KENNEL NOTES.

SALES.—*Dec. 27th.*—H. Dwyer, of this city, has purchased from Mr. E. C. Alden, Dedham, Mass., the Gordon setter bitch Bess, Bessett's Queen Bess-Donno's Tom. Sancha.—Mr. A. H. Evans, the President of the Woodmont Rod and Gun Club of Washington City, has purchased of Mr. Chas. F. Kent, of Birmingham, N. Y., the famous pointer dog Sancha, said to be one of the best field finds in America. Victor-Lucy, whelp.—Mr. N. Elmore has sold to Mr. L. E. Burke, of Westfield, Mass., a fine English blue beagle puppy by Victor out of Lucy.

DEATHS.—*Pride of the Border.*—Mr. Chas. H. Raymond's famous Laverack setter dog Pride of the Border died some time ago. Fritz.—Mr. E. M. Le Moine, of Yonkers, N. Y., has lost by death his beautiful liver and white cocker spaniel Fritz, out of Mr. McKoon's Fanny Per and Sane.

PRESENTATION.—*Sis.*—*Ethel Green, Ind., July 20th.*—I am pleased to acknowledge a present of the red Irish setter puppy Sis, from Mr. James Chubb, of Cleveland, Ohio. She is the finest bitch in this section: Champion Elcho-Gipsy dog, and is most fully appreciated. T. A. SMILES.

NAMES CLAIMED.—*Bounce.*—Mr. W. H. West, of Belfast, Maine, claims the name of Bounce for his red Irish setter puppy whelped April 11th, 1880, out of Bridget Plunket by Dirk Hatterick; purchased from the kennels of Mr. E. J. Robbins, of Wethersfield, Conn. Nellie.—Mr. Edward P. Aborn, of Elizabeth, N. J., claims the name of Nellie for his liver and white pointer puppy, presented to him by Judge Gildersleeve, of this city. The puppy is two months old.

Bark.—*Fairy II.*—*Pontiac.*—Mr. John C. Higgins' Fairy II. to his Pontiac.

WHELPS.—*Petrol.*—Mr. John C. Higgins, Delaware City, Del., Petrol whelped July 15th to his Dashing Monarch. *Petrol II.*—Mr. John C. Higgins' Petrol II. whelped July 15th to his young Laverack. *Flora.*—Messrs. Hitchcock & Hellyar's (formerly Lincoln & Hellyar) imported bitch Flora whelped on July 9th six puppies—one dog and four bitches—by Arlington. *Gipsy Queen.*—Dr. Henshall's setter bitch Gipsy Queen (Royal Duke-Queen), whelped June 4th, 1880, eight—three dogs and five bitches—by Col. Howard's Irish setter Bragg (Bob-Duck); colors, all red and all black. *Norah.*—Mr. Chas. H. Jayton's, Peekskill, N. Y., red Irish setter bitch Norah, first New York, 1880, whelped July 21st ten puppies—six dogs and four bitches—by champion Rory O'More.

PUBLISHERS' DEPARTMENT.

THE FISHING GAZETTE KNIFE.—We have received from Mr. R. B. Marston, editor of the *Fishing Gazette*, a knife designed by him for the use of anglers, and called the "Fishing Gazette Knife." The tool is a very useful one, and contains sixteen distinct implements, including screw-driver, English and French measures, file, disgorger, scissors, etc. Our angling friends will appreciate the value of such an addition to their equipment. We are informed that this knife can be obtained from Messrs. Thornhill & Co., 144 New Bond Street, London, and that the price is £2 10s.

A TEMPERATE DEPARTURE.—The following communication explains itself:—

James H. H. Warner & Co.—ALEXANDRIA BAY, N. Y., 1880. "I have been doctoring the last four years for rheumatism in the back, shoulders and limbs, and have been at no time free from pain until I commenced taking Warner's Safe Kidney and Liver Cure, which has entirely cured me. I want to keep it in the house to treat my friends with, instead of wine and liquors, as it will cure the diseases they will produce. Very truly yours, CHAS. WALTON.

"We call the attention of our readers to an advertisement of the patentee of the Fox Gun, which will be found in our columns of special inducements to those wanting one of these fine breech-loaders, so favorably known throughout the country. The gun is a most practical one, and from the well-known respectability of the maker, we are enabled to advise any one wanting one of these guns to send for an illustrated catalogue to the office of Geo. H. Fox, agent, 39 John Street, New York."

Archery.

—Address all communications to "Forest and Stream Publishing Company, New York."

THE GRAND NATIONAL MEETING.

NOTES ON THE SHOOTING-LESSONS FROM THE WORK DONE.

To say that the meeting at Buffalo was a success, does not convey a sufficient idea of the entirely satisfactory conduct and results of the meeting. The attendance of contestants was smaller than the Committee anticipated, particularly of lady archers, the long distances to be traversed causing many of the leading toxophilites of the West to forego the pleasures of the Tourney.

The arrangements at the grounds were perfect, and but for the intolerable burning of the sun, and the severe breeze constantly sweeping across the ranges, the pleasures of the contest would have been unmarred. No doubt archers are prone to attribute their poor scoring too much to bad weather, and too little to the influences of a public meeting. Yet there can be no question

that the first two days of the meeting were trying ones upon the long endurance of the archer, and that the third day was a trying not less than eight feet. It may not be profitable to suggest to archers in general a few of the principal causes which produce the low scoring at national meetings as compared with private practice rounds. Some of these causes may, to some extent, be removed and others modified in their effects, but several are without remedy. The first trial which the majority of archers in our country have to undergo, and the necessary effect of which is to weaken the desire to preserve the control of the weapons, is the journey of from three hundred to one thousand miles from home to the place of meeting. If any archer will make such a journey immediately before shooting over his own range at his home, he will discover a serious falling off in his scoring. The next matter to be mentioned scolding in itself, but its effects are always observable in diminished scoring, and this is the change of diet and loss of sleep, which can scarcely be avoided when one attends one of these great public meetings. The animal and nervousness attendant upon a public contest also to some extent militates against accuracy, but the chief cause, and the one for which there seems to be no remedy, comes from the changed surroundings. At home the archer shoots the York Round from 4 o'clock to 6 o'clock in the afternoon, when the air is cool and pleasant, and the shadow of the great trees protect him from the scorching rays of the sun, the familiar background enables him to find his point of aim, and, in fact, his mind is so much at ease because his bow does not weaken in the shade to any appreciable extent. He occupies only about two hours in completing the round, and his nerves are kept well strung up from the beginning to the end. There is nothing to distract the attention from the work in hand, and all the energies are directed to one matter. At a great public meeting, however, the archer is compelled to shoot upon a strange field, under the glare of a summer sun, from 10 o'clock A.M. until 6 o'clock P.M., to drag through a single York Round. He misses the familiar background, and hunts in vain for his point of aim on the shining sky above his target. The noonday heat weakens his bow several pounds, and his point of aim constantly rises. He has not met his old friends on the target field since the last national meeting, and in his anxiety to note their style and accuracy, he suffers his attention to wander from his own target. These things, with many others unnecessary to be here recalled, combine to reduce the scoring at every public meeting about 20 per cent. below the average of the same archers in private practice.

The records of the Private Practice Club for the month immediately preceding the National Meeting clearly proves this to be true. Only one archer, Mr. Frank H. Walworth, approached his private practice average. The winner of the champion medal, Mr. L. L. Peddinghaus, averaged for June in the Private Practice Club only a trifle better than his work at the public meeting, getting an average double round of 734 against a score of 684 in the Private Practice Club. The two exceptions already named, the average falling off was about 20 per cent. A list of the 6 highest scores made at the Buffalo meeting by members of the Private Practice Club, opposed to the averages of the same archers for the month of June, will show the true effect of a public meeting:—

	June average.	Buffalo meeting.	Gain.	Loss.
L. L. Peddinghaus.....	734	702	—	32
W. H. Thompson.....	685	696	—	108
W. H. Walworth.....	734	734	—	—
Edwin Devol.....	684	684	—	98
Edwin Devol.....	684	474	—	210
W. H. Kyle.....	684	474	—	217
J. B. Mott.....	594	452	—	142
Total.....	4980	4980	—	500

Even this is not a fair test, since only the 7 highest scores secured by members of the Private Practice Club are chosen as a basis, and, of course, those scoring nearest up to their average would be most likely to secure the highest records. An examination of all the scores made by the members of the Private Practice Club at the Buffalo meeting will show no instance other than that of Mr. Walworth, where an archer equaled his June average.

We have called attention to these discrepancies at a public meeting, not for the purpose of the two exceptions already named, but in the hope that every contestant may be fully aware of his own position, and bearing with great patience those which cannot be overcome.

That systematic effort will greatly reduce their evil effects cannot be doubted, and the wonderful improvement in the general scoring since the national meeting of last year, gives us every reason to be encouraged. Looking to the records of the two national meetings, we find progress everywhere. Three scores this year exceed that by which the medal was won at Chicago, while the average of the 6 highest scores exceed it some points. Last year there were only 5 scores exceeding 500 points, while this year there were 12. At Chicago the 15 highest scores only averaged 401 points, while at Buffalo an average of 500 points was obtained. Such an increase, if continued through another year, would bring us to almost even terms with the veteran archers of Great Britain. On the 23d, 24th and 25th of June the first great public meeting of the archers of England occurred at Leamington, upon grounds famous for the surprisingly great scores made there, and the attendance of archers was greater than this annual meeting ever before called together. The English champion (Mr. Walters), together with such renowned toxophilites as Fitzpatrick, Elliott, Col. Lewin, Piers Leigh, Yates Foote, Aston, Eyrre Hussy, Nesham, Sagar, Bull, and many others of twenty years' experience, among them the two last winners of the champion medal of the United Kingdom, shot there during two days, the first of which the London Field pronounces, "also

I have in my possession the tooth of a grizzly bear, which was killed by one of the Indians whose shots are in the inclosed tag, with the same kind of bow and arrow which he used on the 4th.

LIVINGSTON STONE

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

FOREST AND STREAM PUBLISHING COMPANY.

NOS. 39 AND 40 PARK ROW (TIMES BUILDING), NEW YORK

(POST OFFICE BOX 223.)

TERMS, FOUR DOLLARS A YEAR, STRICTLY IN ADVANCE.

Advertising Rates.

Inside pages, nonpareil type, 25 cents per line; outside page, 40 cents. Special rates for three, six and twelve months. Notices in editorial column, 50 cents per line—eight words to the line, and twelve lines to one inch.

Advertisements should be sent in by Saturday of each week, if possible.

All transient advertisements must be accompanied with the money or they will not be inserted. No advertisement or business notice of an immoral character will be received on any terms.

*Any publisher inserting our prospectus above one character, with brief editorial notice calling attention thereto and sending marked copy to us, will receive the FOREST AND STREAM for one year.

NEW YORK, THURSDAY, JULY 29, 1880.

To Correspondents.

All communications whatever, intended for publication, must be accompanied with real name of the writer as a guarantee of good faith, and be addressed to Forest and Stream Publishing Company. Names will not be published if objection be made. Anonymous communications will not be regarded.

We cannot promise to return rejected manuscripts. Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions.

Nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for dereliction of mail service if money remitted to us is lost.

Trade supplied by American News Company.

PURCHASE OF CARROLL ISLAND.—One of the most renowned shooting grounds for canvas-back ducks is Carroll Island in Chesapeake Bay, not far from the mouth of Gunpowder Creek, and but 14 miles from Baltimore. This island has an area of 1,200 acres, and the extent of the shore is 10 miles. In season it is the resort of multitudes of ducks, including, in the order of their arrival in these waters, teal, black-heads, canvas-backs and red-heads. The teal appear about the 1st of October, and two weeks later the larger fowl put in an appearance. The excellence of the feed and its abundance make this a favorite resort for the birds. The celery, the tea-weed and other plants which grow in the brackish water, and on which ducks delight to feed, grow here in the greatest profusion, and attract the fowl from far and near.

Carroll's Island belonged originally to the old Carroll estate, and more recently to William Slater. Many attempts to purchase it have been made by shooting clubs, and we believe that \$100,000 was at one time offered for it and refused. The shooting privileges have been rented in previous years for \$300 per annum.

We understand that this property has just been bought by an association of twenty gentlemen, of whom ten are New Yorkers, five Philadelphians, and five residents of Baltimore. Each member has subscribed \$2,500, as an admission fee, and the deeds have this week been delivered to the association. Many improvements are to be made on the island, and a new club-house built.

The shooting is principally point shooting and bar shooting, and those who are familiar with the conformation of the island will appreciate the excellence of the sport that the owners of the island are likely to have this fall. The bags made here average from twenty-five to fifty birds to the gun on shooting days.

A DISGRACEFUL SQUABBLE.—In the quarrel between the agents of the Sharps and Ballard Rifle Companies, as reported by cable from England, the travelers for both companies have enacted rather a shameful part. It might have been thought that both men would have cared more about the success of the team than they did for the few dollars difference between the prize each wanted and the one he got; but any one who credited them with so much patriotism and liberal feeling did them a manifest injustice.

From beginning to end the exhibition of the American Rifle Advertising Team has been such as to cause Americans to wish that some of its members were citizens of any other country than the United States.

THE HALFORD-HYDE MATCH.

"SERVED them right" was the general verdict when the cable announced on Saturday last that the squad of shooters gathered together by Gun-Agent Hyde had been defeated on Wimbledon common by an equal number of small-bore celebrities from that side. Since this match was first suggested and so industriously misrepresented by its projector as an international match, the FOREST AND STREAM has been vigilant in declaring its true character. Defeat was predicted by us, simply because from the very nature of its composition those elements which have gone to make the victories of previous and bona fide American teams were wanting in this nondescript company. They were either self-appointed, or possibly, what is worse, hired for the work. The team, if it can be so dignified, had no recognized head, and discipline was at the lowest ebb. The team had no backing from this side the ocean, and whatever of importance attached to it was in the possible mischief it could accomplish in breaking down the prestige which had grown up about American rifle doings here and in Great Britain. The match itself was of no moment whatever; nothing depended upon it; the Palma does not change hands; it was not a championship contest; and having defeated eight Americans by a score which has never been surpassed at Wimbledon, Sir Henry Halford wins merely the empty honor of having carried off the victory from nobody in particular. Had Messrs. Hyde and Halford carried out their original programme of having a bit of a private match, in which each would be assisted by three gentlemen of his choice, nobody would have aught to say about it. The FOREST AND STREAM would probably have said not a word about the immaterial event, beyond a ten line report of the scores. But, swelling with conceit, the manager of the match had worked it up to an offensive prominence under false pretenses. The Board of Directors here did a very dignified and proper thing in ignoring any direct allusion to the match, and providing against the contingency of having the official Irish-American contest of 1880 mixed up in any way with this miserable mushroom match. If it is not understood on the other side by the British National Rifle Association and its members that Hyde had not a scintilla of authority to act as a representative American, it has not been for want of outspoken utterances from this side. There seems to have been an apprehension on the part of the public that the match was nationally insignificant, for the cable informs us that the spectators were but a handful, and that the affair passed off with supreme dreariness, without enthusiasm of any sort until, at the finish, Capt. Halford began the usual talk about "our cousins from the New World," etc. Hyde, in responding, seemed to have some appreciation of the cause of his collapse, and struck the key-note of his opponent's success, and made a confession of his own preliminary carelessness when he said that the British team discipline had won them the battle.

It does not appear that there was any special mishap coming in to throw the Hyde team so far in the shade. The day was palpably good, and the weather conditions not unfavorable, else why the superb score of the British team. The marking was fair and just, and the Americans got all they earned; but with far finer weapons in their hands, they were whipped in a disgraceful manner by men to whom they should have given the closest sort of a struggle, and according to all precedents have shown a clean pair of heels. If everybody who should read or hear of the match could be made to understand precisely its real insignificance as an international contest, no special harm would result, and the press of America very generally understands the situation; but in Great Britain, now that victory has inclined that way, much stress will no doubt be laid on the "International" character of the contest. If our friends over the water find any satisfaction in this, they are abundantly welcome to it; but they must remember, in their congratulation, that America is still the champion, and so long as the Palma remains on this side of the ocean they cannot claim championship honors.

The mere accident of similarity of numbers in the make-up of the team, and of the distances fired over permits comparisons to be made with Elcho Shield contest scores, and by this test the work of the British team stands out very well. Sir Henry Halford has had the first chance of showing that the lessons of his defeat at Creedmoor, in 1877, have not been thrown away. The men were capably squadded, and the steadiest sort of work is shown in the detailed list of scores. The men had caught the idea from the genuine American teams of former years, of each giving the cue to his follower at the same target. Had the Hyde men been able to do the same there would have been one of the finest long-range contests on record, and a score to have beaten the British one must needs have been very fine indeed.

The match, such as it was, will not be without its good fruits. It may teach American riflemen that they are not invincible, as indeed they are very far from being as individual shots. The reliance placed by all good team captains thus far on a good team discipline has not been a misplaced one. There was need of it at all times, and in the

future more even than in the past. What our American riflemen are without it, Gun-Agent Hyde has most thoroughly demonstrated. Sir Henry Halford may take heart now in his promised work of bringing a band over for the Palma match next year. That match of 1881 will be more nearly a trial of men than any we have yet had. The Britishers have caught our secret of team organization. They have taken careful observation of our weapons, and are not a whit behind us now as rifle makers. Nothing now remains but a test of men, and this we are likely to have next time, when the record will be resumed from the point where it was dropped in 1877, though the interim has been given up to such by-play as walk-over matches and gun-agent farces.

THE RISE IN SEAMANSHIP.

THE prize for seamanship, or "neatness" in the keep and outfit for the year, offered to its members by the San Francisco Yacht Club, has been awarded to the sloop *Annie*, Capt. Jabez Howes. She is thoroughly equipped in every respect, as one might suppose from the experience of her owner as a ship captain. Beside handsome furniture, bright paint, smooth sides and brass-work throughout, her boatswain's and navigator's department are fully supplied with all the requisites of a long cruise. Binnacle, taffrail, log and lead, charts, mathematical instruments, sailing directions, barometer, life preservers, fenders, watch tackles, storm gear and sails, ship's library, signal codes, side lights, deck and riding lights, night signals, oil-skis, fog horn, scrubbing gear, boats and fittings, racing sails and spars, housing, topmast, taut rigging, eyes leathened, chafing gear, rope ends hitched and grafted, ample ground tackle, kedge and spare anchor, pumps and plumbing, galley and fittings, sailmakers' and carpenters' supplies, tarpaulins, skylights and hatch covers, all these, and the multitude of lesser things which go to make up a sailor's yacht, were found aboard the *Annie* sloop in regular "ship-shape and Bristol fashion." Of course, skipper Howes would have had his beauty in thorough trim anyhow, prize or no prize, but the attention drawn to his craft, and the manner of her keep, will induce members of the San Francisco Yacht Club to cut their jibs accordingly, save on the beer and grog, and put their money into a tidy ship instead. The Seawanhaka Yacht Club and the Salem Bay Yacht Club have followed suit, and we venture to assure large results from their action in a season or two, for if there is one thing we are more deficient in than another in our New York squadrons it is in a seamanlike outfit of our yachts. We have been absorbed almost entirely with attempts at great speed, and every other feature of the sport has been allowed to remain neglected. We guarantee that not one yachtman out of three can "box the compass," not one out of six can "mark the lead line," and not one out of a hundred can "work a day's reckoning." This is not said altogether in disparagement of our amateur tars, but rather with a view to calling their attention to matters wherein we are still sorely deficient. So many yachtmen are annually new to the sport that they are naturally lacking in all that calls for time, experience or study to acquire; but from the well-known adaptability of Americans to anything they undertake in earnest, we argue that a few years more will work a great change for the better, especially when we once have some sort of standards set up as an example to follow. Hence, we have been foremost among our contemporaries in advocating everything that seemed to drive us nearer to the desired goal, and we would like to see other clubs fall into line with those mentioned in devoting a portion of the year's prize money to something else than racing—to rewards for seamanship, for the greatest number of days underway, for the best kept log, for improvements and useful devices in rig, or fittings, or, generally, for the display of superior efficiency in any of the principal features, the attainment and spread of which would promote the interests of the sport.

—A Long Island negro last week mistook a boy's head for a woodchuck and shot at it, killing the boy. The jury brought in a verdict of accidental shooting. It should at least have censured the man for culpable carelessness. This is not the first instance of the kind on record. Too many men and boys have been shot because the shooter thought that they were wild animals. A wholesome disciplining of the responsible parties would have a salutary effect.

The man who does not know the difference between a boy's head and a woodchuck has no business with a gun, and the gunner who discharges his rifle in the woods at what he supposes to be a deer, but which proves to be a man, ought to be kept at home and not allowed to go into the woods. The simple possession and handling of firearms appear to deprive some men of common sense; they become crazy to shoot, and in this condition are subject to all sorts of hallucinations, in which they behold all manner of familiar woodland objects as game walking. Happily much of the supposed game turns out to be blackened stumps, dark rocks and fallen logs; occasion

ally the mistake is more serious, and human life is sacrificed to their rashness.

To the "didn't-know-it-was-loaded" class of fire-arm handlers, must be added the "thought-it-was-a-wood-chuck" variety; and the man or woman who values his or her life, will do well to give both of these dangerous classes a very wide berth.

—Mr. Frank Lord, the well-known expert in off-hand pistol shooting, sailed for Europe last Saturday. We have already described in the *FOREST AND STREAM* some of Mr. Lord's very entertaining and really remarkable feats, with exhibitions of which he is always willing to favor his friends. To his programme have recently been added several new shots, one of which consists in cutting in twain with his bullet a card thrown up edgewise. Some of these new accomplishments will no doubt surprise even those of his European friends who are familiar with his former shots.

We should add that Mr. Lord is, in the strictest sense of the word, a gentleman amateur, who practices this form of recreation from pure love of the sport, and in thus jealously guarding his skill from all taint of other motives is deserving of the highest credit.

In these days of "professionalism," it is refreshing to see a man who owns fast horses enjoy their speed and take pride in their performances without pitting them on the race course for a money purse; a man who can glory in the strength of his body without rushing on to the sawdust track; and a man who has the quick eye and the steady aim to excel in pistol shooting without posing before the public for game money and prizes.

—The paper published to-day on Grouse Shooting in the Northwest is timely. The writer has been long enough in the field to claim a practical knowledge of what he talks about.

GREENE SMITH.—Greene Smith, known throughout the United States as a sportsman and naturalist, died at his home in Peterboro last Friday morning, July 23d, aged thirty-nine years.

The announcement will be received without surprise, but with none the less of regret by his numerous friends, to whom it has long been known that recovery from his disease, consumption, was impossible.

With this brief note of Mr. Smith's death, we leave until next week a more extended sketch of his life, particularly that side of it by which he was best known to our readers as a devoted follower of field sports and an enthusiastic collector of birds.

The Onondaga County Sportsmen's Club, of Syracuse, held a special meeting last Saturday and adopted these resolutions:—

WHEREAS, Greene Smith, a loved and loving brother, husband and friend, as time when manhood's morning almost reaches noon, and while the shadows are still falling toward the West, by an act of Providence, whose ways are wondrous and past finding out, was taken from amongst us and from this "beautiful world," as he often used to describe it, and we, his friends, here assembled, feeling it, not only our duty, but our sacred privilege, to express our feelings upon this occasion,

Resolved, That in the death of Greene Smith we are again reminded of the uncertainty of the duration of life and of the reality of death.

Resolved, That in the deceased we knew a genial and faithful friend, and although born of illustrious parentage, receiving an education by study and travels, adorned by a liberal acquaintance of wealth and position, which fell to his lot, yet always simple, upright in all his intercourse with his fellow men, and honorable in all his things.

Resolved, That we deeply sympathize with his widow and surviving relatives in this, the hour of their affliction.

Resolved, That those proceedings be published in the Syracuse papers, and a copy forwarded to the bereaved widow.

Resolved, That the President appoint three members of this club to attend the funeral of the deceased at Peterboro on the 26th instant.

Messrs. F. E. Carroll, Thomas Kimber, Jr., and Charles R. Wright were appointed a committee to attend the funeral. The Central City Sportsmen's Club also passed a series of resolutions as follows:—

WHEREAS, It has pleased the Divine Providence to remove from earth Greene Smith, just as he was reaching the prime of manhood, with his faculties developed and his intellect in its ripest vigor,

WHEREAS, The members of this organization cherish with the fondest recollection the remembrance of his genial ways, his kindly heart and his unselfish spirit, recalling with unmeasured sadness the many bright hours spent in the company of one of Nature's noblemen, who was an enthusiast over Nature's loveliness, and

WHEREAS, This association has had many evidences of the generosity, the public spirit and the deep interest taken by our departed brother in pastimes which in common we have enjoyed, therefore, be it

Resolved, That the members of the Central City Sportsmen's Club have learned with inexpressible sadness of the death of our departed brother, who was a member of this organization. We desire to give expression to our appreciation of his conspicuous talents, his large heart which was ever charitable where charity was needed, and his bright and genial ways which illumined his pathway in life and which reflected their sunshine and brightness upon his fellow-men, making them better for having known him.

Resolved, That this association can never forget our departed friend, who shared the pleasure, and bore the brunt of the trials that beset it, and whose princely heart was never happy unless in doing good to his fellow-men.

Resolved, That we tender to the afflicted wife of our departed brother our deepest sympathy in her bereavement and beg her

to accept this inadequate tribute to the sterling worth of a man who was the noblest of his kind.

Resolved, That a committee be appointed to attend the funeral at Peterboro, on Monday, July 29th, at 3 P.M., and a copy of the proceedings be furnished to the press.

Resolved, That an engrossed copy of the above preamble and resolutions be forwarded to Mrs. Greene Smith.

The committee appointed were: Howard Soule, Frank B. Klock, Lucius Moses, R. W. Jones, James Geddes, J. P. Brumelkamp.

The following letter was transmitted by the President of the New York State Association, of which Mr. Smith was, in the years before his sickness, a most active member, and in 1877 the President:—

BROOKLYN, July 25th.

Mrs. Greene Smith:—

Dear Madam: It is with extreme regret that the sad announcement of your husband's death is received. My personal acquaintance with him, though brief, was such as to endear him to me. The irreparable loss sustained by true sportsmen cannot be properly expressed in the space of this communication. Believe me that the intelligence will cause profound sorrow among the many members of the New York State Association for the Protection of Fish and Game, who were intimate with him and were cognizant of his personal worth, work and acquisitions. Scattered, as they are, throughout the State, no formal action can be taken by the Club delegates until the annual meeting in 1881, when suitable measures will be adopted to perpetuate his memory. Meanwhile, on behalf of that Association as its President, and personally tendering you heartfelt sympathy and condolence in your bereavement, permit me to subscribe myself, with very great respect, sincerely yours,

ABEL CHOOK.

GAME PROTECTION.

THE CONNECTICUT WOODCOCK LAW.—The Stamford, Conn., Advocate takes issue with those who think the game law of that State is not observed as it should be. Commenting on the subject it forcibly says:—

In the first place, we don't admit for a moment the game law prohibiting the shooting of summer woodcock is a dead letter. It certainly is not in this section of the State, and if it is in and around Hartford, it is not the fault of the law, but the sportsmen (7) themselves. If the sportsmen of Hartford are willing to be overrun with market shooters and "pot hunters" out of season, they must of course leave "poor picking" in the fall; but we doubt very much if such men as Robinson, Beston and others whom we might name, will admit that the law is a dead letter or that it is not a good and wholesome one. In the second place, the old law permitting the killing of woodcock on and after July 4th was the most abused law ever allowed to stand on our statute books, for more reasons than we have room to give here. All decency rebels against it, for the sake of man and beast, to say nothing about the destruction of the poor half-grown birds. To go back to the barbarous times of summer shooting would be a long stride from the path of progress. The whole sporting fraternity is crying out against it, and it has been forever abolished in many States beside this State, and it is the opinion of all thinking naturalists and sportsmen that if we wish to exterminate the noblest game bird in the world, continue the summer shooting of woodcock. Now the Sportsmen of Connecticut know what their best interest, and will never consent to go back to summer shooting. Show us the man who will claim that there would be any sport in hunting woodcock during the present month, while the thermometer stands at nearly ninety every day, when after the birds are bagged the chances are they would spoil before the return home, is there sport? Is it not more like a crime? In the third place, the law in New York is on until September, and works well. The "pot hunters" may not like it, but are they the sportsmen of the great State of New York? We think not. If "many of the sportsmen of New York think a mistake was made in extending the time from July to September," let us know who they are. Give us the names of the "leading sportsmen" of that or another State, who will not say the law is a grand, good and common-sense law, and for every such name we will furnish scores of who do."

When the local press maintain this position on game and game laws, the work of game protection will be accomplished. This has the ring; it is sound, and we hope to hear more of it.

A PROPOSED PROTECTIVE SOCIETY.—New York, July 22d.—Editor *Forest and Stream*.—I have been talking over a plan with a number of fellow sportsmen, whereby we may be enabled to establish an Association which will protect game in the vicinity of New York. We all know that the Society for the Protection of Game, in New York City, does its work faithfully and well, but in the neighborhood of New York, on Long Island, in New Jersey, and other localities where we are in the habit of looking for game and fish, there is no, or at least very feeble, protection. Especially, perhaps, where the West Jersey Game Society has control, and where its residents generally do not wish to complain of their neighbors, and are afraid to get the ill-will of poachers; beside which, it takes time and money to bring these offenders to justice. My plan is as follows: Let a central association be formed in New York; members can be from any locality, and a suitable reward be offered, not \$5 nor \$10, but \$25 or \$50, for every offender brought to prosecution, and also the club to see that the individuals are properly prosecuted. If such an association was known to exist, and poachers found they were relentlessly prosecuted, poaching would be at a discount very quickly. It is useless to look for aid from State associations; they, as we know, have neither the time nor inclination. It seems to me such an organization ought to have a number of agents, and an assessment of \$5 each would be sufficient to start with. Let those who are in earnest send in their names, and we will call a meeting and organize at once.

W. HOLBERTON,
65 Fulton street, N. Y.

MIGRATORY QUAIL.—Kennelbunk, Me., July 24th.—We received our quota of migratory quail in good condition, and released them in such localities in our vicinity as

seemed to us best fitted for them. The result of such an experiment was the general topic of conversation, not only among sportsmen, but of farmers, store-keepers, and in fact everybody suddenly discovered that they were interested in the migratory quail. Reports were received daily of the birds being seen somewhere, until it really got to be ludicrous to have some thick-headed fellow, who didn't know a sparrow from a blue jay, insist that he had seen a quail several times in his garden or cow yard. "O yes, it was a quail; he knew it was a quail, because he had never seen a bird like it before," when it was probably some bird common in this vicinity; but yet never having noticed the bird before, he thought it must be some new species, and therefore quail.

However, the quail nested quite soon after they were released, and have laid from eight to ten eggs in nests that have been discovered; in some cases they have already hatched, and out of the nest; some are still on the nest. There has been but one case of loss that has come to my knowledge, that of a bird being run over by a moving machine while on the nest covering ten eggs. You can hear them at most any time in the day, but to see them is quite another thing; yet I have heard of their coming about the buildings of the farmers and feeding. Although some of the birds have wandered long distances from where they were released, yet they seem to have generally remained near the localities where they were turned loose.

We hope that next year will bring them back to us in goodly numbers, and then we shall know that with us the experiment is a success.

G. C. L.

Game Bag and Gun.

GAME IN SEASON IN AUGUST.*

Woodcock, <i>Philohela minor</i> .	Red-backed sandpiper, or ox-bird, <i>Tringa americana</i> .
Black-bellied plover, ox-eye, <i>Squatarola helvetica</i> .	Great-headed gowditi, or marsh wren, <i>Linnæa</i> .
Ring-billed gull, <i>Larus delawarensis</i> .	Yellow-bellied sapsucker, <i>Sphyrapicus varius</i> .
Stilt, or long-shanks, <i>Himantopus nigricollis</i> .	Tattler, <i>Totanus melanoleucus</i> .
Red-breasted snipe, dowitcher, <i>Macrorhamphus griseus</i> .	Yellow-shanks, <i>Totanus flavipes</i> .

*This enumeration is general, and is in conflict with many of the State laws.

"Bay birds" generally, including various species of plover, sandpiper, snipe, curlew, etc., and also the phalaropes, avocets, etc., coming under the group *Linnæa*, or shore birds. Many States permit prairie fowl (plains grouse) shooting after Aug. 15th.

—Address all communications to "Forest and Stream Publishing Company, New York."

GROUSE SHOOTING IN THE NORTHWEST.

FOR some years past your correspondent has taken his annual vacation in the Northwest, preferring the fresh prairie breezes to a crowded hotel, and the freedom of camp life to the conventional restraints of a modern watering place. Each season he has there met with Eastern sportsmen in constantly increasing numbers, and it is always a pleasure to find that the region is rarely one of unqualified success. It will, perhaps, not be amiss to offer a few suggestions on the subject.

It may be accepted as a general truth, in all kinds of humanity, that mere skill with the gun is not in itself sufficient to insure a good bag of game, and this principle applies with peculiar force in grouse shooting. The most indifferent shot will bring down his birds easily enough when he has the good fortune to find them, but grouse are not to be met with in every what stubble and along the margin of every slough "as thick as chickens in a barn yard." On the contrary, even in the best grouse region in America (Southern Minnesota, Northwest Iowa and Eastern Dakota) it is common enough for well-equipped sportsmen to beat over miles of good-looking country without getting a point or starting a feather. The reason for this is, of course, that the country is vast, and none but a practiced eye can pick out the "right places" with any sort of precision. Nor are there any royal rules for the guidance of the uninitiated. An old hunter, for instance, mounts the buggy seat, sweeps the horizon and directs the driver to some swale, or ridge, or slough, or stubble. But there are hundred such places within view, and when you ask why he selects that particular one, he can only reply, "It's a likely looking spot for 'em." Were he to justify his impression by assigning specific reasons and going into details, he would merely mystify himself and mislead you. He generalizes, unconsciously, perhaps, but almost unerringly, just as an Indian generalizes a faint trail, or an old banker an accommodation bill.

And this will explain the wide diversity of opinion which prevails in regard to the most suitable dogs for grouse-hunting. If the sportsman proposes to beat up the whole country, he must have bold, wide-ranging dogs, with high speed and great bottom—well-muscled pointers, if their feet are good, or the pointer dropper, or best of all, the Irish setter. But if the hunter has a fair knowledge of the game and its haunts; if he can pick out the choice bits of country with reasonable accuracy, and is already, fine-nosed, close ranger will prove serviceable enough—a Gordon, for instance, even a good, stanch dog who is far past his prime and almost useless for general purposes.

On his first visit to the prairies an Eastern sportsman generally takes out his best quail dog; and it is scarcely too much to say that the animal's merit will exactly mark the degree of his owner's disappointment. A half-broken puppy, which has been used to a title on quail with older dogs, will generally acquire himself even a well on grouse. True, he beats with a perplexed uncertainty, sometimes timid and sometimes bold, but he has at least been taught to back his superiors, and will seldom run in. Above all, not much is expected from him, and when he tremulously makes a crouching point, and holds it, his achievement is looked upon as being full of hope and promise. But, alas! it is far otherwise with your main dependence—stanch old Pointe. Pointe is your favorite. You have worked him for five seasons, and each year your tongue has grown more wanton in his praise. He is a bold, up-headed dog, full of intelligence, and with a marvelous nose—a dog who knows his duties and glories in the knowledge. See with what freedom

BINGHAMTON, N. Y., July 24th.—A friendly match was shot between the Binghamton and the Outcrop gun clubs, and resulted in favor of the Binghamtons by 29 balls. The match was shot from a Cretaceous range; 18 yards rise; on the grounds of the Outcrop Club in Franklin, N. Y.

RANGE AND GALLERY.

THE KENNEDY MAGAZINE RIFLE.—In the FOREST AND STREAM of last week appeared the remarkable record made by Otto Wilkins at glass balls thrown from a trap, a far more difficult performance than the cracking of glass balls and other objects as they are thrown from the hand of an experienced second. The account, however, omitted to state that the weapon used was the Kennedy magazine rifle, and was made by the Whitney Arms Company of New Haven. For a magazine and hunting rifle it is second to none. It is appreciated in the growing demand for it from all sections of the country, and especially from the West, where the hunting qualities of an arm are pretty severely tried. The breech is of very simple construction, perfectly safe, having rolled metal in the line of resistance to the fire, and it can be manipulated and fired as rapidly as any arm. The company are now making a rifle of the same name and style, but intended to use a 60 grain cartridge of .45 caliber. President Whitney also reports: "We have made about 2,000 of the Burgess gun, that uses the United States Government cartridge, and has sold better for sporting purposes than any new gun ever put on the market in the same time, and has given good satisfaction."

ZETTLER RIFLE CLUB.—New York, July 25th.—The fourteenth competition for the J. H. Brown rifle shot for at Outtenberg, 20 yards, 90 shots per man, ring target—

Amateur Match.

On Wednesday the long range match takes place at Walnut Hill. Thursday the glass ball shooters have a jubilee at the same place.

WAKEFIELD, Mass., July 24th.—There was a large attendance of riflemen this afternoon at the range of the Wakefield Amateur Rifle Association. The main feature was the splendid shooting of Messrs. Richardson and Jewell. Richardson made the remarkable score of 59, and Jewell 58, out of a possible 60, Medford target count. On Richardson's first score he made a 5 on the fifth shot, after which he made 12 consecutive bullseyes. There were over 60 entries, and below are 8 of the best scores—

ASHUTUM, Mass., July 20th.—A rifle club has been organized here, and the following officers have been elected: President, Dr. N. Jewett; Vice-President, W. R. Adams; Secretary and Treasurer, Frank H. Parker.

"MANMOTH RIFLE GALLERY.—Boston, July 23d.—The Any Rifle Match is progressing finely, and the third week of the month a great many changes have taken place in the leading competitors, and the shooting has been of high standing. Mr. Frank Hollis now heads the list, jumping from the third place of last week with three 5's and two 8's, followed closely by Mr. A. C. Pollard, who has this season made one point over last week. Mr. Geo. F. Ellsworth is a good third, with 1st out of a possible 20. Mr. A. C. Gross is fourth, with 17s. Mr. Geo. D. Edison is in the fifth position, with 14s, closely followed by L. W. Farrar, who holds the sixth position with 17s, outranking Mr. A. C. Goodspeed, who held the same position last week. The gallery has been well filled during the week, and the following is the standing of the several competitors to date; 60 yards; rounds 3; possible 40; 5 scores to win, or possible 200—

NEWARK, N. J., July 19th.—On Monday last the following members of the First Regiment, N. G. S. N. J., qualified for marksmen's badges: Private Geo. Weizman, Company E, 38; Private A. C. Neumann, Company E, 35; Sergeant C. Loden, Company E, 35; Corporal Wm. Deyo, Company E, 28; Lieut. W. F. Lynn, Company E, 28; Lieut. J. K. Walsh, Company E, 34; Corporal Hedenburg, Company E, 26; Private H. Beach, Company E, 26; Private Geo. Kock, Company E, 25; Private Chas. Day, Company

boy from Trinity College school) at cover point, and Wadsworth

at point, being most prominent. Port Hope, who commenced their second foul in a moment after noon, did better in their second attempt, but failed by 10 runs to save the one innings defeat. Rogers got 25 by very steady batting. Trondell, who played in good form, 24, including a 6 to square leg. Young Jones played very nicely for 8. The bowling and fielding of the visitors was again magnificent, and worth going a long distance to see. On Wednesday evening the Port Hope Club entertained their visitors at a garden party, which was largely attended and passed off very successfully.

—Montreal easily defeated Three Rivers, at Montreal, by 194 to 78 in the first innings. Montreal's second innings totalled 182. Downing, for the winners, made 49 and 65.

—Barnes (24) vs. Girard (24).—Played at West Philadelphia July 17th, and won by the home club by 61 runs on third innings' scores:—

CHALLENGE TO THE ANTHRACITE.

Editor Forest and Stream:—In view of the public recognition which the most economical method of generating and applying steam holds forth, we are willing to do our share toward solving the problems at issue among engineers, and consequently request you to publish the following:

We will be pleased to enter upon a friendly competition against the Perkins system, and to challenge the American to show the *Anthracite* with our own boiler and compound engines on board the steam yacht *Lella*, upon such terms and conditions as may be mutually agreed upon. We are not making any reply to our proposition may be received from the owner or agents of the steamer *Anthracite*, as the questions of economy and speed are to all steam users, and a better opportunity of determining to what extent steam can be expanded at a saving in fuel may not again be offered than during the stay of the *Anthracite* in New York.

THE HERSCHOFF MANUFACTURING CO.

Bristol, R. I., July 29th.

We trust that this challenge will be accepted by the *Anthracite*. There is no reason why it should not, and there is every reason why it should. The *Anthracite* came to America to show the great economy of high steam in general and the Perkins system in particular. She has been most extensively "written up" by the press, which does not understand anything about such matters. As yet not a single journal competent to deal with engineering questions has really examined the Perkins claims from a scientific standpoint; they have so far been content to give the news of her arrival and reputed performance from the lips of interested parties. The daily press having given the cues, others have followed in the same groove. We are not among those who take much stock in the Perkins system other than as it represents only a clumsy and complicated reproduction of the American oil system. There is not a single point in the Perkins boiler which is superior to the Herschhoff oil or to the most boiler, or to Babcock and Wilcox's boiler, or any other sectional or pipe boiler. It is simply a reproduction of a very old idea, clothed in a garb just different enough to deceive the uninitiated and to warrant the assumption of a special name. In principle the boiler is absolutely identical with the Babcock and Wilcox, and in its practical structure it is much inferior. So far as the Perkins engines are concerned, they are an entirely uncalculated for complication and excessive weight in proportion to the power developed, the adoption of the single acting cylinders to overcome the burning away of packing being a most crude, clumsy, and expensive roundabout way of overcoming a very small difficulty.

To engineers, the statement that the Perkins is going the roundabout way of packing which does not leak or burn away is finally overcome by Mr. Perkins substituting a third single acting cylinder, which therefore has no gland, must have emanated from a very worthy disciple of Watt and Stephenson. Indeed, but it is published as gospel truth, nevertheless, all over the country, and is exceedingly complimentary to Mr. Perkins. Now, as to the truth of the matter, the idea of using steam at high pressure as a means of obtaining economy is as old as the hills, and has been worked to the fullest benefit in more than one system. Mr. Perkins has simply carried this steam to still higher pressure, not because of any virtue in his apparatus, not because others could not do the same, but simply because others who have worked the tide have gone even

further than Mr. Perkins, and after experiments have found that in practice no economy is gained by carrying steam much over 150 pounds, however seductive higher pressures may be in theory. Mr. Perkins is simply the victim of a very enticing theory, but he will obtain equal results when he comes back to 20 pounds and a well designed compound of the usual style. Friction of additional machinery, extra friction of steam in its numerous transfers, increased areas for condensation and expansion in passages, back pressures and increased weights of boiler and engine, will probably account for this. His propellers are good ones of the standard of their class, but the Americans will buy out of the scrap heap. No wonder that the Englishmen are slow in adopting them, and no wonder that the S. S. *Wanderer*, 700 tons, Mr. Lambert, has thrown the whole Perkins system overboard and come back to a shell boiler and three cylinder compounds. But as the *Anthracite* is here to prove things, and not merely to imitate the average newspaper reporter or playmate nautical flycatcher, we trust that the interested parties will not hesitate to accept any reasonable test to be applied; otherwise, they may as well make up their minds at once that Americans will buy out of the whole business, and view the *Anthracite* in the same light that we do a circus in the country—good enough to look at as long as it is a "free show," but forgotten as soon as passed by. If the Herschhoff Manufacturing Co. will offer anything like fair terms to the *Anthracite*, we hope a competitive trial will be brought about, for the Herschoffs represent the most advanced practice in America, and the outcome of the trial would do very much to settle one of the most prominent engineering questions of the day.

A GREAT STEAM YACHT RACE.

Editor to Forest and Stream:—

I hereby "authorize" myself to bet twenty million dollars that within twelve months, or less, our country can make no less a feat of time from Sandy Hook to Boston as a first-class compound steamer, and I hereby further "authorize" you to contribute fifty cents for each mile of the following challenge to the Perkins system. Send bill for cost of transportation to the asylum and ten years' board prepaid to A. MUNCHHAUSEN.

In general we are opposed to encouraging bets for such large sums as Mr. Munchausen proposes, and would counsel retaining a few millions for a rainy day, but our correspondence is so sure that if this time that our constitutionally moral character must take a back seat. Let us see: Hook to Fastnet, 8,800 miles; full speed at sea, 14 knots; coal, 5 days; 14 times 21 is 336 miles per day; 5 times 336 is 1,680 miles. Left to make under sail, 1,120 miles. Yes, on the whole, we think we will chip in another fifty cents to the asylum fund.

THE BENNETT CHALLENGE CUPS.

THE following are the conditions under which the various Challenge Cups, presented by Ex-Com. J. G. Bennett to the New York Yacht Club, can be sailed for:

1.—From an imaginary line between the Judge's steamer and buoy No. 5, off Sandy Hook, to and around the Five-Pathom Lightship, off Cape May, leaving it on the port or starboard hand, at the discretion of the challenger, and returning to the starting point, the southward and eastward, within one hundred yards distance.

2.—The Cup will be awarded subject to the following conditions as expressed in the following regulations:

1.—It is to be held by the winner for thirty days after the race, without liability to challenge.

2.—Upon the expiration of that period, the winner must accept any challenge, and be prepared to sail a race over the same course within fifteen days from the receipt of such challenge, or forfeit the Cup to the challenger.

3.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

4.—If the challenger, within the fifteen days, fails to challenge, the bona fide property of any yacht holding it successfully through three consecutive seasons.

5.—The racing season in American waters, in reference to this Cup, is understood to be from the third Thursday in June until the third Thursday in October in each year.

6.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

7.—In the event of the Cup being held at the close of a season by a foreign yacht, it may be held for an American race during the racing season of the next year for an American race, and around the lightship off Sandy Hook and return. Said cup to be held by the winner for the term of 30 days after the Cup is won, without liability to challenge. Upon the expiration of said period, the winner of the Cup must accept any challenge sent by a member of the club, and be prepared to sail a race over the same course, or such other course as may be designated by the annually elected Regatta Committee.

8.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

9.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

10.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

11.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

12.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

13.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

14.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

15.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

16.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

17.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

18.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

19.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

20.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

21.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

22.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

23.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

24.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

25.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

26.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

27.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

28.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

29.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

30.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

31.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

32.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

33.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

34.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

35.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

36.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

37.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

38.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

39.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

40.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

41.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

42.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

43.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

44.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

45.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

46.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

47.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

48.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

49.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

50.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

51.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

52.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

53.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

54.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

55.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

56.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

57.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

58.—If the challenger, within the fifteen days, fails to challenge, the Cup in two consecutive races during one season, it will not again be liable to challenge until the commencement of the following season.

BEVERLY YACHT CLUB.

Editor Forest and Stream.—

Owing to illness of one of the committee the following reports have not been published at an earlier date. In order that the record may be complete, please insert them in **FOREST AND STREAM**.

The first special regatta of the season, and the fifty-fourth of the club, was sailed at Cotuit, July 2d. Wind northeast, moderate weather foggy; over an outside course as follows: From Ball Race, leaving Goller's Lodge and Successor's Lightship on starboard hand at starting point—fourteen miles. Following is the summary:—

Name, owner and rig.	Fl.	In.	Actual Time.	Corrected Time.
Nomad, J. S. Day, Jr. slooner.....	3	40	41	3 53
Maude, H. Stockton, cut. ".....	21. 8	3	42 34	3 29 19
Wagon, Aug. T. Perkins, slop. 21. 6	2	44	55	3 32 12
Nancy Francis, L. Leche, slop. 21. 6	3	42	52	3 35 43

Wagon lost some time by a mistake in the course. Nomad won easily. Maude taking second prize. Judges—A. Coolidge, Jr., F. C. Girdle, Jr.

The second special regatta of the season, and the fifty-fifth of the club, was sailed at Cotuit, July 7th. Wind southwest, light. Course: From Codman's Wharf, leaving stakeboats off Savage's Point and Quabshong Shoal on the starboard hand at starting point, three times round—six miles. Judges—A. Lawrence Lowell, Russell Hooper, Jr., and J. B. Y. C. This race was for small boats. The summary is as follows:—

Name, owner and rig.	Fl.	In.	Actual Time.	Corrected Time.
----------------------	-----	-----	--------------	-----------------

Nina, Francis C. Lowell, cut. "..... 15. 1 1 50 11 1 23 39

Scout, John T. Coolidge, Jr., cut. "..... 15. 5 53 41 1 23 49

Louise, J. T. Coolidge, Jr., cut. "..... 12. 7 1 56 25 1 31 26

Scup takes first prize, Nina second. CLEW GARNEY.

Answers to Correspondents.

No notice taken of Anonymous Communications.

[H. S., Boston.—Address Thos. Sedgwick Steele, Hartford, Conn. S. E., Balthellerville.—Write to our canoe advertisers for circulars.

M. C. K., Warm Springs, N. C.—For birds' eggs write to J. Wallace, 17 North William street, N. Y.

A. A. N., City.—For lawn tennis rules consult the manual of the game, published by J. B. Lippincott & Co.

J. H. E., Arlington, Md.—We have referred your communication to the Pease's Island Club, Pease's Island, Maine, who are looking for wild pigeons.

T. M. C.—The scores in snipe shooting have related to shots while the birds were on the wing. Your account of shooting birds on the ground would hardly be appropriate in that connection.

W. E. M., Poughkeepsie, N. Y.—For full information about the route and cost of Maine trip, see in our issue of Feb. 20th, 1880, "Parmaehene and the Rangley Circuit." It covers the ground completely.

P. H. Melb., North Platte, Neb.—We do not understand that there is any difference in the present methods of manufacture from the old methods, and we fail to see how the same process can produce the different results named.

A. P. T., Belaire, Ohio.—The lessee of the Laval is Hon. D. E. Price, Quebec. The open season for sea, or striped, bass (*Roccus luteus*) in Nova Scotia is from New Brunswick is Aug. 1st to April 1st, for netting with hook and line allowable at all times.

S., Menominee, Mich.—Can you furnish me the address of two or three parties from whom I can probably get specimens of Rocky Mountain lion, moose, and elk heads and horns, etc., for mounting? Ans. Write to J. Wallace, 17 North William street, New York.

G. E. J., New York.—One of the makers of your gun was a clerk of Spies. The gun is very likely one of cheap Birmingham

make, but the fact that the barrels are soft is nothing against it. Soft barrels belong to the best of guns; even laminated steel may be cut with a sharp knife.

W. O. C., Boston, Mass.—Apply twice a day the following ointment, with plenty of friction: Powdered bicarbonate of potash, one ounce; powdered white vitriol, one-quarter ounce; sub-sulphur, two ounces; lard, eight ounces. Mix and rub well into the skin. Continue the Fowler solution of arsenic, five drops twice a day with dog's food. Send your name and address in full.

J. R. H., New York.—Paul Mead's Dash was out of a red Irish setter bitch owned by Mr. A. Johnson. She was sent to Albany, N. Y., and warded by a red Irish setter from Ireland, the owner being one of the dogs. Mr. Johnson paid \$35 for the service of the dog, Red Dash being one of that litter. Mr. F. H. Palmer's red Irish bitch Belle had no puppies when sent here. She came from Dublin.

T. B.—Do black bass ever become lousy? If so, do they ever have a fungoid growth all, or nearly all, through their flesh? The growth that is the "fungoid" resembles what a miner would call a moss-agg. I have a bass containing just such as I have described. I will make you some microscopic slides and send them down. Ans. All fresh water fishes have fungoid growths on injured parts, and are subject to parasites.

J. H. M., Poughkeepsie, N. Y.—As a subscriber to your valuable journal I would like to know how to can fish and game. After a trip up in the mountains I would like to bring back as much as possible of what has been caught and killed. Ans. You cannot can fish or meats without expensive machinery. You may bring them back in brine, dry-salted, or, if not to be kept over a few days, a mixture of pepper and brown sugar is good. Clean the fish and rub this over the backbone.

Hat, Baltimore.—1. What hat do you consider the best for protection against the sun when fishing or otherwise exposed to it? Is not the cork hat very good? 2. Do trout take the fly in West Virginia about July 1st? 3. What is the best thing to protect you from the flies? Ans. 1. The cork hat is good; so is a well ventilated felt hat, with cabbage or other large leaves in the top. 2. Yes. 3. Oil of pennyroyal issued; also preparations of tar, which are about as bad as the flies. Perhaps a fly net or "bee bonnet" is as good as any.

B. M., New York.—Can you tell me of any retired lakes in the southern part of Canada, where I can get good black bass fishing—like Charleston Lake, for instance? How can they be reached? Ans. There are lakes in New York, Cardwell and Ontario counties. Go to Toronto and take rail north or northwest for these. You can hardly miss black bass in any Canadian lakes. Charleston Lake is eighteen miles from Brockville, and north of that is a chain of lakes which are little frequented, and on some of which it is said, an angler never wet a line.

S. P. G., Savannah.—Strictly, the manner of measuring should be regulated by the rules you have agreed to sail under. If those rules do not cover the case in question, the matter must be referred to the club or ruling authorities for decision, as the measurer has no right to give the rules his personal interpretation, unless authority to that effect has been specially delegated to him, but must act simply in a ministerial capacity. On broad grounds the measurement on deck should be taken without reference to the protruding of the water line at either end, as long as the water line is also taken at the middle length, but if only over all length is used, then the greatest length should be taken wherever found.

G. H. T.—We assume that by 30-inch level you mean the pitch of the screw. Then with 450 turns, and say 20 per cent. slip, your launch should make 1021 miles—instead, you say she makes only eight. This may be due to faulty propeller, inadequate model for higher speed, or to both. The latter is most likely the case, as your boat of 35 ft. is rather short and wide for speed. You also turn up too fast; and a larger wheel and fewer turns would serve better. As you do not wish to increase the draft, experiments with various wheels would probably result in a gain, but cannot recommend any special wheel. The usual one for a 35 ft. launch would be 32x48 or thereabouts, from which we judge your wheel churns the water too much and has not effective surface enough. The Herreshoffs have a good speed wheel; apply to them.

W. S. C.—Will you inform me through your valuable paper what you would call the following fish? Some parties claim it to be a brook trout and others to be a salmon trout. It was caught the other morning about 1 o'clock by a young man while fishing for bluebacks at the entrance of the outlet to our Lake "Chautauqua." The lake was stocked some five or six years ago with salmon trout, but from what I can understand, they were destroyed by the pickerel, which predominate. The following are the dimensions: Weight, 11 pounds; length, 14 inches; width, 3 1/2 inches; circumference, 8 inches; tail very nearly straight; fins pink; edges of same black; dorsal fin mottled with black; measures across the thickest part of the back, 11 inches; pearl colored line through center of side from head to tail; breadth of tail, 2 inches, same color as back; fin; color of belly reddish; color of eyes: center black, iris yellow. Spots on side, carmine mixed with light pearl. Head shaped something like a shad, only larger mouth. Large number of teeth. Ans. Color is not to be depended upon in fish. The lake trout or "salmon trout" is not red spotted. It may be a brook trout, unless its head is too much "like a shad."

CAPT. WILCOX'S BLUEFISH STORY.—Capt. Wilcox, of a Mystic menhaden fishing tug, says that last week when he was off the south shore of Long Island in company with three schooners, they ran across the largest school of bluefish he or any of the crews had ever seen. On board of the tug was a brand new \$500 seine, very strong and capacious. It was let out, and the tug started with it around the school. As the folds of the seine swept steadily together, the water boiled with the violent motion of the imprisoned fish. Fifty thousand bluefish were loaded on the decks of the three schooners and the tug. The fish weighed from two to six pounds apiece and loaded down the four vessels. But the beautiful net was an utter ruin. There was not a mesh left that was not chewed into small strings. It was a dead loss, and was thrown away. The fishermen say that where one fish was caught ten or more made their escape.

LITERALLY LED INTO CAPTIVITY.—The learned author of the "Descent of Man," in noticing that the animals often suffer from the diseases that afflict ourselves, might have added that in some cases they are not free from our vices also. According to a recent letter from Darfur, in Africa, the monkeys of that region are inordinately fond of a kind of beer made by the natives, who use the beverage to capture their simial poor relations. Having placed quantities of the beer where the monkeys can get at it, the natives wait until their victims are in various degrees of inebriation, and when they then mingle with them the poor creatures are too much fuddled to recognize the differences between negro and ape. When the negro takes the hand of one of them to lead him off, some other fond creature clings to the hand of the latter one, another to his hand, and thus a single negro may sometimes be seen carrying off a string of staggering monkeys. When secured, the beer is administered in decreasing quantities, so that they may only gradually awaken to the sad result of their spree.—*Boston Herald.*

ESCAPED SEA-LIONS.—Eight sea-lions, which had been confined in a crib at the Brighton Beach Aquarium, Engeman's Pier, Coney Island, escaped into the ocean last Friday evening, and at once disappeared for parts unknown. Three months ago snapping turtles went with them. The largest of the sea-lions was known as "Bill;" he was about 6 ft. 2 in. in length, and his mate, "Fanny," was almost as large. There were also, beside the four other medium sized specimens, two baby sea-lions. The proprietor estimated the loss at \$7,000. No insurance. Much trepidation was manifested among the bathers at Coney Island when it became known that the lions were at large. The fear was, however, entirely groundless. These amphibians are formidable only in name, and would not molest a human leg, unless they mistook it for a good fat herring. Engeman, the owner of the lions, offered a reward of \$50 each for their return.

Ostrich Farming.

ACTIVE OR SILENT PARTNER
wanted, with \$20,000 to \$50,000, to join a young man in the above business in San Joaquin Valley, California. Advertiser has had long experience on ostrich farms in South Africa; thoroughly understands the business in all its branches, such as mating, care of breeding and feather birds, rearing of chicks, and sorting feathers for the London and Paris markets. Large profits can be derived from the investment; more money in it than sheep or cattle ranching. Any person answering this with intention of acting as partner must be strictly temperate; none others need apply. Best of references given and required. Address, giving full name, etc., W. D., Occidental Hotel, San Francisco, Cal. Jy 23-41.

Spanish Silk Worm Gut.

THE GREAT REDUCTION in the quality of this article, and the increasing admixture of rough strands, has forced us to go into the manufacture of it for our own account. Our Mr. Imbrie has just returned from Murcia, Spain, where all the high quality gut is made. While there he organized the most extensive and perfect factory for making this article in the world. The grades named below will run at least 25 per cent better than those of any other manufacturers.

Old Judge Smoking Tobacco.

The Only Tobacco Ever Manufactured that does not Bite the Tongue.

Something Important for Cigarette Smokers to Know.

THE MAJORITY OF SMOKERS are perhaps not aware, that in smoking Cigarettes made of the ordinary pure rice paper, they have been inhaling THE MOST DEADLY OF POISONS, known as by all burning paper, namely: The Oil of Cresote, CHARLES B. BEMLEY, of the firm of GOODWIN & CO., manufacturers of "OLD JUDGE" Cigarettes and Smoking Tobacco invented and patented a process, March 24, 1883, by which the Rice Paper used as wrappers for "OLD JUDGE" Cigarettes has been so prepared that the unpleasant ODOUR and the injurious effects of the Oil of Cresote are completely neutralized or destroyed, and the paper made salubrious to prevent its burning or melting in the mouth. The unprecedented popularity of "OLD JUDGE" Cigarettes is owing to the fact that this process has been used exclusively in their manufacture, no one else having the right to use it. The great advantage and importance of this invention will at once be recognized by all smokers, and its truth demonstrated by the first "OLD JUDGE" Cigarette they smoke. Sold by all leading dealers. Try them and you will use no others.

Manufactured by GOODWIN & CO., 207 and 209 Water st.
